These incidents are enduring symbols of the community of interests between Czechoslovaks and Americans. Their significance is accentuated by the consistent support of their adopted country by Americans of Czechoslovak origin. In this country today, there are approximately a million and a half Americans of Czechoslovak ancestry. Ten percent of this number were inducted into the American fighting forces during the recent war. In addition, this number was swelled in the early days of the conflict by a substantial force of volunteers. On January 19, 1942, Vladimir Hurban, Czechoslovak Minister to the United States, opened the then-current War bond campaign by purchasing the first bond. During that same bond campaign, at a conference between Jan Masaryk, son of former President Thomas Masaryk, and representatives of the fewer than 10,000 Americans of Czechoslovak ancestry in Baltimore, a bond drive goal of half a million dollars was agreed upon and later oversubscribed. In our mines, on our farms, and in our factories Americans whose grandparents called the hills of Moravia and Bohemia their home labored and produced for final victory.

And what about the influence of Americans of Czechoslovak origin on all phases of American life? Does your son or daughter go to a large college or a State university? There is not an institution of higher learning in this country which does not have one or more professors of Czechoslovak ancestry. You American travelers—your way has been made easier because of the bridges designed by Gustav Lindenthal. And American music lovers, there are men and women of Czechoslovak descent playing in every major philharmonic orchestra. You thrill to Anton Dvorak's Humoresque and his New World Symphony composed in Iowa. You hear Bedrich Smetana's Bartered Bride and Karel Weis' The Polish Jew at the Metropolitan Opera. You read Willa Cather's My Antonia, telling vividly of Czechoslovak pioneers in America. Wherever you look, wherever you listen, you will find powerful reminders of the effect of Czechoslovak culture on the American way of life.

In my own home State of Nebraska I can point to innumerable instances of the Czechoslovakian contribution to our civilization. The sturdy, reliable, intelligent, and industrious mechanics of Omaha, many of them of Czechoslovak ancestry, helped to turn out the necessities of war as they are now helping to reconvert our country to peace. From the Missouri River to Elgin, from the South Dakota border to the Platte, American farmers whose forefathers farmed Czechoslovakian valleys harvested the crops that fed our fighting men and are today helping to feed Europe's starving peoples.

What I have said of my own Nebraska could well be said of Michigan, of Montana, of the Dakotas, of Iowa, of Kansas, and of Texas.

Why were the people of Czechoslovakia so easily assimilated into the life stream of the United States? For an answer to that question we need go no further than the Czechoslovak declaration of independence of 1918. It says, in part:

> We accept and shall adhere to the ideals of modern democracy, as they have been the ideals of our nation for centuries. We accept the American principles as laid down by President Wilson—the principles of liberated mankind, of the actual equality of nations, and of governments deriving their just powers from the consent of the governed. We, the nation of Comenius, cannot but accept the principles expressed in the American Declaration of Independence, the principles of Lincoln, and of the declaration of the rights of man and of the citizen.

It is not so difficult to understand the readiness with which Czechoslovaks take to American institutions when we realize that what Thomas Masaryk expressed in these imperishable words was the century-old desire of his people to exist and progress under freedom. It is even as Ruth said to Naomi: "Let my gods be your gods and my people be your people." Such kinship of national feeling is, indeed, a rarity, and it cannot be lightly forgotten.

It is symbolic of the unity of our national purposes that Thomas Masaryk married an American girl, Charlotte Garrigue. After her death in 1923 he wrote of her:

> She was absolutely uncompromising and utterly truthful. These two qualities had a great influence on my development. Our whole married life was cooperation.

This was more than a matrimonial union: it was the marriage of two peoples who believed in the common denominator of freedom.

Today Czechoslovakia is 27 years old. But that is only its chronological age. Actually, the Czechoslovak people—united in a common desire for freedom—compose a much older nation. They are as old as a nation as the Czechoslovak, William Paca, who was one of the signers of the American Declaration of Independence. They are as old as a nation as their first forebearer who gave his life fighting the forces of aggression.

We honor the Czechoslovak Nation and the Czechoslovak people on this, the day of their independence. The distinguished past of this people and this nation in their relationships with the United States points the way toward international understanding by its very existence. It is my sincere hope that the past is only the prelude to the united destinies of America and Czechoslovakia.

## Descendants of "Mayflower" Passengers and Scientific "Furriners"

REMARKS
OF
**HON. CHET HOLIFIELD**
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, October 25, 1945*

Mr. HOLIFIELD. Mr. Speaker, some of our superpatriots are quick to yell "furriner" when the name of any foreign-born person is discussed.

Although my ancestors landed in North Carolina before the Revolutionary War, I seldom mention it. Neither do I claim any special credit for their wise decision. In my opinion, people who make a fetish of their ancestry are in the words of Shakespeare, making "much ado about nothing." If I am not mistaken, the Japanese are afflicted with ancestor worship, and look at them now.

Now, it is a fact that the *Mayflower* was a small boat and some mighty fine people had to take a later boat. I even go so far as to say that many foreign-born people who now are American citizens are better patriots than some of the descendents of the *Mayflower* passengers. These people wrap American flags around themselves on every occasion, but deny the principles for which the flag stands. On other point, also, and sad as it may be to some of our superpatriots, it is nevertheless a fact that American-born people do not have the monopoly on brains or maybe I should say mental ability.

I have recently made quite a study on the atomic energy discovery. To those who fancy this to be an American secret discovered by the work of American scientists only, the following list may be enlightening. I might add that the list is incomplete:

FOREIGN OR FOREIGN-BORN SCIENTISTS MOST INSTRUMENTAL IN THE DEVELOPMENT OF THE ATOMIC BOMB

Albert Einstein, German-born American: Pioneer and founder of all the theoretical work in the field. Wrote the scientific formula for the atomic bomb, which in layman's language is "matter-energy," and without which the atomic bomb would not be. Is a Nobel prize winner.

Neils Bohr, Danish: Perhaps the greatest worker in the field of describing the nature of the atomic bomb and also worked on it. Is a Nobel prize winner.

Enrico Fermi, Italian-born American: Nobel prize winner; man who described the neutron. One of the three or four leading physicists on the atomic bomb project.

Leo Szilard, Hungarian-born American: Another of the half dozen leading physicists of the atomic bomb project.

Leise Meitner: now in Sweden.

Otto Hahn: Nobel prize winner for this year. Now in Russia.

Franz Strassman: German.

The above three first actually split the atom in Berlin in 1939.

Otto Laue, German: One of the outstanding physicists of the world. Now in Russia.

Joliot, French: One of the pioneers in this work who went practically as far as the Germans in 1939 and has perhaps gone even further now. An outstanding nuclear physicist.

Madame Eve Curie and husband Pierre, Polish and French: None of the work in this field would have been possible without these two.

Kapitza, Russian: One of the greatest of the atomic physicists; is a Russian who has been working in Russia on this.

Lord Rutherford, English: The great Englishman in this field who first chipped the atom without splitting it entirely.

So in all kindness, Mr. Speaker, I would admonish the "super patriots" to abstain from the errors they are wont to commit and be kind to the next foreign-born person they meet. He might be Mr. Einstein or even one of our own congressional colleagues—even though he was once a "furriner."

## Demobilization of the Armed Forces

REMARKS
OF
### HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
*Thursday, October 25, 1945*

Mr. ANGELL. Mr. Speaker, my mail is heavy with complaints from men who are seeking to get back home from the service. This morning I received the following letter from which I wish to read. It comes from a constituent, a prominent citizen in my district:

While it seems to be quite generally known that the Army is doing a rather bad job of redeployment from the European theater, I did not believe it was quite as bad as indicated in a letter from my son, stationed at Camp Calas (near Marseilles, France) dated October 12, 1945, and received today. I quote from his letter:

"We finally left Camp Pittsburg early on the morning of the 8th and what a miserable time that was. We got up at 1 a. m., fell out at 1:30 for trucks which were due at 3. They finally came at 5 after everyone was thoroughly frozen. These took us 2 miles to the station where we were jammed 70 to a small boxcar while there were plenty more empty on the siding. We were promised more at the next station, but it was 10:30 that night before we got them. With 70 men there wasn't even room to sit and we were all dead tired. When we got the other cars we were still packed tighter than I've ever ridden before, but we did get some rest. It took this French train about 56 hours to make the 500-mile trip (2½ days).

"Now that we're here we have a predicted wait of from 2 weeks to a month before we catch a boat. This staging area is worse in many ways than Pittsburg was, so we aren't having any fun with our leisure—it's dragging worse than ever."

This young man has spent 31 months overseas, all the way from Africa, Sicily, Italy, France, and Germany. One wonders, first of all, why it was necessary to send these men from Reims, France, all the way to Marseilles, while the much shorter route would have been by way of Le Havre. I understand POW's in this country are transported in first-class passenger trains, so it is hard to understand why our men should be herded like cattle in boxcars. Perhaps transportation facilities in France are demoralized, but it does seem that we could give our soldiers better treatment than here indicated.

Mr. Speaker, I hope the officials in charge of demobilization will heed the requests of our men in uniform and their families and the Members of the Congress to speed up demobilization and provide proper facilities to insure the comfort and well-being of the servicemen while being demobilized. I urge that all fathers with young children, all men with 18 months' service, all young men whose education is being interfered with be discharged at once.

## Committee on Un-American Activities Defended by the Lieutenant Governor of Texas

EXTENSION OF REMARKS
OF
### HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
*Thursday, October 25, 1945*

Mr. RANKIN. Mr. Speaker, on yesterday, the Member of Congress from New York [Mr. CELLER] who attacked the Committee on Un-American Activities turned his guns on conditions in the State of Texas, and attempted to paint a picture of horrible conditions prevailing in that proud Commonwealth.

I was at a loss to understand the reason for such attacks, for I knew that neither communism, fascism, nor nazism could thrive in the State of Texas if the blistering sunlight of publicity were turned upon them.

This morning there came to my desk a clipping from the Houston Post, published in Houston, Tex., on October 21, 1945, which contained an article on the Committee on Un-American Activities, written by Hon. John Lee Smith, Lieutenant Governor of Texas.

The article reads as follows:

The American Legion's National Legislative Committee asserts that the Congressional Committee on Un-American Activities has revealed the Communist party plot to seize control of the American labor movement by infiltrating into labor groups. It further asserts that this committee has shown Joseph Curran, president of the National Maritime Union and vice president of the CIO, to be a member of the Communist Party.

Certain so-called "liberal" and "leftist" groups have lost no opportunity to smear the Congressional Committee on un-American activities. This committee is better known as the Dies committee. The fact is this committee was created in 1938 in compliance with a request of the American Legion and other veteran organizations. Due to the concerted efforts of many veteran groups it was made a permanent committee of the House of Representatives in January of this year. A number of Texans, posing as loyal Democrats, have lost no opportunity to denounce the work of this committee.

It would be well for every thoughtful citizen to remember that the bitterest opposition to this committee comes from radical and Communist sources.

A reading of only a partial list of the achievements of this committee as presented by its chief sponsor—the American Legion—will show why the radicals of every sort lost no opportunity to attack the committee. I quote only a partial list of its work as submitted by the national legislative committee of the American Legion.

"1. Exposed Communist group instigation in several labor disturbances.

"2. Disclosed that the German-American bund was foreign-backed with the result that Fritz Kuhn and James Wheeler Hill, bund officers, were convicted of subversive activities.

"3. Disclosed the Communist party plans to seize control of the American labor movement by infiltrating in labor groups.

"4. Revealed the American Youth Congress as Communist-controlled.

"5. Exposed the Transocean News Service, American Fellowship Forum, German Library of Information, and the German Railway Agencies as channels for distribution of Nazi propaganda.

"6. Investigated and exposed the Kyffhauser bund as an organization of former German soldiers and officers doing propaganda work.

"7. Exposed Joseph Curran, president of the Maritime Union and vice president of the CIO as a member of the Communist Party.

"8. Revealed Communist activities within the American Newspaper Guild, and in the California aircraft industries.

"9. Built up a complete file on fifth-column organizations containing the names and records of hundreds of thousands of individuals.

"10. Investigated and exposed Communist Party fraud in obtaining signatures to nominating petitions used in the 1940 elections with the result that party officials were indicted in several States and party candidates ruled off the ballots.

"11. Exposed the activities of Harry Bridges, Fascist leaders James E. Campbell, George Deatherage, and Charles Hudson, and Silver Shirt leader William Dudley Pelley."

During the long fight it has made to defend the American way of life it has been the target of Pacifist, Communist, and Communist-sympathizing critics. Most bitterly was it attacked recently when Representative RANKIN was urging its continuance.

It is to be seen from this brief synopsis of the committee's accomplishments why the Communists and the Communist-sympathizers have so viciously attacked the work of the committee.

It has furnished the Nation with ample evidence that Joseph Curran, prominent CIO leader, is a Communist.

It has shown that the American Newspaper Guild, nest of many radical writers, has been steeped in Communist activities.

The committee has clearly shown that communism seeks to dominate America by gaining control of the labor movement. In this connection it is the part of wisdom to remember the Political Action Committee of the CIO, which, according to one of its prominent members, W. M. Aikin, has a warchest of $60,000 to back CIO favored candidates in the next Democratic primary in Texas.

Congress is entitled to congratulation on its act in making permanent the Dies Committee. So long as it is in existence every little sleazy Communist and his well-wishers will rest uneasy.

JOHN LEE SMITH,
*Lieutenant Governor, State of Texas.*
AUSTIN, TEX.

## Compulsory Military Training

REMARKS
OF
### HON. HENRY D. LARCADE, JR.
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, October 25, 1945*

Mr. LARCADE. Mr. Speaker, before and since my election to the Congress I have consistently taken the position that, in my opinion, our country should take the necessary steps for our protection so that we will not again be caught in the helpless position in which we found ourselves at the beginning of World War I and World War II.

Mr. Speaker, only through the grace of God have we survived through this period, and world developments since VE-day have further convinced me, and further confirmed by judgment, that, notwithstanding that our Nation is a peaceful people, and we believe that other nations should also be permitted to live in peace, unmolested, and work out their own determinations, and notwithstanding the efforts of our great leaders to bring about such a utopia, the future is not bright in that respect. All over the world there is unrest. Power politics continue in Europe. It appears that those "who get there fustest with the mostest" propose to keep the "mostest."

Mr. Speaker, we all decry this situation. However, I believe it is our duty to our country not to permit our people to again lull themselves into the condition of false security. It should not be necessary to call to the attention of our country, again and again, that an aggressor nation, girded for conquest, preparing over a period of years, invade and subjugate weak countries at will, and almost conquer all of Europe. In the East we had the same terrible experience—another nation conquered nearly all of Asia and attacked this country, which was totally and pathetically unprepared.

Mr. Speaker, we must not be caught in that position again.

Our President has appeared before us and has placed the responsibility on us. Anyone who is fair-minded will heed the warning. We have only to read between the lines of the warning of our President to realize the seriousness of the situation. We must act. We must take the necessary steps to protect ourselves and our country. We all realize that any kind of compulsory military training is, and will be, unpopular. A great President said, "There is nothing to fear but fear itself."

I do not believe the mothers of the sons of the United States want to live in fear. Would it not be better for the mothers to go to sleep at night knowing that their sons are ready and able to protect themselves, their families, and their country?

## Full Employment and Minimum Wage Bills

EXTENSION OF REMARKS
OF
### HON. ANDREW J. BIEMILLER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
*Thursday, October 25, 1945*

Mr. BIEMILLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I am including the following statement recently issued by the executive council of the American Federation of Labor on the full employment bill and the minimum wage bill:

Two postwar measures of vital concern to the Nation's workers and strongly endorsed by the American Federation of Labor are experiencing rough sledding in Congress. They are the full employment bill and the amendment to the Wages and Hours Act which would lift the statutory floor under wages to 65 cents an hour.

True, the Senate passed a full employment bill. But it was so weakened by amendments, so hamstrung by reservations, that its effectiveness in present form is doubtful. Senate Majority Leader BARKLEY summed up the disappointment of the sponsors of this legislation when he said the bill as passed merely says that a worker has the right to a job—if he can find one.

Hearings on this legislation in the House are now drawing toward a conclusion and an effort will be made to restore the legislation to some semblance of its original meaning and intent when it comes up for a vote.

The executive council pledges the full support of the American Federation of Labor to this move.

It seems inconceivable that there should be any serious objections to making full employment a national policy. The legislation seeks to promote full employment by encouraging private industry to expand and make the most of its opportunities. It can in no sense be called a spending bill because it authorizes public works only when private investment falls short of the Nation's needs.

The pending amendments to the Fair Labor Standards Act, setting 65 cents an hour as the new minimum wage in interstate industry, are encountering serious opposition from interests which seek to perpetuate a low-wage economy in certain sections of the country.

This narrow-minded viewpoint must not be permitted to prevail. The postwar prosperity of America depends upon a high volume of purchasing power among wage earners. By keeping wages from falling below $26 a week for 40 hours of work, we can assure a great domestic market for the products of American farms and factories. If millions of Americans cannot afford to buy food and clothing or obtain decent housing, all Americans will suffer.

Some enlightened employers are beginning to realize this unchallengeable economic truth. They learned during the war that profits can be more certainly assured by keeping production high than by keeping wages low. They are now showing increasing reluctance to support the position of unfair competitors who are unwilling to pay decent wages, regardless of the interests of the Nation.

Labor welcomes support from every source. We are determined to rally the full power of the American Federation of Labor and the backing of public opinion for prompt enactment of this vital legislation.

## Army Discharge Policy in India

EXTENSION OF REMARKS
OF
### HON. MIKE MANSFIELD
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, October 25, 1945*

Mr. MANSFIELD of Montana. Mr. Speaker, I am in receipt of two letters from American servicemen in India, who are just as anxious as their buddies located in other areas to be returned to civilian life. The men in India, as well as those in Burma, China, and Korea, are entitled to every possible consideration in this matter and, in my opinion, they should be returned to the United States at the earliest opportunity. The C. B. I. was the forgotten theater during the war but that policy should not be continued into the postwar period. Now, with the proposed suspension of over-the-hump service, with our withdrawal from the Stilwell Road, and with the need for our remaining troops in the C. B. I. long since past, I think it is high time that we withdraw from that area immediately.

Mr. Speaker, I will continue to do my very best to help bring the earliest possible withdrawal of all our troops from the Far East, Japan excepted. Let us all keep faith with these men and give to them the opportunity to return to civilian life. I should like to call to the attention of the Congress the longer of the two following communications because it will give you, as it gave me, food for thought. I also intended to take up with the War Department the questions raised in these communications so that all possible action can be taken in behalf of the men in the C. B. I.

FORTY-EIGHTH DEPOT
SUPPLY SQUADRON,
*APO 492, Postmaster, New York, N. Y.,*
*October 16, 1945.*

Hon. MIKE MANSFIELD,
*Representative, Montana, House of Representatives, Washington, D. C.*

DEAR MR. MANSFIELD: I am writing to you because of your publicly expressed interest in the release of military personnel from the Orient. It is the feeling of the great majority of enlisted men and officers stationed at the Bengal Air Depot, near Calcutta, India, that boondoggling on the part of high-ranking officers is responsible for unnecessarily keeping large numbers of personnel here. These high-ranking officers are attempting to perpetuate themselves in their office. For the most part they are Regular Army officers and officers who intend to apply for commissions in the Regular Army. To them it will make no difference where they serve—and then it is to their advantage to serve overseas for many reasons. Some are afraid to face the rigors of civilian job hunting, knowing that they will never command the same salaries as they are now drawing; others realize that never again will they have the same authority and responsibility as they now possess in the military. Thus, these men in high position are doing everything within their power to retain personnel under their command Let me cite some facts to prove this contention.

Two months after the war's end, only one out of 29 classes of Air Corps property has had any decision rendered as to its disposition. There is a systematic and thorough slowing-down process, conflicting orders, daily rescinding of previous orders—complete lack of any coordinated action toward closing down of Army installations here. A good share of this property was made obsolete long before the war's end by adoption of new type planes, advances, and modifications. Yet no one will give any order or make any decision as to its disposition.

Calcutta has been designated as one of the main supply points for Shanghai, although it is nearly half as far by water from Calcutta to Shanghai as it is from the United States to Shanghai. Depots having the same type of supplies are being dismantled in the Pacific islands, much nearer to Shanghai.

Today marks the beginning of the third month since Japan surrendered. During the time elapsed, not more than a third of the 3,500 men stationed at this depot could lay claim to the fact that they have done an honest day's work. If the men who set the war policy were as anxious to close up this theater as they were in their vigorous prosecution of the war, such useless waste of manpower would never exist. A survey of the depot now still shows men sitting around, doing nothing. This was admitted by the commanding officer of the depot, who has suggested that men without jobs be put on guard duty—the equivalent of cutting the grass with bayonets. We are dismissed from work daily at 4:30 o'clock. We are given Wednesday afternoons off as well as all day Sunday. Junior-grade officers and enlisted men alike would be delighted to work 18 hours a day, every day, if we knew it meant the prompt closing of the installation. The job can be done in 2 months, but the latest authentic information is that the field will close in the middle of March 1946, five long months from now.

If we were convinced that it would take 5 months to close up our business here, there would be no beefing. But we are far from convinced. We are sure that there is an abuse of power and authority, a desire on the part of certain general officers and their staffs to perpetuate themselves for as long a time as possible at our expense. We realize this is a serious charge but playing with our lives is far more grievous.

Can you help us?

With every best wish, I am,

Cordially yours,

---

BARRACKPORE, BENGAL,
*October 14, 1945.*

MIKE MANSFIELD,
*House of Representatives,*
*Washington, D. C.*

DEAR MIKE: The enclosed clipping was taken from the Sunday Statesman of Calcutta this morning.

Words cannot express our gratification at the realization that someone in the States besides our families are interested in our return.

Thanks.

(Signatures omitted.)

## Maj. George Fielding Eliot's Views on Atomic Energy

EXTENSION OF REMARKS
OF
**HON. CHET HOLIFIELD**
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, October 25, 1945*

Mr. HOLIFIELD. Mr. Speaker, under leave to extend my own remarks, I include therein a portion of the remarks of Maj. George Fielding Eliot. These remarks are on the all-important subject of how to approach the atomic energy problem. I favor presenting as many views as possible on this subject, in order that the public may be informed.

Major Eliot's remarks follow:

There are certain things we can do now with what we have. There are certain things we should not try to do until we have facts on which we can base intelligent decisions. We have two basic problems: To establish a workable system of world security, and to survive while we are doing it.

A sensible security program might include these steps:

1. Get the various agencies and organisms of the United Nations Organization operating as soon as possible. Within that framework, begin (as the first order of business) discussion of a general agreement on limitation of armaments, with special reference to atomic weapons, rockets, guided missiles, and other things of that general type, and a provision for the Security Council to have the right to make inspections anywhere any time without anyone being able to veto such action.

2. Meanwhile come to a decision as to the domestic control of atomic energy and talk the whole subject over with our present atomic partners, Britain and Canada, in the hope of reaching a common viewpoint.

3. Postpone all legislation on the reorganization of our armed forces until we know where we stand in the international field, and use the time interval for a comprehensive, impartial survey of our military policy by a commission of top-flight civilians. This is necessary anyway in order to avoid piecemeal decisions.

A NATIONAL POLICY COUNCIL

4. Set up a national policy council at the highest level (President, Secretaries of State, War, and Navy, plus some form of congressional participation in making policy), with a permanent secretariat and with responsibilities established by law for keeping our foreign and military policies in true balance.

5. Create a first-class national intelligence service, reporting directly to the President and the policy council. We must have accurate and timely information of what goes on in this troubled world. Facts are the only basis for wise decisions.

6. While we are working out these problems, let us keep in hand sufficient margins of military and naval power, supported by industrial organization and by scientific research, so that any breach of our peace will appear suicidal to potential enemies.

These are not spectacular or dramatic suggestions. They will hardly be satisfactory to those who want the whole problem of security to be solved by tomorrow morning. But they form a connected program which seeks to make the best use of what we have while trying to find out how we may progress to better things. The lessons of history suggest that human beings will make durable progress forward and upward in the future, as in the past, only in one way: step by painful step.

## We Must Act Now

EXTENSION OF REMARKS
OF
**HON. HENRY D. LARCADE, JR.**
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, October 25, 1945*

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks, I wish to submit for publication in the RECORD a copy of an editorial from the Washington Evening Star, of date October 24, 1945, as follows:

WE MUST ACT NOW

President Truman has stated the case for universal military training in a thoroughly admirable message to Congress. Every American, whatever his present views on the subject, should make it his business to read the message, for it presents the arguments in behalf of the training program with a degree of earnestness, clarity, and logic which compels respect and defies challenge.

There have been other messages to Congress on this little-understood subject. But in this one, for the first time, the issue is met squarely and courageously. Mr. Truman pointed out that the training program would be productive of a variety of benefits—educational, physical, moral, and spiritual. "But," he continued, "the basic reason for universal training is a very simple one—to guarantee the safety and freedom of the United States against any potential aggressor. The other benefits are all by-products—useful indeed, but still byproducts. The fundamental need is, and always will be, the national security of the United States, and the safety of our homes and our loved ones."

That, in a very few words, sets out the reason why this country must train its young men or run the risk—and it is a very real risk—of being defeated and destroyed in another war.

There is hope now that the world has learned its lesson and that the nations will organize to maintain the peace. Initial steps toward this end have been taken, and the United States will support this effort with every means at its command. Nevertheless, we cannot ignore the fact that aggressors filled with the urge to conquer peaceful nations have been turning up with disconcerting regularity since the dawn of civilization. And neither can we close our eyes to the international frictions and rivalries which have sprung up so quickly in the wake of this war. Plainly, as of today, this is a world in which no nation can have assurance of safety unless it is ready and strong in its own right.

The President has said, and he is manifestly correct, that never again can we count upon the luxury of time in which to get ready for war. Another conflict would burst upon us without warning and the aggressor, profiting from the lessons of this war, would strike first and in great force at the industrial heart of the United States.

There are two known ways in which we can meet this danger. One is through the maintenance of a large professional Army and Navy. But that would be too costly in terms of money, too wasteful in terms of men, and, perhaps, a real threat to our free institutions. The alternative is the one which President Truman recommends—a comparatively small Regular Army, Navy, and Marine Corps, a greatly strengthened National Guard and Organized Reserve, and a General Reserve composed of all the male citizens of the United States who have received training.

This General Reserve would not be a part of the armed forces, and, in time of emergency, it could be called to service only through act of Congress and on a selective basis. Yet, if war should come, the Reserve would be there, substantially trained and ready for quick mobilization—two big facts which would tend to discourage attack, and, more importantly, enable us to repel an assault if it should be made.

There are influential groups which oppose military training, but they have offered nothing in support of their position except what the President bluntly describes as "pious hope and dangerous wishful thinking." These groups argue for delay, but the time has come to act. The President advocates a program which, in the Star's belief, is literally essential to the security of the Nation. If the opponents have any constructive alternative, the people of this country have a right to demand to know what it is.

## Information, Please

EXTENSION OF REMARKS

OF

### HON. WALT HORAN

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

*Thursday, October 25, 1945*

Mr. HORAN. Mr. Speaker, under unanimous consent to extend my own remarks in the Appendix of the RECORD, I am pleased to include an editorial from the Spokane Chronicle entitled "A Bad Time To Talk Spying."

This editorial is indeed timely. It comes at a time when we see information and more information regarding the conditions in both the conquered and the liberated countries of Europe and Asia.

We want all of the information we can get—as to crops, health, demobilization of the Allies and remilitarization of the liberated countries, and much other data.

We hear, already, of secret trade pacts and secret political treaties.

Light, not the darkness of stealth, will promote peace.

Obviously it is no time for our great Nation to talk spying.

The editorial referred to follows:

A BAD TIME TO TALK SPYING

If General Marshall feels that the United States is in need of a superintelligence service to carry on world-wide espionage he should not have made his wishes public.

The general is a highly respected and beloved American and his words carry the stamp of genuine Americanism, but his spy recommendation to Congress Thursday in requesting unification of the services could hardly have come at a more inopportune time. Statesmen of the world are trying manfully to come to some sort of agreement to outlaw war. They are trying to build this understanding on world-wide good will and trust. What a slap in the face to the other nations to have a top-flight American make open recommendation for a world-wide spy system!

The "over the coffee cups system" of intelligence which America has used may have been inadequate, but it could not have prevented World War II, in the face of Allied apathy. There was nothing secret about the threatening developments that led, unchecked, to the war. It required no spy system to see whither Germany and Italy were moving. Britain and America ignored them. America apparently knew of the coming storm at Pearl Harbor, but ignored that, too, right down to the last warning when the noncommissioned officer heard the Jap planes approaching and was snubbed. If we could not see a threat of war in the scrap metal and oil stock piles Japan was building, if no suspicion was aroused by the Jap moves in Indochina and China proper, what could spies have done?

No great nation could ready itself for war now without the world's knowing it, if each country opened its doors to a free press, free speech and free travel. That would do away with the need of gumshoe tactics and certainly would result in a better foundation for lasting peace.

## Relief of Distressed Peoples

EXTENSION OF REMARKS

OF

### HON. CHARLES R. ROBERTSON

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

*Thursday, October 25, 1945*

Mr. ROBERTSON of North Dakota. Mr. Speaker, it has long been a national policy of the United States to view with deep sympathy peoples in distress regardless of the country in which they live. This policy on the part of the United States has won for us ever-increasing admiration throughout the world.

Today in many sections of the Old World thousands of people are on the threshold of starvation. As a nation we promised relief. And more than that, we made available funds by the action of this Congress for that program.

I recognize that there are many political leaders in sections of Europe whose faith we might rightly challenge. It is not improbable that there are some instances where they are misappropriating food and supplies being sent to their country for their own political ends.

It may be necessary to make certain improvements in the policy of the United Nations Relief and Rehabilitation Administration or certain additions of staff to see that things reach the common people. After all it is not the politicos and puppets who face death for lack of food, clothing, and medicine. It is the little people. I feel we must help them as we promised, at least to get through this first difficult winter.

Under unanimous consent, I include with my remarks an editorial taken from the Washington News of Wednesday, October 24, 1945, which clearly and intelligently reminds us of our responsibility, the title of which is "We Promised Relief":

WE PROMISED RELIEF

Almost a month has passed since Director General Lehman, of UNRRA, warned that a shortage of funds threatens to break the relief line to hungry Europe. Still Congress has not acted on President Truman's repeated appeals. According to official estimates, 180,000,000 of our allies are already near the edge of starvation, with winter closing in and worse conditions ahead. Surely it is not the desire of Congress or of the American people to ignore this desperate need.

The $550,000,000 requested was authorized by Congress last year but never appropriated. Next year, when UNRRA hopes to finish its work, an additional one and one-third billion dollars will be required to make up our original international agreement to give 1 percent of the national income for foreign relief and rehabilitation.

This does not go to former enemy countries. Most of the western European allies are able to pay. So, apart from China, the relief goes to the liberated eastern and southern European countries where the need is greatest.

Many of the supplies can come out of farm surpluses in the United States, and thus accomplish the double purpose of stabilizing the American economy while giving relief abroad. Other supplies can come from United States Army surpluses piled high in Europe, which cannot be returned to this country and which already are deteriorating.

We are aware that Russia made matters worse in eastern Europe by carrying off livestock and some supplies, and that her puppet regimes are trying to get their hands on relief supplies for political purposes. This should cause Congress to insist on stricter international supervision and all possible safeguards. But this problem is not sufficient reason for withholding relief.

After all, it is not the politicos and puppets who face death for lack of food, clothing, and medicine. It is the little people. We must help them as promised.

## Militarism on the March

EXTENSION OF REMARKS

OF

### HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Thursday, October 25, 1945*

Mr. REED of New York. Mr. Speaker, President Truman is the victim and tool of the warmongering internationalists who believe in war, promote war, and who now seek to fasten militarism upon the

people. Under leave to extend my remarks, I insert the timely article by David Lawrence, published in the Washington Star October 24, 1945:

WAR-TRAINING PLAN LINKED TO MILITARISTS—TRUMAN SHORT-SIGHTED ON HIGHER EDUCATION NEED, SAYS WRITER

(By David Lawrence)

President Truman has swallowed hook-line-and-sinker the militaristic approach to universal military training. He has accepted the plans of the high-ranking generals and militaristically inclined civilians in the War Department who believe that it is desirable to interrupt higher education for military purposes even in time of peace.

Instead of proposing a plan that would make it optional for the boy to take one year's training any time between the ages of 18 and 24, the President accepts the War Department's proposal that between high school and college all boys must interrupt their studies and spend a year in a military camp. This proposal will never be accepted by Congress if the liberals of the country and the persons who believe in higher education become vocal about it.

The only answer that some of the War Department experts have at times made to the point is that it isn't democratic to worry about college educations. This is but another way of saying that it isn't necessary to develop doctors or dentists or scientists or any of the other professional groups so essential to American life.

CITES DOCTOR SHORTAGE

The shortage of doctors today in civilian communities is due directly to such short-sightedness by the military chieftains. As for the future, there is to be a shortage of medical men for many years to come so that even the veterans with recurrent disabilities are going to have a hard time getting medical care in the next several years.

There are some educators who have been persuaded to take the War Department's view of military training, but they are a minority. It has been contended by most of the others that when a boy graduates from high school he should go ahead with his college education because the 1-year interruption gets him out of the habit of concentration on studies and even may require refresher courses to recover ground in some of the interrupted studies.

The Army has not considered a boy of 23 or 24 unfit for training. In fact, during the war this was considered a desirable age bracket for making noncommissioned and commissioned officers. So, if the proposal were to permit boys to take the year of training any time between 18 and 24, some who were not going to college could take the year early whereas others could take it after their college courses.

The President repeats in his message to Congress the same illogical arguments that the Army chiefs have made before. He says:

"The argument has been made that compulsory training violates traditional American concepts of liberty and democracy and even that it would endanger our system of government by creating a powerful military caste. The purpose of the program, however, is just the contrary."

A SYSTEM OF TEACHING

Mr. Truman may not know it, but no militarist ever conceded a militaristic purpose. The development of a military caste cannot be prevented just by stating that there isn't any intention to develop one. Militarism is a state of mind and a system of teaching which can easily be foisted on the youth of America as it was on the youth of Germany. If boys are taken at an impressionistic age and taught the latest methods of killing, it is not likely that their professional officers will fail to tell them how to hate and how to bayonet their potential enemies—as was done during the war by a voluminous literature called indoctrination.

"The objective," says the President, "is not to train professional soldiers. It is to train citizens, so that if and when the Congress should declare it necessary for them to become soldiers, they could do so more quickly and more efficiently."

It is difficult to see the President's distinction, and it would have been better to acknowledge that the purpose is to train soldiers and make the best soldiers America can produce. But this can be done as well with boys of much more mature age and with a system of civilian supervision to avoid militaristic teachings than by entrusting the task to the military departments.

HINT OF MILITARISM

A hint of the militarism that lurks in the proposal is to be found in the following paragraph of the President's message:

"Under the plan which I propose, provisions should be made within the armed services to help trainees improve their educational status."

Presumably under such a plan the Army would be hiring teachers away from the colleges and high schools and this would mean an entire educational system overlapping the civilian educational system. The President adds:

"The period of training could well be used * * * to develop in our young men the ideals of responsible American citizenship."

This is a large order. Not a single textbook the Army got out during the war on this subject was free from criticism, because opinions differ on what constitute "ideals." The President admits, moreover, that the emphasis isn't going to be on "mere drilling" any longer or on calisthenics, but "on the use of all the instruments and weapons of modern warfare."

The business of organized killing may be over for the time being, but the training to do more killing apparently must go on.

## Put an End to the Draft

EXTENSION OF REMARKS
OF
### HON. J. EDGAR CHENOWETH
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
*Thursday, October 25, 1945*

Mr. CHENOWETH. Mr. Speaker, I have introduced H. R. 4431 to terminate the Selective Training and Service Act of 1940, as amended. This was a wartime measure. I feel there is now no military necessity which justifies the continuance of this law.

I am advised that during the month of September 51,900 persons were inducted into the armed forces under this act. Of this number some 35,000 were boys and had just reached their eighteenth birthday. Another 10,000 were boys 19 and 20 years of age. In other words, about the only persons being inducted were these 18- and 19-year-old boys.

I had an 18-year-old boy in my office just this week who was compelled to leave Yale University and return to Colorado to wait for the draft. He had just finished his first term and was anxious to continue. However, so long as this law is in force no boy who is 18 or over can make any plans for his education. These boys are in constant suspense while waiting to be called.

I have a letter from a friend in Colorado advising of one case where a boy quit college when he became 18 and returned home to wait for the draft. He lost 3 years of college while waiting to be called, although anxious to serve his country in time of war. Surely no such situation should exist now that we are at peace.

It seems so unnecessary to deprive these young men of their education. Congress very reluctantly gave its consent to take these boys during the war period. We were told it was necessary to win the war. Now that the fighting has stopped we should immediately repeal this act, as it now appears that we will be able to get all of the men required through voluntary methods under the new enlistment bill just passed.

I cannot believe that the War Department wants to send these young boys to police the occupied countries. Certainly more experienced and mature men should be selected for that duty. Those who are now enlisting are trained soldiers and can be sent immediately to the occupation areas. I wish also to call attention to the statement made recently by General Marshall that it will not be possible to bring all of the men home from overseas until next June. So until that time the need for men will not be so great, and I predict that within 6 months we will obtain a sufficient number of men to fill all requirements.

I believe also, Mr. Speaker, that some consideration should be given the thousands of patriotic and loyal citizens over the country who have rendered such a valuable and unselfish service by serving on the local selective-service boards. These boards should be relieved of the responsibility of filling monthly quotas, which is becoming a most difficult assignment. I am sure they do not relish the idea of continuing to take these 18- and 19-year-old boys out of schools now that we are at peace.

I wish to include an editorial from the Colorado Springs Gazette, as follows:

PUT AN END TO THE DRAFT

Five months after the end of war in Europe, 2 months after the defeat of Japan, and with more men in uniform than the services know what to do with, youths are still being drafted for military duty at the rate of more than 50,000 a month. The Army says it is necessary in order to release the men who fought the war. The suspicion is that it grows out of the desire to perpetuate conscription.

Representative CHENOWETH denies necessity. He says that voluntary enlistments in the Army are running at the rate of 1,500 a day and may be expected soon to increase to 2,000 a day. He declares "it is quite obvious that we do not need to continue drafting 18- and 19-year-old boys," and he has introduced a bill to halt conscription.

Mr. CHENOWETH seems to be borne out in his view by Vice Adm. Louis E. Denfeld, Chief of Navy Personnel, who told the Senate Military Committee that voluntary enlistments were so satisfactory that the Navy henceforth would ask only "token" numbers of draftees.

What purpose do "token" levies serve beyond mere maintenance of the system?

The Navy aims at a permanent strength of 500,000 enlisted men. The Army has set its sights many notches higher. It remains for Congress to say what the size of the Military

Establishment is to be. The certainty is that the country cannot maintain itself as an armed camp, if for no other reason than that it has not the money. Neither will it long tolerate the drafting of men for the maintenance of armies abroad. The Army's current idea of urgent need is based on the continuance of such forces in large number.

The necessarily slow process of demobilization gives assurance of adequate armed forces for immediate purposes and soon there will be only limited requirements. There is nowhere an organized enemy force to consider. The occupation of Germany, for instance, could be effected with one or two divisions. It is now merely symbolic. Heavy replacements are not needed, and the yanking of youths out of high school and college for military service is as lacking in reason as it is arrogant.

Representative CHENOWETH is justified in demanding an end to the draft. He should find wide support in Congress and clearly has it among the people.

## Signs of Trouble Are Seen Abroad

EXTENSION OF REMARKS
OF
### HON. HENRY C. DWORSHAK
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
*Thursday, October 25, 1945*

Mr. DWORSHAK. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include herewith an interesting report by Representative KARL E. MUNDT, of South Dakota, who returned recently from a tour of 20 countries of Europe. This report appeared in the Daily Argus, of Sioux Falls, S. Dak.:

MUNDT SEES SIGNS OF TROUBLE IN COUNTRIES AROUND MEDITERRANEAN—CIVILIZATION END POSSIBLE WHERE BEGUN—WAR CLOUDS DECLARED VISIBLE IN ARAB NATIONS, BALKANS, SPAIN

(By KARL E. MUNDT, Congressman, First District)

A blue sea with a red rim. Many a song and fabled story has been written about the blue Mediterranean. And seen from a plane on a clear day, it is as blue and as beautiful as its most enthusiastic admirers have described it. But, more than any other body of water, the Mediterranean Sea is surrounded by a red rim. And unless men mend their methods, that shore line may run red with human blood once more. Unfortunately, such a floodtide of red has a fatalistic tendency to spread—within the past quarter of a century it has twice extended to distant American shores.

Civilization was born on the shores of the Mediterranean Sea at the point where the great Nile River of Egypt sprays itself out through fertile delta land to the sea. The great Christian, Jewish, and Mohammedan religions had their origin and sustain their shrines in this same area. Here, too, is the great Vatican City in Rome. In this area archeologists tell us, human and animal life had its first existence and in the south of what is now known as Iraq they take you to the site of the Garden of Eden. Yet along the shores of this great sea and the lesser seas branching off from it, more wars have been fought for more different reasons than in any other region of this earth. Like civilization, life, and religion, it seems that war, death, and pestilence have selected this comparatively small and reasonably remote area in which to originate and thrive. Judging from what one sees and hears in this locality today, the end is not yet. Trouble is still brewing its wicked broth on this red rim. And with the age of atomic warfare upon us, it may well be that civilization will create its doom where it had its dawn unless real statesmanship in many high places moves promptly and positively to avert it. The straws in the wind indicate that wise action is needed here now.

STRAWS IN THE WIND

What are these telltale straws of woe and war? In at least two areas of the blood-soaked shores of the Mediterranean (the Arab countries and the Balkans) war clouds are already visible and in a third area (Spain) some political forecasters see stormy weather ahead. Let us consider briefly the two trouble areas our committee has been permitted to study analytically.

THE ARAB COUNTRIES

On dark nights, some rifle shots have been heard during our studies here between Arab partisans and Jewish partisans each passionately believing that Palestine is their rightful heritage. The controversy is white-hot. Should the Jews be given Palestine as a homeland and an independent Jewish state or should the Arabs be permitted to retain it as part of what they call their Arab world? Great Britain, having precipitated the controversy during World War I, has been exercising a mandate over Palestine. Great Britain has been at different times first on the Jewish side and then on the Arab side of the question. She now wants to refer the problem to the United Nations. Nineteen hundred and forty-four was to be the year of decision on the question but nothing has been definitely decided. Neither side is satisfied. Accusations fly fast and furiously. There is acute danger of a widespread Arab uprising and of bloodshed. The Jews, too, have arms and their case has merit.

To add to the powder-packed situation is the fact that many Arab states, Iraq, Saudi Arabia, Lebanon, Syria, as well as Egypt and Iran, want independence and complete freedom from British, French, or Russian domination. Neither do they desire American domination. Each of these four great powers has economic interests in the Arab world; each in one way or another—America included—is playing a dangerous game in dominating or directing certain aspects of the national life of one or another of these countries whose passion for independence smacks a bit of the Americanism of 1776.

At the moment, America is the most popular outsider in this area. In some respects we are the smallest offender but in one regard—I am sorry to have to report—we are the most flagrant.

Should uneasiness and restlessness and resentment break out in warfare and should each "guardian" big power help its "ward," the interests of the great nations might well clash and another small war swell into a global conflict. It is a situation for which a workable and equitable remedy must be found. This reporter and his committee will make some recommendations to President Truman and our Foreign Affairs Committee when we return. Following that, this column will report to you on our suggestions.

THE BLOODY BALKANS

Among the Balkan countries, too, we found great powers using little nations almost like pawns upon a chessboard. Here, too, uneasiness is the order of the day. America is less directly involved in the bid and barter game of the Balkans for economic and political advantage but the results of bad guesswork and guerrilla warfare might whip out to engulf us in conflict again as they did in 1914. It must be remembered, too, that in Balkan-adjacent Italy World War II had its basic beginning when men of Mussolini crossed the Mediterranean and invaded Abyssinia. This witch's brew which today intoxicates the Balkans is a potent poison.

Thus far, United Nations conferences and charters have neatly dodged the underlying factors of discontent in the Balkans. But the impacts of the difficulties, the rivalries, the jealousies, and the manipulations cannot be permanently dodged. We must face up to them. Pretty phrases on a printed page are not enough to solve problems which have incited endless wars.

If public men and potent nations permit the blue Mediterranean again to run red with blood, the pyramids may well mark the end as well as the beginning of man's conquest over the serenity of Nature. This may well be man's last opportunity to use reason boldly instead of chance in the business of ruling the affairs of nations.

DIVIDENDS

The United States today is rich in dividends of friendship around the world. We should utilize these dividends now; our leadership, our sound judgment, our sense of fair play, our insistence at times should be brought into play in trouble areas before they develop into war zones. Positive action now can prevent punitive expeditions tomorrow. Unused, these dividends mean little; but utilized, today, they can mean very much indeed.

## Letter to the President

EXTENSION OF REMARKS
OF
### HON. ROBERT HALE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
*Thursday, October 25, 1945*

Mr. HALE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

SEPTEMBER 28, 1945.

THE PRESIDENT OF THE UNITED STATES,
*White House, Washington, D. C.*

DEAR MR. PRESIDENT: I am taking the liberty of sending you an article which has recently been written by Paul Mallon. It outlines in part a social disease that is spreading over this country like wildfire, and which is the culmination of the political and social philosophies of our national Government of the past 13 years.

Briefly, I am an Independent voter. I voted for Roosevelt in 1932 and against him ever since. My opinions are not those of an old-line Republican, and therefore may be read with the knowledge that this letter is not a name-calling, reactionary document.

Before the New Deal—and I use the phrase in a descriptive manner only—the old Republican line politics was to protect the few at the expense of the many. And the few were allowed to be crooked, industrialists or bankers as the case may be, all with the charming protection of being "rugged individualists." The country was backward in terms of a sound social philosophy. The big boys had things pretty much their own way. But at least the backbone of our country, the millions of little people, were honest and sound. The country as a whole reflected the innate honesty, self-respect, and responsibility of the average citizen.

After 13 years of New Deal philosophy and action, I am terribly fearful that the average citizen has been taught that all his problems are to be solved by the Government. He has a right to education, a right to work, a right to unemployment compensation, a right to organize, a right to strike, a right to social security, a right to medical care, a right to do this and to have that, but nowhere has there been the slightest emphasis on any responsibilities to match those rights. We are

about to be faced with the curse of this national disease. We are a Nation of grabbers, cheaters, liars, and lacking in self-respect to the point of being all too willing to be supported by our Government. We are willing to be supported in all these things, so long as we don't have to work out its responsibilities. We are becoming a Nation of weaklings, willing to grab all the benefits that organized minorities can force out of the Government, the methods used to obtain such benefits based upon threats of strikes, of chaos, or political revenge. This, in turn, encourages other groups to use the same methods, because at no time has there been a governmental head with sufficient honesty, integrity, and courage to face the real issues at stake and to really represent all the people of this country. It has been a spectacle of rats gnawing at the very foundations of our democracy, each being interested in filling its own belly, regardless of the rights and privileges of all.

This is what you have inherited, Mr. President. If you disagree with my thoughts, it must be because you believe the trend of our citizens appreciating their responsibilities of citizenship have increased since 1932, rather than otherwise. If you agree with me that the situation has deteriorated, then it is imperative that countermeasures be taken to correct and cure the evils that have caused the disease. To do nothing, to be "political," to depend upon the expediencies of the moment is to invite disaster. Those are the causes of our present plight.

The fortune wheel has made you President. You have been hoisted to heights of prestige and power that must make you dizzy to contemplate. You are at the summit. You can go no further. You now have the rarest opportunity that has come to any man for generations: to have the courage, the supreme integrity to be the President of the people, rather than the President of minority pressure groups. Only the President of the people can redirect the thinking and philosophy of our country back to the virtues we must attain if our freedom is to be assured. We must again realize that our responsibilities of citizenship must equal our rights of citizenship. Failing in that, we lose all rights, all freedom.

Respectfully yours,

DONALD A. FOWLER.

## A Scientist's Views on the Atomic Bomb

EXTENSION OF REMARKS
OF
### HON. WILLIAM A. ROWAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
*Thursday, October 25, 1945*

Mr. ROWAN. Mr. Speaker, Prof. H. I. Schlesinger, of the department of chemistry of the University of Chicago, in a letter which I have just received gives his views on the future of the atomic bomb and the consequences which might result from the passage of the May-Johnson bill, S. 1463. His letter is herewith presented:

THE UNIVERSITY OF CHICAGO,
DEPARTMENT OF CHEMISTRY,
*Chicago, Ill., October 22, 1945.*

Hon. WILLIAM A. ROWAN,
*House of Representatives,*
*House Office Building,*
*Washington, D. C.*

DEAR MR. ROWAN: I am deeply concerned about the consequences which might result from passage of the May-Johnson bill (S. 1463) for the control of atomic energy. My concern is the result of my conviction that this bill will not safeguard us against attack by foreign enemies and that it gives this country no assurance that the nonmilitary uses of atomic energy will not disrupt our economy or destroy our free institutions.

My fears about the future of American security against foreign attacks are based on the following considerations. Present knowledge and understanding of atomic disintegration and its military uses are in an initial and highly undeveloped stage. The only way in which we can maintain our present advantage in this field is by providing the best environment for scientific and technological research and by training young men to take up the problem where the present workers in this field must leave off. The indefinite, arbitrary, and severe restrictions made possible by this bill, the provisions which make it possible to prevent free discussion and interchange of ideas, knowledge, and experience are completely incompatible with research or teaching.

Furthermore, by its very emphasis on secrecy, the bill will inevitably create the impression among our people that they are safe because we possess secret basic knowledge and can make further basic discoveries not available or possible for other nations. The Smyth report shows that both impressions are utterly false. Nevertheless, the creation of such impressions is bound to lull our people into a false sense of security which will make them unwilling to bear the cost of the future research and technological development which alone can give us any measure of security.

The bill, however, creates other equally serious doubts. The commissioners and their administrators are, in my opinion, not really responsible to the President, the Congress, or to any other authority, because they cannot be removed except for causes which are not related to the policies they may adopt. Nevertheless, they are given complete powers over a field of science which will affect and pervade every aspect of American life. They are given authority not only to control research and development, but even discussion of atomic energy; they may make regulations without knowledge or consent of the President or Congress and to punish individuals for infractions, whether intentional or inadvertent, of these regulations; they may establish a secret, independent security organization responsible to no one except themselves. Special provisions are made to allow Army or Navy officers to act as administrators—has the United States ever come so close to a military dictatorship with its attendant gestapo as this?

I realize that some secrecy and much regulation in this field will be needed. But hasty, hysterical legislation is not the solution of the problem which faces us. I urge you to use your great influence to prevent hasty action and to assure adequate open hearings and wide publicity of the view of all sides. That type of approach is the only way in which so serious a crisis can be resolved by democratic procedures.

Respectfully yours,

H. I. SCHLESINGER,
*Professor of Chemistry.*

## A Voice From the Country

EXTENSION OF REMARKS
OF
### HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
*Thursday, October 25, 1945*

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Louis Bromfield, from the Cleveland Plain Dealer of October 21, 1945:

A VOICE FROM THE COUNTRY
(By Louis Bromfield)

"The sum total of the common sense of the common people is the greatest and soundest force on earth."—Thomas Jefferson.

There are times when many thoughtful, good citizens must succumb to pessimism regarding the future of this Republic, and never more so perhaps than at this moment when the country is economically, socially, and even spiritually dislocated by the confusion into which we plunged on the day of Japan's surrender.

The reasons for this pessimism seem to me to have a profundity greater than has been touched upon by any of the thinking or writing I have encountered. It is no acute cause for pessimism that we cannot at the moment get tires or new cars or build desperately needed houses. These are, at most, inconveniences which we hope will one day be alleviated.

What is alarming is the underlying cause—that the most powerful nation in the world, where wealth and opportunity still abound, is behaving as if it were a poor nation afflicted with despair like Germany or a nation like England which, after two wars and the pressure of economic, geographic, and world-political circumstances, is threatened by decline and perhaps decay.

AS IF WE WERE POOR

A considerable segment of our population appears set to impose upon this rich and powerful Republic of free citizens, a mold of government which is properly the last resort of ruined or declining nations. In the face of a huge and hungry market, in the face of a vast accumulation of free money begging to be spent, we are behaving as if we were a poor and desperate nation haunted by the necessity of providing for a population housed in half-ruined hovels and threatened by starvation.

Nearly the whole of the program proposed indifferently by President Truman to Congress is that of a ruined, despairing nation. All the proposals for increased unemployment insurance, for right to work, the abolition of taxes in lower-income brackets, and a hundred other manifestations of defeatist psychology, are both cowardly and unnecessary if the bulk of our citizens still possess the virtues which in the past have built our strength and power.

I refer to such virtues as thrift and discipline, morality, love of independence, and liberty, courage, neighborliness, human dignity, and that fundamental virtue of every strong citizen or nation, not the right to work, but a desire to work and a sense of the dignity of work.

I think President Truman knows all this in his heart. I think that is the reason he presented the program in a half-hearted fashion and has shown no great passion to see it carried through. It is essentially a cowardly program and even his mild sponsorship of it was undoubtedly brought about by political pressure from three elements of our population:

1. That of selfish minority interests seeking virtually by blackmail of the Nation to grab all they can during the Nation-wide internal crisis of reconversion.

2. The demagogic politicians who are always whining about the people, as if they were a herd of sheep or a starving rabble.

3. Those sinister elements which are endeavoring to create artificially, through strikes, confusion, and economic dislocation, conditions which do not in reality exist, and which alone can bring about the enactment of such a program.

A FOOLISH SPECTACLE

The absurdity of a theory which calls for 30 to 50 percent increases in industrial wages

without raising the cost of living speaks for itself. The tragedy is that not a few people really believe this and that many others are willing to give such a theory lip service for the sake of their immediate, shortsighted, and selfish interests. By none of these methods or panaceas was any great nation ever built or sustained.

From the White House in Washington, President Truman, a simple man of hard common sense, must find himself confronted by an extraordinarily foolish spectacle, perhaps the most foolish ever provided by any great nation in history. He sees farms and factories, hotels, and offices, restaurants, and shops, crying out for help, begging men to take jobs.

He sees huge factories shut down by strikes over fantastic demands for increased wages or jurisdictional brawls between unions or petty grievances like the discharge of an obnoxious employee. He sees thousands of people, blocks long, standing in line to draw unemployment insurance while millions of jobs go begging.

He sees hotels and trains crowded with people throwing away wildly whatever money they have because they cannot invest it soundly in cars or houses or washing machines, since organized labor will not permit them to do so.

I think that the President must ask himself, as many a solid citizen has begun to do, What would happen if all of us went to work, not to destroy this Nation, but to build it up?

Never was there such an opportunity.

## Further, With Regard to Irrigated Land for Veterans

EXTENSION OF REMARKS
OF

### HON. JOHN R. MURDOCK

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

*Thursday, October 25, 1945*

Mr. MURDOCK. Mr. Speaker, it is well known among our membership that I have been sponsoring legislation for many months which would provide good irrigated land in family-sized farms for the Nation's defenders in the 17 Western States. I am glad to say that one of these bills, which was introduced at the request of the American Legion, passed the House on April 17, but it has not as yet been acted upon by the Senate. However, I have, durifig the last few days, contacted several members of the Senate Committee on Irrigation and Reclamation, urging action upon this bill, H. R. 2742. I have been given assurance that action will be taken on it soon.

Another bill, H. R. 520, which in my judgment is more important as a benefit to veterans, was reported out of the House Committee on Irrigation and Reclamation on June 5, 1945, but due to opposition and delay it did not pass the House until September 19 last. I have made inquiry of the Senate Committee on Irrigation and Reclamation also with regard to this bill, and I believe we may expect action on it in the near future. The specific reason why I wish to see enactment of these two and other such measures at the earliest possible date is that millions of veterans have now returned from the war and are asking what Congress has done for them as well as what business and industry is doing for them. Literally hundreds have asked about the terms and conditions under which a veteran may obtain a home on irrigated land.

It is well known that the authorities took a survey of our Armed Forces before demobilization started, and it was found that out of about a dozen million men in uniform, 850,000 indicated a desire to return or go to the farm and own a piece of farm land for themselves. Of course, by the wildest stretch of imagination, with all opportunity and help furnished the Bureau of Reclamation, during the next 5 or 6 years, it would be impossible for them to provide family-sized farms for more than one-tenth of that number. However, the Government has other means to supply farms. It is earnestly to be hoped that good farm land may be made available in every State of the Union, and not merely in the so-called irrigation States. While I am interested in the Bureau of Reclamation, because of my official position, I am also interested in other agencies of the Government, particularly the Department of Agriculture, in making provision, in addition to the so-called GI bill of rights, that at least 50 percent of those desiring homes on the land may obtain family-sized farms, or at least homes in rural communities where professional men may live next to the soil while making a living in their professions or trades. I think this could occur in every State of the Union, and I think it would be good for our economy to enable several thousand of the Nation's defenders to come home and live in rural communities according to their conception of the American way of life.

As chairman of the House Committee on Irrigation and Reclamation, I hail the President's recommendations and estimates for appropriations as contained in House Document No. 331 and submitted to the House last week. As chairman of the committee, I shall support this postwar program and urge my colleagues to do likewise. It is another evidence of the President's vision in an attempt to build the West in the most appropriate and profitable way in these postwar years. Usually the Committee on Appropriations think of my plea for reclamation as only for the Gila project, and such it has been for the last 9 years, until this year. I must continue to remind my colleagues that there are 17 Western States in which there are vast possibilities for irrigation. I have been telling returning veterans that with the timely aid of Congress, the Bureau of Reclamation could furnish them homes on good land in these 17 Western States. Therefore, my sights are lifted above the possibilities in Arizona and even beyond the possibilities of the Colorado River Basin, vast and attractive as those possibilities are.

To my constituents in Arizona, I am glad to point out that the President, in this House Document No. 331, suggests a $2,000,000 appropriation for the Gila project and $10,000,000 appropriation for the building of the Davis Dam on the Colorado River at the Bulls-Head site. To my constituents I will say that I have been committed to and have been working on the Gila project since January, 1937, and on the proposed Davis Dam for more than 4 years, having begun on the latter proposition prior to our entrance into the Second World War. Therefore, I am delighted that the President has given such prominence to these two items.

The building of the Davis Dam, halfway between Boulder Dam and Parker Dam, will confer a great benefit upon Arizona, California, and Nevada. Its influence may be felt upon all the States of the Southwest. The legal provisions for its construction are contained in the water treaty between the United States and the Republic of Mexico, ratified some time ago by our Senate and within the last few weeks by Mexico. This treaty calls for the building of the Davis Dam; and because of the requirement to fill an international obligation, a large share of the expense of construction should be an obligation of the National Government.

When Congressman James Scrugham, of Nevada, and I first discussed the building of this proposed dam, we had in mind a power producer to supplement the power needs of the Southwest; but, of course, it is capable of multiple use, and I think some irrigation benefits may come from it, if properly planned. The chief ultimate use, even surpassing that of power production, is the part it will be called upon to play in regulating the Colorado River, under the terms of the treaty with Mexico. For that reason I feel that a large share of the cost should be borne by our Government.

I have been telling service men and women of the Second World War who have written me asking their chances of getting irrigated land near Yuma, Ariz., that if and when Congress passes certain legislation—which has not yet been done—giving veterans preference on those irrigation projects soon to be completed, it would be possible for several hundred homes to be established on the Gila project within the next few months. In answer to an inquiry, I have just received a lengthy letter from the Commissioner of Reclamation, Mr. Bashore—a letter dated October 23—outlining exactly what the Bureau of Reclamation would do on the Gila project if the money is appropriated as the President has suggested. Therefore, I say again, in this public way, to those inquiring veterans, "If Congress appropriates $2,000,000 to the Bureau of Reclamation for the development of the Gila project in Yuma County, Ariz., and if Congress enacts legislation giving veterans preference on such lands in the Gila project, it would be possible, within a few months, to allot homes to qualified veterans in this desirable area which the inhabitants of the city of Yuma are accustomed to refer to as 'the Garden of Eden.'" I want to call attention to the last two "ifs," and to remind my inquiring friends, now stepping out of the service, that I have constantly sought appropriations for this development and I have given more effort to get legislation enacted extending veteran preference on newly irrigated land than I have given to any other one phase of legislation. The next few months will

tell the story in this regard; and anything done on it after the year 1945 will be too late, in my judgment, to be of any benefit to veterans who would like to own a piece of irrigated land.

The remarks last made apply to one portion of the Southwest, but the President's recommendations, to which I must return, apply to almost every one of the reclamation States; and our great President, through the Director of the Budget, has suggested as to this phase of national postwar reconversion and effort that Congress appropriate $93,367,000 for the reclamation work of the Bureau of Reclamation. This is a proposal containing great prospect and hope, and it is now at the point of decision by your Congress.

## The Poll-Tax Issue

EXTENSION OF REMARKS
OF
### HON. ESTES KEFAUVER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES

*Wednesday, October 24, 1945*

Mr. KEFAUVER. Mr. Speaker, under leave to extend my remarks, I include an editorial entitled "Here or Hereafter" which appeared in the Nashville Tennesseean on October 3, 1945:

For the third time in as many years the Judiciary Committee of the United States Senate has recommended a law to allow all Americans to vote freely for President, Vice President, and Representatives in Congress. In each of those years such a measure has been passed in the House by large majorities. In the Senate now, as in previous years, a majority of the membership is pledged to vote for the legislation.

For the measure to fail of enactment again this year because of the unwillingness or inability of the Senate to override a filibuster would be not only to leave millions of Americans under poll-tax disfranchisement but to stultify majority will in the Congress itself. With our Government pointedly insisting upon the right of the peoples of Bulgaria, Rumania, Poland, Greece, Japan, and Germany to express their political choice in free elections, the failure of Congress to protect this right to millions of American citizens—including the people of Tennessee—would earn for our Nation the raucous laughter of a world unimpressed by mere pretensions.

The Judiciary Committee also has recommended to the Senate Senator O'MAHONEY's proposal for a constitutional amendment to outlaw vote taxation. It is unfortunate that Senator O'MAHONEY should have introduced this proposal at this time, and that the committee should have passed it along with the anti-poll-tax statute which had so firm a priority. The effect of this action can only be to confuse the issue; and it is sufficient to observe that a poll-tax witch doctor like Senator BILBO, of Mississippi, readily promises not to filibuster against the O'Mahoney resolution to appreciate the ill-turn that has been done.

A constitutional amendment can be blocked by the simple inaction of 13 States, and by this route a free vote for all America could be achieved, if at all, for some future generation. Many of the leading constitutional authorities of the Nation have declared their belief in the rectitude of the anti-poll-tax statute—as have, of course, the Members of the House who have voted for it three times and the Senators who have pledged themselves in its favor. The poll-tax oligarchy in the Senate has opposed the statute not because they doubt its constitutionality, but precisely because they are convinced that it would be upheld in the courts.

The merit of the anti-poll-tax statute is exactly the merit of democracy—the principle of government we preach in the world and fight wars to defend. It is the duty of Congress, under the Federal Constitution, to preserve the Republic—and hence to clear the right of every citizen to his voice in government. That duty cannot be delegated to the States or to the people—certainly not to the people who are tax-barred from the vote.

At the present pass, where fundamentals of our own Government are at stake, the Senate can sidestep its duty by putting the O'Mahoney resolution ahead of the poll-tax bill or by yielding again to the disgrace of a filibuster. Or it can vindicate the Nation's love of democracy by courageously enacting the law which alone can make the America of our day a land of free elections.

## Let Us Try for Peace First

EXTENSION OF REMARKS
OF
### HON. GEORGE W. GILLIE
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

*Thursday, October 25, 1945*

Mr. GILLIE. Mr. Speaker, are we not going to give the peace a chance? Do we not have any faith in our efforts to achieve a permanent effective world security organization? Before the ink is hardly dry on the peace documents, and before we can fully comprehend the significance and possibilities of the San Francisco Conference, our President comes out with a statement that we must have a compulsory military-training program.

When we speak of military training, does that sound peacelike? After the last war, we advocated a disarmament program, and followed through with it. We did not join the League of Nations. That was held against us and used by the internationalists as the reason for the Second World War. Now we have come out full force for world peace organization. We were hosts to the delegates at San Francisco where hopeful prospects were forecast for a permanent peace. We have the honor of having Mr. Stettinius as its chairman. But before this organization gets set up for business, our President comes out flatly and says we have to have military training for every young man. Does this look like we are laying down our arms after just finishing the greatest war in history, and giving unselfishly our full measure of blood and treasure to down the tyranny of the Axis Powers? Does it manifest our sincere belief that peace can be achieved? Where is the courage and forthrightness of our leadership? Has it exhausted every channel of opportunity for peace? What has caused our leaders to turn to this cynical attitude? We willingly spent billions to support our war effort and to help our boys defeat the war criminals. What has our leadership offered in the way of a spending program to keep the peace? They cry out that the atomic bomb has doomed the world. Have they done anything to tame it for peacetime pursuits?

They say we have lost our moral strength and abilities in the race to our scientific progress. What has been done to build up our moral fibers since the end of the war? At our request and with $2,000,000,000, we asked the scientists to make an atomic bomb. It was something new. Something impossible. But our scientists put their full energies, resourcefulness, and intelligence to work. The result? They built it.

What is the matter with requesting our moral and spiritual leaders to go to work and discover a plan to keep the peace—or at least use the full resources of the organization we have set up? Give them the money to do the job. We discovered something to scare the pants off civilization. Now we have to do something to outlaw it. It would be far simpler to outlaw war.

All of this may seem irrelevant to compulsory military training. But to me the analogy is clear. Either we have to believe we can win the peace and stick to it, or say to the people of this Nation and the world that we are merely in a brief interlude preparing for another war.

Let us stop kidding ourselves. Which will it be? Personally, I think we should give the peace a chance. It is our one great hope for the world. But we cannot have peace by preparing for war. Compulsory military training by any name sets this Nation at work arming for a fight. And that is not peaceful.

## This Changing World

EXTENSION OF REMARKS
OF
### HON. HENRY D. LARCADE, JR.
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

*Thursday, October 25, 1945*

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a copy of an article by Constantine Brown, Washington columnist, entitled "This Changing World," as follows:

THIS CHANGING WORLD
(By Constantine Brown)

The Fourth French Republic, which was born last Sunday, is colored with a "healthy" pink. The Communist Party emerged as the strongest individual political group, but the Socialists, headed by Leon Blum, and the Christian Socialists—now known as the MRP and headed by Foreign Minister George Bidault—have an overwhelming combined majority.

The Radical Socialist Party of Édouard Herriot, once the most popular political leader of France, was badly defeated.

The political situation in France can be summed up as follows:

Internally the French people have given a mandate to their representatives who are to

draft the new French Constitution to go as far as they like in the matter of socialization. This means that laws providing for the nationalization of the banks and the large industries will be put into effect. But the private initiative of the "little fellow" will not be impaired in any way. Neither will there be any collectivization of the farms. The followers of Blum and Bidault have pledged themselves to preserve the individualism of the farm owners.

In foreign affairs, and this is more important to the outside world than France's domestic affairs, the policy of the Blum-Bidault groups, which now have an overwhelming majority, will be to restore France as an important world power. Both leaders oppose any policy of subservience to another power and expect their country to play an important role on the international stage.

The victory of the Leftist Socialists who are supporting General de Gaulle is more a victory of French common sense than a personal triumph of the head of the French provisional government.

It is true that in the past 12 months General de Gaulle has made much progress in humanizing himself. He has learned to smile and, while not losing his stubbornness which had thrown him into many difficult situations, he also has learned to compromise. His dictatorial complex, which was more on the surface than underneath, has gradually disappeared under the severe knocks he has received since France was liberated.

But the fundamental reason why the Communists failed to win at the polls, despite their compact with Herriot, is to be found in the rebuffs France received in London at the hands of Soviet Foreign Commissar Molotov.

In spite of the crushing military defeat suffered by France in 1940 and in spite of the hardships which they are now undergoing, the French people have never lost their national pride. Frenchmen are convinced that France is still a great power.

The United States and Great Britain did much to bolster this feeling when both Governments insisted that France become one of the Big Five.

At the Foreign Ministers Conference in London, however, the Russians, who had been the first to recognize General de Gaulle's Free French organization as a de facto government, decided to slap down the French by refusing to let them join the United States, Great Britain, and Russia in drafting the peace treaties in the Balkans.

This was a well-calculated diplomatic operation. The French, even today, enjoy a greater prestige in the Balkans than all the other great powers together. The roots of France's political and intellectual influence can be traced back many centuries. This influence, the Russians fear, may run counter to their plans in central and southern Europe.

The brusque manner in which Commissar Molotov told the French to mind their own business had strong repercussions among the French electorate, and is said to have had a definite bearing at the polls. The Communists, who are known to take orders directly from Moscow, were better organized than all the other parties. Many official observers who have kept in close touch with French affairs predicted a great victory for them. General de Gaulle, himself, is said to have been skeptical that his platform would be accepted by the French electorate, and is reported to have made preparations to withdraw to a modest home along the Marne River to write his memoirs.

But the situation dramatically changed after the national pride of the French people was offended by the Russians in London.

Political observers are convinced that the results of the elections will make France nobody's puppet—and eventually will have deep repercussions throughout Europe.

## Address by Mr. Justice Douglas Before Missouri Bar Association

EXTENSION OF REMARKS
OF
## HON. FRANK P. BRIGGS
OF MISSOURI
IN THE SENATE OF THE UNITED STATES

*Friday, October 26 (legislative day of Monday, October 22), 1945*

Mr. BRIGGS. Mr. President, last month the State of Missouri was signally honored by a visit from Mr. Justice William O. Douglas on the event of the annual meeting of the Missouri Bar Association. I ask unanimous consent that the remarks of the honorable justice on this occasion be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The State of Missouri has been much in the news in recent months. The name has been heard lately in Potsdam and Paris. Even the Japanese have had it impressed upon them in a way they will not soon forget.

Missouri's latest fame is well deserved. But I think that one of the most significant facts about your State is one we learned at school. That fact goes back 80 years, to the time when the North and the South of this country were having a feud. Missouri hadn't made up her mind whether she was part of the North or the South.

But Missouri never shunned an issue. And Missouri believed in backing up her convictions. There were convinced Confederates in Missouri, and there were Unionists, too. Both groups had mighty strong convictions. The result was that Missouri occupied a unique position, 80 years ago, in that war. As I recall, she was the only State in the Union that more than filled her quota of enlistments in both the Union Army and the Confederate Army.

Well, that was a long time ago, and a lot of things have happened since. But this bit of Missouri history bears on a point I wish to make.

It's about conviction—the kind of conviction your grandfathers, on both sides of that war, had.

I think we need a lot of that today.

You take this Japanese war we've just won, and the war against the Nazis that we won last spring. From some comments that are heard one wouldn't know that we had just beaten the most powerful professional military machine the world has ever seen. One wouldn't think we'd won anything but a chance to get ourselves into a lot of trouble. Rather, you would think the most important question about the beginning of this war was whether our generals were more short-sighted than our admirals, or vice versa. You would think the most pressing problem of the peace was what the Germans and the Japanese thought about America.

But we didn't go to Tokyo to psychoanalyze the Japanese. We didn't go to Tokyo so that they could have an election.

We went to Tokyo because we beat the Japanese.

We went to Tokyo because the American people are determined to prevent Japan from starting another war. We went to Tokyo to put Shinto savagery and feudal militarism out of business in the Pacific in which we live. We went to Tokyo to take the balance of power in the Far East out of Japan's hands.

If we do not take it out of her hands, if we leave Japan any vestige of political influence or prestige in the Far East, we will be making her a free gift of an infinite chance to do mischief. The first place she will try to make mischief is between Russia and America. In just this way the Nazis, both before and after defeat, have tried to disrupt our relations with our allies.

We must be on our guard against this kind of political warfare directed at smashing the friendship of the United Nations. The Japanese are clever, sly, and arrogantly ambitious. They will tell us that without them Russia will dominate the Orient; and that China will fall into disorder. They will try to sneak into every situation where they think they see a difference of opinion developing between the powers that have beaten them, and do their best to widen that difference into a rift.

Differences of opinion between our allies and ourselves are, of course, bound to develop as time passes. Nothing could be more hopeless and futile than to ignore them and let them fester between us. They must be solved in the open. But they must be solved with no helpful suggestions from Tokyo. They must be solved directly between Russia and America, or China and America. From Tokyo we can deal face to face with Russia and China, as neighbors together.

We cannot tolerate Balkan intrigue in the Pacific. The Pacific is our corridor into the new world aborning in Asia. The Pacific has become a lake connecting America and Russia. It is our link with the new China that has allied herself with America and Russia. The Pacific is America's new frontier. Now that we are in Tokyo it is our job to impose the criminal law and to operate a reform school.

The world will judge us by how well we do the job. Russia in particular will judge us by a strict test. She will look to see whether we sterilize Japanese militarism as effectively as she sterilizes German militarism. She will value us by our results, not by our rhetoric. And, because we Americans are at bottom idealists, we will value ourselves by results, too.

Our unpreparedness cost a lot of men their lives. We must examine our mistakes, and judge the guilty. We must profit by this lesson. But the worst thing we can do with the blame for Pearl Harbor is to quarrel over who the American scapegoat is to be. Let us never forget that the real guilt of Pearl Harbor lies on the shoulders of General Tojo and the other criminals who used Hirohito and the sinister religion of Shintoism as a front for the brutalization of the Japanese people. The important fact about the start of the war is that the Japanese picked a fight with us.

We beat them. Let's remember that. Instead of sighing with relief and hoping for the best (but fearing the worst), let us celebrate our victory. Let us be clear that, thanks to our victory, life for us can now be as good as we dare to make it—and better than other peoples have ever dared dream it could be.

There are many families in America to whom victory cannot mean all that it does to the rest of us. Those are the families that have changed a blue star in their service flags to a gold one. They cannot rejoice lightheartedly at a victory that was won at the cost of a son or a husband or a brother.

No, they cannot rejoice lightheartedly. But they will not understand anyone who tells them that our victory means nothing. They will not understand anyone who tells them that the last 4 years were a meaningless interlude of horror that swept their loved ones off for no reason and no gain. They will not believe it.

Victory means something which is more challenging than anything in the previous history of America. Victory means that this great Nation has acquired a position of moral leadership in the world which is not only

unique but which carries tremendous responsibilities.

Our victory was so decisive that we are apt to take it for granted. But the great victory we have won was the sum of three factors:

1. The courage and initiative and skill of American fighting men;

2. The brains of American scientific laboratories;

3. American productive power.

American production, according to Marshal Joseph Stalin, was the decisive weapon of the war. We can agree that American labor and American industry did the most amazing job during the war that the world has ever seen. But at the same time we will never forget the faith and daring and courage of the men who held and maintained our far-flung battle lines and who carried the fight to the enemy even during the dark days of 1942 and 1943 while American production was getting under way. And we will never forget the brilliant work of American scientists who won the race against German and Japanese laboratories. There can indeed be no doubt that American inventive genius has earned the eternal gratitude of free people throughout the world.

Victory has produced a new era. Those who are thinking in terms of a return to normalcy are substituting a dangerous illusion for reality. The technological changes which the war has produced make unmistakably plain that we are living in a fast-moving, dynamic society which defies any standard of normalcy. And those who think that we can now retire to the point from which we started in 1941 fail to recognize the responsibilities which go with our position of moral leadership in the world.

The 11,000,000 men and women who served in this war do not start anew from the point at which they left civilian life. They have gained in maturity and knowledge. They have lost much happiness in fighting this war. Their personal losses are a large measure of the Nation's victory. They know the difference between victory and defeat. For they have been at places where they could see what defeat really means. They have a good idea of the ruthless forces which were turned loose on Western civilization and of the great potential dangers ahead for any nation which does not maintain the lead in this competitive world.

Neither are labor and industry going back to the point from which they started.

I was brought up to be proud that the American standard of living was the highest in the world. I'm still proud of it. I'm proud of our skilled mechanics who turned out the B-29's that bombed Tokyo, the tanks that broke the German lines, and the ships that carried our supplies all over the world. I'm proud of the women who had never worked before, and who became good welders and good turret-lathe operators.

They were paid good wages and they deserved them. They won increased status and position. They deserve that too. For they did the producing that gave our soldiers and our allies the weapons that won the war. Let us not forget that the Germans, who used slave labor, were beaten.

The new industries that have grown out of the war are not going to disappear either. Radar, electronics, atomic power—they are part of our victory. They are new gifts with which to build the peace. They will be as beneficial or as terrible as we make them. It's up to us.

Scientific knowledge is discovered by men and used by men. We don't need to be afraid of it—unless we're afraid of ourselves. We don't need to distrust our future unless we distrust ourselves.

We have no reason to distrust ourselves. There is nothing in the war record of America that should make any American feel anything but proud. We are even proud of the way our early defeats were faced. We are proud of the men on Bataan, the men on Wake Island, the men of the Navy who fought the first bitter defensive battle of this war. We gave General Wainwright as big a welcome as we gave General Eisenhower.

I am proud of a country that gives as big a welcome to a defeated general as to a victorious one. I am proud of a country that remembers for 3 years that a general's defeat was its defeat; that never repudiates him; that keeps his memory bright and cheers when he is decorated for his deeply American courage during the campaign that ended in his surrender.

I am proud of that country. It is a country that is proud of itself. Japan makes a cult of suicide. America has a faith for which to live.

I am confident that our new scientific knowledge will be used as well as General Wainwright and Colonel Devereaux used what they had in hand. It will be used as scientific knowledge always has been used in America. For the good of America. For the happiness and freedom of the American people. For the expression of the essential decency of the American people. As a weapon in the continuing fight for progress and a more creative humanity.

That is America's goal. The objective is not mere security. Security alone is nothing. It is a treacherous illusion unless it is based on a constant striving for something new and better than the outgrown past. There is no security without competition—competition against the highest records that we ourselves have set; and competition that insures our ability to defeat anyone who threatens us. Such security, the only real security, is not based on self-doubt and the desire to be safe. It is based on self-confidence, on self-knowledge, and on the old American conviction that freedom and democracy can build a better world. Any other standard of security is as dangerous as the false security of a Maginot line.

No nation on earth has done more to build a better world than America. Now we have new tools with which to build that world—new material tools based on our scientific knowledge. But the new tools must still be used in the traditional American way—the way that respects the dignity of mankind, the freedom of initiative, the opportunity of youth, the strength and power of those who toil. That is part of the responsibility that goes with our position of moral leadership.

Everyone is going to have the secret of atomic power. We don't dare seek our own security through wishful thinking that others will not discover that secret. Knowledge cannot be buried in a vault. We can no more suppress the secret of atomic power or reserve it for ourselves exclusively than we could have suppressed the secret of the gasoline engine. Atomic power is going to be used in every phase of the economy—of our economy and of every other economy. We must be strong enough and alert enough and imaginative enough to see to it that this new power is used not to destroy mankind but to raise the standards of living throughout the world.

Our only security in the new atomic age will be in our ability to continue using knowledge better than anyone else can. We have not feared this challenge in the past. We must not fear it now. Let us go forward with that conviction.

President Roosevelt declared last year that we needed 6,000,000 jobs for men and women of labor. He was looking ahead then to the postwar period with the same insight and knowledge that saw the coming war in 1938 and 1939 and 1940, and that girded us for its battles. President Truman has begun the work with Congress to guarantee that program.

The drive for full employment is a noble program. But it seems to me that we limit our vision of it if we see it as merely a battle for security. We must indeed gain freedom from want in America. But we can do so only if, at the same time, we preserve our freedom to want—freedom to reach for new horizons, spiritual as well as material. Freedom to want a better education for our children, a further expression of individual happiness, as well as a higher standard of living.

A man out of work needs a job. Every man who doesn't have a decent job that he can respect himself for doing—every such man, frustrated and disappointed with the opportunities his life has given him, weakens the whole fabric of American society. We can see that that man and his family do not starve. But assurance against starvation is not the kind of security that will satisfy men. It will not solve the age-old problems of human desires and dreams.

Spiritual and intellectual security come only to those who are not afraid to live and who live adventurously. It was that kind of intellectual adventure, that willingness to strike out into the unknown, that gained us the knowledge of atomic power.

This knowledge cannot be bottled up by a high priesthood of science for use in the interest of security. There is no such security. If we had bottled up our knowledge of the gasoline engine, it might have made buggy manufacturers feel secure for a few years more. But it would not have helped our economy or our place in the world.

The only true security we can ever know is the right, and the opportunity, to gamble on the future. There are no guaranties for any of us, as individuals. There is no guaranty that America as a nation will remain what she has been during this war—powerful in the council of nations, dreaded by her enemies, generous to her allies. That is a unique position and one that was acquired not just by physical strength, but by moral leadership and idealistic determination to offer the world a chance to know the fruits of peace, as we know them here. But there are those who tell us that our generosity, and the influence and moral leadership it gives us, weaken our physical strength. They tell us that we'd better be careful in our dealings with our allies, because these countries who fought on our side, these people who have seen our supplies save their land from defeat and devastation, are going to play us for suckers. They will sit in the middle of their bombed, burned, tortured acres and do nothing about them—just sit and open their mouths from time to time to be fed by America.

I am not afraid that our allies are going to play us for suckers. No, the people who will try to play us for suckers are our beaten enemies. As I said before the greatest risk is that our beaten enemies will endeavor to break the warm alliance existing among the United Nations.

A recent episode is in point. The Japanese have been telling the Koreans for years that white men would not respect them; that discrimination against Asiatics would land with our armies. The irresponsible statement that the Koreans "were the same breed of cat as the Japs" not only did not help the American position in the Far East, it played right into the Japanese hands.

Let us be forever rid of the obsession that it is our allies whom we must fear.

Worry is based on fear and self-doubt. No normal person is going to be afraid of looking like a fool unless he has a sneaking suspicion that he is a fool. We've got enough to do in the world today without making up a bogeyman. There are real dangers in the world, and real problems to be met. If we ignore these real problems to chase off after mythical dragons, we shall be stupid and untrue to ourselves. We'll be playing America for a sucker.

Let's trust our strength. Let's trust our potentialities for the future. Let's trust our pride and our self-respect. Let us go on with the old American task of building here a so-

ciety that will come closer and closer to the democratic ideal.

The most famous saying about this great State of Missouri is, of course, that a man from Missouri has to be shown. He's cautious, and he doesn't commit himself to an idea or to a deal until he knows quite a bit about it. Nor should the rest of America. Let us be cautious in world affairs. Let us hesitate to commit ourselves to policies until we have explored them.

But let us remember that caution is not refusal to face facts. Let us hesitate to act until we know the truth. But then let us act decisively. Otherwise, the very refusal to act becomes a policy—the most self-defeating policy in the world. It becomes a paralysis of the will. Caution turns into suspicion, and suspicion into neurosis, and neurosis into hostility and violence.

We have a place in the world. There is no choice about that. It is the position of moral leadership: Our only decision is whether we shall fill it well, or badly. Our responsibility to America and our responsibility to the rest of the world are much the same—to fill that place well. If we are true to ourselves, to our generosity, as well as to our cautious self-confidence, we cannot fail.

## Is the State Department Imprisoning Tyler Kent To Conceal Evidence?

EXTENSION OF REMARKS
OF

### HON. CLARE E. HOFFMAN

OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Thursday, October 25, 1945*

Mr. HOFFMAN. Mr. Speaker, the strange case of Tyler Kent, who has been imprisoned in Great Britain for more than 5 years because he disclosed the contents of code messages passing between the late President Roosevelt and Winston Churchill, who was not then Prime Minister of Great Britain, continues to be a thorn in the side of the State Department and of those who may be responsible for the war.

It will be recalled that in 1939 young Kent, who was then a clerk in the employ of the American Embassy in London, gave out to a Captain Ramsey, a Member of the British Parliament, the contents of certain messages which had come into his hands as decoding clerk and which he said had passed between Mr. Churchill and President Roosevelt.

The full text of these messages has never been given to the public. One, as disclosed by Kent, shows a message from Churchill to Roosevelt, in which the former is alleged to have said:

> I am half American and a natural person to work with you. It is evident we see eye to eye. Were I to become Prime Minister of Britain, we could control the world.

When Kent's activities became public, instead of being charged with a violation of any American law—and if he violated such a law, he was subject to prosecution here in America—he was turned over to the British and, after being imprisoned for 9 months, he was finally brought to trial under some English law, rule, or regulation, and was sentenced to 7 years' imprisonment.

He was entitled to and received a 25-percent diminution of that sentence for good behavior, and when it expired on October 5, 1945, he was booked for return to the United States on a ship sailing October 11 because of an order of deportation issued by the British on May 23, 1940. That order had been held in abeyance until the expiration of his sentence.

It is also alleged that, in the meantime, President Roosevelt had revoked his citizenship by some Executive order, although I have no accurate information as to that. I am making inquiry of the State Department.

For some reason unknown to me, Kent was not permitted to sail on October 11, but it was ordered that he should sail on a ship leaving October 19. But once again his sailing has been delayed.

His mother advises that he now is unable to learn when, if ever, he will be permitted to return or, more accurately, when he will be deported.

She called attention to the fact that he had been confined in prison for 9 months prior to his trial; that he served his sentence in prison on the Isle of Wight; and that since the expiration of his sentence, that is, after he had paid the penalty imposed by the British, he was brought to, and for the past month has been confined in, Brixton Prison.

She further said that he has been unable to persuade his attorney to make an application for a writ of habeas corpus and wonders whether the attorney is afraid that he may displease that Department if he takes aggressive action at this time.

The State Department is powerful, and from the foregoing and from the previous history of the Kent case, it is more than possible that it will attempt to delay his return to America until some bill like that before the House yesterday, enacted into law, will effectually gag him and prevent his interrogation by members of the press.

Is it possible that the order permitting him to sail on the nineteenth was held in abeyance until there could be put through the Congress the bill which has already been passed in the Senate and which came up yesterday in the House, and which, if it became a law, would make it a criminal offense for Kent to tell to the people of America through the public press what was in the messages that passed between President Roosevelt and Churchill in 1939, before we were in the war, and which might disclose that it was the purpose of those two gentlemen to see that we got into the war?

In this connection it may be well to remember that it was Churchill who, upon our entry into the war, said:

> That is what I have dreamed of, aimed at, and worked for, and now it has come to pass.

When the bill making it an offense for anyone to disclose the contents of a message which had been sent in code, whether or not that disclosure would have interfered with our national security, came before the House yesterday, the Kent case was one of the factors taken into consideration by the House Members.

Many Members were also of the opinion that the passage of this bill was desired by the State Department and perhaps by other departments of the Government to prevent a disclosure of activities which led up to Pearl Harbor and which might disclose the reason for our unpreparedness there.

Kent undoubtedly possesses valuable information. He was confined in an English prison 9 months before he was brought to trial. So far as can be learned, the State Department made no protest, made no effort to protect an American citizen from British prosecution, made no effort to prosecute him under American law.

The British were permitted without protest to seize him and to imprison him, although Great Britain's right of seizure on the high seas had been decided against her in the War of 1812.

Is the State Department more British than American? Was it, has it been, and is it interested in concealing from the American people messages which would give the American people the true facts as to what preceded our entry into the war?

Is the State Department and the administration trying to cover up the responsibility for Pearl Harbor? Was that its purpose in rushing through the Senate and attempting to jam through the House yesterday the bill making it an offense to reveal the contents of decoded messages?

In this connection, one of the strangest incidents that ever occurred on the floor of the House since I have been here arose during the roll call of the vote on the adoption of the rule to make this suppression bill in order.

On a voice vote, the rule had been defeated by 111 noes to 49 ayes. When a record vote was demanded, it was at once apparent that the vote would be close. After two Democratic Members had voted, they were seen to go to the Speaker's desk and, thereafter, from the well of the House, one of them changed his vote from "yea" to "nay," and then, when it was apparent that the rule would be adopted without their votes; that is, that the administration would win, one of them again changed his vote from the "nay" to the "yea" column, while another changed his "nay" to "yea."

A parliamentary inquiry was put to the Speaker and was answered by him, but that parliamentary inquiry does not this morning appear in the CONGRESSIONAL RECORD.

The American people fought and won this war. They were told that it was necessary to go into it because only by winning it could the "four freedoms" be preserved here and carried throughout the world.

Freedom of speech was emphasized by the late President, but all through the war—yes, and prior to our entry into the war—the activities of officials high in the administration, their sayings and their writings, were successfully suppressed.

Now that the war has been won, here at home there is a deliberate attempt to keep the American people from learning the truth as to the facts preceding the war, as to the part played by high Government officials in the events which preceded Pearl Harbor.

The case of Tyler Kent has become historic. Future generations, if the

present attempt at concealment succeeds, will never know the true facts, the deciding factors, which may have involved us in this war.

Open covenants openly arrived at was a sound doctrine promulgated by President Wilson, but it has not been followed by the present nor the preceding administration.

## The International Situation

EXTENSION OF REMARKS
OF
**HON. ARTHUR CAPPER**
OF KANSAS
IN THE SENATE OF THE UNITED STATES
*Friday, October 26 (legislative day of Monday, October 22), 1945*

Mr. CAPPER. Mr. President, former Gov. Alf Landon, of Topeka, Kans., delivered an able address before the Kiwanis Club, Lawrence, Kans., on October 25. The subject was, The International Situation. I ask unanimous consent to have his address printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Our foreign policies involve not only our future peace and prosperity but such everyday affairs as—how long your boy is going to stay in the Army or Navy—whether your boy is to be conscripted under a permanent peacetime compulsory military draft—how much of your earnings we are to give to Great Britain—and other foreign countries—as subsidies—and the atomic bomb in the hands of other countries.

All the money we may give to Great Britain and other countries, in our interest, to help the economic world get on its feet—all the collaboration that might have been but was not at the London Conference—the UNO—will not stabilize the world as long as we push the basic error of the ghastly insane Morgenthau plan in the treatment of Germany, and as long as other errors are committed equally destructive to lasting peace.

First, we have removed the surplus producing territories of Germany and crowded about 70,000,000 people into what we now call Germany.

Second, even with this surplus producing area, Germany had to import foodstuffs before the war.

Third, the Germans will only be able to produce about fifteen hundred calories per day per person. Two thousand calories are a rock-bottom diet to sustain life. Approximately 3,000 calories are necessary for a healthy living.

Fourth, we are wrecking Germany industrially so that she will not be able to purchase the additional foodstuffs she must have.

Fifth, all that, plus the mass shifting of peoples around like cattle positively means a great explosion in the future.

Once again our political leaders have lost the fruits of the glorious victories of our Army and Navy and we are headed straight for a third world war unless there is an immediate and basic reorientation of our foreign policy.

Last January—before it was certain that the impossible Morgenthau plan would be followed—I suggested in some private letters a subsidy for Great Britain. But now that appears to be throwing good money after bad.

It is unquestionably our great responsibility—and to our great interest—to help restore stable world finances—maximum production—broader markets—and thereby higher standards of living.

But we completely block all that in our German policies. To strip Germany of her industries and reduce her to eighteenth century agriculture, so violently disrupts the economic life of Europe that all the money we can scrape together to advance to other nations is of no avail in restoring stable economic conditions in the world. Therefore, stable political conditions are absent.

It's not too late to build for lasting peace if we recognize that we have been sucked farther and farther into the destructive whirlpool of balance of power politics and race hatreds, and calling that cooperative security. Despite our ideological war banners, we have participated in the ancient blood evil of shifting territories to satisfy the conflicting claims of a victorious coalition.

The political and religious philosophy of a country has never yet been uprooted by a foreign army. No country has ever been taught democracy with a bayonet.

Our national honor is tarnished by our participation in the partition of our stanch ally—Poland.

Every news report from Europe conveys a warning that we will be principally blamed for the appalling suffering ahead.

We had the friendship of all Asians—outside of Japan—because of our treatment of the Filipinos. We are losing it as fast as we use our forces to restore British, French, and, until last week, the Dutch as masters. And yet it is being proposed that we form a western bloc composed principally of those same powers. If we join them as is, and stick to the Morgenthau plan, then we will need a permanent draft act and large permanent armies of occupation with higher taxes, because we will pull the heavy car both financially and militarily. Perhaps that will be the only course in the end. But let's face what it means and other possible alternatives.

The "abysmal fiasco, as things now stand," as the New York Times called the London Conference—may open our eyes to the fact that the methods we have been pursuing will never mean lasting peace.

We have got to have a better, a different and more fundamentally sound organization than the United Nations. The San Francisco Charter was barely a step in the right direction toward collective security. The only hope in the UNO was that the Assembly would develop into a real force with time. But the UNO didn't have a chance to get started. Its fate, entangled in the wreckage of the break-down of the London Council of Ministers, seems to be similar to the European advisory commission, which was announced with much fanfare from Moscow in October 1943. After which each power continued its own way. The weakness of the unanimous consent procedure of the United Nations Council is now clearly evident.

Secretary of State Byrnes says that Generalissimo Stalin, Prime Minister Attlee, and President Truman were called upon by the London Council of Ministers but were also unable to agree. That makes the disagreement unanimous.

Out of the shock and confusion caused by the complete failure of the London Conference, everything is being considered except the possibility that the base foundation is faulty and unsound.

Why discuss the policy of the appeasement or nonappeasement of Russia? Either, on the course we have been pursuing, simply means more friction.

In addition to the piddling policy of making loans, we are to have the greatest navy—the greatest army—the newest, greatest weapon—for awhile. All history proves the futility of that policy.

We are seizing strategic bases in a "speakeasy" sort of way and then wonder why the world should look at us with cynicism and suspicion. The race between Russia and the United States to obtain strategic bases is fooling no one but the American people—who are still being doped with soothing sirup that differences between ourselves and Russia is one of language and inexperience in foreign affairs.

We are still talking about implementing the crippled United Nations Charter or about blueprints for other international organizations based on law. But law must always be based on firmly established conceptions of reason and justice. You cannot have international law and order when there is no stability or prospect of achieving stability in the world by our present policies, and when Russia and Great Britain are still carrying on the undeclared war that has been the cardinal point of the foreign policies of both countries for over a hundred years.

You can't build an international organization for collective security on the quicksilver of vindictive and ruinous and imperialistic peace settlements that lack any constructive ideas.

Therefore, we must start a new foundation on solid rock if we are to have real collective security and if civilization is to escape destruction.

What are the specifications of that solid rock? That's a large order for any man to give. I don't believe we can depend on time to find the necessary accord. Mass starvation—chaos approaching anarchy—wait on neither time nor man.

Therefore, concretely in part I believe:

1. Make the United States a sound financial mooring post for the rest of the world to tie to by reversing our present unsound fiscal policies of borrowing and spending unlimited.

2. Reverse the German policies for which we largely are responsible. In the interest of a stable world, Germany must be permitted an economic, self-sustaining life. Under the Morgenthau plan, Uncle Sam either follows in the footsteps of Genghis Khan, or must supply the German people with millions of American dollars' worth of food and clothing.

3. All nations abandon their extraterritorial practices. We should stand in the Far East as advocating in substance what we did in the Philippines, where we set the model for colonial treatment and development of self-governing communities.

4. We must insist on the honest and intelligent reasonable application of the principles of the Atlantic Charter, before we make any gifts. In other words, let's follow for the most part Woodrow Wilson's 14 principles for peace. They never yet have been tried by any nation or combination of nations, except our great and glorious Republic. As I have said elsewhere, America must stand firmly on the principle that the inalienable rights to life, liberty, and the pursuit of happiness apply to nations as well as individuals. But "according to their own racial genuis and heritage—not according to ours."

5. Four hundred scientists who helped develop the atomic bomb say that to try to keep it from the rest of the world "will lead to an unending war more savage than the last. * * * The actualities of the situation require a drastic solution. * * * Lack of the decision within even a few months will be preparing the world for unprecedented destruction—not only of other countries, but our own as well."

The solution offered by the 400 experts is to internationalize the atomic weapon.

I believe we must seriously and thoroughly consider that solution. Of course, in all matters concerning the atomic weapon, the opinion and judgment of our respected Army and Navy leaders must have great weight.

The decision regarding the disposition of the secret of the atomic weapon is not ours alone. I believe Congress should invite the legislative bodies of England and Canada, who participated with us in its development,

to form a joint committee with ours to consider this most vital problem of the age. However, the internationalizing of the atomic weapon only does a half job.

Along with the internationalizing of the atomic weapon, nations must seriously consider internationalizing the few hitherto key spots of the world.

If that is not done, they must be entirely rebuilt as their defenses are obsolete with the air teeming with accurately directed huge rockets, jet planes, gigantic bombers, and atomic bombs.

Do not forget that the next war will pick up where the last one left off—just as this war picked up from the mechanism and technology of World War I.

By internationalizing, I mean having these key spots as well as the atomic bomb administered by a real collective security international organization. That would, of course, demand that the nations of the world genuinely and sincerely abandon their imperialistic-sphere-of-influence policy of aggression.

6. If the other nations do offer everything that equity in world affairs could reasonably demand, and Russia refuses the proffered hand of the peace-seeking nations, we must not shrink from the tragic facts that a new aggressor is on the prowl. And that aggressor is old militaristic, imperialistic, totalitarian Adam Zad—the bear that walks like a man. But let us hope that Russia will be willing to accept these principles, at least as a basis for discussion, when she sees they do not apply to her alone.

The maxim, he who seeks equity must do equity, applies to nations as well as individuals. Tragically, so far since the close of the war, nations are following the power-politics pattern of the centuries which has always meant more war—not peace.

Secretary of State Byrnes' report to the American people, on the failure of the London Council of Ministers, lacked a lot of satisfying the observant citizen.

There is a general feeling that we are not getting anywhere on the course we are pursuing and that there have been too many secret covenants secretly arrived at.

Italy surrendered over 2 years ago. Yet the peace terms have not been announced and our soldiers are still tied up as an occupational army in that unfortunate country.

The program I have outlined is a step toward what at least is a definite constructive plan as a basis for discussion.

Some of these proposals are not within our control. But let me remind you that requests for financing by the United States, and our great resources, give us the opportunity—late though it may be—to use our great influence to guide international political evolutions in the interest of equity and justice on which a durable peace must ultimately be based.

Understanding other nations' side to a problem, clear thinking, patience, skill and a definite plan are essential to preventing the international situation from developing in a way that can only mean another war.

If Russia and Great Britain and France and Holland really and truly are ready to apply the principles of the Atlantic Charter, then, by the financial aid of the greatest capitalistic country in the world and the reversal of our German policies, there is a fair chance of establishing a sound base essential to any practical world organization; and our victories and sacrifices will not have been in vain.

Our course of action must depend on whether America, Great Britain, Holland, France, and Russia are genuinely willing to join in a genuinely equitable world program instead of the present grab-bag policies.

On the decisions made now—in the next few months—depend future peace or destruction for humanity.

## West Side of Hell

EXTENSION OF REMARKS

OF

### HON. CLARENCE CANNON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

*Thursday, October 25, 1945*

Mr. CANNON of Missouri. Mr. Speaker, under leave to print, I am including a letter received in this morning's mail. The letter is just as received and is self-explanatory.

YOUTAN AIR STRIP,
OKINAWA (West side of hell),
*October 14, 1945.*

DEAR CLARENCE: I haven't writteh to you of late because I've been in doubt as to your whereabouts but presume you are back in D. C. again. So far, since the first of the month I've shuttled hundreds of miles and am now back just 3 miles from where I started in an AAF transient camp. General Larson issued orders that no one could hitch hike east on a plane. Well, under my orders that was my only chance. Anyway I couldn't go with the marines. Then there were 50 B-29's leaving for the east on three consecutive days and all 50 were empty but the order kept me off those. Finally, yesterday morning ATC put me on their list where I imagine I'll remain till my name is reached and then for some reason they will refuse me. The Army can't be beat. They don't want to get the men from here home so they pacify Congress and the public with some pretty announcements and then let the troops sit.

I'm practically 39 years old, have a family, and been eligible for discharge since August 15 and here I sit. And it's not just me but thousands. Since VJ-day I haven't been on duty of any kind except for a couple of days when I guarded a concrete mixer. I think every day they steal from our lives is a mortal sin and I pray every night and every morning that the Lord will burn the ones responsible for eternity. Every island over here is lined with ships, setting at anchor and many I know have been there for weeks. And the big new ships get all shined up and sent back to the States for a Navy Day celebration.

Since my last letter I have gone through the worst experience of my life, to date. That was the typhoon that struck on the 9th. The wind blew all that day. In the middle of the afternoon our tent blew away, along with everything in it. By 5 o'clock the entire area was gone and we were in the radio station. It was a permanent building, concrete foundation with iron sides and roof. At 6 o'clock the roof went off and the CO ordered us to evacuate the place. It was as dark as pitch and we couldn't see an inch. We were on a bluff by the seashore, about 150 feet above the water, but when I stepped outside, sea water hit my face. Twice the wind picked me up and carried me 15 to 20 yards. Was blown into a ditch finally. Steel antenna towers, 75 feet high were falling. Corrugated iron sheeting was blowing through the air like ships, cutting fellows up and steel oil drums were blowing around like baseballs. I had a flashlight so I crawled along till I found a burial vault and went in. There was a gook skeleton sitting there with his arms and legs crossed, all nice and dry, so I told him I wanted to keep dry too and that I wouldn't crowd him a bit if he'd leave me alone. The place was full of centipedes and the roof dripped constantly but I stayed there 5 hours. By that time the wind had dropped to 30 miles an hour so I went back out. I don't know how high the wind went for the gadget that measures it's velocity broke at 125 miles per hour.

This is definitely no fit country for white people. Now everyone is sweating out the next storm. There have been three here since I came but the last one was the climax.

There was no place to live so some other fellows went with me to a native village near here and we took over an abandoned house. There was just a roof on it but we moved in. Got a supply of K rations and holed up for 3 days. The rats kept us awake at night running around but otherwise things were up to the Army standard. The native neighbors appeared friendly. At least they condescended to eat our food with gusto. Some of them aren't too bad and nearly all speak a little English. They have nothing left, but all display a keen sense of humor and laugh a lot. Well, I would feel like laughing too if I could get home, and they are home. Maybe when all the ETO fellows get back they will remember the lunatics left out on these rocks and come after us.

This is Sunday morning and I'm going over to the chapel in a bit, then come back to the tent and burn away another day. Will spend my time trying to figure out a way of getting transferred to Alcatraz.

There's the truck for church now so must close. My love to each of you.

JOHN.

## Operation of the Patent Office

EXTENSION OF REMARKS

OF

### HON. FRANK P. BRIGGS

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

*Friday, October 26 (legislative day of Monday, October 22), 1945*

Mr. BRIGGS. Mr. President, Francis P. Douglas, a distinguished Missourian, has recently made a careful study of the United States Patent Office and has written a series of articles in the Washington Star about his findings. So good and so timely are the articles that I ask unanimous consent that they be printed in the Appendix of the RECORD along with an editorial from the Washington Star on this subject.

There being no objection, the articles and editorial were ordered to be printed in the RECORD, as follows:

[From the Washington Star of October 21, 1945]

PATENT OFFICE OUTPUT DECREASES AS APPLICATIONS RISE 30 PERCENT

(The American Patent Law Association meeting in Washington on October 9, adopted a resolution which pointed to the diminished efficiency of the Patent Office because the greater part of it was in Richmond, and directing attention to the hardships imposed on examiners. The association called for restoration of the entire office to its former quarters in the Commerce Building. The Star assigned a reporter to investigate conditions. The first report of three follows.)

(By Francis P. Douglas)

The Patent Office is facing the greatest task in its history, hampered by the division of its staff and facilities between Washington and Richmond, Va., and by a serious shortage in trained personnel which it is believed cannot be alleviated until the office is consolidated again in the Capital.

The output of the Office has fallen to a low for which there is no comparison since 1905.

And the number of applications for patents is running well above 30 percent more than a year ago.

The plight of the Patent Office is interfering with reconversion and reemployment, according to Patent Commissioner Casper W. Ooms. Mr. Ooms said: "I believe that anything that interferes with new business and with a man knowing he can go into a new business is bound to interfere with reconversion." He said lack of assurance that capital investment in a new invention has patent protection interferes with new business.

Mr. Ooms described the situation as a "dreadful plight."

At the end of September, he said, there were 69,794 pending applications for patents.

"A year ago," he said, "the figure was below 60,000. In 1942 there were fewer than 45,000 pending cases.

"Within 3 years we will probably have 25 percent more new business than we ever had. The year 1929 was the record year; there were 94,738 applications.

"We made a study of the work and we found the efficiency per man is off 25 percent. That is, the productive output is off. That is due to the handicaps under which the work is done. In addition to the divided facilities, the members of the staff are torn by personal problems. Because of the uncertainty as to the length of time they will remain in Richmond, many have been evicted from the homes they rented there. The rent-control measures have saved some from hardships. Others are separated from their families who remained in Washington."

TWO HUNDRED ENGINEERS NEEDED

"We can use 200 engineers if we can get them. There are trained men coming out of the Army and Navy, but the returning men don't want to go to Richmond."

The bulk of the Patent Office was moved to Richmond in January 1942, as a temporary wartime measure.

Leslie Frazer, First Assistant Commissioner, who is stationed in Richmond, gave these figures on the removal of personnel:

About 1,000 made the move from Washington to Richmond. Of that number, approximately 500 remain. The armed services took 250. Some resigned. Others retired or died. The corps of examiners, normally 700, is now 500.

BEEN "HEAD..CHE FOR EVERYBODY"

Of the staff in Richmond approximately 150 spend their week ends in Washington. A hundred of this number own their homes in the Capital.

Matching Mr. Ooms' description of the Patent Office situation as a "dreadful plight," Mr. Frazer said of the division of the Office: "It's been a headache for everybody." And he added resignedly, "But it's one of those things Sherman had in mind."

Mr. Frazer made it clear there is no criticism of Richmond implied. The relations with the city and its people have been excellent. Many members of the staff have taken part in the city's social and civic life to their enjoyment. Some have found Richmond more comfortable than the living conditions they formerly enjoyed in Washington. Patent Office staff members in Richmond have been generous contributors to Community Fund and Red Cross drives, and they are proud of the favorable comment they have received in the Richmond papers.

UNCERTAINTY WAS WORST ELEMENT

But since the move was temporary, many have avoided permanent ties and long-range plans. Mr. Frazer said the worst element had been the uncertainty.

As long as a year ago it was announced that the return to Washington by the end of the year was possible. Since then a few divisions have been moved back. That increased the uncertainty of those who remained.

Last week the Budget Bureau announced that offices which were moved from Washington cannot expect to be moved back before 6 months or even a year.

Mr. Ooms was asked about the prospects of the return of the Richmond staff. He made it clear it depended on space being available in the Patent Office quarters at the north end of the Commerce Department Building.

"I expect to have a substantial block of space this year," he said. "And I am hoping to get the entire crew back by the end of the current fiscal year." That would be by June 30, 1946.

In the space formerly occupied by the Patent Office are the Maritime Commission, the War Shipping Administration, the Surplus Property Board and some parts of the Bureau of Foreign and Domestic Commerce. The Office of the Coordinator of Inter-American Affairs formerly occupied space there. It moved out but Surplus Property moved in.

The transfer of the Office of Surplus Property from the Commerce Department to the Reconstruction Finance Corporation will have no immediate effect on the space available to the Patent Office, Mr. Ooms said.

Last August the Classification and Design Divisions and two units of the Manuscript Division were moved back from Richmond. About 50 persons in all were involved.

The story is told that four of those returning were assigned to an office and established themselves at desks there. They went out for lunch and, returning, found their desks had been moved into the hall by competitors for the space from another agency. They moved the desks back, and then took turns standing guard to make sure they would hold on to the space.

A Patent Office spokesman was asked about this. He laughed and said it sounded like the general run of stories that resulted from crowded office conditions in Washington buildings. But he added, "It may be true."

---

[From the Washington Star of October 22, 1945]

PATENT OFFICE "JIG-SAW" SET-UP CAUSES DELAYS UP TO YEAR

(Second of a Series)

(By Francis P. Douglas)

The Patent Office has applications for patents filed more than a year ago which still are awaiting initial action.

A report on the work of the 64 examining divisions also shows that 46 of the divisions have applications that are 6 months or more old still awaiting action.

One division head told the Star: "If a person must wait at least a year before he can receive the first official report from the Patent Office on the examination of claims, he—or it may be a firm or corporation—will be exceedingly reluctant to proceed to commercialize the invention. Obviously this greatly hampers industry and retards the progress of the arts and sciences."

Patent Commissioner Casper W. Ooms, as reported in the Star yesterday, told of a loss of 25 percent in efficiency in the Patent Office.

According to officials and staff members of the Patent Office from whom the Star has obtained statements, this is due to the difficulties of working with the facilities of the Office divided between Washington and Richmond, Va., and the decreased morale of the staff. The bulk of the staff has been in Richmond since January 1942.

In Richmond the Office occupies a former tobacco warehouse of five stories, with a two-story annex. Partitions divide the floor areas. The partitions do not run to the high ceilings, but appear to be adequate.

It is agreed that a pretty good job has been done in converting the building. It is judged on the basis of what was possible during the war emergency. It is described as "not bad" and "as well as could be done."

The search room, the records and the scientific library remain in Washington. The search room, used by the public in large numbers, has been compressed to make room for the Trade-Marks Division. Lawyers who must use it say the crowded condition is intolerable. Part of the space of the scientific library has been taken to provide quarters for the Board of Appeals.

Examiners in Richmond say they are hampered because they are separated from the records, from the scientific library and from the Library of Congress and the libraries maintained by the Agriculture Department, the Bureau of Standards and other agencies here.

A truck service maintains daily deliveries between Washington and Richmond, but it far from eliminates the inconvenience. One examiner said:

"In examining an application you may recall something you saw in a scientific or trade journal which has an important bearing on the case. In Washington you could go to the library and look it up in a few minutes. Unless you recall the date you cannot order the journal sent down to Richmond. What you do is to let a few such problems accumulate and then devote a day to going to Washington and consulting the books or records needed."

The division of the Office also makes problems for patent attorneys. Patent applications are classified according to the arts and sciences, and then are assigned to the appropriate division. Applications for radio patents, for example, go to the radiant energy classification. Radio receivers are in a subclassification in which there are more than 5,000 patents.

An attorney with an application for a radio receiver patent must search through these 5,000 patents. Examiners, however, make subsidiary files which they keep for ready reference in their offices. At present if the attorney would consult these, and thereby shorten his work, he must go to Richmond.

He must also go to Richmond if he would short-cut the ironing out of problems by a personal discussion, instead of correspondence going back and forth consuming time.

---

[From the Washington Star of October 23, 1945]

MANY PATENT OFFICE EXAMINERS STILL BEAR DUAL HOME EXPENSE

(Third of a Series)

(By Francis P. Douglas)

Patent Office examiners whose families remained in Washington when the greater part of the Office was moved to Richmond have found they have been under extra expense amounting to from $600 to $1,200 a year, it appeared after conversations with them in Richmond.

Their initial hopes that these expenses would be deductible on their income-tax returns were blasted by rulings of the Internal Revenue office.

About 150 of these "displaced persons" in Richmond spend their week ends with their families in Washington—"commuting" is what they call it. About a hundred still own homes here.

The Patent Office, with a large proportion of its staff professional men, had a large number of home owners here, perhaps the largest of any agency of the Government. Salaries range from $2,320 up to $6,230, with added increases due to length of service. The aver-

age for the professional classification is around $4,000.

Graduates in the various branches of engineering are sought for the positions. In addition, many of the examiners take courses in law and become members of the bar in order to reach the grades of assistant chief or chief examiner.

A few of the home owners sold their homes here when they moved to Richmond in January, 1942, and some rented their homes. One man said that at that time he had children in school, one child going to a dentist for the straightening of her teeth, an uncertain draft status, and a home, which he owned. While no one of these reasons would have been enough to induce him to leave his family here, all of them together were sufficient.

THREE-HOUR TRIP

The "commuters" rent quarters in a rooming house, with a private family or in a hotel. Unless they find a good boarding house, they patronize the cafeterias and restaurants.

"We eat around and discuss our stomach ulcers," is the way one put it.

Commuting means taking the 3-hour train trip between Washington and Richmond or belonging to a car pool. One car-pool member said the return trip meant starting out from Washington at 4:30 a. m. on Monday.

Some of the personnel have bought houses in Richmond. Mindful of the crowded conditions in Washington, they are not in any haste to return.

There are also some who have found life easy and attractive in the Virginia capital, have made enjoyable social contacts, and plan to stay there even if it means leaving the Patent Office.

UNCERTAINTY LOWERS MORALE

One patent attorney said when he visits the Patent Office in Richmond he is always asked, "What's the latest news on the return to Washington?" After that subject is out of the way, he said, one gets down to business.

The uncertainty and the disturbed living conditions are listed as the chief elements in the loss of morale in the Office. This is reflected in decreased production which Patent Commissioner Casper W. Ooms has said amounts to 25 percent.

The attitude of Richmond landlords also indicates the uncertainty. It was reported some of the employees had difficulty in renewing apartment leases because the owners did not want to rent to persons who might be moving out before long.

PREVIOUS RUMORS RECALLED

Some recall rather grimly the reports of a year ago that the Office might be moved back to Washington before the end of that year. And they recall with wry humor the plans they made for the move.

Where the Patent Office goes, patent attorneys have to go. There are now 26 patent attorneys listed in the Richmond telephone book, where formerly there was only a handful. However, many do not maintain offices there, but are represented by Richmond firms. About 20 attorneys a day visit the Office. Those who go to Richmond from Washington have to take a day for work which might be disposed of in a few hours.

---

[From the Washington Star of October 23, 1945]

A RASH EXPERIMENT

The original announcement of the plan to move the Patent Office to New York was greeted with widespread condemnation on the ground that it was an ill-considered and rather silly experiment which would do more harm than good. Now, almost 4 years later, these predictions are fully vindicated.

The decision to move the Patent Office and 11 other agencies to make room for war workers was reached about a week after Pearl Harbor, when most of official Washington was still suffering from the shock of that experience. There was no attempt to consult the officials who would be affected by the proposal, and, apparently, there was little or no consideration of the probable consequences. The Budget Bureau, presumably acting under White House instructions, simply decided that efficiency in conducting the war called for the removal of some people from Washington so that others could be brought in, and the Patent Office, through a process of selection suggestive of the toss of a coin, was slated to go. The original proposal met with such universal criticism, however, that the New York move was abandoned. Instead, it was decided to keep part of the Office here and move the rest to Richmond, Va., with the result that in early 1942 about 1,000 Patent Office workers were sent to the Virginia capital.

Now, with the war ended, the process is being reversed, and the Patent Office is being returned to Washington. It is an Office, however, which has suffered severely from the rash experiment of 4 years ago. As pointed out in a series of articles printed in the Star, the last of which appears today, there has been a 25 percent over-all loss of efficiency in the agency. The Office is far behind in its work, so that frequently more than a year passes between the filing of a patent application and the initial action on it. Many of the employees have been put to heavy additional expenses, and the morale of virtually all of these skilled professional workers has been seriously impaired.

Since the satisfactory functioning of the Patent Office is intimately related to the development of new business enterprises, it is obvious that not only the employees of the agency but also the national welfare has suffered from the conditions brought about by the transfer. This being so, it is eminently desirable that the entire staff should be brought back to Washington as soon as possible and that the Patent Office once again should be housed in its specially designed quarters in the Commerce Building. During the war that space has been used by various preferred agencies, some of which were doing important work. But the war is over and the time has come to get these agencies out and put the Patent Office back into the physical surroundings that were designed to fit its peculiar needs, and in which the agency, whose services are vital to the country in time of peace as well as war, can be rehabilitated with all possible speed.

---

## Wage Increases and Control of Prices

EXTENSION OF REMARKS

OF

## HON. BRIEN McMAHON

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

*Friday, October 26 (legislative day of Monday, October 22), 1945*

Mr. McMAHON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an interesting editorial entitled "Wage Increases With Control of Prices Essential To Save Our Living Standards," published in the Bridgeport (Conn.) Herald of September 30, 1945. It discusses a subject of vital interest.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WAGE INCREASES WITH CONTROL OF PRICES ESSENTIAL TO SAVE OUR LIVING STANDARD

What this country needs more than that good 5-cent cigar is a victory reconversion wage policy.

Such a policy to replace the Little Steel formula should have been readied for submission, discussion, and formulation within hours or days after the end of the war against Japan.

Like the twin arm of a pincers against either inflation or deflation in this critical change-over period, there also should have been readied a reinforced OPA price-maintenance policy and program, buttressed by congressional approval and the necessary funds.

These are the simple, basic instruments of economic peace and security, leading to 60,000,000 jobs.

Instead of breast beating because of the number of men on strike in the Detroit area, in the oil region, in New York or elsewhere, if the legions of striking men quickly would convince Congress of the immediacy for action along these lines now, instead of too little legislation too late, then I could see a point in having twice the number walk out in dramatic protests.

Congressional decision to shelve unemployment bills, because of the mounting total of strikers, is as cogent as it would be for firemen to announce that not a drop of water will be played on a blaze until the flames subside.

Good, bad, or indifferent, the Little Steel wage formula served its purpose during the fighting war. The 15-percent increase allowed workers did not compensate for increased living costs. No one claimed that, not with estimates and statistics on rising costs, ranging from 30 to 50 percent.

The war's end meant short shrift to overtime and a sharp decrease in take-home pay. To take up the slack between the fat and the leaner envelope, what was offered? Nothing. Not even a plan.

I know one manufacturer who improvised a temporary plan for his plant. He told his workers, who had been working 52 hours, that the drop to 40 hours was too sudden and sharp, and that therefore until further notice they were to be employed 48 hours.

The United Automobile Workers, CIO, and the other groups of organized workers are demanding a 30 percent wage increase. Are they to be blamed for their incisive words? I hold not. They have to forge, in the heat of collective bargaining, the beginnings of a new national wage policy, because there was none to which they could turn.

I do not know whether there will evolve a Nation-wide, general, over-all wage policy, altered by local and industry exigencies, of 10, 15, 25 or 30 percent.

But such an over-all precedent is demanded by our economy to protect wage levels and consequent living standards, and to build new and maintain old home markets.

But wage boosts, no matter what the percentage, are meaningless without price controls. A 30 percent wage increase and a 50 percent jump in prices would result in a 20 percent drop in purchasing power for millions of workers and their families. That translates itself into less food on the table, fewer clothes on the body, a decline in sales of everything.

There are two alternatives: A depressed living standard, further removed from the vaunted American standard, followed by sharper and more bitter demands for wage increases.

Should that cycle begin, there is only the black prospect of inflation, with all its tragic

implications of valueless bank accounts, insurance policies, and fixed incomes.

Is that what our boys fought for?

Or, and here is where the OPA comes in, a reinvigorated price control policy that actually will hold the lid on prices, for a sufficiently long period, until fully stocked shelves and a stabilized employment will be able to maintain a reasonable equitable balance.

It is that clear-cut, notwithstanding congressional headlining to make our immediate national industrial problem complicated, partisan and obtuse.

Wage increases, first, and equally first—not second—freezing of prices at current or lower levels, to safeguard that for which we primarily fought—a high and higher living standard, bigger and better home markets and jobs for 60,000,000 employables.—L. D.

## Universal Military Training

EXTENSION OF REMARKS
OF

### HON. JOHN H. OVERTON

OF LOUISIANA

IN THE SENATE OF THE UNITED STATES

*Monday, October 29, 1945*

Mr. OVERTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two editorials from the Shreveport (La.) Times on the question of universal military training.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Shreveport Times of October 25, 1945]

A SOUND, COURAGEOUS STAND

President Truman took a courageous and thoroughly sound stand in recommending to Congress that legislation be passed for military training of all physically capable American youth as an essential to preservation of peace. With pride in the manner in which the Chief Executive faced this grave issue, and with genuine and sincere conviction that the course he proposes must be followed, the Times enthusiastically endorses Mr. Truman's whole youth-training program. We have urged the need for military training of youth virtually since the end of War I. We urge it now with renewed vigor and faith.

Mr. Truman's speech was courageous both politically and morally. He knew that he was speaking in behalf of a program which faces much opposition and misunderstanding, and which never before in this Nation's history has been so moot a question as it is today. He knew also, in his heart and in his mind, that every white cross over the graves of men of the armed forces of the United States for the past century and a half is a silent symbol of a nation's tragically unending failure to realize that peace can be preserved only through possession of power.

The easy course would have been for Mr. Truman to pussyfoot along a politically expedient middle-of-the-road course with a program which offered only mild National Guard and ROTC expansion, and which did not approach the essentials of an overall and continuing youth-training program. Instead, the President strode forth boldly and without equivocation along the straight—and rocky—road that he feels the Nation must travel if the white crosses of two terrible world wars of the past are not to be multiplied over and over again by what would become an inevitable third war.

While some of Mr. Truman's political advisers felt that his course might hurt him with some citizen groups, we believe that time will prove the contrary. Right now, every mother and father, wife and sweetheart, is thinking of getting her soldier, sailor, marine, or coast guardsman home. Right now there is considerable national hysteria over any man or youth being in fighting uniform a day longer than the relatives at home think necessary. Right now, the necessity for military strength in a nation that has just won time's most terrible war may not be clear to vision largely befogged with thoughts of individual members of the family.

But, right now, the veterans of two devastating world wars—the men who fought and suffered and won—stand overwhelmingly in favor of youth military training as the one best means of preventing another war.

Right now the veterans of these conflicts—the men who know from bitter and bloody experience—know that the only way to keep American youth of the future from the horrors of world-wide combat is to have it so prepared for such combat that no nation anywhere on the globe will dare to become an aggressor.

We cannot understand how any citizen group—whether of the church or the laity, whether from the ranks of labor or from the offices of financiers—can look even casually at the history of this Nation or any other nation and fail to see that the veterans of the two world wars are right, that Mr. Truman and those who endorse his proposals are right, that no nation ever can be safe from attack unless it is armed to defend itself against attack.

The theory that national military weakness is an example to other nations in the field of peace and that it constitutes leadership toward international friendship has been tested over and over again in this Nation since the day Cornwallis surrendered to George Washington. For a century and a half it has failed—failed continuously, miserably, tragically, and horribly.

The theory that future youth training constitutes a lack of confidence in preservation of peace through world agreements and organizations is pure and simple fallacy. The world as a whole concedes today that War II followed quickly on the ending of War I because there was no force to keep peace.

The world as a whole concedes that any success coming to the United Nations security organizations rests largely on the willingness of those nations to use force to knock down aggression and to preserve peace. Is not the same thing true of such individual nations as ours? The whole history of the world has shown through all of its recorded pages that nations that are prepared are not attacked and the nations unprepared always are attacked in time—and if they continue unpreparedness after temporary victory, eventually they are destroyed.

Any agreement between nations becomes a tattered scrap of paper when a nation of aggression decides to use it as a target for machine-gun practice. Agreements—treaties, et cetera—have no strength of their own. They merely lay down a course of proposed action. That course is followed in exact ratio to the physical strength back of the words on the piece of paper.

There never has been a day when starry-eyed idealism and blind theory could get to first base in keeping peace between nations. If this Nation, and the world, are to have peace, it must be won with the same type of solid, sound, common-sense practicalism that won the war.

President Truman has proposed a course of practicalism. May the Nation have the vision to follow it.

[From the Shreveport Times of October 26, 1945]

REACTION TO MR. TRUMAN'S PLAN

Senator JOHN H. OVERTON has been one of the stalwarts in support of compulsory military training for this Nation as an essential step in prevention of war. His strong endorsement of the training program presented to Congress by President Truman deserves commendation both within and without his home State of Louisiana, indicates that the Louisiana Senator will be one of the most active leaders in seeking congressional approval of military training along the basic principles of Mr. Truman's proposal. That leadership will mean much for the proponents of youth training.

Aside from the position taken by Senator OVERTON and the statement of the Republican minority leader, Representative JOE MARTIN of the House of Representatives, in opposition to the President, most of the congressional comment on Mr. Truman's message was innocuous. This comment is disappointing both in its support and its opposition to what Mr. Truman has proposed. Most of it was purely political clap-trap—comparable to one youngster saying something is "swell" and another saying it is "terrible," but with neither offering any argument in support of his contention. The subject of universal military training, wrapped up as it is in the entire future of this Nation—and perhaps of the world—is too grave, and too important to be treated with anything but the most serious and far-reaching consideration and discussion.

Minority Leader MARTIN proposes that, instead of establishing universal military training for youth, the United States call on all nations to abolish conscription entirely, and do so itself if the others are willing to follow. We assume that Mr. MARTIN is thoroughly sincere in this proposal, although it is difficult to understand how a successful businessman and a deep student of political affairs, such as he is, could imagine that any such plan possibly could be put into effect. Russia, for one, certainly would not agree to it. The minute the war in Europe ended, Russia began conscripting 15 year olds, and still is doing so. Even if Russia and all other nations agreed to abolish conscription there would be nothing to prevent them from first establishing a huge army, or from creating domestic conditions that would force youth into military service in the guise of "volunteering."

Mr. MARTIN, in his proposal, seems to forget that the need for adequate defense and adequate citizen training has existed and has been demonstrated fully and thoroughly in this Nation from the days of Gen. George Washington to the present days of Generals Eisenhower and MacArthur. He seems to forget that throughout this period the United States always has followed the course of deliberately weakening her defenses and of virtually abolishing any power to attack an aggressor, and that the result always has been war, and then war again. On what grounds does Mr. MARTIN believe that what has failed repeatedly for more than a century and a half in this Nation, and for several times that number of years in other nations, now would succeed?

Mr. MARTIN, of course, does not represent a Republican Party viewpoint or policy in his proposals. He is speaking as an individual. The debate on youth training will find all party lines split. As a matter of fact, throughout the past dozen years it has been Republicans and anti-administration Democrats who were the strongest advocates in peacetime of defense measures that should have been taken and either were not taken or were taken too late—as World War II itself proved. For example, Representative WADSWORTH, Republican, of New York, a fel-

low easterner and close political associate of Minority Leader MARTIN, always has been an outstanding leader in advocating universal peacetime training, universal wartime service, and the maintaining always of a strong Army, Navy, and Air Force. Mr. WADSWORTH was the father of the peacetime draft legislation which originally drew no support from Mr. Roosevelt and finally was pushed through Congress by a coalition of Democrats and Republicans and some New Dealers who completely abandoned all party and factional lines.

We suggest that Mr. MARTIN, instead of proposing a nonconscription theory which he must know is unworkable—no matter how sincerely he may believe in it—should join with Mr. WADSWORTH, his fellow Republican, and with Democrats and others in seeking a truly workable youth-training program patterned on the basic principles of Mr. Truman's address. We do not think that Mr. MARTIN is trying to play politics in this—for, as we have stated above, no party lines are involved—but we do think he is going to subject himself to the charge of politics unless he supports some form of universal training, or offers some substitute for it that would be workable.

## President Truman on Safeguarding America

REMARKS

OF

## HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

*Monday, October 29, 1945*

Mr. RANKIN. Mr. Speaker, the Communists and their fellow travelers, as well as their publications, the Communist Daily Worker and its uptown edition known as PM, are attacking President Truman because of his stand on last Saturday, and his stand, previously announced, of keeping secret what he calls the know-how of manufacturing the atomic bomb.

I agree with the gentleman from Georgia [Mr. COX] that the time has come for America to tell the world where she stands, and to tell it in terms that every other nation on earth can understand it.

It is time to let the world know that our country will not continue a policy of appeasement toward any nation that is following a policy of deception toward us, while plundering the weaker countries around her.

I was glad to hear President Truman come out and serve notice that America is not going to appease any country that undertakes to wreck the civilization of the world, and that "we shall refuse to recognize any government imposed upon any nation by the force of any foreign power."

Few, if any, Presidents have uttered more encouraging words to the civilized nations of the earth, and especially to the small christian countries whose rights have been, and are now being trampled underfoot, than are to be found in the following excerpts from President Truman's Navy Day address:

The foreign policy of the United States is based firmly on fundamental principles of righteousness and justice. In carrying out those principles we shall firmly adhere to what we believe to be right; and we shall not give our approval to any compromise with evil.

But we know that we cannot attain perfection in this world overnight. We shall not let our search for perfection obstruct our steady progress toward international cooperation. We must be prepared to fulfill our responsibilities as best we can, within the framework of our fundamental principles, even though we recognize that we have to operate in an imperfect world.

FUNDAMENTALS OF FOREIGN POLICY

Let me restate the fundamentals of that foreign policy of the United States:

1. We seek no territorial expansion or selfish advantage. We have no plans for aggression against any other state, large or small. We have no objective which need clash with the peaceful aims of any other nations.

2. We believe in the eventual return of sovereign rights and self-government to all peoples who have been deprived of them by force.

3. We shall approve no territorial changes in any friendly part of the world unless they accord with the freely expressed wishes of the people concerned.

4. We believe that all peoples who are prepared for self-government should be permitted to choose their own form of government by their own freely expressed choice, without interference from any foreign source. That is true in Europe, in Asia, in Africa, as well as in the Western Hemisphere.

5. By the combined and cooperative action of our war allies, we shall help the defeated enemy states establish peaceful democratic governments of their own free choice. And we shall try to attain a world in which nazism, fascism, and military aggression cannot exist.

6. We shall refuse to recognize any government imposed upon any nation by the force of any foreign power. In some cases it may be impossible to prevent forceful imposition of such a government. But the United States will not recognize any such government.

7. We believe that all nations should have the freedom of the seas and equal rights to the navigation of boundary rivers and waterways and of rivers and waterways which pass through more than one country.

8. We believe that all states which are accepted in the society of nations should have access on equal terms to the trade and the raw materials of the world.

9. We believe that the sovereign states of the Western Hemisphere, without interference from outside the Western Hemisphere, must work together as good neighbors in the solution of their common problems.

10. We believe that full economic collaboration between all nations, great and small, is essential to the improvement of living conditions all over the world, and to the establishment of freedom from fear and freedom from want.

11. We shall continue to strive to promote freedom of expression and freedom of religion throughout the peace-loving areas of the world.

12. We are convinced that the preservation of peace between nations requires a united nations organization composed of all the peace-loving nations of the world who are willing jointly to use force if necessary to insure peace.

GUIDE FOR UNITED STATES NOW AND IN FUTURE

Now that is the foreign policy which guides the United States. That is the foreign policy with which it confidently faces the future.

It may not be put into effect tomorrow or the next day. But nonetheless, it is our policy, and we shall seek to achieve it. It may take a long time, and it is worth waiting for, and it is worth striving to attain.

The Ten Commandments themselves have not yet been universally achieved over these thousands of years. Yet we struggle constantly to achieve them, and in many ways we come closer to them each year. Though we may meet set-backs from time to time, we shall not relent in our efforts to bring the Golden Rule into the international affairs of the world.

We are now passing through a difficult phase of international relations. Unfortunately it has always been true after past wars that the unity among allies, forged by their common peril, has tended to wear out as the danger passed.

The world cannot afford any let down in the united determination of the Allies in this war to accomplish a lasting peace. The world cannot afford to let the cooperative spirit of the Allies in this war disintegrate. The world simply cannot allow this to happen. The people in the United States, in Russia, and Britain, in France and China, in collaboration with all the other peace-loving people, must take the course of current history into their own hand and mold it in a new direction—the direcion of continued cooperation. It was a common danger which united us before victory. Let it be a common hope which continues to draw us together in the years to come.

The atomic bombs which fell on Hiroshima and Nagasaki must be made a signal, not for the old process of falling apart but for a new era—an era of ever-closer unity and ever-closer friendship among peaceful nations.

Building a peace requires as much moral stamina as waging a war. Perhaps it requires even more, because it is so laborious and painstaking and undramatic. It requires undying patience and continuous application. But it can give us, if we stay with it, the greatest reward that there is in the whole field of human effort.

Differences of the kind that exist today among nations that fought together so long and so valiantly for victory are not hopeless or irreconcilable. There are no conflicts of interest among the victorious powers so deeply rooted that they cannot be resolved. But their solution will require a combination of forbearance and firmness. It will require a steadfast adherence to the high principles which we have enunciated. It will also require a willingness to find a common ground as to the methods of applying those principles.

Our American policy is a policy of friendly partnership with all peaceful nations, and of full support for the United Nations Organization. It is a policy that has the strong backing of the American people. It is a policy around which we can rally without fear or misgiving.

The more widely and clearly that policy is understood abroad, the better and surer will be the peace. For our own part, we must seek to understand the special problems of other nations. We must seek to understand their own legitimate urge toward security as they see it.

The immediate, the greatest threat to us is the threat of disillusionment, the danger of an insidious skepticism—a loss of faith in the effectiveness of international cooperation. Such a loss of faith would be dangerous at any time. In an atomic age it would be nothing short of disastrous.

There has been talk about the atomic bomb scrapping all navies, armies, and air forces. For the present, I think that such talk is 100 percent wrong. Today control of the seas rests in the fleets of the United States and her allies. There is no substitute for them. We have learned the bitter lesson that the weakness of this great Republic invites men of ill will to shake the very foundations of civilization all over the world, and we had two concrete lessons in that.

What the distant future of atomic research will bring to the fleet which we honor

today, no one can foretell. But the fundamental mission of the Navy has not changed. Control of our sea approaches and of the skies above them is still the key to our freedom and to our ability to help enforce the peace of the world. No enemy will ever strike us directly except across the sea. We cannot reach out to help stop and defeat an aggressor without crossing the sea. Therefore, the Navy, armed with whatever weapons science brings forth, is still dedicated to its historic task: Control of the ocean approaches to our country and of the skies above them.

POLICY NOT ALTERED BY ATOMIC BOMB

The atomic bomb does not alter the basic foreign policy of the United States. It makes the development and application of our policy more urgent than we could have dreamed 6 months ago. It means that we must be prepared to approach international problems with greater speed, with greater determination, with greater ingenuity, in order to meet a situation for which there is no precedent.

We must find the answer to the problems created by the release of atomic energy—we must find the answers to the many other problems of peace—in partnership with all the peoples of the United Nations. For their stake in world peace is as great as our own.

As I said in my message to the Congress, discussion of the atomic bomb with Great Britain and Canada and later with other nations cannot wait upon the formal organization of the United Nations. These discussions, looking toward a free exchange of fundamental scientific information will be begun in the near future. But I emphasize again, as I have before, that these discussions will not be concerned with the processes of manufacturing the atomic bomb or any other instruments of war.

In our possession of this weapon, as in our possession of other new weapons, there is no threat to any nation. The world, which has seen the United States in two great recent wars, knows that full well. The possession in our hands of this new power of destruction we regard as a sacred trust. Because of our love of peace, the thoughtful people of the world know that that trust will not be violated, that it will be faithfully executed.

Indeed, the highest hope of the American people is that world cooperation for peace will soon reach such a state of perfection that atomic methods of destruction can be definitely and effectively outlawed forever.

We have sought, and we will continue to seek, the attainment of that objective. We shall pursue that coure with all the wisdom, patience, and determination that the God of peace can bestow upon a people who are trying to follow in His path.

## Atomic Energy and the Atomic Bomb

EXTENSION OF REMARKS

OF

### HON. JOSEPH H. BALL

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

*Monday, October 29, 1945*

Mr. BALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the opening remarks I made Thursday night, October 25, 1945, in the Town Meeting of the Air, in a discussion of the subject Should We Share the Atomic-Bomb Secret With Any Other Nation?

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SHOULD WE SHARE THE ATOMIC-BOMB SECRET WITH ANY OTHER NATION?

Dr. Suits and Dr. Gustavson have given us a graphic picture both of the tremendous destructive potential in atomic energy and its great beneficial possibilities for mankind. We and the world have only 2 to 5 years to devise some way to realize the benefits, and control the destructive possibilities.

Responsibility and initiative in finding the solution rests squarely on the United States. We made the bomb. We used it. We have the production secret, at least for a few years. What we decide to do with it may save or destroy civilization.

The results of an unqualified negative answer to our question—should we share the atomic bomb secret?—are disclosed in the May-Johnson bill now pending in Congress. That bill was drafted by the War Department on the assumption that production of atomic energy must remain a closely guarded national secret.

It would create a nine-member commission to control completely all phases of the production of atomic energy, from fundamental research through production and application to both military and industrial problems. There are severe penalties, up to $300,000 fines and 30-year jail sentences for the disclosure by anyone of any information prohibited by commission regulations. The commission would control not only the Government's present $2,000,000,000 investment in this project, but all future activity, public or private, and do it in absolute secrecy. It would not even be responsible to Congress, because the bill would specifically authorize it to withhold information from both Congress and the President.

In other words, we would create a gigantic, supergovernment monopoly which would operate in complete secrecy, with authority to make and enforce its own laws to protect its power. That is a horrible Frankenstein monster for a democracy to create. I am sure Senator WILEY will not like the May-Johnson bill. But some such procedure is essential if we are determined to keep this whole development a closely guarded national secret, because a secret shared with 135,000,000 people, or even with 500 Members of Congress, is no secret at all. So we are forced inevitably to this Nazi-Fascist answer of turning complete control of this tremendous discovery over to a handful of individuals. The democratic process requires that the people have knowledge in order to decide policies intelligently, and we dare not let them have knowledge in this case.

I do not think such a solution will work in America. If it did work, it would do the United States more harm than good. Scientific research does not flourish in secrecy. That's why the Middle Ages are known as the Dark Ages, because dissemination of knowledge was taboo. If we try to strait-jacket our scientists in their search for knowledge, we'll find the United States trailing instead of leading the world.

What is a possible democratic solution? I believe that fear, based on ignorance of what other nations are doing or may do in this field, is today the greatest danger in the atomic bomb. Russia is afraid of our intentions, we are fearful of what Russia might do with the bomb if she had it. The only antidote to fear growing out of ignorance is knowledge.

First, let's set up our domestic control of atomic energy so as to leave our scientists completely free to exchange their knowledge both in fundamental research and on its industrial application. Certainly, we would not withhold from the world any beneficial uses which may eventually flow from this terrifying discovery. For the time being, let the injunction of secrecy remain on the purely military application of atomic energy, and on that alone.

Second, let's initiate an international conference of both scientists and politicians to develop machinery for sharing the beneficial results of the discovery and controlling its potential destructive effects. Let's say to Russia, France, and other nations that we are perfectly willing that their scientists see and publish everything we are doing if they in turn will permit our scientists complete freedom to see and publish everything they are doing. Then Russia will know whether or not we are manufacturing a stock pile of atomic bombs, and we will know what Russia is developing in the way of secret weapons.

Armed with that knowledge, we at least stand a chance of controlling in time any madman or outlaw nation that shows signs of attempting to pervert this discovery to the destruction of civilization. To do that we must strengthen the security council of the United Nations, make it more democratic and effective by eliminating the veto power and then be vigilant to see that it functions. The only authorized stock pile of atomic bombs should be in the hands of a truly international police force controlled by the United Nations Security Council.

The only alternative to that course is to embark on a mad and secret race among the nations to develop and produce atomic bombs and other weapons nearly as terrible, which can end only in an explosion that will destroy our civilization.

## Universal Military Training

EXTENSION OF REMARKS

OF

### HON. ARTHUR CAPPER

OF KANSAS

IN THE SENATE OF THE UNITED STATES

*Monday, October 29, 1945*

Mr. CAPPER. Mr. President, on October 28, I delivered a radio address over Station WIBW, Topeka, Kans., on the subject of universal military training, and I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Friends in the radio audience, I listened attentively Tuesday to President Truman as he read to the Congress in joint session his message recommending the adoption of universal military training for all American boys not absolutely disqualified physically to take the training.

Afterward I read and reread his message with some care.

And I must admit he left me unconvinced.

At the same time I want to pay tribute to the President for his forthrightness in coming before the Congress and advocating firmly a program which he knew the majority of the Members do not approve.

President Truman recommended for the postwar military organization—

1. A comparatively small Regular Army, Navy, and Marine Corps.

2. A greatly strengthened National Guard and Organized Reserve for the Army, Navy, and Marine Corps.

3. A General Reserve composed of all the male citizens of the United States who have received training.

The General Reserve, he said, while available for rapid mobilization in an emergency, would have no obligation to serve, either in this country or abroad, unless and until called to the service by an act of the Congress.

Now, I am going to quote him exactly upon his next statement.

"In order to provide this general reserve, I recommend to the Congress the adoption of a plan for universal military training," President Truman said. And continued:

"Universal military service is not conscription. The opponents of training have labeled it conscription, and by so doing have confused the minds of some of our citizens.

"Conscription is compulsory service in the Army or Navy in time of peace or war.

"Trainees under this proposed legislation, however," and I still am quoting from President Truman's message to the Congress, "would not be enrolled in any of the armed services. They would be civilians in training. They would be no closer to membership in the armed forces than if they had no training. Special rules and regulations would have to be adopted for their organization, discipline, and welfare."

The foregoing is quoted directly from President Truman's message.

I do not question in the least that President Truman in his own mind has drawn a very clear distinction between conscription for military service and conscription for military training. How long that distinction would be observed I do not undertake to say. I have a feeling that in a relatively short time it would be discovered that the best military training, after all, is the experience of military service. And I remember that many of the staunchest advocates of universal military service also maintain just as staunchly that it is impossible to obtain and maintain the sized military establishment our world position requires from now on, by voluntary enlistments.

So without in the least impugning the motives or doubting the statements of the President, I take with a sizable grain of salt the contention that when we adopt universal military training we are not, really, adopting conscription for military service.

The President advocates that this military training be taken between the ages of 18 and 20, at the completion of high school if that came between 18 and 20; even before 18 if the boy finished high school before he reached that age.

In this connection I was much interested in the comment by David Lawrence, whom I have known for better than three decades, and during those 30 years he never has been accused of being either a pacifist or an isolationist.

"President Truman has swallowed hook-line-and-sinker the militaristic approach to universal military training," says Mr. Lawrence in his syndicated column. "He has accepted the plans of the high-ranking generals and militaristically inclined civilians in the War Department who believe that it is highly desirable to interrupt higher education for military purposes even in time of peace.

"Instead of proposing a plan by which it would make it optional for the boy to take 1 year's training any time between the ages of 18 and 24," writes Mr. Lawrence, "the President accepts the War Department's proposal that between high school and college all boys must interrupt their studies and spend a year in a military camp.

"This proposal," continues Mr. Lawrence, "will never be accepted by Congress if the liberals of the country and the persons who believe in higher education become vocal about it.

"The only answer that some of the War Department specialists have at times made to the point is that it isn't democratic to worry about college educations. This is but another way of saying that it is not necessary to develop doctors or dentists or scientists or any of the other professional groups so essential to American life."

That ends the quotation from David Lawrence.

The President sees no danger of creating either a military caste nor a spirit of militarism in his proposal. He maintains it will do just the opposite; increase democracy and hold down the militaristic spirit. I cannot see that.

Of course, no militarist, at home or abroad, has ever conceded a militaristic purpose. But the development of a military caste cannot be prevented by saying there is not any intention of doing that, while you take the steps that inevitably will develop just that.

Militarism is a state of mind that can be foisted upon the youth of America just as it was on the youth of Germany—I think Frederick the Great started that many years ago, by putting military conscription into effect.

And as for military conscription—or universal military training—assuring victory in wars, we have only to look at the two World Wars we have passed through to raise a doubt as to the validity of that argument.

It was not military conscription, nor universal military training, nor indoctrinated and disciplined people taught to take orders (and to depend upon orders for courses of action) that brought the United States and Great Britain through World Wars I and II as the only major nations on the winning side in both wars. Neither of them had it. Most of the losers had conscription in some form or other, and had had it for generations.

I seriously doubt if universal military training is the answer to the problem of national defense—or national security as it now is called. Unless, of course, it develops that the sized Army and Navy and Air Forces that the United States must maintain under the secure and lasting peace won by the United Nations are so large that the necessary personnel cannot be obtained by voluntary enlistments.

However, if that is the case—and I must admit that the present complexion of world affairs does make it look like a strong possibility—if that is the case, I repeat, it will not be universal military training but actual compulsory military service that we will have to adopt.

President Truman says emphatically that is not the situation that faces us. He does not propose conscription for military service. So I say let's see what we are to face before we take the initial step toward conscription for military service in peacetime.

I am still hopeful that we may have a few years of peace between wars. At least I'd like to try it.

---

## Anglo-British Relations

EXTENSION OF REMARKS

OF

## HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

*Monday, October 29, 1945*

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Money for England," published in the Chicago Daily Tribune of September 17, 1945; another editorial entitled "It Is the American People's Money," published in the Chicago Herald-American of October 9, 1945; an article entitled "England Begins To Miss the Americans," by Anne O'Hare McCormick, published in the New York Times of October 17, 1945; and an article by Helen Essary published in the Washington Times-Herald of September 16, 1945.

There being no objection, the editorials and articles were ordered to be printed in the RECORD, as follows:

[From the Chicago Daily Tribune of September 17, 1945]

MONEY FOR ENGLAND

The Socialist Government of Britain is now engaged in trying to get a vast amount of money from the American Treasury. Prime Minister Attlee and Foreign Minister Bevin didn't come to Washington themselves on this mission, nor did they send any of their Labor Party associates. They are depending upon two men who played important roles in the old Conservative Government to put over this daring business. London is using titled moochers to conceal the true nature of the undertaking.

Halifax and Keynes have made it clear that what they are after is money without any strings attached to it. The idea of a loan is ridiculed by the two Britons. Of course, a gift is much more attractive to the recipient than a loan. With a loan, you either honor it or you don't. If you do, you pay interest and part of the principal each year, and that means you can't consume all you produce. The British goal is to consume more than they produce. British production is so low that they can consume out of their own efforts only half as much as Americans can.

The British perceive that if they don't honor their debt, their credit is shut off. When that happens, some time has to elapse before the slate is wiped clean and new loans can be had.

Lend-lease had neither of these drawbacks. They got their money and didn't have to worry about paying, for there was no default and no penalty. The British were crazy about lend-lease. The Right Honorable Walter Eliot, for many years an important figure in the British Government, said when lend-lease first came into use: "Lend-lease * * * which means giving the stuff away * * * is carefully drawn so as to conceal this essential implication. * * * It is the most powerful and important economic phrase of our time, the beginning of whose importance we do not yet see, let alone the end."

Lend-lease was terminated by President Truman when the Japs were defeated. The British objective is to have it resumed, under another label. One term suggested is "retroactive lend-lease." A phrase which is intended to justify a refund to them of the $3,500,000,000 they say they spent here before the lend-lease law was passed. If we are such consummate suckers as to pay out three and one-half billions as retroactive lend-lease, this would not be the end. They would be back for more in a year or two and have another clever name for it.

What are they going to do with the money they get from us? Some say they need it to support the pound, which has been under some pressure, particularly since the Socialist government came into office with its program of taking over industries. Is money raised by taxes in this country going to be given to the Socialist government at London so that it can pay off the stockholders of the Bank of England and the British railroads?

Or are the funds now sought to be used to straighten out the tangled British financial relations with India, Canada, and Argentina? The members of the sterling bloc are calling upon London for a settlement of claims. Let us remember that this was an arrangement by which Britain was able to keep for herself, often at the expense of America, some of the choicest markets in the world.

Surely the money is not sought for the purpose of enabling British manufacturers to buy cotton and other American raw materials for processing and export. All that is required for that purpose is short-term loans. Money of that sort is available right along here, if not through the banks, then through one of the Government corporations. If what is wanted is equipment, such as for the mines and the textile plants, installment loans for

this purpose also could be arranged. The British people aren't looking now for funds for rebuilding Coventry and similarly bombed-out places. The International Bank of Reconstruction and Development was created under the Bretton Woods agreements for that specific purpose.

The British can provide for all legitimate financing through institutions already set up or provided for. It is outrageous to expect the American taxpayer to provide money to bail out the sterling bloc, which was organized among other things to impede American and other non-British exports. It is preposterous to come here for a donation to pay off the stockholders of the Bank of England. It is unthinkable that American funds are to be provided to subsidize the British standard of living, just to prove that people can live better under socialism. Halifax and Keynes need to be told that lend-lease has ended for good, and successful mooching is a thing of the past. Otherwise, touch artists from every friendly and near-friendly country will descend upon Washington.

---

[From the Chicago Herald-American of October 9, 1945]

IT IS THE AMERICAN PEOPLE'S MONEY

President Truman has given the public another Washington mystery to ponder over by accepting two resignations from Mr. Leo T. Crowley when, according to the White House public record, Mr. Crowley had formally tendered only one.

Washington gossip in the last several days has it that Mr. Crowley submitted two letters of resignation, including a resignation from the FEA, but that the President "did not like" what Mr. Crowley said about the parleys with Lord Keynes and Lord Halifax and hence did not make the FEA letter public, as he did the letter of resignation from the FDIC.

So once again it becomes necessary for Americans to turn to London for information as to what the American Government is doing in Washington.

The London opinion is that, in the conferences with Lord Keynes and Lord Halifax, there have been two dissenting groups of American commoners.

One group would make the Socialist-Labor government of Great Britain an outright gift of the billions of American dollars sought, with no interest or principal to be paid and no quid pro quo.

The other group wanted to make the transaction an old-fashioned business loan, of the sort which helped to build the British Empire, to be granted only if Great Britain agreed to reduce its sterling debt, to modify its arbitrary trade restrictions, and to make some other concessions toward international settlements and adjustments.

And Mr. Crowley, says London, belonged to the second, or pro-American, group.

The British Broadcasting Corp., which is owned by the British Government, has openly expressed the London opinion.

It said, unequivocally, that Mr. Crowley's resignation resulted from disagreements in the American delegation as to our policy in the Anglo-American economic conference.

It quoted the Washington correspondent of the Times of London as writing:

"It is understood that in the talks Mr. Crowley has ranged himself strongly on the side of those who believe in what may be described as 'a business settlement with Britain.'"

The Times correspondent likewise reported that Mr. Crowley was opposed to a "grant-in-aid" or "noninterest bearing loan," in other words, to another one-sided multibillion-dollar Santa Claus transaction.

Inasmuch as any money that the administration may lend or give away is the money of the American people, surely the American people have a right to know all about it.

There is certainly no justification for mystery in so costly a proceeding.

As the fragmentary public record now indicates, Mr. Crowley is out of the administration for representing the interests of the American people in refusing to give away their money without return.

If the record is inaccurate, the White House should correct it by promptly disclosing all the facts.

If the White House does not do so, it will be the duty of Congress to procure a full disclosure of the secret negotiations with Lord Keynes and Lord Halifax.

---

[From the New York Times of October 17, 1945]

ENGLAND BEGINS TO MISS THE AMERICANS

(By Anne O'Hare McCormick)

CAMBRIDGE, October 16.—There were times in the war when the American population exceeded the British in some districts in East Anglia. In training bases and nearly 200 bomber stations scattered over the flat field of the eastern counties, great stretches of which are as far below sea level as Holland, upward of 400,000 Americans were quartered between 1942 and 1944.

Some will never go home. At Madingly, 2 miles from Cambridge, 5,500 lie buried. Row on row of the white crosses are planted in green turf as soft and thick as a tufted carpet. Edges of late blooming roses frame the plots and there is nothing lovelier in England than the surrounding countryside. The young warriors who died here rest in a scene of great peace. In the soft sunlight yesterday one looked across a garden of golden woods and emerald meadows to the glint of the Cam, the spires of the old colleges and far in the distance the tower of Ely Cathedral lightly etched on the pale blue sky.

Nearby is Grandchester, immortalized by Rupert Brooke, the young poet who fell at Gallipoli and made Forever England the ground where English heroes rest. So this bit of England is forever America. The names on the crosses, seldom of British origin, trace the characteristic inscription of America, alien in its strange blend of bloods and culture and yet as natural of this landscape as if England were the mother country of them all.

It is fitting that this cemetery should be located in the shadow of Cambridge, next to Edinburgh the favorite rest center of the American soldiers stationed in the British Isles until VE-day. The Eighth Air Force was based in the country between here and the coast because this section is flatter, less densely populated and nearer to Germany than any other part of England. It is old land and mostly farming land, set in its ways and more remote from American ways than the industrial midlands or the London suburbs.

Probably there is no better place to observe the effects of the American invasion on British life and speculate on its long-range influence on the relations between two peoples far more different than they are alike and far more interdependent in the "reconversion" of the world to peace than they were in the simpler crises of the war.

Not all the American servicemen have gone home. Cambridge is beginning its first normal years since the war, but there is nothing normal in the odd conglomeration of students to be seen poring over notebooks in the famous "backs" of Kings, Trinity, Queens, and other historical colleges on the banks of the Cam.

They comprise men in uniform and men in gowns, boys of 17 and old young men of 27 resuming where they left off 6 years ago, and 144 American soldiers, some as full students, others as specials. Besides these about 1,500 Americans are taking on-the-job courses for 3 or 4 weeks in English business and professional form.

The idea behind the latter project, explained the officer directing the work from Red Cross headquarters in the Old Bull Hotel, is not primarily to give officers and men something useful to do while they are waiting to go home. It is to provide an opportunity for Englishmen and Americans in the same line of work to exchange ideas and learn one another's methods.

As an essay in promoting understanding, however, these contacts either with universities or business firms are only a small postscript to the impression made on this country by the vast American armies camped here during the hardest years in British history.

They made a terrific impact on British life. No American who follows the track of the incursion can fail to see the after-effects. No thoughtful Englishman denies them. "Nothing quite like it has happend to us since the Norman invasion," remarked a British officer who had a liaison job between British and American forces.

He went on to predict that the result of the experience would be more perceptible when the excitements and irritations of the war had died down.

"When the poignant homesickness they suffered in this strange, uncomfortable land is cured the Americans will forget what they did not like in a nostalgia to see the old country again. The British are already forgetting what they disliked in the Americans."

Certainly the latter statement is true. In Cambridge and the East Anglian towns from Norwich to Yarmouth, where our airmen and GI's were most in evidence, people will tell you with a sigh that they miss the Americans—and miss them, it seems, for the very qualities that annoyed them when they swarmed over the countryside with their full pockets, their free and easy ways, tall tales, and invidious comparisons of local amenities with things back home.

"The Americans, were a ferment in England. They helped churn up already active currents of discontent. They corrupted the language with American slang and jeered at the British equivalent. They introduced jive, pumpkin pie, Mother's Day, and chewing gum.

"They were also useful around the house and wonderful with children. They broke down British reserve and made lasting friends. And when they dug deep enough below the superficial differences they found fundamental likenesses. What I discovered in 3 years with both armies," said the liaison officer, "above all is that your chaps and ours puzzled over the same things and were sure of the same things."

---

[From the Washington Times-Herald of September 16, 1945]

DEAR WASHINGTON

(By Helen Essary)

Lord Keynes has come to Washington to tell the United States how much money Britain requires in order to reconvert British industries and to expand British trade. Lord Keynes is a profound economist. So I should like to ask him a few questions. I shall probably be scolded well for asking the questions. But—here they go:

How much money does it cost to support the English Royal family? How much in taxes got from the British people does it cost to keep the royal palaces and castles in purple and fine linen and satin-panted footmen?

How much does it cost to supply jewels and ermine robes to members of the royal family? To caparison their horses and decorate their royal coaches? What is the value of the estates allotted the royal family?

What is the value of the crown jewels that used to be on view in the Tower of London? Hunks of precious stones. Gobs of diamonds, rubies and emeralds watched over by guards in velvet liveries.

Since Britain is once again in financial straits, is there not some way of cutting down on such medieval extravagances as these? Some way that would be less embarrassing

than asking for another loan—call it a "grant" this time—from the United States?

Another question—Is it necessary to keep the British embassies in such luxury? The British Ambassador to Washington receives about $20,000 salary a year. The United States Ambassador to England receives $17,500.

The salaries of the British Ambassador's Washington staff, which includes several ministers and dozens of secretaries and other chiefs, are proportionately large.

The expense of maintaining the Massachusetts Avenue embassy is appalling. The British Government allows $35,000 a year for the expense of representation and another $35,000 a year for official entertainments and upkeep. Add the two last sums. They make $70,000.

The United States Ambassador to England is allowed $8,400 for representation and entertainment. The sum of $1,080 is thought enough by this Government, the Government that wants to finance most of the rest of the world, to cover the difference in the cost of living in Washington and in London.

And the ambassador of the richest country on earth, the representative of that international spendthrift, Uncle Sam, is given $4,000 a year with which to rent a house which should be equivalent in elegance and importance to the British Embassy here.

Think of the sum of $4,000 a year. To rent a United States embassy in London. If the rent-control board had cut your Aunt Minnie down to that amount for her house out in Chevy Chase, you would have felt outraged.

Summarizing the difference allowed for embassy maintenance by the Government which says it is too poor to carry on with the embassy maintenance allowed by the Government which may say "Don't you worry, we will give you some more billions," the ratio, according to our State Department, is 4 to 1 in favor of the British. Being a poor relative is profitable.

Britain pays all of her diplomats well and sees that they live in a manner to prove the importance of the British Empire.

The United States pays her diplomats penuriously. Indeed the State Department files, giving salaries paid our representatives to the ranking powers, show annotations something like this:

"It is not recommended that this post be accepted by a man without a large private income. The last Ambassador paid out of his own funds the amount of * * *. This amount was necessary to run the Embassy and to entertain properly."

It is barely possible that we in the United States are too generous with foreign suppliants and too stingy with our own people. It obviously does not occur to the British Treasury that it might save some money, quite a little in fact, by being less lavish with its pomp and circumstance at home and abroad.

## The TVA—Statement of Committee for 31 National and Regional Land and Water Organizations

EXTENSION OF REMARKS

OF

### HON. JOHN L. McCLELLAN

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

*Monday, October 29, 1945*

Mr. McCLELLAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the reply of the coordinating committee for 31 national and regional land and water organizations to some statements made in a recent series of articles by Peter Edson, NEA columnist.

There being no objection, the reply was ordered to be printed in the RECORD, as follows:

Under the caption "Washington Water Lobby," Mr. Peter Edson, NEA columnist, recently endeavored to further convince the public that TVA is all that its advocates claim for it.

In the beginning of the series reference was made to the 31 land and water users' organizations as a "water lobby," an appellation that is not warranted. The objective is the enlightment of all of the people as to the true story of the TVA. These 31 organizations have banded together to try to offset the work of the TVA lobby, which has propagandized the people of the United States for 10 years at the expense of the Federal taxpayer, and which, as pointed out in the articles in question, is now organized to promote Federal "authorities" in every river basin in the United States. With as many issues involved as there as in the "authority" proposals—placing all the land and water, mineral and industrial resources of the Nation in the hands of Federal corporations with almost unlimited powers over the political and industrial development of the Nation—the existing water organizations would be derelict in their duties to their members and to the citizens of the Nation if they did not attempt to tell the other side of the story, a story that up to the present has been viewed almost entirely through the rose-colored glasses of the TVA advocates.

There are millions of people in this country who have an interest in the land and water resources of the Nation whose views cannot be expressed by either the TVA or the private power interests. The 31 organizations mentioned represent a small segment of those millions. The farther these organizations go in their analysis of the TVA, the proposed MVA, the CVA, the SVA, and all the others, the more they find that is of interest to their members, to the common citizen, and to the taxpayers.

After setting forth the various items that enter into the cost of the project, an attempt is made in the concluding article of the series to justify the position taken by the writer. First he takes up the question of retirement of the investment and quotes TVA itself to the effect that "on the basis of operating experience up to the present, TVA estimates that its income from the sale of electric power will be sufficient to retire the entire investment in 60 years, without interest." That investment in power is set forth at $460,000,000.

Regarding this presentation it should be pointed out to the country at large that this $460,000,000 invested in power equipment alone costs Uncle Sam something like 2½ percent interest annually. In view of the fact that TVA is going to take 60 years to pay off the investment, without interest, it is quite clear that the taxpayers of the Nation are going to have to pay this interest, which amounts to $11,500,000 yearly.

It must be a very comfortable feeling to the people of the Tennessee Valley to know that a hundred and thirty million people throughout the rest of the United States are subsidizing their electric light bills and their industrial power costs while at the same time the TVA can deduct from its operating expenses one item of eleven and a half million dollars each year.

The TVA report shows a net income of $14,737,270 from operations. That, however, is the brightest side of the picture—if there is a bright side. That $14,737,270 income represents the receipts in the last and biggest business year in TVA history. It represents for the most part war business. The war will be over before very long, and then where is TVA going to get its income?

But there is still another item—and not such a small one either. It is the item of taxes. Of course, the taxpayers of the country are paying this TVA bill, too. Somebody has to furnish the money to run the Government. If TVA paid its share of the tax burden, as private interests are expected to do, there would be another obligation amounting to $7,298,077, State and local, with an added Federal tax of approximately $14,321,000, all of which adds up to a deficit of $21,619,077. Allowing a $2,000,000 credit paid in lieu of taxes, the net deficit is approximately $19,619,077, which corroborates the testimony offered by Edward L. Moreland, dean of engineering of the Massachusetts Institute of Technology, before the Joint Committee on Investigation of the Tennessee Valley Authority, Seventy-fifth Congress, Third Session, to the effect that "the taxpayers would have to make up an annual deficit of $20,999,000."

Emphasis is placed on the power activities of the project, which is as it should be, since power was the prime motive in setting up the TVA. But the columnist in his enthusiasm reiterates the oft-repeated but misleading statement that 20 percent of the consumers of TVA power are rural, and also that they use twice as much electricity as United States average.

Again going to the TVA annual report, it is discovered that when the 20 percent of users is translated into kilowatt-hours the story takes on a different hue. The TVA report for the fiscal year ending June 30, 1944, which is the peak year for TVA, discloses that all of the "individual" users, rural and otherwise, used only 8,306,590 kilowatt-hours of juice out of a total of 9,110,370,790 kilowatts sold, or less than 1 percent.

Quoting from one of the said articles: "The TVA yardstick has been used in many communities to force down rates." There is much evidence in the operations of TVA to support this confession. And when this is accomplished, TVA then proceeds to dictate to the local companies which it took over with the taxpayers' money and to the cooperatives how much they shall charge for power, at rates that only a Government-subsidized corporation could hope to exist on.

Another interesting disclosure in the financial structure as cited in the opening number of the series is under the heading, "Costs." It says $65,000,000 bonds were sold. An examination of the TVA report for the fiscal year ending June 30, 1944, discloses the fact that $6,300,000 of these bonds were deposited with the Reconstruction Finance Corporation, and that all of the rest, with the exception of a block of a little less than $2,000,000, which may have been retired, were deposited with the United States Treasury. So this statement may be somewhat misleading.

The question of flood control is passed over lightly, with the general statement that TVA "flatly denies charges its flood-control operations have not benefited flood conditions on the lower Ohio and Mississippi." On this phase of the subject it might be well to quote from an article in the current issue of the Public Utilities Fortnightly, entitled "The Valley and Propaganda; Another Portrait of TVA." It reads:

"During a devastating flood on the Ohio-Mississippi River system in the spring of 1937 Col. R. C. Powell, Army division engineer at Cincinnati, asked TVA to withhold release of water at its Norris and Wheeler Dams until levels in the lower Ohio and the Mississippi Rivers had dropped. But TVA couldn't comply with this request; both reservoirs were brimful of water for power-making purposes.

"Then, too, as all engineers recognize, whatever flood protection may be provided by TVA's dams is due primarily to the fact that most of the lands subject to overflow before their construction are now permanently flooded by its reservoirs. Speaking at

New Orleans in November 1944, WILLIAM M. WHITTINGTON, chairman of the House Flood Control Committee, said:

"'What flood control obtains in the Tennessee Valley? Instead of protecting the valley, the construction of dams from the mouth of the Tennessee to its source has converted the entire valley into reservoirs. Before the TVA was authorized the greatest area that could be overflown was 420,000 acres. Now 360,000 acres, or six-sevenths of the entire area, are under water in the reservoir bottoms of the Tennessee Valley.'"

That irreparable damage was done to the area taken over by TVA is revealed in information divulged by the Tennessee Farm Bureau at a 3-day meeting. TVA transformed a successful agricultural community into an industrial center of doubtful permanence and without the consent of the people affected. In so doing it not only robbed large numbers of people of their homes and livelihoods, but placed another heavy financial burden on those people.

The State of Tennessee alone was deprived of an annual income of $13,415,300 from the sale of crops, products consumed, and Government farm payments. In addition it gouged the people of this one State of $16,830,360 in farm lands on the basis of a $30 valuation of the land acquired.

Another proper charge against power operations is the cost of removing towns, railroads, bridges, roads, and families. Hearings held by the House Committee on Appropriations on the independent offices bill for 1946 disclosed that 14,433 families or a total of 56,000 persons were dispossessed of both homes and livelihoods in the interest of the "experiment."

Members of the Tennessee Valley Farm Bureau charge that many of these people left the State and thus increased the financial burden of those that remained behind to operate smaller and less desirable farm lands.

They say that the land TVA took over is the most fertile and productive farm land in Tennessee. This, they say, is the land that contributes most in direct taxes for the maintenance of county governments and public schools. It is the land that creates most of the annual wealth of raw materials—corn, wheat, vegetables, livestock, wool, meats, eggs, dairy products. It creates local processing plants, flour mills, canneries, milk plants, meat packing establishments, and provides employment for large numbers of people not directly engaged in farming.

This is a part of the story that the representatives of these 31 organizations referred to as the "water lobby" believe should be told. The story thus far has been too one-sided.

Roy Miller, President, Intracoastal Canal Association of Louisiana and Texas, Chairman; William H. Webb, Executive Vice President, National Rivers and Harbors Congress; E. W. Rising, Finance Officer, Water Conservation Conference Continuing Committee; Lachlan Macleay, President, Mississippi Valley Association; F. O. Hagie, Secretary-Manager, National Reclamation Association.

## A Design for Business Confidence

EXTENSION OF REMARKS

OF

### HON. FRANCK R. HAVENNER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, October 29, 1945*

Mr. HAVENNER. Mr. Speaker, a distinguished engineer, who is engaged in the practice of his profession in my congressional district, has prepared a very studious thesis on the subject of maintaining a high level of employment in America by means of a system of guaranteeing adequate markets for goods and services without Government planning. He originally entitled his thesis "A Design for Business Confidence." It is a very thoughtful proposal for preserving permanent high levels of purchasing power and investment capital through a national program of market insurance.

The author of this thesis, Mr. Alfred B. Sabin, is retained by some of the largest business corporations in California, and is the originator and designer of a number of modern mechanical appliances which are now in successful use by these corporations. I believe that his business and professional experience and the long and careful study which he has devoted to the problems of American markets should make his thesis a subject of interest to all Members of Congress.

The thesis follows:

#### WHAT IS BEHIND EMPLOYMENT?

The full-employment bill of 1945 calls for an annual survey of the Nation's over-all industrial potential markets and investment needs. The bill further provides that government shall stimulate business activity, if necessary, to insure a high level of employment.

Much of the criticism being leveled at the bill is based on the contention that planning by government has proved basically unsound and dangerous to free institutions. It is generally assumed that government stimulation must of necessity consist mostly of public-works programs. It is contended that any public-works program, to be effective, must be large, so large that by its very size it becomes politically and economically dangerous to private pursuits. The sponsors of the bill, themselves, seem conscious of this dilemma, for they have suggested that the important thing is to place the Government on record as adopting a full-employment policy, but leaving the question of the method open for further development.

The object here is to outline a method which would guarantee adequate markets for both goods and services without Government planning, without endangering the Treasury, and without bureaucracy.

#### REWARD MUST EQUAL RISK

The basis of these proposals is that the closer we can approach the ideal of free, unrestricted, unobstructed markets, the closer we can come to real freedom and prosperity, and that the thing we have to fear is fear itself. The corollary to this is that full peacetime employment depends on business confidence. We have many suggestions for achieving the goal—some good, most dangerous. Even the best have not yet added up to business confidence, confidence in the future, confidence that the reward is worth the risk, work, and worry. Let's set it down right here that unless the reward is worth the risk, work, and worry private enterprise is not going to be able to furnish full employment. It never has in peacetime. It never will, unless the necessary confidence is established.

The worth of any program designed to furnish full employment under private enterprise must be measured by its power to inspire such confidence in businessmen, investors, professionals, farmers, and labor. It must inspire sufficient confidence to induce some employer to hire the last marginal worker of our goal, let us say, 55,000,000 employed. There should be such confidence that this employer will hire the last marginal worker—as he did in wartime—because he needs him. It must give sufficient confidence to the investor to induce him to invest that last marginal dollar required to employ that last marginal worker. It must assure the farmer at planting season that at harvest his efforts will be rewarded. It must assure the worker a fair share of reward for his effort and a continuing demand for his services.

The first requirement for confidence is that laws, regulations, and taxes be fair, clear, and impartially administered. The second requirement is that markets for goods and services be ample to consume them at the highest levels of production, continuously. Without minimizing in the least the importance of reforms in banking, law, and taxation, the second requirement of markets and how they may be expanded to meet any production increase is the primary subject of this article.

The cost of such a program would be inversely proportional to its effectiveness. Theodore Roosevelt said he wanted a navy so big he would never have to use it. We know such a navy is expensive to maintain, but not nearly as expensive as not having it. As a parallel on costs, the Federal guaranty of bank deposits is closer. Bank reserves and Government appropriations do not, like navies, involve maintenance costs. The cost of guaranteeing bank deposits has been a negligible item because the reserves behind the guaranty are extremely large and convincing. The same type of thing is necessary for insuring business confidence at minimum cost. If a really convincing program were set up, the psychological pressures would continually tighten up the interlacing spider web of commerce. Areas not competitive before would become so. Areas of overcompetition would be relieved. We might thus approach that ideal of a free market where all goods and services are evaluated in the only truly just and democratic way, through supply and demand. Then the annual cost of the insurance would be less than the cost of one battleship—not much to pay for the winning of the peace. Let us examine the possible effects of such a program.

Obviously, the production of goods and services would be greatly stimulated. Since 1938 gross production has risen from $85,000,000,000 to $190,000,000,000. It seems likely that with the armed forces discharged and back in industry, and using the skills we have already developed, we could approach this wartime peak rather soon.

Assurance of a job has always meant that the average American spends freely. He wants a better house, a better car, more education, better roads, more travel, more sports, and more leisure. Let us not forget leisure—time to do those things we want to do, using the things we have made; leisure, which most men automatically take when their physical needs are satisfied (as witness absenteeism). Leisure is the balance wheel, which, if widespread in time of peace, due to general prosperity, will automatically hold productive levels to what the market will absorb.

Investors, large and small, would be offered the greatest field of private investment in the history of the Nation, for capital demands would be enormous. As a rule, an investor could expect greater safety for his invested funds and a more moderate taxation. Venture capital would really get the green light.

As a corollary, it is probable that due to greater safety of funds, the tendency would be toward low rates of interest, rents and dividends. This would take place due to the laws of supply, demand, and risk; not Government regulation.

The situation for businessmen and farmers would be similar. Secure markets would stimulate mass production, enlarged plants, new services, and products, all without Government red-tape, hamstrings, quotas, ceilings, or controls.

Expansion of foreign trade is held by some to be an answer to the problem of markets and employment. Others insist restriction of

foreign trade through tariffs is necessary to protect business and employment. Both can't be true and in fact neither is.

The advantages of large foreign trade are, (a) greater variety of goods; (b) better quality of goods and specialties; (c) less monopoly; (d) conservation of the nations' scarcer natural resources; (e) collection of foreign debts; (f) and most important, better international relations. The basis of foreign trade and peace is a healthy home economy.

Though we work and hope for peace, we must be prepared for war. Fortunately, the best course in preparing for war is to work for a dynamic peace. Preparing for war boils down to one thing, be strong. Be strong in national health. Be strong in unity of purpose. Be strong in industrial "know how" and productive capacity. All of these are the product of a healthy, vigorous economy of full employment and ample markets. At the beginning of every major war in the Nation's history, we have been unforgivably short of weapons, but long on industrial power, and we have so far been victorious. We should take care of our weapons hereafter, but national defense is implemented and sustained by confidence in ample markets, by full employment.

We have outlined a few of the effects to be expected if market confidence can be insured. Following are some of the elements basic to any program which aspires to create business confidence. First, we will take up a few on which many economists tend to agree. Taxation is important. The effect of taxation on business is to remove money from circulation. This causes the remainder, due to its relative scarcity, to become more valuable. A dollar buys more goods which means lower prices. We, therefore, say taxation is deflationary and injures business. Government expenditures are the opposite of taxation. Wages rise, but not so fast as prices; hence a lower standard of living. Business may boom, at least for a time, but the greater the spending the larger the debt and the impending taxes. There is always a day of reckoning, although it may be postponed; the logical attitude toward tax rates would seem to be that over a period of years the relation of taxes to expenditures should leave just enough money in circulation to maintain a stable price level.

Taxation can be kept down only by reduction in expenditures or by reducing the amount of the interest-bearing public debt. In the immediate postwar years, tax rates should be kept as high as possible without injuring business, to reduce the debt and the interest thereon, to insure eventual scaling down of debts and taxes. With markets insured, it is probable that wartime tax rates can be maintained and the war be paid for in a few years' time. Reduce tax rates then; not before. But without market insurance, adequate taxation would probably kill business and debt repayment will take many years.

Distribution of taxation can have a profound effect on the trends of business. The tendency to penalize efficient types of business structures is against the public interest. Venture capital is the mainspring of new enterprise, new products, and industrial progress. Severe taxation of resulting large incomes turns venture capital to low-interest, tax-free, safe investments, and we all are the losers. Such taxation has gone too far. Broadening the base of income and pay-roll taxes with less pressure on the peaks, and special inducements to progressive management and investments are in order.

Taxes of the nuisance variety, taxes which cost too much to collect, and taxes which tend to restrict trade should be abolished. Income taxes require further simplification. Taxation of stockholder dividends instead of excess corporate profits would tend to eliminate unfair double taxation and stimulate corporate risk taking.

Monopoly, cartels, and devices by which they are achieved tend to restrict trade, narrow opportunity, and prevent necessary adjustments of prices to supply and demand. They are the arch enemies of free enterprise and must be curbed. Patent laws which have shown themselves of great value in the stimulation of progressive invention must be redirected to that end.

Economic trends are going to be influenced powerfully by the disposition of surplus war products and war plants. Like the public debt, it is desirable to liquidate the whole thing as rapidly as possible. There are three good reasons: (1) To put these goods to the best possible use for the good of all concerned; (2) to remove the threat to future markets; and (3) to control inflation. However, again this will be possible only if in some way ample demand for newly manufactured products can be maintained, over and above the war goods which are being fed into the economic stream. And again a convincing insurance of markets becomes imperative.

Most of these ideas have been argued pro and con for years. There is nothing new about them. They have become just good old conservative propaganda. Many conservatives assert that such a program is all that is needed to put the old U. S. A. into first-class shape. But they betray their own lack of conviction by admitting that, of course, there will be more depressions, "necessary to eliminate the unfit." "Keeps labor from getting clear out of hand." No; they aren's convinced. Nor are the so-called liberals who assure us that if private enterprise can't employ everybody the Government can. But let's not deceive ourselves. Surely the Government can employ everybody. Russia does it, but not under the guise of preserving capitalism or freedom.

Public works are very necessary and many things, such as highways, schools, post offices, Army and Navy, and so forth, are done better or can be done only by government. Such projects should continue to be done by government. But when government attempts to solve unemployment through public-works programs, the public value of the project often becomes of secondary importance. Graft and bureaucracy have a chance to dig in and if or when employment is restored a great many Americans will have gone to work for the Government. A program big enough to produce adequate markets could easily overwhelm private enterprise and create a tremendous debt which would, in turn, tend to undermine the market confidence we wish to create. No; this is not an answer. We may thus solve unemployment, but at a price—a price which may well include most of the things we have been fighting for, for several hundred years. Only some new type of market insurance can bridge the gap between the old and the new—between the era of scarcity and the era of abundance.

No; the old formulas are unsatisfactory because they do not add up to business confidence in markets and profits, and unless the total equals confidence, we have accomplished nothing. Something else is needed. I suggest that this something must satisfy five demands: (1) it must be simple, simple enough to be understood by the average businessman, the average housewife, the average farmer and factory worker; (2) it must be fair, as fair as wages determined by fair competition. Good work, hard work, perseverence, imagination and creative courage must be rewarded if we want those characteristics in our civilization; (3) it must be concrete, as concrete as a 5 dollar bill in the pants pocket; (4) it must be strong, strong enough to be effective, like the Federal guarantee of bank deposits. All good design requires a factor of safety to take care of the things which no man can foresee. Better still, use a rising factor of safety, one which increases rapidly under stress so that the mind is presented with over-powering certainty; (5) it must offer a minimum of restriction to the free flow of commerce and the right of every man to follow his own road to fame, to fortune and to his own personal goals.

These specifications all can be met by a subsidy on earned incomes geared to an employment index. If employment falls below a minimum standard of, say 90 percent, a payment would be made to each person with an earned income during the previous year. Make it proportional to that earned income. Make the payments every month so long as employment is below 90 percent. Start the first payment at twice the amount estimated as required to restore markets. Then double the amount each month of substandard employment. Simplify and speed up the process by issuing certificates at the time of income tax payments. Back these up with a Federal appropriation.

As an example of how this might work, suppose that at the time of filing our income tax reports, each of us would fill in five coupons like the sample below:

"BUSINESS ASSURANCE COUPON

"In consideration for compliance with act of Congress No.____ this note for the sum of $____ shall become redeemable in legal tender of the United States of America when, and for 30 days after so proclaimed by the Secretary of the Treasury and signed by the recipient in the presence of an authorized officer.

"Issued to_____

"Signed_____

"Social Security No._____

"Date_____

"In the presence of_____ _____ who is authorized by law to witness the above signature.

"(Seal of witnessing officer.)"

No. 1 coupon would be made out for 1 percent of the reported earned income on which the tax was paid. No. 2 coupon would be filled out for 2 percent, No. 3 for 4 percent, No. 4 for 8 percent, and No. 5 for 16 percent—a total of 31 percent of each person's previously earned income. These coupons would be checked, numbered, sealed, and mailed back to the taxpayer. Checking would consist of simply making sure that the figures correspond to the amount on which the tax was paid. By definition "earned income" might be limited to $10,000 or under if desired.

Persons having incomes too small to be taxed would get coupons by filing a sworn statement of earned income and would be encouraged, if not required, to do so. Upon completion of coupon tabulation, the total of all coupons issued would be submitted to Congress for a covering appropriation.

If, during the ensuing 12 months, the employment index remained above 90 percent, the coupons would become void. If, however, employment fell below 90 percent, the Secretary of the Treasury would be required by law to declare No. 1 coupon payable. If at the end of 1 month, employment remained below 90 percent, No. 2 would become payable; next month No. 3, etc. Payments would continue until employment exceeded 90 percent. Payments would be made whether or not the individual were employed at the time of payment. Prior to proclamation, no coupon could be discounted or bought up, this to insure full effect on markets.

The whole point of these coupons is to create confidence in markets and jobs, thereby making their payment unnecessary. An occasional payment, say every 10 or 20 years, might be desirable, if only to let people know the mechanism is operating. If more than a few were made, it would indicate political tampering or lack of public concern to maintain the basic pattern. As long as such a guarantee remained in force, however, it is difficult to see how we could have another

depression due to a lack of effective purchasing power. As long as employment remained above 90 percent, no payments would be made. The pressure to insure free markets and opportunity would be psychological.

There may be holes in this bulwark of confidence. If there are, plug them. But let's get some good insurance in effect before the dike gives way again.

## The President's Navy Day Address in New York

EXTENSION OF REMARKS

OF

## HON. OWEN BREWSTER

OF MAINE

IN THE SENATE OF THE UNITED STATES

*Monday, October 29, 1945*

Mr. BREWSTER. Mr. President, I ask unanimous consent to have published in the RECORD an article entitled "United States Rudder Still Needs Firm Hand," written by Bill Cunningham, and published in the Boston Herald of October 28, 1945, commenting on the Navy Day address by President Truman in New York.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UNITED STATES RUDDER STILL NEEDS FIRM HAND—IS TRUMAN'S BELATED EXPLANATION ENOUGH TO KEEP NATION OFF REEFS?

(By Bill Cunningham)

President Truman's Navy Day address from New York had strength in that it defined our stand, told the world what we expect and what we are prepared to recognize as the final pattern of the brave, new world. It had strength in that it served notice to Russia that puppet governments will not be recognized, and advised the British that the seas will be free and that "we believe that all peoples who are prepared for self-government should be permitted to choose their own form of government without interference from any foreign source."

WEAKENED BY VAGUE GENERALITIES

It had strength in that it clearly announced that we would keep for the present the most powerful Navy in the world and one of the strongest armies and air forces, and that, for the time being at least, we will not share the secrets of how to manufacture the atomic bomb.

It had weakness because such a statement of foreign policy is so long overdue that it looks as if this were an effort to find one. It had weakness in the fact that, like the Atlantic Charter and the "four freedoms," it consisted mostly of noble ideals and vague generalities. It was weak because it merely stated our beliefs and stopped short of saying what we're prepared to do about them. It was weak because instead of defining the 12 specific points as a practical program we're not only prepared to accept but to enforce, it classed them as a dream of perfection, possibly unattainable for many years, and compared them with the Ten Commandments, which, the President said, "have not yet been universally achieved over these thousands of years."

This looks like a belated rewrite of the Atlantic Charter, which has already been ignored all over the map, and except for whatever implication Europe wants to read from the big-armed-force and the atomic bomb retention, it's still a golden ideal to be hoped for some time. In the meanwhile, we have fought a hard, practical war, and have come out into a hard, practical future.

Understandings such as these should have been part of the fighting, firmly outlined by us as practical, finite provisions, and agreed to by Russia, Britain, China, and all other Allies, active and passive, as our arms and supplies were given them and our men sent to fight at their sides.

"SO WHAT?" MAY BE UNIVERSAL RESPONSE

Instead, nothing of this sort was evidently done, and a complete stagnation was allowed to develop as soon as the last shot was fired. This may have given greedy forces, at home and abroad, enough of a start to make these ideals unobtainable by any means other than another World War.

We've come in so late with our definition of what we were fighting for that unless we forcibly add that we're still willing to fight for it, the universal response may be "So what?" Many in this land hammered with all they had for such a statement as this while the fighting was on. They were assured that the "four freedoms" said it all, that they really constituted our war aims.

Our allies the while were hard-driving, realistic people. It was obvious from the first that they knew what they wanted, and that they intended to get it if possible. They didn't talk in generalities. Nobody had to wonder what their policies were. Right or wrong, they had straight practical pictures of what they were fighting for, and they still have.

The American people also had war aims, but each man was practically forced to picture his own. His were idealistic, too, but he was forced by the very nature of life in wartime to add some practicality. Each hoped, rather than was ever convinced, that as he gave his sons, his labor, his savings in patriotic contributions, that there was some master direction to what he was doing. There was not the slightest question about his idealism. He gave without stint, and the very least he expected was a better and better-ordered world when it was over.

Instead he has seen nothing of international cooperation, not to mention progress, toward even the writing of a peace treaty, and the home front, instead of being more unified, more tightly bound by the experience of sacrifice, the memory of danger, fear, and heartbreak mutually shared, seems to him to be torn into more different pieces than ever.

Remembering with chilling fear the experience of the last conflict, he has been wondering that if again and despite its awful warning, we have won the fighting and were preparing to lose or walk away from the things the fighting was about. Now comes this belated explanation of what "we believe" instead of what we insist shall be done. Is it enough?

GRAND BLOW-UP MENACINGLY CLOSE

We soldiers of the last war carried this same duty as far as it's been again carried to date. We whipped the Germans. That's all, plus the Japs, of course, that has happened up to now. We even left a Europe in better shape than this one and a world that had a much better chance of making something decent of itself. We had some war aims in our war. They were well defined and clearly enunciated. We offered the Germans a clean-cut pattern for surrender, and we had a plan for lasting peace. It was all blown apart by the bombing of politics later, but we, at least, had something to guide by. We knew what we were doing and what we expected.

We had all that—and failed.

This time there's none, or none that's shown to date. By every law of common sense that seems to say that failure will come more quickly than it did last time, unless we rouse ourselves and start moving. We have won the battle but we still can lose the war. As matters look now, we are already losing it.

If the "four freedoms" were really what we were fighting for, they still haven't been established anywhere in the world, including, incontestably, in our own country. There is want everywhere on the face of the globe, and, as soon as the false prosperity of the war years has evaporated, we'll be at grips with want in this land, too.

There is fear in the hearts of myriad peoples. You can find it all over Europe. You can sense it in Britain. If the truth were known, there's probably a lot of it here. Freedom of speech is little but a figure of speech anywhere but here and in the British Commonwealth. And all speech here is by no means free. Freedom of writing is what we really have in this land. Most of the others don't even have freedom of whispers, and freely admitted as much to a committee of American editors who toured the world about a year ago just to see. Their official report is sufficient commentary on that.

Freedom of religion is likewise far from universally established. The troubles between the Vatican and Moscow, the Arabs and the Jews, reported pogroms in Poland, and anti-Semitic outbreaks in Buenos Aires are samples of that sad state of affairs.

Thus, if those noble generalities represent our war aims, we haven't, as yet, won victory on any count.

FIGHTING STOPPED BUT THAT'S ALL

What progress, then, have we made?

Well, we have stopped the fighting by stronging it down, and we have succeeded in organizing the United Nations—a body expected to function if we can ever write a peace, but a body which will blow apart as Woodrow Wilson's dream did if somebody decides first to start a fight.

The rest has been entirely stagnant and stalemated, and whether this is natural reaction, a tired world merely resting, or preface-to-breakdown remains for the coming months to decide. Up to now, we haven't done much in our handling of Germany, nor done much but agree with—some call it "appease"—Russia, on anything.

From this distance, to many people, that has seemed to be weakness, lack of decision, lack of understandings, of a plan, and it probably was. There are probably others who consider it intelligent action, and maintain that it's wise to be certain before taking a stand. It was announced this week that after much work and many conferences, the plan for governing Germany ordered into being the Potsdam Conference had been completed and evidently will be put into effect soon.

This has taken 4 months, and, in the meantime our Germans have been doing some resting of their own. This seemed silly to the Russians who considered the Germans a conquered enemy and not a public charge, who therefore took what they wanted, told the Germans what they expected and stood for no loafing nor fooling.

We have practically concluded at long and elaborate last, the machinery and the preparations for the trials of German master war criminels. It looks now as if all the formality bids fair to be a farce. Instead of cold and haughty Prussians, and impressive Nazi subfuehrers, eyewitnesses report that the former Nazi overlords and generals have disintegrated into a lot of shoddy-looking bums. Two or three have practically lost what passed for their minds and even Herman Goering, who represents the prize exhibit A, has degenerated into little but a sodden physical monstrosity.

CONVICTION WOULD RULE OUT MARTYRDOM

Herr Dr. Robert Ley, the drunkard, hanged himself with a towel. Julius Streicher, the brutal Jew-baiter, now shriveled and shabby, stands and takes imaginary salutes from imaginary columns of imaginary goose-stepping German soldiers. Rudolf Hess has so completely lost his mind, or so completely pretends that he has, that he denies ever having even heard the name Adolf Hitler.

In brief, the production is terrific, but the cast is reduced to shrunken degenerates and stir-crazy bums. Again the Russians consider us silly. They can't understand why

we didn't drumhead and shoot them while they still were worth shooting. The Russians have no war criminals. They considered them strictly excess.

Still, the other side of that is that we are trying for the record, for the ages. After such a trial, if these men are convicted and executed, no Hitler of the future ever can maintain that they were glorious martyrs, shot like dogs without a chance. An added, and important feature, too, is that here, for the first time, members of a general staff will be tried, and plotting a ruthless war will be established under international procedure as an international crime if conviction is obtained.

Understanding with Russia is still the unsolved problem and, from every means of measurement, the most serious of them all. There are those who feel that we should have stood up long since and told the Muscovites right in their teeth that they'd take orders for awhile. There are, likewise, those who feel that the slow treatment was best. These latter see the break-down of the London Conference as a constructive thing. There, at long last, after giving the Russians their way in many things—"appeasing" them, if you will—we refused to climb down any more. This was the limit. That was our way of saying it.

FURTHER DELAY MIGHT BRING COLLAPSE

The Russian, so it's said, is the type of blustering ebullient who'll push you and say "Get out of the way," but if you push him back and say, "Get out of the way yourself," he'll grin, stick out his hand and say, "Fine, we understand each other now. There isn't any reason why we can't be friends." If that's true, we've now pushed him back.

But for all this we're still nowhere on the road to winning the war—to getting the issues settled and the causes of the next war rooted out and destroyed. Rationalize it, explain it, defend it as you will, we've made no real start, and further delay invites complete collapse—more quickly than it came after a better finale and evidently better planning last time.

Meanwhile the home front gives little evidence of remembering World War II. Full pressure is on to bring the Army and Navy home. Every family wants its soldier home, as is natural, but our troubles seem to be multiplying in direct proportion to the speed of the general pull-out. The charge has now been publicly made that the fast withdrawal of our Army from Europe is weakening General Eisenhower's hand in his dealings with the foreign powers. It probably is. They take it as an index. They're realistic, not idealistic. They don't talk back to a man with a stick in his hand.

The epidemic of strikes speaks for itself—and not well in terms of the strength and steadfastness we need right now. The admirals and the generals take their eyes off what we've won overseas to parade their service politics in the argument about combination into one defense department.

ONLY THE EASIEST PART IS WON

The scientists, the military, and the President all are in conflict as to whether we should share the secrets of the atomic bomb. Congress, with reelection looming as a bugaboo for most Members, treads around the vital labor question as gingerly as if it were a new kind of atomic bomb and goes hard after that sure-fire vote getter, the lowering of taxes. The President proposes compulsory military training for all able-bodied young men of subcollege age, while the church people, the pacifists, and the educators prepare to go after him.

This is all minor staff. There's a war still on. We haven't won it. All we've won is the easiest part of it—the fighting. Whether it was wise, or weak, to hold back, we've held. Whether we had no plan, no preparation, or whether we've secretly been following a perfect plan, the time has now come to rip the wraps off and make certain of the thing our more than a million casualties bought with their blood.

The time has come to say what we are, what we were in the war for, and what we expect. It still isn't too late. The others still need what we've got. Their delegations are over here now begging for it. The call is now to step in and be the world leader we've grown up to be, to pick up the bat and stride to the plate, and not continue to play a deep shortstop, as one pundit expressed it, waiting continually for issues to be batted at us. We need to bat a few—completely over the fence. We have all the hickory and the heft necessary to do it.

If we quit the game, or let the others make the play, our fate is certain. Every student of war on the face of the globe has carefully filed away a significant fact. That is that Germany lost two wars in 25 years by making one fatal mistake. That was jumping on somebody else first, and giving us time to get ready. If there's another world war, whoever sees fit to start it will certainly slug us first, and they'll bring enough when they do—atomic bombs, or whatever—to wipe us off the face of the earth. We've got to follow through now, or prepare to perish then. It's not a pleasant thought, but this isn't a pleasant world, as yet. Nor will it be, unless we make it one.

## Natural Resources of Missouri River Basin

EXTENSION OF REMARKS
OF
### HON. ARTHUR CAPPER
OF KANSAS

IN THE SENATE OF THE UNITED STATES

*Monday, October 29, 1945*

Mr. CAPPER. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial from the Kansas City Star of October 25, 1945, with respect to the natural resources of the Missouri River Basin.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

There is more than passing significance in the retention by the Army engineers of the Midwest Research Institute to make a scientific study of the Missouri River Basin's natural resources.

Obviously Army engineers desire to have all the facts on the area's resources at their fingertips when they submit their proposals for river development to a congressional committee. Various groups have had various interests in the flood-control program. Selection of the Midwest Research Institute is a tribute to its reputation for scientific integrity. Its findings will not be challenged as being weighted in favor of any special interest or group.

More important, however, will be the practical value of the analysis. The project associates the Army and a private research organization in a program in which both are vitally interested—the industrial and agricultural development of the Missouri River Basin. Assembling of all the facts on minerals, raw materials, agricultural products and fuels in the States drained by the river is the first step.

From this survey, the industrial potentialities of the region can be determined. Tentative plans calls for carrying the survey into the field of laboratory research on some of the natural resources.

Even before construction on the reservoir system begins, scientific research will be under way. It is an intelligent approach. The survey will be of great value in harnessing and utilizing the Missouri River for its maximum benefit to the area it drains.

## Broadcasting Congressional Proceedings

EXTENSION OF REMARKS
OF
### HON. JOHN M. COFFEE
OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, October 24, 1945*

Mr. COFFEE. Mr. Speaker, Senator CLAUDE PEPPER, of Florida, and myself have introduced identical bills authorizing the broadcasting of congressional proceedings. These bills are respectively Senate Joint Resolution 55 and House Joint Resolution 89. Much discussion thereof has appeared in the press since the first of the year. In speeches on this floor and in remarks made on public platforms I have quoted from numerous editorials and magazine articles in reference to the topic. One of the most interesting articles, which has but recently been called to my attention, appeared in the State Government magazine of August 1944. Here it is:

BROADCASTING PARLIAMENT IN NEW ZEALAND—NEWS OF LEGISLATIVE PROCEEDINGS BY RADIO

(By Leon Weaver,[1] captain, U. S. Marine Corps)

Brief notes in recent issues of popular magazines concerning New Zealand's practice of broadcasting proceedings of its Parliament raised questions of interest to students of legislative and electoral processes in democracies. Should similar proposals be made with reference to the Congress or State legislatures, the results of the New Zealand experiment will be of value in appraising the proposals.

New Zealand has evidenced a willingness to experiment, especially in social legislation. This willingness to pioneer in the changing of economic relationships doubtless helps explain the willingness to experiment in broadcasting the proceedings of Parliament.

Were such an innovation to be proposed in the United States Congress or in a State legislature, it would doubtless be the subject of considerable debate, and would probably be done only after much discussion and deliberation, with many arguments being made regarding its implications for democracy.

In New Zealand it was undertaken in a much more matter of fact sort of way, as but another of a series of political innovations.

The suggestion that parliamentary proceedings be broadcast was made as early as 1931. Speaking on the floor of the house of representatives, Mr. M. J. Savage (later Labor Prime Minister) said:

"Some day we may even have a microphone on the roof of this Chamber to enable the people to know how their Representatives are shaping in this House. Of course, it may be to the disadvantage of some of us, but we will have to put up with that. However, I would sooner put up with the publication of my remarks over the air than with the reports which I read in the newspapers."

[1] The opinions or assertions contained in this article are the private ones of the author and are not to be construed as official or reflecting the views of the Navy Department or the naval service at large.

This statement reveals that, as far as the Labor Party was concerned, one of the chief motives was the conviction that the press was not reporting political news fairly.[2] But one newspaper may be said to be a Labor paper, and it is one of the smaller ones. The newspapers published in the larger cities—Auckland, Wellington, Christchurch, Dunedin—are all Nationalist papers.

The suggestion was again brought forward by Labor in 1935, during the coalition government's consideration of legislation to permit broadcasting political speeches over the air. Labor was unfavorable to this legislation, fearing the Government would be treated more favorably in the allocation of time than the Labor opposition, but continued to press for broadcasting of proceedings of Parliament. Again the statement was made that, while newspapers gave good reports within space limits, they were not always fair; also, that many people were interested in following the debates on a given bill.

After the 1935 elections which resulted in the formation of a Labor government, the Prime Minister, Mr. Savage, gave instructions that the necessary facilities be installed. The decision was reached and carried out by the Ministry. Examination of paliamentary debates and newspaper files indicates that there was scant public debate on the matter at the time that the policy was instituted, although the Nationalist press and many of the Nationalist opposition members opposed the practice.[3] At first the broadcasts were confined to the more important debates. Mr. Savage stated that if the public demand justified it the transmission of speeches would be increased, and that the project should be viewed as an inexpensive experiment to see if the community desired to listen.

It is worth noting that the project was not conceived of as a panacea for the ills of representative government. Parliamentary debates and newspaper files reveal no high-sounding arguments that such an innovation was conceived of as a great contribution to democracy. At least, such claims were quite modest, and were implicit rather than explicit.[4] The innovation was viewed as a means of equalizing the conditions of the party struggle and as a means of disseminating news to which the public was entitled, if interested.

At first only the more important debates were broadcast. After a few months, however, the government felt that the experiment had been well enough received that it was decided to broadcast the proceedings more completely. It was also decided to meet the complaints of listeners not interested in the broadcasts by providing a special government station to carry such broadcasts. Under the present arrangement, the speakers and topics are announced in advance. The proceedings are "on the air" from the opening of the day's business until 11 p. m., when the microphone is turned off even though the house may stay in session, on the theory that only a very few people would wish to listen after that hour. This results in management of the debates so that the speeches designed for the ears of the outside public occur in the early evening. It also gives rise to the charge that it is possible for the government on occasion to time its parliamentary moves so that its speakers' remarks will be broadcast while those of the Opposition are made while the microphone is turned off. As might be expected, the allocation of the time has not been completely satisfactory to the Nationalist Opposition. The practice has been to follow a pro rata system as nearly as possible, whereby the time allocated to a party is proportional to the number of seats it possesses. For example, after the 1935 elections, the representation of the parties in the house of representatives was as follows: Government, 55; Opposition, 19; Independents, 6. As of June 9, 1936, the number of speeches broadcast was: Government, 19; Opposition, 13; Independents, 8. Whether or not this arrangement is fair will depend on the point of view. It results in the majority's side of the question being argued more fully than the minority's. The above figures show, however, that the allocation of time to the Opposition and Independents was in excess of that called for by their proportionate strength. The alternative—to allow every political grouping, regardless of its size, the same time as the majority—would hardly be justifiable.

By ruling of the speaker, members are not allowed to read speeches being broadcast. The speaker also controls the switch of the microphone. The microphone is turned off when subjects involving military security are involved. According to one political observer, there have been differences of opinion between the speaker and military censorship authorities as to what might be permitted to go out over the air, these differences being usually resolved in favor of the view of censorship authorities.

Recourse must be had to the opinions of political observers in order to assess the effects of parliamentary broadcasts on New Zealand political processes. As to the effects of the institution on legislators, its defenders argue that it makes for closer popular surveillance of measures and men and that this has a salutary effect on the attitudes and conduct of legislators. Some observers are inclined to minimize the effects of the experiment or to point out that some of them have been unfortunate. It is said that during the popular listening hours from 7 to 10 p. m. the legislators tend to "play to the grandstand," prolonging the debates, and that conduct of business is noticeably more expeditious after the microphone is turned off at 11 p. m. It is stated that broadcasting the speeches increases the tendency to speak on matters of interest only to the legislator's constituency, and thus fosters an undue preoccupation with relatively minor sectional problems. It is said that a legislator with something worth while to say but a poor radio voice is eclipsed by one whose principal asset is a good radio voice. It is argued that, with the inauguration of broadcasting debates, the people became conscious of the low order of debate—poor grammar, indulging in personalities, etc.—and therefore Parliament has lost some of its dignity and "mystery." It is also argued, however, that consciousness of the radio audience leads members to take greater care with their speeches. As to whether or not parliamentary broadcasts have tended to cause voters to return more able men to Parliament, even from the standpoint of debating ability, there is difference of opinion.[5]

As to the effect of the broadcasts on the political consciousness and civic literacy of the electorate, opinion is even more divided. Some observers, especially those not affiliated with the Labor Party, are inclined to minimize the size of the listening audience, and say that the novelty is wearing off and interest therefore is likely to drop. It is said that rural people listen more than urban people; that such broadcasts are listened to chiefly because they relieve the monotony of farm life, while the urban listener has competing interests.[6] It is said that only "cranks" listen to the broadcasts of routine proceedings with any degree of regularity, although it is conceded that on controversial measures or on measures affecting the listener's own locality listener interest may be substantial. Labor Party officials are of the opinion that the listening audience is substantial. The decision to broadcast even the routine proceedings as well as the more important debates was dictated partially by the feeling that there was a widespread popular interest in the broadcasts. Typical of this attitude is the following expression of opinion by a labor member of Parliament:

"Parliamentary broadcasts are, I think, much appreciated. When people listen to the broadcast of parliamentary debates they are hearing real talks, and I believe are more than satisfied with them. They appreciate the privilege of being able to hear the debates as they are proceeding, and I know that honorable members on all sides of the House have received letters of appreciation as a result. The electors scattered throughout the country are interested when their parliamentary representative is speaking in the House, and, although they do not naturally agree with all that is said, they like to hear their representative expressing his views and possibly putting forward the claim of his own district, as well as expressing an opinion on the many problems involved in the legislation that comes before the House of Representatives. I consider that the large increase in the number of license holders is due in a great measure to the fact that Parliament has been on the air."

[2] This conviction, and the resolution to deal boldly with the situation, has also been in evidence in the Labor Party's stand for close government control of radio broadcasting and its reliance on the radio as a medium for political publicity. In this connection, the Labor government's postmaster general, Mr. F. Jones, was quoted as saying that the government would be "the master of publicity * * * and is not going to wait for the newspapers or the opposition to tell the people what it is doing."

[3] Before the 1943 elections the leader of the nationalist opposition announced that if his party came to power the parliamentary broadcasts would continue.

[4] For example, about the closest approach to any such claim was Mr. Savage's statement that if the people could not be brought to parliament, parliament could be taken to the people.

[5] One observer with whom the writer talked thought possibly they had; others thought not. "Alarmists who had thought the microphone would encourage fluent hypocrisy at the expense of floundering soundness were silenced—along with the House's most agile speakers. Some of the House's lamest orators were triumphantly reelected. To champions of parliamentary broadcasting this seemed proof that the New Zealand voter was capable of being educated without being entranced" (Time, November 1, 1943).

[6] Greater interest on the part of rural people is probably partially caused by two facts: (1) In recent years, parliamentary debates have frequently dealt with matters of great concern to rural people as producers; (2) this type of news reporting would doubtless be of greater interest to the rural population whose newspapers do not carry as promptly available and complete reports of the parliamentary proceedings as do the metropolitan newspapers.

## Where Food Was Produced in 1944

EXTENSION OF REMARKS

OF

### HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

*Monday, October 29, 1945*

Mr. MURRAY of Wisconsin. Mr. Speaker, to answer many inquiries I receive I include the following letter and table from the Department of Agriculture:

OCTOBER 26, 1945.

Hon. REID F. MURRAY,
*House of Representatives.*

DEAR MR. MURRAY: In the absence of Mr. Bennett I am replying to your letter of Octo-

ber 19 requesting income from all farm products and from food products for the year 1944. The enclosed table shows cash receipts from sales of all products and the closest approximation we can make at the present time to receipts from the sale of food products.

Cash receipts from farm marketings of cotton lint, tobacco, and wool were subtracted from the total cash receipts from farm marketings to obtain the indicated income from food products. Actually there are a number of other deductions that also should be made to obtain a more realistic indication of income from food products alone but, to date, the department has not assembled its income data to fit a precise food-nonfood classification.

The attached information is preliminary and subject to revision.

Yours very truly,

PAUL L. KOENIG,
*Head, Division of Agricultural Statistics.*

*Cash receipts from marketing of farm products used for food and all farm products, by States, 1944 calendar year* [1]

[In thousands of dollars]

| States | Cash receipts from marketings of all products | Cash receipts from marketings of food products [2] |
|---|---|---|
| Alabama | 262,336 | 156,870 |
| Arizona | 125,541 | 103,556 |
| Arkansas | 340,318 | 191,165 |
| California | 1,711,964 | 1,657,507 |
| Colorado | 301,409 | 295,964 |
| Connecticut | 102,646 | 97,140 |
| Delaware | 81,241 | 81,335 |
| Florida | 337,757 | 330,110 |
| Georgia | 380,475 | 250,165 |
| Idaho | 236,687 | 231,131 |
| Illinois | 1,124,289 | 1,121,794 |
| Indiana | 656,542 | 650,520 |
| Iowa | 1,458,968 | 1,454,805 |

| New Jersey | 191,437 | 191,415 |
| New Mexico | 107,595 | 87,689 |
| New York | 613,423 | 612,479 |
| North Carolina | 615,046 | 208,681 |
| North Dakota | 409,865 | 409,696 |
| Ohio | 697,914 | 687,101 |
| Oklahoma | 438,700 | 382,119 |
| Oregon | 281,995 | 278,091 |
| Peunsylvania | 521,520 | 512,984 |
| Rhode Island | 16,969 | 16,963 |
| South Carolina | 245,222 | 100,410 |
| South Dakota | 337,212 | 331,046 |
| Tennessee | 316,555 | 217,820 |
| Texas | 1,222,596 | 921,140 |
| Utah | 115,735 | 108,271 |
| Vermont | 75,848 | 75,791 |
| Virginia | 319,848 | 250,642 |
| Washington | 453,056 | 451,448 |
| West Virginia | 85,363 | 83,408 |
| Wisconsin | 729,690 | 721,912 |
| Wyoming | 91,562 | 80,526 |
| United States | 19,975,447 | 17,999,181 |

[1] Preliminary. Excludes Government payments.
[2] Cash receipts from all farm products minus receipts for cotton lint, tobacco, and wool.

Source: Bureau of Agricultural Economics.

There are several factors to be considered in analyzing these tables:

First. The receipts in dollars is not a true reflection as to the amounts in pounds, bushels or tons of the various products that have been produced. Some States receive 50 percent or more for the same products than do other States.

Second. These returns must be considered as cash receipts and not as net cash returns. From these cash receipts must be deducted labor, fertilizer, feeds, irrigation costs and general farm expense so that while the $19,000,000 as cash receipts may appear large, yet when the expenses are deducted and the resulting total is divided by 7,000,000 the number of farms in the United States, the net cash receipt per farm is, even during wartime, relatively small.

You will note that the States of California, Iowa, Texas and Illinois are the four leading States in dollar receipts, and one must realize the size of Texas with an area of 263,644 square miles and the size of California 156,803 square miles in comparison to the 55,986 square miles comprising the great State of Iowa. Minnesota with 80,009 square miles ranks fifth and Wisconsin sixth with 54,715 square miles although both of these States are only partially developed agriculturally.

## Twelve Million Men Seen Available as Reserves

EXTENSION OF REMARKS
OF
## HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

*Monday, October 29, 1945*

Mr. REED of New York. Mr. Speaker, the American people have never been subjected to the liberty crushing effect of militarism. The system now sought to be fastened upon our free people through universal military training is the first step in setting up a military regime which is as foreign to our principles of American liberty as it would be to establish a king in place of an elected President. Once militarism is suffered and permitted to take over the control, education, and training of our youth, even for a year, this will be the beginning of the end of civilian control and direction of the young people of the Nation. If the military caste system is permitted to inoculate the coming generation with its philosophy of military government and its complete domination of the civilian population, the influence of the home will be destroyed as a "soft and dangerous influence" upon our youth both morally and physically.

Millions of fine people have come here to become citizens of the United States to escape from the war-breeding scourge of militarism, and our founding fathers sought to keep this Nation free from its pernicious influence upon our liberties and institutions.

Under leave to extend my remarks, I am inserting an article on universal military training by David Lawrence, which article appeared in the Washington Star October 25, 1945:

TWELVE MILLION MEN SEEN AVAILABLE AS RESERVES—YOUNG ENOUGH FOR WAR DUTY FOR 5 YEARS, SAYS WRITER

(By David Lawrence)

Approximately 12,000,000 men will be available as Reserves out of the armed services. They will be young enough for duty for another 5 years at least. Then why all the hurry to get a universal military training bill passed now?

This question is being asked on Capitol Hill and doubtless throughout the country. President Truman was aware of it and tried to answer the point in his message to Congress by saying:

"At the present time we have the necessary organization, the required camp installations and the essential equipment and training grounds immediately available for use in a training program. Once we disband and scatter this set-up, it will be much harder and more expensive to reestablish the necessary facilities."

This comment—which has, of course, the War Department flavor, because it has been issued heretofore repeatedly in a long series of statements by Army officials and others—merely means that the military men want to be assured of their status in the armed services. They would like to remain generals and colonels and not step back in rank, at lower pay, as is usually the case when the military services are diminished in size after a war.

MORE JOBS FOR OFFICERS

If the universal military training program goes through, it will require that more commissioned officers be retained on active duty than would otherwise be the case. So it is understandable that the military groups should insist that it is better to maintain the present organization and not disband it.

Mr. Truman takes note of another phase of the same argument against delay when he says:

"It has been suggested in some quarters that there should be no universal military training until the shape of the peace is better known, and until the military needs of this country can be estimated and our commitments under the United Nations Organization can be determined. But it is impossible today to foresee the future. It is difficult at any time to know exactly what our responsibilities will require in the way of force. We do know that if we are to have available a force when needed, the time to begin preparing is now. The need exists today—and must be met today."

It seems, of course, incredible that the President of the United States immediately after the close of the most horrible war in history—a war fought to destroy militarism and set up an international organization to preserve peace—should be saying that it is impossible to forsee the future and that he doesn't really know "what our responsibilities will require in the way of force."

Clearly there would appear to be little faith in the United Nations Organization and little faith in the capacity of the moral forces of the world to keep peaceful nations from developing enmities against one another. But there is also another phase of the uncertainty which Mr. Truman omits to mention.

WHO WON THE WAR?

Ever since the atomic bomb was dropped, high officers of the Army and Navy have been telling us that this didn't really win the war and that Japan was actually beaten before the bomb was dropped. The Russian press insists the atomic bomb was superfluous and that Russia's entry really turned the scales.

Spokesmen for the Army Air Forces are broadcasting claims that the Air Forces won the war by bombing, even before the atomic bomb was dropped. Navy men point out that seapower won the war against Japan because the bases from which the bombs were dropped were taken by the Navy and Marine Corps, assisted in some instances by ground troops of the Army.

Certainly nobody has come forth to make a case for a large group army. In fact, a considerable sum of the taxpayers' money is being used by different services inside the War Department to put over the idea that

the Air Forces won the war. It is most unfortunate that the ground troops which fought their way so brilliantly across France and into Germany and the artillery and tank forces haven't as effective press agents today clamoring for recognition for them. The public is left with the impression that ground armies are really of secondary importance, if not altogether obsolete.

Yet in the fact of such impressions created by high-placed military men themselves, the urgency is for immediate passage of a peacetime conscription.

For, however much that name may be denounced, the universal military training plan certainly isn't the volunteer system. And few Members of Congress are willing to maintain draft boards to keep on drafting 18-year-olds to fight an imaginary war.

Maybe a year or two from now when the military needs of the United States can be better estimated, some plan for universal service on a quasi-volunteer basis may be justified in connection with instruction in the high schools and colleges—that is, under civilian jurisdiction. But in the meantime, nothing is lost because there are 12,000,000 reserves available for any emergency for the least 5 years.

## The Witnesses, Please!

EXTENSION OF REMARKS
OF
### HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
*Monday, October 29, 1945*

Mr. ANGELL. Mr. Speaker, the President's message on peacetime military training is receiving the serious consideration of all of us, and I include in my remarks an editorial appearing in the Oregonian published in my district, under date of October 24, entitled "The Witnesses, Please!" in which this entire problem is discussed. The editorial which follows is worthy of careful consideration:

THE WITNESSES PLEASE!

A couple of weeks ago when Gen. George C. Marshall recommended universal training, it was said here that it was difficult to deny his argument that there must be adequate manpower to back up the weapons of the atomic age, so long as Russia hid behind a curtain of secrecy and practiced conscription along with science.

How could the United States, seriously exposed to atomic weapons both on the east coast and the west coast—thus standing in the open—increase its danger by making less of a levy than did Russia—standing in the dark—upon its manpower?

The extremity of the situation compelled us to give the utmost weight to the recommendations of the Chief of Staff—contrary as these are to the national traditions.

Now President Truman has embodied General Marshall's program in a definite proposal to Congress. The President would keep the professional services "comparatively" small. He would strengthen the National Guard and the Organized Reserve. He would form the basis for an army of citizens, to be subject to quick mobilization, by giving a year of training to young men in their late teens and then holding them in various reserve categories during their physically effective years.

In short, here is peacetime conscription for America, which always has hated the thought, camouflaged under the name of "civilian training."

Now let us say, bluntly, that the plan for our national protection, as set forth in the President's message, leaves us unconvinced.

Six of the eight reasons for universal service advanced by the President are absolutely unacceptable. He talks about the young men improving "their educational status"; about their working for "self-improvement" generally; about their developing "skills which would be useful in civilian life"; about reduction of the illiteracy rate; about the development of "ideals of responsible American citizenship"; about improving "the moral and spiritual welfare of the Nation's youth."

Bah! All this might have come out of the mouth of any military leader from Alexander to Keitel.

It is the very claptrap which Anglo-American civilization discarded when it started to build modern society—when it gave the world democracy.

No; if we are going back to the Prussian system of having the military organizations of the country train the youth of the country it must be for the purpose of preserving the Nation—not for any of this hokum that military life is the good life. If we come to that, we must say that our enemies were right all the time, and on that score we do not agree.

Thus there are only two arguments advanced by the President which bear validity. His point No. 1 was that the youth of the country should "perfect themselves in some military specialty." His point No. 5 was that the program would "raise the physical standards of the Nation's manpower." If the fate of America depends upon these two points, we can go along with Mr. Truman; if it does not, we cannot.

And at the moment, we are wondering; we are skeptical. Several things cause distrust.

Foremost is the fact that the Government seems to be determined to force universal training through before the Congress and the people really know about the atomic bomb. It is reported to us on the best of authority that the scientists of the University of Chicago group have all signed a remarkable document as to the seriousness of the bomb, and that this document is deliberately withheld by the Government and the War Department, in spite of the fact that it gives away no technical secrets. What other purpose could there be than to impose universal training prior to a renewed discussion of whether universal training has become worthless?

Then there is the fact that the recommendation, and the program, are submitted before we have had a chance to hear from those battle-front commanders best qualified to testify as to the nature of the wars of tomorrow. The Oregonian, for one, wants to have the testimony of General MacArthur and his remarkable air commander, Gen. George Kenney. These men were in large part responsible, from the strategic standpoint, for forcing the surrender of a practically intact enemy army of 7,000,000. Shouldn't they be heard on what the wars of the future will be like—whether they will be wars of universal service or of specialists? And there are others from the European theater, and from the naval theaters on both sides, who cannot be ignored. Why not get their views? In particular, Generals MacArthur and Kenney.

Then, what about this strange lack of an explanation, as to why, with highly scientific weapons, we should have a comparatively small Regular service and this great poorly trained universal force? One would think that air power and the use of the atomic bomb would require specialists giving the work a lifetime.

And lastly, why doesn't the President use the temporary advantage of the United States to bring Russia into line? There is only one reasonable solution of this atomic-bomb situation. That is a world in which every foot of land would be subject to scrutiny by an international body charged with the duty. And the only chance of that is to bring Russia around to our way of thinking while we still have the advantage. Otherwise Russia, living in secrecy and in vast distances, will feel that the dice of fate are on her side. But not a breath of that comes into Mr. Truman's message.

We have said before, and we repeat it, that it does not seem reasonable to go against the recommendations of our military commanders in regard to universal service, so long as the other major power of the world, Russia, practices universal service. They brought us through the war.

But the present procedure is terrible, and we will support the matter no further until we know what the scientists think as to the atomic bomb and what the battle-front commanders, especially those in the Pacific war, think of the needs. We believe the people want the answers to these questions. We believe they also want to know why, with science so specialized, a year's training is held so important as compared to a permanent force. And we believe the people would like to have the President of the United States use the present position of the United States to bring about a reasoned world.

He doesn't seem to be doing much about it, and we are drifting toward disaster in the dawning age of neuclonics.

## Bargaining With Britain

EXTENSION OF REMARKS
OF
### HON. RALPH A. GAMBLE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, October 2, 1945*

Mr. GAMBLE. Mr. Speaker, under leave granted me to extend my remarks, I present for insertion in the CONGRESSIONAL RECORD an editorial which appeared in the Daily Times of Larchmont, N. Y., titled, "Bargaining With Britain":

BARGAINING WITH BRITAIN

Tremendously vital fiscal negotiations are under way in Washington between representatives of the United States of America and the British Empire. England feels she must have billions of American dollars if she is to be restored to economic parity with other great nations. She feels she cannot pay even the interest on such loans, though the United States must pay its bond buyers in order to raise the billions to loan to the Attlee government.

But America looks beyond these representations. We see that while Britain is complacently accepting cancellation of $29,000,000,000 in lend-lease which we sent across, she does not intend to cancel, in interest of peacetime trade, the loans she obtained from units of her empire. Why, we suggest, should we be asked to give more than members of the British family itself give to the mother country? We want these others to forgive Britain her debts as we forgive her as our debtor.

We want freer trade within the Empire and less of trade restrictions, designed to shut out from fair competition those not within the British Commonwealth. Above all, we want elimination of factors within the British policy which have, through selfishness in the past, created trade wars leading to actual military clashes.

And incidentally, while Britain is bargaining on these vital points, we suggest it would be polite for spokesmen of the British Socialist Government to refrain from invidious comment upon the capitalistic system which has made us strong enough to invite the British appeal.

## Battle-Weary Veteran Asks Why Army Drive Is Not in Use for Redeployment System

EXTENSION OF REMARKS
OF
### HON. JAMES H. MORRISON
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
*Monday, October 29, 1945*

Mr. MORRISON. Mr. Speaker, a battle-weary sergeant in Germany sent me the following plea for a square deal. He is right that it is up to this Congress to see that he receives it.

Hon. JAMES H. MORRISON:

Having just read an account given by you, in regards to an officer's letter of protest on the redeployment schedule and discharge rate, I would like to add to the subject, from an enlisted man's standpoint of view. As a result of your interest and fight, I can think of no better individual, in your position, to criticize and protest to on the Army's much debated demobilization program. It seems apparent that congressional action has the only forceful hand in making changes and bettering the particular program, so it is to our national political figures that we look forward to—with hope.

I won't attempt to elaborate or cite any personal cases or instances, but rather to try to portray the opinions and feelings of the average GI in the European theater. There has been a woeful situation created in the Army, due to the inadequacy and inefficiency created by officials in high positions who seemingly possess the status of being mentally incapacitated. There appears to be no drive or push whatsoever on the Army's part to speed up discharges and redeployment to the States.

In regards to the point system, the majority believe the whole thing is grossly unfair and should be done away with as soon as possible. Length of service and combat credit should be given more consideration in the release of military personnel.

Probably the worse mistake the War Department has yet committed was the authorization to discharge any man in the States regardless of points if a job could not be found for him. A man with 44 points over here will remain in the army of occupation for an indeterminate period, according to a recent USFET statement. Thirty-six points is sufficient a score to keep from being sent overseas for those who are fortunate enough to be in the United States. The troops who fall in this category are also enjoying furloughs up to 45 days at a time. I have enclosed a small clipping from today's edition of the Stars and Stripes that gives an interesting light on this matter.

We believe that shipments to the United States can be increased and speeded up. We have read that 300 ships have been laid up since "there is no further use for them." Do these people responsible think that all men in the European theater are home? We see, in the Munich area, hundreds of large planes being "pickled" for storage. Cannot these planes, which are capable of Atlantic flights, be made available for the transportation of troops?

Morale is so low among troops in this sector that it is actually pitiful. The men, who deserve to be home, and should by all rights of sensible argumentation, are in most cases bitter toward the administration in fault. If any individual or collective group in Washington has the idea that all's well and rosey in this theater, pertaining to the disposition and morale of troops, I sincerely wish that an investigation could be arranged. I'm sure that the analysis of the outcome of the investigation would ve very startling.

There are so many troops over here with nothing to do, that it almost creates a problem on many unit commanding officers as to what to do with the vast surplus. The fact that there are 10 times the actual required and necessary number of men needed to carry out occupational duties in assigned sectors is an outstanding one. You can interview 10 GI's and 9 will tell you that all they're doing is passing away time and "sweating out" a boat ride home. It's a common sight to see outfits jammed in small towns, with no more military installations to guard and administer than you would find in some desolate desert.

Then, too, we would like to know about the facts and figures concerning the replacements that are supposed to replace some of the lower point men in the European theater. It seems that with the drafting of 50,000 men monthly, the reenlistments, and the men eligible for overseas service who have yet to leave the States, the War Department could certainly muster sufficient a force to comply with the required occupational force figures. Incidentally, the psychological and physiological requirements for overseas duty shouldn't be at a very high fixed standard now that the war has reached its climax. Any 4–F could do what we are doing.

We also read that a recruiting program is being launched by the War Department. There's one thing definite—nobody who is aware of what the Department has done and is doing regarding demobilization would want anything to do with this Army, no matter how great the inducements may be. Unless something is done by congressional legislation to readjust or radically change the present demobilization program, I fear the outcome of the men who stand as victims.

I hope and am sure that you employ and devote your energy, efficiency, and prestige on the subject involved. I'll close with my only compliment—orchids to the few Members of both the House and the Senate who are at least trying and realize our plight.

Sincerely.

## Irrigated Lands for Veterans May Yet Be Furnished by Congress Another Way

EXTENSION OF REMARKS
OF
### HON. JOHN R. MURDOCK
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
*Monday, October 29, 1945*

Mr. MURDOCK. Mr. Speaker, a few hours earlier this afternoon I was called out of the Chamber to go down to one of the Departments on official business. Therefore I was absent at the time the conference report on the land-grant railroad bill was brought before the House. I understand that the House rejected the conference report, probably because of the opposition to an amendment placed in the measure by 10 western Senators, including the 2 Senators from Arizona. This Senate amendment sought to authorize an appropriation to be used in the irrigation States to provide family-sized farms for veterans in those Western States. I know it was contended that this Senate amendment was a rider placed on a bill to which it seemed to have little logical relationship. However, I favored accepting it in the conference report.

There is a definite relationship between this amendment offered by 10 western Senators and this land-grant railroad rate bill to which it was attached prior to the action of the House in rejecting it. This measure when it becomes law will turn back to the Government certain lands in those Western States to the public domain and as such it will not be taxed. While this railroad land was in private ownership, it was subject to taxation by local government and thus yielded some local tax revenue. Now, it is in these Western States where the Federal Government owns so much of the area nontaxable that the local governments are hard pressed to find revenue for local need. If the amendment could have been accepted it would have provided thousands of farms for veterans in private ownership and thus would have counteracted the local tax losses incurred by the bill itself by furnishing new taxable wealth in homes for new settlers.

Aside from the logic of furnishing, by this amendment, local revenue to compensate States and counties for the lost revenue which this bill will cause by returning the railroad grants to the public domain, this Senate amendment deserved our support even more because it conferred benefits upon returning veterans. While I am working for other legislation which seeks to furnish good irrigated land in family-sized farms for veterans I was neverthless strongly in favor of this Senate amendment. Members may say, "It is a splendid idea to provide farm homes for veterans on good irrigated land, but there is another way to do it rather than through the adoption of this amendment. Congress ought to do it the other way." Now, I will not only agree, but insist, that it ought to be done some way as part payment of the obligation we owe to veterans and we ought to do it as a part of the postwar reconversion plan. If the House will not accept the Senate amendment to provide homes for veterans in these irrigation States, it is all the more reason why Congress should do it the other way. And what is that other way?

I submit that one other legislative way which Congress could and should choose to furnish vet[illegible]ns homes on irrigated lands is to enact into law two bills which the House Committee on Irrigation and Reclamation has already reported out, and on which the House has taken first action. I refer to H. R. 2742 and H. R. 520. These bills may need slight changes, but in the interest of veterans both of these bills should be enacted into law quickly as a legislative foundation, and followed up with due appropriation. At this moment the Appropriation Subcommittees are hearing requests for various amounts for irrigation projects. To give

force and effect to our plan to furnish veterans farm homes, Congress should immediately appropriate $93,367,000 to the Bureau of Reclamation as requested by the President about 2 weeks ago. This request is found in Document No. 331, which contains supplemental estimates to enable the Reclamation Service to carry on its postwar program for the benefit of veterans. Any Member who sincerely wants to enable veterans to get irrigated farm lands, but who could not support the Senate amendment in the conference report today, can still accomplish this most commendable objective by wholeheartedly supporting the legislation and appropriation I have just referred to.

I hope I do not tire the membership by dwelling on this one topic so much and so often, but I must say solemnly that now is the time of decision. Either we pass some laws, such as H. R. 520 and H. R. 2742, giving preferential rights to veterans, and appropriate sufficient money to do something in this line for veterans, or we will do nothing for them in the way of such benefits. And Congress must act now if it is going to act, for next year will be too late. Let no sincere Member say or think for one minute this type of legislation for veterans can be taken care of next session. Now is the time to make our words mean something through our action for, without action immediately, our promises are mere words.

## A Tribute to the Home-Front Army

EXTENSION OF REMARKS
OF
### HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
*Monday, October 29, 1945*

Mr. PATMAN. Mr. Speaker, today America launches a campaign to gather $11,000,000,000 in the Victory Loan drive, money needed to finish the job of winding up the war, to pay for bringing home our troops, to care for the wounded and disabled, and to pay the final installment on the planes and tanks and guns and bombs we used to defeat the Axis Nations. This drive is under the able leadership of the distinguished Secretary of the Treasury, the Honorable Fred M. Vinson.

THE AVERAGE AMERICAN

No time could be more fitting for us to pay a word of tribute to the average American; to thank him for the splendid way he has dug so deeply into his pocket to finance our struggle for freedom. Later I expect to have something especially to say about the Honorable Theodore R. Gamble, who has so effectively and so efficiently conducted these campaigns.

Much has been said about the tremendous production job our industries did, the speed with which they produced ships, the hundreds of thousands of planes and weapons that rolled off our assembly lines. It was a magnificent record. But none of that would have been possible, not a wheel could have rolled, had it not been for the millions of Americans who took out of their pocketbooks and laid down the money to provide the payment for our part in the struggle for freedom.

THIS, THE EIGHTH DRIVE FOR FUNDS

Seven times the Treasury has called on the American citizen to supply the financial sinews for our struggle against the aggressor nations. The first time it was for $9,000,000,000. Our people responded by buying $12,000,000,000 worth of bonds in 30 days. As the tempo of conflict increased, the Treasury called again and again. For thirteen billion, then fifteen, then sixteen, and $14,000,000,000. Each time our people responded so generously every goal was exceeded.

During the war the Treasury has asked the people for a total of $95,000,000,000. They gave $135,000,000,000. Today more than 85,000,000 individual Americans have bought partnership in their Government through war-bond purchases. That shining contribution stands uniquely beside the bravery of our soldiers abroad, as a tribute to the unity of a true Republic fighting for its freedom.

How was this accomplished? Did our Government spend millions of dollars for a vast force of workers to persuade people to buy bonds? No. The total number of paid Treasury employees actively engaged in these war-bond campaigns has only been approximately 650 men and women.

It was accomplished by an army of civilian volunteers, 6,000,000 of them—one-half the size of our uniformed Army in the field—and by the leadership and organization of America's entire radio and publishing and moving-picture industry, working with the Treasury force on a purely voluntary basis.

Too high a tribute cannot be paid to our Nation's publishers, editors, advertising agencies, and advertisers, and the hundred other media which brought the war-bond story to every crossroads hamlet in the Nation. They were handicapped by lack of paper and by lack of manpower, yet they gave space without stint to bring the war-bond message to the people.

They donated a total of $153,174,966 worth of advertising space to the war-bond drives. The radio industry alone contributed $77,658,742 in otherwise salable time. Daily newspapers contributed $36,000,000 worth of space.

Weekly newspapers contributed more than $1,000,000 in space; magazines gave twelve million; the outdoor advertising field gave $11,000,000 worth of space to the various campaigns. No dollars-and-cents value can be put on the millions of dollars' worth of free publicity supplied these campaigns by the moving-picture industry and the theatrical interests of the Nation. Neither can we properly appraise the dollars-and-cents value of the thousands of retail store windows given over to war-bond displays or the efforts of our manufacturers who put war-bond slogans on everything from pats of butter to cross-country freight trucks.

It was the greatest sales form ever assembled in history, sparked by a tremendous wholehearted desire to cooperate with the war effort.

In 1 drive this year, more than 3,000 magazines gave their front covers to war-bond pleas. Literally millions of columns of editorial space in newspapers and magazines, thousands of hours of radio time, and the work of thousands of trained writers and publicists have been thrown voluntarily in this effort. These contributions have helped to write one of the proudest stories of the entire home front in this war.

The team mates of those who brought the war-bond story to the people deserve a special tribute. Those were the soldiers in the civilian army of 6,000,000, the individual salesmen who gave so much of their time and effort, the ones who literally tramped from door to door, who completed the cycle of bringing the bond directly to the hands of the citizens who wanted them.

Those infantrymen of the civilian army will get no medals, but all their lives they can keep the satisfaction of knowing that they played a vital role in bringing us along the successful road to victory. They will have the gratitude of the many whom they persuaded to invest in war bonds. It was a job well done.

There is still another group on this team, the administrative officials of the Treasury Department who supplied the program and the leadership for financing this war under the able direction of Secretary of the Treasury Morgenthau. No Secretary of the Treasury in our Nation's history ever faced a more difficult task than he did in developing the vast ramifications of finance necessary to provide funds with the least possible pledging of the Nation's future income. His success is fully attested to by the fact that, to finance World War I, the Government paid an interest rate which averaged 4¼ percent, while, today, the average interest rate on the Nation's total debt is only 1.9 percent.

Today, we are embarking on the last of the war-loan drives. We need $11,000,000,000 to nail down the lid on final victory. Some of this money will go for ammunition already fired; some to pay the cost of guarding Germany and Japan. It will cost one and a half billion dollars to bring all our soldiers and sailors and airmen back home. Money will be needed to provide medical care for our 500,000 disabled and wounded veterans. Returning servicemen must have a stake to start again in civilian life and we have provided up to $300 per man for that. That will require some $2,000,000,000. Those are the major items of the final bill.

We have waged a long struggle—the most destructive one in history. With our skill and power of men and materials, we have stunned our enemies, pulled their fangs, and made them harmless. The cost has been incredibly heavy, but the victory is ours—complete, inspiring.

This total victory, however, the victory of our armed forces, is but a prelude to another battle before us—the winning of the peacetime battle against inflation. We are at the beachhead. To win that battle, we must mobilize the same energies, the same skills, the same team spirit

that won the war, to win a prosperous and enduring peace.

The immediate financial task in this battle is to hold back our excess purchasing power, to finish the job of paying for the war, and to establish a sound foundation for the way of life before us.

We cannot falter at this stage any more than our armed forces could stop fighting before victory. As a free, generous daring people, there is but one answer—to redirect our resources—manpower, material, skills and capital from war's destruction to rebuilding peace and prosperity. This is the greatest challenge and opportunity we have ever had. Let us provide the money and finish the job.

## Dictatorship by Commission?

EXTENSION OF REMARKS
OF
### HON. CHARLES H. ELSTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
*Monday, October 29, 1945*

Mr. ELSTON. Mr. Speaker, in connection with the bill soon to be reported to the House by the Military Affairs Committee, the purpose of which is to control the development and utilization of atomic energy, the following editorial from the Cincinnati Times-Star of October 25, 1945, is appropriate:

DICTATORSHIP BY COMMISSION?

The problem of controlling atomic energy has had somewhat the same effect upon official thinking in Washington as the atomic bomb had physically upon Hiroshima.

Everyone agrees that control of this terrible new form of energy is essential to the future of the United States and of the entire planet. But this does not excuse the setting up of a commission dictatorship over the United States, with no public voice in the matter and indeed no public understanding of what is going on.

Such a dictatorial power would be created by the May-Johnson bill, now pending in Congress. That measure would set up a 9-man control commission, appointed by the President with the approval of the Senate for staggered terms and removable only by the President for extreme cause. Most of the commission's powers would be exercised by an "administrator," who could be removed only by the commission.

This extraordinary official and the commission under him would wield powers never before dreamed of in the United States. They would control "all sources of atomic energy and all matters concerned with research." They could direct the services of the heads of all governmental agencies. They would have condemnation powers over all uranium sources and over all minerals, real property, mines, factories, technical information and patents which might be related to atomic research now or in the future. They could muzzle all scientists, who would work under commission orders. Their extreme powers of censorship would be backed by heavy penalties.

This bill was prepared by the War Department, introduced by the President and rushed through two hearings, at which no real discussion was permitted by the congressional sponsors. There has been no public weighing of its merits or defects by scientists or by representatives of the people. It might fairly be called a product of atomic hysteria.

This bill to set up a commission which might easily become more powerful than the Government itself must not be railroaded through Congress without thought or discussion. In our concern to restrain and harness the appalling force of atomic energy we must not invite the tragic consequence of a dictatorship by commission in the United States.

## OPA County Carnival Program

EXTENSION OF REMARKS
OF
### HON. NOAH M. MASON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
*Monday, October 29, 1945*

Mr. MASON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

ILLINOIS FEDERATION OF
RETAIL ASSOCIATIONS,
*Chicago, Ill., October 26, 1945.*

DEAR CONGRESSMAN: We would appreciate it very much if you would investigate the county carnival program now being staged by the OPA in some counties and being prepared for 2,400 buying centers over the United States. We understand the carnivals are to popularize the continued need for price control under the guise of checking inflation.

A week or so ago the OPA enlisted the aid of merchants and other businessmen in greater Jackson and Madison County (Tenn.) in its first Fight Inflation Week. We can envision this as an effort on the part of OPA to sell people on the need for a continuation of controls far in advance of the present termination date of the Price Control Act on June 30, 1946.

HOW IS IT AUTHORIZED?

We would also like to know how much of the taxpayers' money these elaborate programs are costing and in what manner they are authorized by the Bureau of the Budget and under what appropriation? We also would like to know why these programs are being held without also setting forth the tragic results of current OPA restrictive absorption and proticketing policies not only on the manufacturers and their merchants but on their customers?

WHY NOT BOTH SIDES OF THE STORY?

We wonder why there are not displays of so-called new goods coming on the market—such as were mentioned before the Smith committee—new goods coming on the market from new producers and goods far inferior in quality and far higher in price than the merchandise which is now not being made by established manufacturers because of the price squeeze. We wonder why the bare shelves of retail stores are not photographed and displayed. We wonder why a Government agency can utilize taxpayer money for the purpose of presenting only one side of a story. We wonder why the program is necessary if OPA is sincere in its hope to abandon controls soon. We wonder if the shortages of today which might necessitate the controls of tomorrow are not being manufactured to a large extent by the restrictions of the present. We wonder, in truth, whether or not the citizens of this country are simply being readied to bombard their Congressmen with requests to continue price control—and the emergency—come June 30.

"Supported by the Greater Jackson and Madison County (Tenn.) Association," the federation reported, "the OPA enlisted merchants and other businessmen almost 100 percent behind its 'fight inflation week.' Plans now are being made to carry this carnival type promotion into about 2,400 population centers. We presume they will be held in Illinois and we expect that businessmen here will also 'cooperate' because noncooperation could easily be construed by the well-propagandized citizenry as meaning that merchants were for inflation. They are less for it than anyone else could possibly be. But they are beginning to wonder whether these carnivals are less to fight inflation and more to perpetuate controls."

"The Tennessee carnivals," the federation reported, "were quoted as well-organized, effectively displayed and convincing."

WHAT THE CARNIVAL FEATURES

"The local newspaper carried a series of stories on the coming event. On September 30, the entire Sunday edition of 58 pages was devoted to the stunt. News section, society, business, local events, and religion were tied tightly into the plan. Every advertisement was keyed to it.

"Over 40 merchants in Jackson (a city of 40,000) designed special window displays. Prizes were offered for the best windows, for slogans and essays. The local radio stations carried spot news of the program every day during the week and merchants sponsored three special programs for the week.

"Local women's and men's clubs scheduled speakers on the subject and staged a civic rally. The theaters ran special shorts prepared for the occasion and established elaborate lobby displays. Schools gave special lectures for parents and children on the evils of inflation and explained the OPA program.

"One of the features of the week which brought about most public enthusiasm was an auction on the public square where a new Ford car, 100 pounds of sugar, automobile tires, and 50 pounds of lard were auctioned off to the highest bidder. The auction was cleared through the State attorney general so that the adjustments made later would be legal and no controversy would arise.

"The car sold for $2,500, sugar for $36, tires for $29 and $30 and lard for $15. After the auction it was explained that this was an object lesson to show what people would pay for scarce items. The purchasers were then sold the items at OPA ceiling prices. The car, which has not as yet been priced by OPA because it was an unreleased model, was returned to the factory but the man who bought it was given a certificate allowing him to buy the first Ford issued to that area at the regular ceiling price.

"Congressman ALBERT GORE and Lt. Gene Kelley were brought into Jackson as special guests for the occasion and spoke on the need for public education against inflation. Some ex-servicemen who had been stationed in countries where inflation abounded reported on what prices civilians were paying for clothing, food, and rents. They testified publicly that the veterans were grateful for what OPA did for their families by keeping prices in line.

"Merchants pointed up the testimony of servicemen in their window displays. They priced $75 men's suits as they are priced in France at $400. Shoe stores, haberdasheries, food stores, laundries, and specialty shops cooperated in this form of display. Merchants also displayed goods priced as they were after World War I and gave comparative postwar II prices."

WHAT IS INFLATION?

"It was," concluded the federation, "a skillful presentation but it did not tell the whole story. There are many kinds of inflation. Inflation can come from inferior quality of goods resulting from OPA restrictions. It can come from OPA policies which discourage adequate production, lower the supply and invite inflation. It can come from regulations that distort normal practices. And it

can come through steady elimination of sound small merchants who, by going out of the competitive scene, make prices less controllable by normal, vigorous competition."

We wonder what Illinois city will be the first to have the opportunity to stage one of these dramatic events.

Sincerely,

J. T. MEEK.

## Our Service Men and Women Should Be Brought Home More Rapidly

EXTENSION OF REMARKS

OF

### HON. THOMAS A. JENKINS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

*Monday, October 29, 1945*

Mr. JENKINS. Mr. Speaker, the Army and Navy authorities must exert greater efforts toward bringing the servicemen home.

We are now at peace with the world. There are three basic principles and facts that we must not forget:

First. The American people are definitely opposed to military government.

Second. In times of national danger the American people have never failed to rally instantly to their country's defense.

Third. When the danger is over the servicemen instinctively want to return to their homes and their families, who are equally anxious to receive them.

Servicemen and all of us alike in wartime loyally defer to the plans, decisions and strategy of our military and naval commanders. But when the war is over the problems of peace become paramount. Since the family is the basis of American life the rapid restoration of the American family becomes our first great peacetime responsibility. Millions of our families have become disrupted and saddened. The military and naval authorities therefore owe the servicemen and their families and the country a duty to subordinate all other activities to the task of returning the fighting men to their homes immediately. I recognize that this is a difficult task and that is more the reason for immediate action and the most efficient effort possible. The failure of any demobilizing officer however slight, cannot be condoned.

While generally speaking, most of the demobilizing officers may have performed their duties in accordance with instructions, yet there has been a terrific lack of system and coordination running through the whole program. There has been too much adherence to rigid regulations which smack of Army discipline. This is not a matter of Army discipline. It is a matter of natural human emotions making themselves manifest in the desire of the boys to go home. The matter must be handled accordingly.

Sharp criticism by many Members of Congress, including myself, have brought many desirable changes in plans and in the methods of carrying them out. Point requirements have been reduced drastically. Transportation has been speeded up and a marked change of attitudes has been noticed in the actions of demobilizing officers and agencies. But there is yet much room for improvement. I receive many justified complaints from servicemen from all parts of the world. These complaints indicate that there is more blame to be attached to the system of demobilization and the methods employed than with the personal conduct of the demobilization officers.

For instance a number of Ohio men with long overseas service and with point credits varying from 90 to 125 have been since August trying to secure their discharge. After serving 3½ years in the Army most of which was in the African and European campaigns they were brought back and landed in an eastern port in August. After a furlough home to Ohio they were brought back to the eastern port and then sent to a California camp to be demobilized. After waiting there for weeks they were finally processed but have waited additional weeks for transportation, and are still there. During their stay and by way of adding to their mental anguish they report that they have seen contingents where men had only 60 and 70 points come in to that same camp and receive their discharge papers and their transportation back to New England and to Florida with no great delay while they, the battle-scarred veterans, are still waiting.

My mail also discloses that the demobilization in the European theaters and in the Pacific is being subject to some criticism. The men complain that demobilizing officers are inefficient and uncooperative. Charges are openly made that priorities are given to some to the prejudice and disadvantage of others who are much more deserving. Men with long service and men with children should not be discriminated against. Charges are also made that men are afraid to demand their rights under threats that they may be sent overseas or to undesirable assignments.

Mr. Speaker, the military and naval officers charged with the responsibility for the demobilization of our service men and women should put first things first as they did when they were waging the war so successfully. They should insist that this task be done immediately and that it be done fairly. This is no time for excuses. Parades and pageantry should be subordinated to the best interests of the American family life and to giving our fighting men a chance to come home and in many cases to see a son or daughter that they have never seen.

Building up an Army and Navy with a big war on are entirely different from demobilizing an Army in peacetimes. Nothing should be omitted in our efforts to bring our boys and girls back home as fast as humanly possible. I shall continue to do my part. I invite my constituents to continue to write me.

The present temper of the House of Representatives is to pass the Reed bill which provides for the discharge of all servicemen who have served honorably for 18 months or more.

## The Public Has a Stake

EXTENSION OF REMARKS

OF

### HON. RALPH A. GAMBLE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, October 2, 1945*

Mr. GAMBLE. Mr. Speaker, under leave granted me, I present for insertion in the CONGRESSIONAL RECORD an editorial titled "The Public Has a Stake" which appeared in the Standard-Star, published at New Rochelle, N. Y.:

THE PUBLIC HAS A STAKE

In the epidemic of strikes which has spread so rapidly and so alarmingly over the Nation, there is need for calm, sober efforts toward conciliation. Name calling will not help; rather it will aggravate an extremely serious situation. For while these strikes continue, the national income drops, thereby reducing the purchasing power of the country; at the same time, consumers are denied many household conveniences they had been led to expect early in the reconversion period. Further, idleness is always reflected in a heavier drain upon public funds, whether unemployment insurance benefit payments or relief funds.

It was, perhaps, to be expected that in the let-down after the war there would be a renewed outburst of controversies between labor and management, largely postponed during the war because both were then allied in common warfare against a mutual enemy. But this postwar period of controversy can be shortened and its gravity minimized if all concerned exercise restraint and tolerance and patience. Certainly no intelligent person wants a knock-down-and-drag-out battle wherein eventually all would suffer loss.

What seems to be lost sight of in this unfortunate postwar development is that the public has a great stake in the outcome. Those who are neither of management nor of labor unions involved can suffer severely in the struggle. For the public is not and cannot be a mere bystander; its own interests are closely intertwined. Consider, as mentioned, the housewife who is eagerly awaiting a new carpet sweeper or refrigerator or washing machine, or the newly married couple studying plans for a new home, or nearly all of us awaiting a new car. Strikes postpone the day when our proper desires can be met.

There is an even more serious element to this business of strikes. If the 30-percent increase in wages is gained, or any substantial part thereof, the advance must of necessity be reflected in increased prices of commodities, both necessities and luxuries. And where one group secures these wage increases, another group is by that same token encouraged to make demands, in order to meet increased living costs caused by the rise in price of the commodities produced by the first group. Thus, eventually, the entire scale of living costs advances, whereupon we have another series of strikes to offset this new increased cost, and so on around the dizzily revolving squirrel-cage of inflation.

Who suffers most in this sort of thing? Why, it is the white-collar class, comprising by far the majority of Westchester and of the rest of the country. Widows and orphans dependent upon investments of their dead are also among those hardest hit, as the purchasing price of the dollar declines in the inflation spiral. The defenseless, the previously sheltered, the middle-class office, and professional workers—these are without recourse when strikes push up living costs

and a national administration talks instead of acting.

Make no mistake about it, this epidemic can become a grim, life-and-death matter to thousands not directly involved in the negotiations. It is not solely an issue between the employer and the employee. Instead, it will, if permitted to continue, affect the comfort and the budget of every American citizen, big or little, high or lowly placed, even the members of the unions themselves.

## Will There Ever Be Any Coordination of Food Efforts?

EXTENSION OF REMARKS
OF
### HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
*Monday, October 29, 1945*

Mr. MURRAY of Wisconsin. Mr. Speaker, there appears to be little coordination in the efforts of the various bureaus. They all seem to operate on a basis of spending money instead of cooperating to furnish food for the hungry of the world.

KRAUT FOR THE HUNGRY

It took the OPA at least 2 months to decide what they were going to do about sauerkraut prices. The WFA had been compelled to wait also to find out what if anything the OPA intended to do about the kraut price. The OPA and WFA confusion could have been avoided if the Fulmer bill that passed the Agriculture Committee in June of 1943 had had consideration or if the Andresen amendment, which was the same thing, had been adopted in June 1945.

In June 1945 the Secretary of Agriculture, Clinton P. Anderson, evidently opposed the Andresen amendment so if he has to fry in the OPA fat it is the result of the emasculating of the Andresen amendment.

The following telegram shows the kraut picture:

APPLETON, WIS., *October 3, 1945.*

REID MURRAY,
*Member of Congress,*
*House Office Building,*
*Washington, D. C.:*

Wisconsin cabbage situation rapidly growing more critical. OPA apparently sitting on price ceiling removal and made no other price announcement for past several weeks. Wisconsin has nearly 6,000 cars cabbage, most of which could be used by Ohio-Indiana kraut packers if assured could reflect cost plus freight in sales. Season now too late for full pack but if OPA ceiling removal made official next 2 days might save 3,000 car loads of nearly 6,000 that will otherwise rot in field with public demand for quantities of kraut in excess of entire crop. Bungling somewhere in OPA already cost us thousands of cars loss and if matter isn't rectified immediately three-fourths of entire Wisconsin crop will be lost. Eleven hundred members this association frantic something be done. Have spent 4 weeks and hundreds of dollars but can find no one in OPA interested in doing anything. Government buying program helpful but inadequate to handle 95 percent of surplus. In view of OPA failure to act feel we should have same protection as crops under Steagall amendment and guaranteed price of cabbage to farmers $15 this year as Government agency entirely responsible for tremendous losses involved through inability to set price. Normal filling of kraut tanks are three year year; because of lateness of season many be filled only once. Salvage some returns for our members.

R. H. EBERDT,
*General Manager,*
*C. S. H. Crops Cooperative.*

POTATOES FOR THE NEEDY

The potato situation is cited in the following letter to our colleague, CLIFFORD HOPE, as one of of the delegates to the FAO Conference at Quebec:

OCTOBER 9, 1945.

Representative CLIFFORD R. HOPE,
*New House Office Building,*
*Washington, D. C.*

DEAR CLIFF: It appears that it would be desirable to discuss the possibility of disposing of our surplus foods at the FAO Conference in Quebec. Possibly some of these countries could make use of potatoes, for example, as the surplus seems to be embarrassing at this time.

If $60,000,000 is to be spent on the domestic potato program why could not that $60,000,000 be more profitably spent to buy dehydrated potatoes to be sent to the hungry of the world?

I think most people would rather see this money spent for a food to bfie sent to the starving, at the same time it is being used to fulfill the commitments.

I believe the potato growers of America would appreciate your discussing this situation at the conference.

Sincerely yours,

REID F. MURRAY,
*Member of Congress.*

Here then is the situation:

First the OPA's attitude did not result in the maximum kraut pack.

Second. UNRRA made rather large purchases of sweetpotatoes but pleaded lack of funds for purchases in appreciable amounts of Irish potatoes.

The United States has made certain food commitments:

(a) The ones President Truman made at Potsdam, which most every American wants to see fulfilled.

(b) The UNRRA commitments for food for the hungry.

Third. I ask if it would not be better to spend the money in purchasing food for the needy rather than spending the money on a program that does not provide conservation of food already produced.

Fourth. When one considers the millions of pounds of tin plate wasted in canning a product like filled milk, it is to be regretted that sufficient tin plate is not now available to can foods really needed for the hungry of the world. The last time I checked it, over 50,000,000 pounds of tin plate had been allocated to filled milk alone.

Fifth. If the powers that be had told the kraut makers of America that they would take a certain amount of kraut at a given price, and if the same powers would have told the potato growers that they would take a certain amount of canned potatoes and dehydrated potatoes for feeding the hungry people, these hungry people would be getting much more food and the confusion and waste of money would not be continuously taking place.

The hungry people of the world will never forgive us if we allow food products to be wasted that could just as well have been sent to them.

## Control of Atomic Energy

EXTENSION OF REMARKS
OF
### HON. SHERIDAN DOWNEY
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
*Monday, October 29, 1945*

Mr. DOWNEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD three thoughtful articles from the Washington Post on the problem of atomic energy, one entitled "Handling the Atom," by Marquis Childs, one entitled "Controlling the Atom," by Ernest Lindley, and the third entitled "Secrecy on Weapons Should Be Abolished," by Merlo Pusey.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Washington Post of October 6, 1945]

WASHINGTON CALLING

(By Marquis Childs)

HANDLING THE ATOM

While he has postponed a final decision on the international use of atomic power, President Truman has made it clear that he favors some form of control through an international organization.

Long delay on this decision would be unfortunate. While the uncertainty hangs over the world the distrust and suspicion grow.

The choices that lie before us have been badly stated, it seems to me. Those who talk about the "secret" of the atomic bomb, and how we must keep it, are bracing themselves to resist a move that no one contemplates.

Those who urge international control of atomic power do not propose to rush out day after tomorrow and hand over the formula to every nation in the world. That is an unfair distortion of what they propose.

The most intelligent proposal has come in the form of a bill introduced by Senator BRIEN MCMAHON, of Connecticut, who would eventually entrust control of atomic power to the Security Council of the United Nations Organization. But before this was done careful steps would be taken to make sure the Security Council had the right to inspect all plants and laboratories in every country of the world to see whether the agreement was being kept.

If the Council could not obtain such assurances from each nation, then, presumably, the basic information on the method of atom splitting, which still is the secret of the group that did the job in this country, would be withheld. As President Truman said in his message, the principle is no secret. And the method of blowing the world to pieces will not long be our exclusive possession—perhaps 3 to 5 years at the most.

If we were to move toward sharing this power with the rest of the world, I believe it would do more than anything else to wipe out the cloud of suspicion and hostility rapidly forming on the international horizon.

We should have no illusions about that cloud. Above all, it is separating East and West, separating Russia and the United States into opposing camps.

We are beginning to deal in hints and threats. On their side, the Russians are beginning to do some hinting about atomic fission, and, as we have learned, the Russians never do anything without a purpose.

One broad hint was recently overlooked. The information bulletin published by the Soviet Embassy in Washington was devoted in considerable part, one day last week, to Russia's scientific achievements. In the ccurse of a revealing article titled "Can

Science Be Planned?" A. Joffe, director of the Physico-Technical Institute, had this to say:

"By way of illustration, I can cite an experience of my own in May 1930, at a time when our country was still comparatively poor and everything was being directed toward the fulfillment of the first 5-year plan.

"My colleagues at the Physico-Technical Institute and I thought it essential to begin work on the atomic nucleus. We were worried, however, because it was the middle of the year, when appropriations for our work had already been made, and the new research work we had outlined required an additional expenditure of several hundred thousand rubles.

"I went to Sergei Orjonikidze, who was chairman of the Supreme Council of National Economy, put the matter before him and in literally 10 minutes left his office with an order signed by him authorizing the sum. Once started, we continued work on the atomic nucleus for 15 years, an essential part of our plan."

That is pretty plain. That says, almost in so many words, that Russia is a rich and powerful country geared to go to work immediately on any technical or scientific problem.

We may not believe it. But the important thing is that Russia wants us to understand just that. Suspicion feeds on itself, and will until we try to find a cure.

---

[From the Washington Post of September 24, 1945]

CONTROLLING THE ATOM

(By Ernest Lindley)

THE M'MAHON PROPOSAL

Two of the proposals concerning control of atomic energy now before Congress are purely preliminary. They would do no more than set up bodies to study the problem and formulate recommendations.

Senator VANDENBERG's resolution would create a joint committee of six Members of each House to be appointed by the President pro tempore of the Senate and the Speaker.

Senator ELBERT THOMAS' would create a special commission of seven, composed of the Chief Justice of the United States, the chairmen of the Military and Naval Affairs Committees of the two Houses, a representative of the President, and a representative of industry who had a part in the development of the atomic bomb.

A third proposal, by Senator MCMAHON, goes further. It would set up a national board of control composed of a chairman appointed by the President and confirmed by the Senate, six Cabinet officers—the Secretaries of State, War, the Navy, Commerce, and Labor, and the Attorney General—and the Chairman of the Federal Power Commission. It would define the general duties of this board, which would include further research and experiment in the field of atomic energy. It would prescribe penalties for unauthorized production, transport, or use of atomic energy and materials or articles produced with the aid of atomic energy, and for the unauthorized disclosure of secret or confidential information.

The McMahon proposal also looks forward to the next step: the international control of the production and application of atomic energy. It would empower the national board of control to enter into agreements with the Security Council of the United Nations for the licensing of research and experiment with atomic energy and of the production and use of atomic energy.

Senator MCMAHON stipulates, however, that any such agreements with the Security Council should: (1) be approved by Congress, (2) provide that all other nations should turn over to the Security Council all information which they have concerning research and development in the field of armaments and munitions, and (3) provide that the Security Council shall have access to and inspect "all plants, laboratories, and operations of whatsoever kind relating to research, development, manufacture and production of armament and munitions of war."

Senator MCMAHON may be somewhat ahead of the congressional procession. Most of the Members will want to give the whole question thorough study before taking a first step. But the present Congress can hardly escape setting up some kind of national board of control, with authority to direct further research and development, but also with safeguards for secrecy. And, in the firm view of some of our wisest public men, the United States—and Britain and Canada—should not long delay the formulation of policies for the international control of atomic energy.

The scientists seem to be agreed that the bomb could be duplicated by another nation, starting from scratch, in a few years—probably not more than 5 years, probably less. The choice now is between national—or United States-British-Canadian—control and no control. Within a few years it will be between effective international control or no control. If an effort to establish effective international control is delayed, it may come too late. We might not even know that our feat had been duplicated until atomic bombs dropped on us. Moreover, indications that the United States or the United States-British-Canadian combination was intent upon keeping the atomic bomb a secret as long as possible would, as Senator MCMAHON has pointed out, breed distrust.

The conclusion becomes inescapable that the United States, Britain, and Canada should soon declare their intentions. A proffer of the bomb and its attendant secrets to the Security Council of the United Nations would have to be conditional. Senator MCMAHON's bill has indicated at least some of the essential conditions.

---

[From the Washington Post of October 2, 1945]

SECRECY ON WEAPONS

(By Merlo Pusey)

SHOULD BE ABOLISHED

What shall we do with the atomic bomb? Discussion of that subject is spinning so fast and furiously and gathering so much confusion as it goes that it seems almost a crime to give it further momentum. Since it is the biggest issue that the world is likely to face in the next decade, however, any effort to strip it down to fundamentals should be welcomed.

Much of the discussion has gone askew, in my opinion, because it is directed to the question of giving away the atomic-bomb secret. That question arouses emotions and obscures the more basic issues. It could assume great significance only if we were trying to halt research and further development of atomic power and to induce all other peoples to do likewise. But no one I know of is thinking seriously of any such proposal.

The general assumption is that science will now move heaven and earth to harness atomic power, as it previously harnessed electric power, for industrial and commercial uses. This necessarily means that atom splitting will be brought into the light of day. Senator MCMAHON hit the nail on the head last week when he asked, "How in the name of common sense could we make any peacetime use of it and keep it secret anyway?"

We must start, then, with the fact that if this knowledge is to be utilized for the benefit of mankind, it cannot be hidden under a bushel. Secrecy would imply that atomic power should be reserved for destructive purposes only. I think Senator MCMAHON is 100 percent right in assuming that the American people would never tolerate such a policy. Even if it were possible to prevent other nations not now sharing the secret from obtaining it, which it is not, the idea of bottling up the formula for release of atomic energy over any extensive period of time must be discarded.

But the argument on the other side—that we should hasten to give away the atomic-bomb secret—is equally untenable. Suppose we should open our files and equipment to inspection by Russian, French, and Chinese experts tomorrow and impart to them everything we know about atomic power. Would such blind generosity automatically prevent other countries from using atomic power against us? Of course not. The result would probably be to give the Russians, for example, more knowledge than we have, for they would add all the information developed here to the data assembled through their own independent research.

Instead of talking loosely about giving our secret away, therefore, we ought to be using it in this period of its novelty to minimize the dangers of future atomic warfare. Senator MCMAHON has the best formula I have seen. What his bill proposes is the abolition of military secrecy among the United Nations. The governments in possession of the atomic-bomb secret would turn it over to the Security Council in return for all the information that other nations possess on weapons of war.

Of course, the agreement would have to be applicable to future discoveries as well as present knowledge. It would create a common pool of military information among the great powers. The next logical step would be an agreement forbidding the use of atomic weapons in any possible future war, as use of poison gas is now forbidden by international convention, or, if that should prove impossible, rigidly limiting the manufacture of atomic weapons.

The key to future world security must necessarily be, however, the lifting of all secrecy as to weapons among the armed powers. It is to be assumed that Germany and Japan will be kept disarmed. But in the absence of internationalization of atomic information and controls, all of the other big powers will probably be in a position a decade hence to wipe out their neighbors, even distant neighbors, without warning. Without a common pool of military information and a rational understanding among them, the only feasible course for any one of them would be intensive research and large-scale production of weapons infinitely more deadly than the bombs which laid Hiroshima and Nagasaki low.

Secrecy would goad each nation to the utmost efforts to avoid possible annihilation. Russia is said be already whipping up her scientific research in feverish haste. Unless we can succeed in bringing about an open defense system among the United Nations, we shall not know whether the atomic bombs Russia is certain to develop will be more powerful than our own. We shall live in fear and distrust, as every other people must. The logical outcome of such a state of tension would be an earth-shaking attack by the nation suffering from the greatest fear complex.

The least we can work for in these circumstances is an open defense system, with the Security Council regularly inspecting all military establishments and all sources of information on new weapons. It would be futile and self-defeating to ask more. And to trade our secret for less would leave the world without a foundation on which future security could be built.

## Federal Grants to State and Local Governments

EXTENSION OF REMARKS
OF
## HON. JOHN J. COCHRAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

*Monday, October 29, 1945*

Mr. COCHRAN. Mr. Speaker, there is not a Member of Congress who does not receive appeals for a balanced Budget. At the same time we also receive letters from home urging us to support new authorizations for appropriations. The most recent example was the $350,000,000 grant for airports. That bill provided the States and municipalities should match the Federal grant. The question is, Can we continue to pass such legislation and ever reach the goal, a balanced Budget, unless we raise by taxation the money? It should also be remembered when the State matches a Federal grant it too can only secure the money either by selling bonds or taxation. Therefore, the people who must pay the bill are called upon to pay by both the Federal and State Governments. We have pending a number of bills that provide Federal aid and for new projects that will cost billions of dollars if enacted into law.

Legislation providing for Federal aid and Federal grants is always very popular. It is hard to remember when we have started a Federal-aid project that we have ever repealed the law. You have bills pending providing for Federal aid to stop river pollution, Federal aid for education, as well as additional Federal aid for vocational education. The Commodity Credit Corporation wants a half billion dollars. We have increased our appropriation for Federal aid for roads. There are provisions for public housing, aid for aeronautical experiments. They want hundreds of millions of dollars for health programs of all kinds, also Federal aid for the construction of additional hospitals in the States and the cities, and many others that I could mention.

Very recently there came to my desk a very strong appeal from a chamber of commerce urging me to support a bill that would have set up three laboratories as well as plants to provide research and manufacture by the Government that would result in the production of a better fertilizer. We all know that one of the outstanding organizations in the United States that is always demanding a reduction in expenditures as well as a reduction in taxes is the National Chamber of Commerce and its affiliates. Likewise, they demand that the Government stop competing with private industry. I answered the letter and in my reply told them of the demands made upon us by the United States Chamber of Commerce and its affiliates for reduction in expenditures and taxes. I pointed out that we could not do both and if we could I would like to have them advise me how it could be done, but up to this time I have not received a reply.

The outstanding feature of that letter, however, was that they not only favored the bill but the letter stated the only objection of the chamber was that it did not provide for 10 manufacturing plants and laboratories rather than 3.

From time to time I call upon the Bureau of the Budget for a statement in reference to expenditures for Federal grants to States and local governments. I have just received a letter from the Bureau of the Budget, together with a statement of expenditures, and, under the permission granted me, I include it as part of my remarks. It follows:

EXECUTIVE OFFICE
OF THE PRESIDENT,
BUREAU OF THE BUDGET,
*Washington, D. C., October 25, 1945.*

Hon. JOHN J. COCHRAN,
*House of Representatives,*
*Washington, D. C.*

DEAR MR. COCHRAN: In accordance with your request of October 15, 1945, we are sending you herewith two copies of a statement of expenditures for Federal grants to State and local governments for the fiscal years 1944 and 1945.

The compilation is similar to that sent you July 19, 1944, except that the data are limited to the last two fiscal years, for which only estimated expenditures were available at that time.

The payments are classified, first, as to type of grant: Regular, shared revenues, war, and emergency works and relief; and second, under each of these headings, according to major functions. It is believed that this form of presentation of the data will promote their usefulness.

Not classified as grants for the purpose of this tabulation are the contribution ($6,000,000 annually) to the District of Columbia and several minor items, such as education and health of Indians.

I hope this information meets your needs. If there is anything further we can do, please let me know.

Very truly yours,

F. J. LAWTON,
*Administrative Assistant.*

## Must Inflation Go Into Building of Nation's Homes?

EXTENSION OF REMARKS

OF

## HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

*Monday, October 29, 1945*

Mr. PATMAN. Mr. Speaker, back in the summer of 1940, many American editorial writers had the foresight to cry out against the dangers of the coming war, and to try to warn the Nation to arm. For far too long, their clear-sighted warnings fell on deaf ears in Washington.

Today they are once more lifting their voices against a danger that can wreck our Nation as thoroughly as occupation by a robbing, burning enemy army; the specter of uncontrolled inflation. In the hope that some of their wise warnings will this time reach more receptive ears, Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to include two editorials from my home State of Texas on this subject. One is written by the able editor of the Austin, Tex., Statesman, and appeared on October 16, 1945. The other is the equally clear-sighted warning of the Marshall News Messenger, of October 25, 1945:

[From the Austin (Tex.) Statesman of October 16, 1945]

MUST INFLATION GO INTO BUILDING OF NATION'S HOMES, TOO?

Congressman WRIGHT PATMAN has lashed out vigorously in the housing controversy, demanding that more careful study and less impulsiveness be given the situation before precipitate action is taken which may weaken the national economy.

The controversy, in the view of the Texarkana Congressman, has become so heated that it obscures most of the fundamental facts. It is high time, he says, that all sides consider how much material we have with which to build homes, and how much they will sell for. The present inflated market for homes is a danger signal that must be heeded.

Most persons can be fully in accord with the fundamental objective of building homes as rapidly as they can be built. But the by-products of a program which also entails the lifting of all price controls completely disregards the danger of uncontrolled inflation.

Responsible leaders in the materials and construction industries agree that a serious danger to the country exists in the present housing situation. The most bitter opponents of housing price control admit that the building industry has a critical shortage of materials—lumber, pipe, brick, and scores of other items. Both lumber and steel are on the verge of going back on the WPB critical list.

The pressure for housing, the pressure of wartime savings comprising a purchasing power never before present in the Nation's history is tremendous and dangerous without control on prices. And until these materials get more closely in line with demand, we are going to see $6,000 homes costing $10,000 and a period sometime ahead when deflationary influences which always follow a boom will leave their owners holding the sack. The record of the last depression demonstrates this in terms of billions of dollars.

What the Nation needs and must have is less impulsiveness, less agitation by some elements who want to make a financial killing, and better planning and willingness to see the danger for what it is.

[From the Marshall (Tex.) Morning News Messenger of October 25, 1945]

INFLATION AHEAD

This country faces the threat of an inflationary spiral that could be more disastrous than the depression of the 1930's, for while the depression merely froze real values and paralyzed the Nation's economy, a first-class, all-out, uncontrolled inflation would wipe out all values beyond recall, and force us to scratch.

We were going to control this inflation in the brave days of yore. We were going to have lots of jobs, heavy production, steady consumer demand. Where there is production to ease off consumer demand, free and open competition keeps values in line and there is no inflation. Where you have 100 people bidding against each other for one small item, you have skyrocketing prices. Money loses its value, which is inflation.

People are uneasy about the rapid rise in real-estate prices. They are soaring upward at a fast clip, with no sign of abatement. How could there be, with the demand for housing what it is, and no flow of materials to construct new units?

Several million wartime marriages, plus a slowed-down wartime building program that couldn't even keep pace with needed replacements, spells a demand for housing that surpasses the imagination.

Only one thing could cure that situation—unlimited materials, an abundance of labor, easy credits.

The materials aren't to be had, and it probably will be 3 to 5 years before we even reach normal supplies. Meantime the demand for homes piles up, and this demand sends prices through the ceiling.

Artificial control of prices is impossible. If loopholes could be found by the dozens in wartime, they could be found by the hundreds in peacetime, and the inflationary spiral would go right on up.

That is just one angle to the forces that are driving this country into an orgy of

inflation. Meantime, Congress only contribution toward a solution is to ease the tax burden, which is like pouring oil on the flame.

## Relief Operations in Europe

EXTENSION OF REMARKS
OF
### HON. CHRISTIAN A. HERTER
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Monday, October 29, 1945*

Mr. HERTER. Mr. Speaker, in connection with the current widespread interest in the volume and type of relief operations being conducted in Europe, I felt that it would be significant to examine the extent of our relief activities after World War I. Accordingly, I wrote to former President Herbert Hoover, asking for some factual data on the subject, and, under unanimous consent, I include in these remarks his letter to me of October 23, 1945, together with certain tables appended to that letter:

THE WALDORF-ASTORIA TOWERS,
*New York, N. Y., October 23, 1945.*

Hon. CHRISTIAN A. HERTER,
*House of Representatives,*
*Washington, D. C.*

DEAR MR. CONGRESSMAN: I have your letter of October 20.

I take it that what we are interested in is the period after the armistice. I have obtained the figures from the War Library records, and they are shown on the attached tables. They do not include our very large operations prior to the armistice.

You will see that the total relief supplies after the armistice from the United States to the European continental countries was 13,615,357 tons, valued at $2,109,518,971, of which the United States received in cash $275,581,553, in obligations to pay $1,689,783,645, and gave in charity $144,153,773. In addition, we provided 4,305,330 tons of food alone to Britain on credit to the amount of $687,775,300. The charity was almost wholly given in special feeding for children on the Continent conducted separately from the general relief. As the obligations to pay were largely defaulted, therefore it was nearly all charity.

There are several gaps in this picture.

1. Britain, France, and Italy include only food and feed that was financed by the United States Treasury. They purchased other food from overseas. It is probable that under our exchange arrangements of the time some of these purchased supplies were at the cost of our Treasury. What their clothing, medical, and miscellaneous supplies (aside from arms) from the United States were has never been worked out.

It could possibly be done by a study of our exports to these countries during the period, plus our Army liquidation sales.

2. During the period November 1918 to November 1919, I coordinated the food supply of the European neutrals with the whole program, but as these nations paid cash and transported their food imports, we did not make a statistical record. The information on their purchases from the United States and elsewhere could be secured by the Department of Commerce from the statistical reports of these countries as to their imports. Inadequate statistics of the League of Nations show these neutrals imported during the period from all quarters about 4,000,000 tons.

You might get the Department to investigate this. The countries are Holland, Denmark, Norway, Sweden, Switzerland, Portugal, and Spain.

It is possible to get the exact amounts each government paid on their obligations to the United States—which included other supplies—and by prorating it to thus determine how much was paid on food loans. These figures could be secured from the Treasury summaries of the amounts paid on debts up to 1932 when all these countries repudiated, except Finland. Whatever the amounts were, they could be regarded as cash.

3. The operation was much more complicated than appears on the surface and will never be fully presented in statistics. For instance, we shipped food from America into the Mediterranean area of Yugoslavia on condition that the Yugoslavs furnished food to Hungary and Rumania from their eastern surplus. Our men arranged trades in manufactured goods, coal and oil, but we did not attempt to engage a staff to preserve full records of such barters. We were satisfied when the people got the food. Some of these trades were recorded and appear here as exchange of goods. I suppose if someone wanted to, he could work out this European interfood movement—if the national statistics of the countries have not been destroyed.

A broad estimate shows that about 27,000,000 tons of food and supplies were imported from overseas after the armistice, either under my direction or coordinated with our movement, of which we furnished nearly 18,000,000 tons.

4. This does not include the coal movement. The central European coal movement was coordinated under my direction, but overseas coal shipments were carried on otherwise. We attempted no statistical record of either movement.

Yours faithfully,

HERBERT HOOVER.

## Universal Military Training

EXTENSION OF REMARKS
OF

## HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

*Monday, October 29, 1945*

Mr. BROOKS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Shreveport (La.) Times of October 26, 1945:

A SOUND, COURAGEOUS STAND

President Truman took a courageous and thoroughly sound stand in recommending to Congress that legislation be passed for military training of all physically capable American youth as an essential to preservation of peace. With pride in the manner in which the Chief Executive faced this grave issue, and with genuine and sincere conviction that the course he proposes must be followed, the Times enthusiastically endorses Mr. Truman's whole youth-training program. We have urged the need for military training of youth virtually since the end of War I. We urge it now with renewed vigor and faith.

Mr. Truman's speech was courageous both politically and morally. He knew that he was speaking in behalf of a program which faces much opposition and misunderstanding and which never before in this Nation's history has been so moot a question as it is today. He knew also, in his heart and in his mind, that every white cross over the graves of men of the armed forces of the United States for the past century and a half is a silent symbol of a nation's tragically unending failure to realize that peace can be preserved only through possession of power.

The easy course would have been for Mr. Truman to pussyfoot along a politically expedient middle-of-the-road course with a program which offered only mild National Guard and ROTC expansion, and which did not approach the essentials of an over-all and continuing youth-training program. Instead the President strode forth boldly and without equivocation along the straight—and rocky—road that he feels the Nation must travel if the white crosses of two terrible World Wars of the past are not to be multiplied over and over again by what would become an inevitable third war.

While some of Mr. Truman's political advisers felt that his course might hurt him with some citizen groups, we believe that time will prove the contrary. Right now, every mother and father, wife and sweetheart, is thinking of getting her soldier, sailor, marine, or coast guardsman home. Right now there is considerable national hysteria over any man or youth being in fighting uniform a day longer than the relatives at home think necessary. Right now, the necessity for military strength in a nation that has just won time's most terrible war may not be clear to vision largely befogged with thoughts of individual members of the family.

But, right now, the veterans of two devastating World War—the men who fought and suffered and won—stand overwhelmingly in favor of youth military training as the one best means of preventing another war.

Right now, the veterans of these conflicts—the men who know from bitter and bloody experience—know that the only way to keep American youth of the future from the horrors of world-wide combat is to have it so prepared for such combat that no nation anywhere on the globe will dare to become an aggressor.

We cannot understand how any citizen group—whether of the church or the laity, whether from the ranks of labor or from the offices of financiers—can look even casually at the history of this Nation or any other nation and fail to see that the veterans of the two World War are right, that Mr. Truman and those who endorse his proposals are right, that no nation ever can be safe from attack unless it is armed to defend itself against attack.

The theory that national military weakness is an example to other nations in the field of peace and that it constitutes leadership toward international friendship has been tested over and over again in this Nation since the day Cornwallis surrendered to George Washington. For a century and a half it has failed—failed continuously, miserably, tragically, and horribly.

The theory that future youth training constitutes a lack of confidence in preservation of peace through world agreements and organizations is pure and simple fallacy. The world as a whole concedes today that World War II followed quickly on the ending of World War I because there was no force to keep peace.

The world as a whole concedes that any success coming to the United Nations security organizations rests largely on the willingness of those nations to use force to knock down aggression and to preserve peace. Is not the same thing true of such individual nations as ours? The whole history of the world has shown through all of its recorded pages that nations that are prepared are not attacked and that nations unprepared always are attacked in time—and if they continue unpreparedness after temporary victory, eventually they are destroyed.

Any agreement between nations becomes a tattered scrap of paper when a nation of aggression decides to use it as a target for machine-gun practice. Agreements—treaties, et cetera—have no strength of their own. They merely lay down a course of proposed action. That course is followed in exact ratio to the physical strength back of the words on the piece of paper.

There never has been a day when starry-eyed idealism and blind theory could get to first base in keeping peace between nations. If this Nation, and the world, are to have peace, it must be won with the same type of solid, sound, common-sense practicalism that won the war.

President Truman has proposed a course of practicalism. May the Nation have the vision to follow it.

## War Department Snafus

EXTENSION OF REMARKS
OF
### HON. JAMES H. MORRISON
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

*Monday, October 29, 1945*

Mr. MORRISON. Mr. Speaker, selfishness is being practiced by too many Army men in positions of power with the following result. If Congress does not correct this situation, the predicted consequences are at our door.

GERMANY.

DEAR SIR: I happen to be one of those very bitter and disgusted ex-civilians that know I should have been home to wife and children some months ago. Now this new news of lost ships to us plus the striking harbor workers is the last straw. I am not a foolish kid, but a mature man of 37. I know that the War Department itself is putting snafus in the way to slow down discharges for own selfish reasons. I have reached the place where I'm ready to go to hell and take some of those responsible for all this with me. I would like to point out to you what you know to be true. Last fall the papers were full of how many soldiers certain ships brought across in one load. I was one of them, so I know it to be true. Now these same ships are docking with half or slightly over half the number of troops less all that equipment we brought over with us. Does that look like to anyone but an idiot that they are doing their very best to get us home? Now last winter, no excuses were accepted from us. It was give and do. Now in return we get lies; promises that they know are lies when given, and excuses.

Have lost confidence in you Congressmen to see we get justice. You have swallowed all these promises, lies, and false figures given out by those who delay discharge for own selfish interest. I have a deep hatred of Army and from now on my vote and all influence will be lined up in opposition to any measure for the armed forces. The point deal for the combat men was a kick in the teeth for their reward. Now I happen to be one of the old men who was drafted in early 1944 when the need was great. That 2-year clause of 35 and past helps the bulk of us fellows a lot, doesn't it? Yet, I remember the big talks given us at Fort Meade and Camp Shanks before coming over. The theme was like this: "You old men are needed very badly but as soon as Germany is beaten, you will be among the first 2,000,000 released." What happened? The point deal. No age. Nothing for the combat man who took the snow, cold, rain, no food, no clean clothes for months. But combat men will come home first.

The combat man is still the poor relation. Most points go first. They are in the Air Corps and service units. Combat units are full of us replacements. Oldest are dead or wounded. Now take Charlie Trippie getting out on 41 points, no combat, no overseas. While I am for every man being discharged, I still resent an old man as myself being held in. I resent being turned down four times for O. C. S. after having made the grade in everything except ACC (too old—rejected). Yet I made a good private along with all those younger fellows and no favors shown because of age. The other way around a dangerous job fell to me because of good common sense. In fact I volunteered for plenty because I felt younger fellows would bungle it. I resent the fact also that most of the fellows got a furlough home before shipping over while I, an old man, married, was denied one. I am sorry, Mr. MORRISON, that I have taken up your time letting some of this bitter festering sore out on you. But you know the true facts of the southern draft boards, as like this. Young men going to defense works and transfering to the board there and our board had to draw from us old men who had to stay with our farms and business. In that way we are in while a lot of those same fellows are out due to being essential or from a high number and lots to draw from at their board. I want you to know that we over here are boiling and ready to spill over. Should even a minor revolt start, it will get out of hand very soon. There are too many like myself, that just don't care any longer. If we could get to those who laid up those 300 ships or those strikers would be some hanging take place. Would show these men even less mercy than did some of those SS Germans. After those of our boys were shot to death last winter, we asked no quarter and gave none. Seems like I could go on for a long time letting this bitterness out but will stop. You won't read any of it anyhow, or pay any attention either.

Yours truly.

## West Coast Steel Industry

REMARKS
OF
### HON. JOHN M. COFFEE
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

*Monday, October 29, 1945*

Mr. COFFEE. Mr. Speaker, the problem of reconversion serves to emphasize the difficult situation facing the people on the west coast. In the years before the war our population was growing rapidly, much more rapidly than the heavy industries essential to maintain sizable urban populations. During this period of growth we fought to maintain a standard of living consistent with the American dream. In the period just before and during the war the need for heavy industry was met by the mushroom development of aircraft factories and shipbuilding yards and aluminum plants, and so forth.

With the sudden cessation of the war in the Pacific every citizen, from chamber of commerce presidents to union organizers, is asking what the next step will be.

We are by no means faced merely with the problem of conversion to our prewar pursuits. The west coast, and Washington State particularly, had no industrial activities capable of supporting the vastly expanded populations. Two millions of additional population came to the Pacific slope to help in the tremendous job of production necessary to carry on the war. These 2,000,000 people do not want to go back. In polls conducted by the larger defense plants at least 70 percent are staying in their new-found homes.

Let us look at the situation in regard to industrialization in the West. The basic foundation of industrial development of any size is a steel industry. Major industrial status is impossible without it, and it has been the lack of such an industry that has hamstrung the West.

The west coast has all the physical qualifications necessary for low-cost steel production. At this point, I should like to call the attention of the Members to an information circular published in March of this year by the Bureau of Mines, entitled "A Pattern for Western Steel Production." The Bureau of Mines asserts, after a comprehensive survey of the known iron and coal resources in the West, that the raw materials needed are available in sufficient quantity for a comprehensive steel industry. The report also reaches the conclusion, based on reliable statistics, that there are sufficient markets available at the present time, and as far in the future as can be reasonably predicted, to support production in plants of economic size.

In short, according to the experts, the west coast has the resources, and it has the market. We have a labor force, not only numerically larger, but skilled and experienced far beyond our prewar standards. Furthermore, in the Puget Sound area, as well as in lower California, we have the physical location necessary for bringing together iron and coal at water level and at the same time close to our western population centers. All we can point to as steel plants are Fontana and Geneva, and they are not necessarily examples of the best we can do, because of their inland locations.

I repeat, the west coast has all the physical qualifications necessary for low-cost steel production.

Why have we not developed a sizable steel and iron industry?

Let us look into the cause for the West's industrial backwardness. Our local industrialists have been unable successfully to enter into competition with the entrenched monopolies concentrated in the East. This inability is not calculated to maintain legitimate competitive factors. Eastern capital has maintained a strangle hold through financial control on any industrial development which threatens the profit-making capacity of its huge eastern investments. We all know how complicated and powerful is the web of financial control that stretches from Wall Street. Another of the illegitimate factors brought into the picture, by the self-perpetuating economy with headquarters in the East, is

seen in the long-lamented but still extant freight-rate structure. We all know the evils of this system. It is a prime example of monopolistic control redounding to the detriment of free enterprise and western and southern regional development.

The Eastern monopolists are afraid that they will lose their markets if the West builds up industrially. They have consistently and effectively prevented the West from rising for just this reason. They are sadly mistaken in this view. Under the limited economy of previous years, figures show that the East has only been able to sell 10 percent of its output to the West and South. This will never improve until the purchasing power of these areas is increased.

Developing a competitive steel industry on the western seaboard will be of tremendous value to the western consumer. Current prices for all heavy steel manufactures now must include the freight charges of a cross-continent haul. The farmers on the wheat farms and fruit ranches of Washington will be able to buy farm machinery at reasonable prices based on really competitive manufacturing costs for the first time in the history of the Northwest. Consumers of the entire Pacific coast will no longer have to pay the penalty of higher prices for the privilege of living in the West Coast States.

I am not asking for special favors for the people of the Northwest. I am only asking for an equal opportunity for them to utilize the natural resources, location advantages, and labor supply that are already available in our territory. I am asking that the artificial barriers set up by those who desire to perpetuate themselves, and their century-old advantages, be torn down, as unbefitting a modern, progressive Nation looking to the future for new and better solutions for the economic ills that have plagued our past.

The fact that we must face today is, that this country and its industrial economy cannot remain half colonial, any more than it could remain half slave and half free. One-half of the country cannot be prosperous if the other half is existing on a marginal economy. Today the West is well-nigh as much of a frontier territory, industrially, as it was 50 years ago. Only now it is not only agricultural development but industrial development that is needed. The sons and grandsons of our western pioneers stand ready to take up again the battle to insure that the Pacific coast will be given every opportunity to assume its rightful place in the economy of the United States and the world.

## Minnesota Leads the Way

EXTENSION OF REMARKS

OF

### HON. JOHN S. GIBSON

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, October 29, 1945*

Mr. GIBSON. Mr. Speaker, under leave to extend my remarks, I include therein an open letter addressed by A. J. Olson, chairman, Minnesota Peoples Action Committee to the Minnesota congressional delegation.

After reading this letter I was so inspired over the purpose of this organization that I made some further investigation.

I find that the organization has had to say in a pamphlet gotten out by it, the following, which to me is very sound:

In the progress of a government that is of, by, and for the people, it is necessary for citizens to examine tendencies which, if neglected, might destroy the blessings and the opportunities of the American way of life.

Active and growing pressure groups led by selfish men, most of whom are alien to this state, now seek to control the Government.

These men and groups must be opposed if democracy, under the Constitution, is to survive.

There are other tendencies in this country that also menace the American way of life. We see them in—

1. The increasing demand that business of the Nation be turned over to politicians to administer and manage.

2. The accompanying growth of bureaucracy with its withering effect upon individual initiative, ambition, and character.

3. The continued belief in high places that public spending is a panacea for domestic problems.

4. The centralization of Government in Washington with its usurpation of the rights of States and communities.

5. The idea that the Government ought to support all citizens, regardless of their unwillingness to support themselves.

6. The growing power of group organizations to interfere with the individual freedom of citizens.

We call upon all citizens who view these tendencies with distrust and alarm to unite in a State-wide, nonpartisan movement to check them and to turn back the leaders responsible for them. In order that citizens may unite in this common purpose, we submit for their consideration and support the following declaration of principles—

(a) We believe in the American way of life.

(b) We believe that America's greatness rests upon a foundation that has as its cornerstone religious freedom, freedom of the press, personal liberty, full economic opportunity, and the right of private enterprise.

(c) We believe the first duty of government is to protect the citizen under the law.

(d) We believe that any combination of power, be it government, business or labor, that seeks to stifle freedom of the individual is a menace to democratic institutions.

(e) We strongly oppose political action groups which threaten to coerce the government against the rights of other citizens.

(f) We believe profoundly in the rights of organized labor to have such bargaining power as will secure for it an equitable return for labor given.

(g) We believe that agriculture must be given the administrative machinery, under farmer management and control, to insure parity of income and opportunity with other groups.

(h) We believe with Thomas Jefferson that that government is best that governs least.

(i) We believe that "big labor" as well as "big business" when uncontrolled by the people is a menace and a danger to the guaranties that assure the American way of life.

(j) We believe in the free-enterprise system.

(k) We believe, now that the war is ended, it is of first importance, if we are to have any certainty of prosperity, happiness and opportunity for the service groups when they come home, that there be formulated a national labor relations policy. Such a policy must recognize the rights of the public in labor disputes, the rights and duties of both management and labor, seek to maintain uninterrupted production as the basis for national prosperity, provide just and fair opportunity for settlement of labor disputes and provide for firm insistence upon acceptance of such settlements.

(l) We believe that the people's savings, whether life-insurance policies, war bonds, or other forms of savings, should be protected from the inflation that will follow continued reckless public spending.

(m) We believe that no member of an organization, labor, agriculture or business, should place the demands of his group above his rights and duties as an American citizen.

I quote the letter as follows:

*To Members of the Minnesota Congressional Delegation, Washington, D. C.*

GENTLEMEN: The purpose of this memorandum is to give factual data in support of the telegram we sent you October 5, reading as follows:

"Manpower situation in Minnesota most critical in history. Increase in unemployment payments will aggravate matters. Farmers hardest hit. Embargo threatened on livestock shipments because packing plants so undermined they are unable to keep pace with receipts. Processing of $20,000,000 Thanksgiving turkey crop handicapped. Creameries short-handed. Potato harvest short pickers. Earnestly hope you will resist CIO–PAC delegation pressure."

Through personal interviews, correspondence, and telephone, we have contacted farmers and others in all parts of the state. This survey confirms our statement concerning the acute manpower shortage and the manner in which it is lowering the incomes of Minnesota citizens, particularly farmers.

The views of the great majority of citizens are well expressed in a letter from a farmer, reading:

"To ask for increased unemployment compensation is today so fantastic, un-American, and illogical that some reason other than need must exist. There are today thousands upon thousands of well-paying jobs crying to be filled. Wealth must be had if postwar problems are to be met. While other nations buckle down to work, in the realization that only through the rendering of service and in the production of goods is wealth produced, we in the United States are forced to witness the most outrageous attempts to foster leeches on the public, determined to be supported in idleness by the taxpayer.

"The belief that the Government—in other words, the taxpayer—owes everyone a living, with no effort on his part to collect it, seems to be the philosophy of too many today in responsible positions. It is the responsibility of the individual to support the Government, not the Government the individual. Further, it would be the height of folly to dissipate the funds now in reserve for unemployment at a time when jobs are going begging. These funds should and must be kept in reserve against the time of actual need. That time will come quickly if the demands of labor leaders are granted. Not one penny should be paid for unemployment compensation as long as a job is available to a person, physically able to fill it, and within reasonable distance from his home.

"These demands are fantastic, absurd, and—if America is to come through—impossible to grant."

There is no way of accurately determining the total number of jobs open in Minnesota. Efforts to secure help are made through the urban and rural press, by placards placed in shop and hotel windows, and by filing requests with United States employment agencies. Some indication of the total may be had from the fact that the United States employment offices in Minnesoa alone have unfilled orders for more than 27,000 jobs

In spite of that situation, there are 5,186 persons drawing payments from the Minnesota unemployment fund. This fund, in our opinion, is unusually well and conservatively managed.

The following are random excerpts from reports of those who have participated in this survey:

LIVESTOCK

The packing houses all over the State are in need of help. More than 2,000 additional persons are needed in South St. Paul plants alone. Unless this additional labor force is promptly obtained, there will be restrictions on the amount of livestock the packing houses can accept, possibly an embargo against shipments, which will inevitably reduce prices paid to the stock raisers.

POULTRY

None of the larger plants processing dairy and poultry products have a full quota of help. This is true also to some extent in the smaller plants. Poultry is backing up in the country because processing plants are unable to accept it. This deprives producers of present good prices caused by unusual consumer demand. There are more than 1,000,000 Minnesota turkeys ready for market, but shortage of help at dressing plants forces them to remain on farms. Experts say that if the present situation prevails for another 30 days, the average price will drop $1.50 per bird. Turkeys kept on farms are putting on weight. The market will be glutted with heavy birds suitable only for hotels, clubs, and dining cars, and for which there is limited demand.

There is a very heavy crop of other poultry in Minnesota—hens and springs, etc. Due to labor shortage, processing plants are running only 60 percent capacity. Therefore the farmer has been able to market only a limited number of birds.

The farmers are protesting bitterly that after producing the stock they are unable to market it. They say that this heavy production was at specific Government request.

SUMMARY OF REPORT FROM DULUTH

On October 1, there were approximately 1,400 jobs available in this business area (southern part of St. Louis County, Duluth, and immediate area, extending as far as Cloquet). These jobs were chiefly with iron and steel manufacturers, railroads, wholesale and retail firms, and construction work.

Approximately 725 persons in this area received unemployment payments for the period September 24 to 29; in addition, there were 118 World War II veterans who received SAR checks during the same period.

This report covers about 80 percent of employable people in this area, the other 20 percent being domestics, etc.

Insofar as employment is concerned, there seems to be an even balance on Iron Range proper. However, there is a shortage of common labor in the Hibbing district. Survey shows that those who are drawing unemployment payments in this area are mostly women and older men, who do not expect to return to work.

TWIN CITIES INDUSTRIAL DISTRICT

Even though production has been lessened in some plants because of Government cancellation of contracts, many of these same plants are still running only 80 percent capacity, because of the manpower shortage.

A survey of 26 industrial plants in the Twin Cities shows only 2 plants fully manned. In the remaining 26 plants anywhere from a dozen to 1,500 additional employees are needed. Plants are short of all classes of help, skilled and unskilled, men and women, including all classes of office help—accountants, stenographers, and clerks.

SMALL EMPLOYERS

This manpower shortage is by no means confined to large industrial plants or farms. A proprietor of a medium-sized garage reports that for more than 3 weeks he has been in dire need of a cashier, floorman, mechanic, and car washer, but is positively unable to secure the required help.

Small restaurants, soft-drink establishments, and similar institutions are unable to secure needed help. Hotels are unable to get chambermaids, telephone operators, waitresses, and elevator operators. The situation in laundries is particularly bad. It takes a minimum of 2 weeks to have laundry finished, and frequently 3 weeks.

Many small employers report the situation as bad as during the height of war production.

GENERAL SITUATION IN MINNESOTA

At a regional meeting of Minnesota Peoples Political Action Committee, held at Mankato October 6, similar conditions were reported throughout the entire Second Congressional District. Reports from officers of the organization living in other parts of the State show conclusively that there is an acute manpower shortage in all parts of the State, except Duluth and the Iron Range district.

That the manpower shortage is affecting agricultural districts in adjoining States is indicated by the following news release from the North Dakota Agricultural College, under date of October 4:

"An urgent appeal for more help in the commercial potato-producing areas of the State has been issued by the farm labor office of NDAC Extension Service. Unfavorable weather has delayed harvesting, and many workers who were available earlier have left the State.

"Growers must have more manpower in order to get an exceptionally large crop safely in storage before cold weather sets in. Excellent wages are being paid and workers have an opportunity for several weeks of employment.

"Going wages are 8 cents per 'pickers' bushel' with board and lodging, and 10 cents per pickers' bushel when the worker pays his own expenses.

"County agent offices or offices of the United States Employment Service will direct potato pickers to areas where the help is needed."

UNEMPLOYMENT PAYMENTS VERSUS WAGES

The Minnesota unemployment fund is being administered with unusual care and skill, with the result that only slightly more than 5,000 persons are drawing unemployment payments. However, there are many more applications for unemployment payments than are granted. The reason for the large number of applications may be found in the fact that in many cases it is nearly as profitable to remain idle and draw unemployment payments as it is to work and draw pay. For example:

The so-called stabilized rate for labor in this area for metal manufacturing plants, as established by the War Labor Board, sixth region, is 70 cents per hour, or $28 per week for a 40-hour week. A single man working for this $28-a-week wage, would have deductions from his pay, for old-age benefit, victory and withholding taxes, amounting to $4.19, or a net pay check of $23.81.

Under existing law, a single man is entitled to draw unemployment payments of $20 per week. Thus, he would sacrifice only $3.81 per week by staying idle and drawing this unemployment pension, as against working 40 hours per week for the $28 wage. If the unemployment compensation rate is increased to $25 per week, the same man would get $1.19 per week more, by remaining idle and collecting unemployment payments, than he would get for working a full 40-hour week.

At the regional meeting of our organization, in Mankato, the seriousness of the unemployment situation was discussed at length. It was the unanimous belief of those present that any increase in the unemployment compensation rate would only aggravate a serious situation, and I was instructed to inform you that your action in resisting pressure for such increase would be appreciated, and that you could rely upon the united support of all citizens who have the best interests of our State at heart. The unanimous sentiment was expressed by one of the farmers present, who said:

"Tell our boys in Congress that if they have the courage to look after our interest in Washington, they can count on our looking after their interests at home."

We believe the situation speaks for itself, and have no comment to make except that we believe profoundly in the basic principles of unemployment relief. We believe that in times of stress, it becomes the duty of Government to come to the aid of persons willing to work and support themselves, but who are unable to secure employment. However, in defense of that principle, and in defense of the great body of honest and industrious citizens of our State, we must guard against abuses which will so enrage our citizens that they may repeal the law and thus deprive the deserving from the protection to which they are justly entitled. Any further increase in unemployment benefits by Federal law will place a larger premium on idleness, it will aggravate a situation which is reducing the agricultural, industrial, and commercial income of our State, and cause a tide of resentment which threatens our whole system of unemployment protection. We believe in millions for honest unemployment relief but not one nickel for loafing.

MINNESOTA PEOPLES POLITICAL ACTION COMMITTEE.
By direction of the executive committee.
A. J. OLSON, *Chairman.*

Mr. Speaker, if the sound thinking people of this Nation who are interested in preserving free enterprise and our American way of life do not unite and counteract the activities of the CIO Political Action Committee, God pity our posterity. They are running rampant over everything held dear to the heart of the true American and are not stopping at anything to force their philosophy of government over the American people by every known means of intimidation on the Members of Congress.

I have on so many occasions seen groups of around 300 menacingly promenade around the Capitol grounds in an effort to intimidate Members of Congress to vote for legislation which they were sponsoring and which was fundamentally un-American, until it gives me new hope to see the citizens of this great State rise up with courage to combat their sordid efforts. We Members of Congress who have had courage enough to fight them in the face of their threats of defeat and other means of intimidation, welcome this patriotic effort manifested by the good citizens of Minnesota, and let it be hoped that all people throughout the United States who are interested in defeating this CIO gang and their purposes will follow the lead of these stalwart Americans.

## St. Lawrence Seaway

EXTENSION OF REMARKS
OF
**HON. THAD F. WASIELEWSKI**
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
*Monday, October 29, 1945*

Mr. WASIELEWSKI. Mr. Speaker, under leave to extend my remarks in the

RECORD, I include the following editorial from the Milwaukee Journal of October 24, 1945:

WOLL'S SEAWAY CRITICISM LACKS CONVINCING SUBSTANCE

Matthew Woll, vice president of the AFL, has expressed his organization's opposition to the St. Lawrence seaway in a pamphlet that now is being circulated in Wisconsin.

Mr. Woll says one objection to the proposed seaway plan is that any American funds to be supplied for work in Canadian territory must be used for the employment of Canadian labor.

What would American labor say if Canadian funds, used on the American side, must be paid to Canadian labor, imported into the United States in competition with American workers?

Further objections, says Mr. Woll, are that American maritime workers would be hurt as foreign ships sailed the Great Lakes in competition with American ships; that the production of electrical power would reduce the use of American coal and thus hamper American coal miners; that the seaway would divert some rail shipments and thereby harm railway workers.

Any major increase in maritime activity on the Great Lakes ought to help rather than injure American maritime workers. If actual seamen suffered from competition—which we doubt—what about American shipyard workers, dock workers, harbor workers, and many others? Clearly, they would find new and more jobs, wholly under American standards and labor agreements.

As for electrical power: If coal operators, and thereby miners, should lose some outlets for their products or energies, electrical workers would find new opportunities.

The coal argument won't impress many Americans who have, for some years, been unable to get enough coal for their own needs, due to exports, strikes, or other causes.

Rail shipments evidently would not be curtailed as great cargoes were brought into and out of Great Lakes ports. These cargoes merely would be routed from and to other markets rather than into and out of a few Atlantic seaboard ports.

## Lumber Situation in Regard to Small Homes

REMARKS

OF

### HON. JOHN LESINSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Monday, October 29, 1945*

Mr. LESINSKI. Mr. Speaker, for the past 42 years I have been engaged in the real estate and building business. At the present time I own and operate two businesses engaged in selling lumber and building supplies at retail. I am also quite familiar with the building trades from the construction standpoint as I was only 26 years of age when I constructed approximately four thousand houses, which were the nucleus for the present city of Hamtramck, which metropolis at the present time is completely surrounded by the city of Detroit. I make these statements to show that I know something about the real estate and building businesses from first-hand experience over a long period of years.

Because of my experience in the construction and building trades in the Detroit area, as well as the fact that I own and operate two businesses, many of the retail dealers are constantly contacting me in regard to the unsatisfactory condition that prevails in securing materials. The majority of retail dealers in the Detroit area some months ago endorsed a program of unrestricted building operations and insisted that directive L–41 issued by the WPB be revoked. In fact, at the time this matter was first brought to my attention I was in favor of revoking L–41, but after its revocation I came to the conclusion that on account of the shortage of materials, especially building materials and principally lumber, the revocation of L–41 was advantageous to the large contractors and real-estate operators because their financial resources are in excess of those available to smaller businessmen and the markets have gotten out of control and beyond the reach of small businesses. It also became apparent to me that these large contractors and real-estate operators would be able to purchase in such quantities that very little lumber would be available for the use of an individual who desired to build his own home or, for that matter, a small contractor.

The Congress has provided the first priority to veterans for building materials but on account of the rescission of L–41 the veterans and the small retail yards, as well as other individuals, are able to purchase only those building materials that may dribble through and are not contracted for by the large contractors. The large real-estate operators, even though not engaged in retail building materials operations, find ways to contract for building materials to the detriment of the veteran, the individual builder, and the small businessman.

In view of the fact that the veteran, the individual who desires to build his own home, and the small businessman have been confronted with so many obstacles since the rescission of L–41, I am convinced—in the light of experience gained—that L–41 should be restored and that a set quota should be fixed on the same basis as when a grave national emergency confronted the country during actual wartime. I am further convinced that this quota should be based on the amount of material available for construction for each month, in the several areas of the United States, and that the retail distributors, especially the small businessman, should have first priority on the materials available for that particular month and that the distributors be directed to give priority to: First, veterans; second, the individual who desires to construct his own home; third, the small businessman; and fourth, the small contractor. If after this program has been carried out in the manner I have heretofore enumerated and it is found that the supply of materials for a particular month has not been exhausted, then the remaining supply for that particular month should be equally distributed among the large real-estate operators and contractors in the several specified areas.

This program should especially be followed in the Northern States, or colder climates, where there are only 8 months suitable for construction and that the quota for the 8 months' period in these colder areas should be figured the 12 months' quota basis because of the fact that for a period of only 8 months—and not 12 months—is the weather suitable for construction operations. In other words, in these colder areas the year's quota for 12 months should be equally divided over an 8 months' period in order that in the colder areas the same amount of materials would be available as would be allotted to areas where construction operations can be carried on throughout the whole 12 months' period.

Mr. Speaker, I regret very much to announce to the House that this administration is being deceived by the real estate and mass building interests of our country. In fact, it is being led into a trap and unless a change of policy takes place immediately the record will show that our Government is being used as the unwitting tool of speculators and profiteers. I realize full well that these are strong words, but the facts will bear out the allegation.

Mr. Speaker, a cursory examination of the facts will also disclose that the responsibility for the administration's present incorrect and untenable position rests on the shoulders of one man—Mr. John W. Snyder, Director of the Office of War Mobilization and Reconversion. That examination would also disclose that Mr. Snyder was confronted with the opportunity of making a decision between protecting our veterans and small business and preventing inflation on the one hand, and acquiescing to the pressure of big business which will result in profiteering to the benefit of greedy real estate interests on the other hand. He chose to side with the profiteers.

Mr. Speaker, as one who has made his own way since early youth in the competitive field of business, it is needless for me to state that my efforts have always been directed to the end of making a profit and I have evidenced the same satisfaction as any other businessman when at the close of a business year he finds that his books are not in the red. All businessmen have a feeling of personal exhilaration when their businesses have shown a profit through honest efforts and I, like other businessmen, have felt that exhilaration when such profits have been evidenced, but never in my entire career have I stooped to make a dishonest dollar. As a patriotic American citizen I certainly would not choose to make money at the expense of my country's economic future and thereby jeopardize our economic welfare for years to come by deliberately using whatever power I might have, politically or in the business world, in a way that would result in inflation.

Mr. Speaker, I do not question War Mobilizer Snyder's sincerity or his integrity but I do question his judgment in this matter because of his lack of experience and knowledge of the complex problems with which he is dealing.

Mr. Speaker, for the past several weeks one of the most courageous Members of this body, the Honorable WRIGHT PATMAN, of Texas, has made several speeches to this House in which he has pointed out the dangers of uncontrolled inflation which faces this Government because of Mr. Snyder's decision to stand by the re-

cession of L–41 and the other agency orders and directives which have kept the lid on housing prices. The gentleman from Texas [Mr. PATMAN] has courage because he takes the side which has no strong lobby here in Washington to defend its interests. He has chosen a hard and difficult, not an easy, road.

Mr. Speaker, I want the Members of this House to know that I am wholeheartedly in accord with the fight being made in defense of small business by the distinguished gentleman from Texas, who is chairman of the Select Committee To Investigate and Study Problems of Small Business. I also want my constituents to know I realize full well that this endorsement by me will not be popular with many of the customers of my lumber businesses back in Michigan, especially the large real-estate operators and contractors. In fact, it is the leaders of the large builders and realty interests who have been successfully leading Mr. Snyder into this unsavory trap at the expense of the economic welfare of our Nation.

In fact, Members of both the House and Senate have been told, as Mr. Snyder was told, that unless L–41 was recinded no houses could be built to take care of the great demand for homes which we all know now exists. That is pure fabrication. Houses were built under L–41 and houses can still be built under a similar order. The only limitation of the people of this country to build houses is their inability to obtain the materials which we now have on hand to build them. It is true that some of these materials are scarce today and that they are needed for the construction of low-cost housing for returning servicemen and their dependents. It is proper that our returning veterans should have first priority, regardless of how much other individuals, including ourselves, need new homes—surely we can wait until our boys have found roofs for themselves and their families. In my considered opinion, it is too much to ask or require a returning veteran to take his wife and children in on a double-up deal with his parents or his wife's family—that is the worst way in the world to restore his morale and show faith to him for what he has done for us and the welfare of the world as a whole.

Under the program which Mr. Snyder favors, mass-construction builders stand the best chance of getting these scarce materials. These men build before they sign up a customer for the house they are building. There is no limit on their profits. They can and will charge whatever the market will stand. The little man, both the customer and the small builder, does not stand a chance under Mr. Snyder's program.

War Mobilizer Snyder has the power to correct this injustice. He can arrange through the President to have an Executive order issued which will restore L–41 or some similar order which channels the flow of lumber to the proper customer. He can by means of such an order limit the profit that can be made on such homes. Why does he refuse to do it?

It is unnecessary to talk about old houses—they have already been built. Perhaps we will have some speculation in them but certainly not if new houses are placed on the market at fair prices, under legislation enacted to prevent excessive profits. If new homes are obtainable at fair prices, certainly old houses will not be sold at excessive prices. It is my considered opinion that War Mobilizer Snyder has it within his power to issue the necessary administrative orders to prevent this inflationary building program. On his shoulders—and his shoulders alone—rests the responsibility for doing this job and doing it right.

Mr. Speaker, just a few days ago War Mobilizer Snyder testified before the Senate Small Business Committee on this very subject. He toyed with the problem. He did not pick it up in his hands and tackle it in the way a competent executive would have handled the problem. He handled it like a hot political potato. If this administration is to evidence good faith and show to the people of this country that it understands the problems of the average citizen and the small businessman, it must present a program which will eliminate the present inequalities in the distribution of building materials. Certainly no such program has yet been presented by the officials of our Government and if the handling of the present problem is to be taken as a criterion it is a poor omen for the future.

War Mobilizer Snyder, his assistants, and the lobbyists for the real-estate interests have endeavored to tell us that the Army has vast stock piles of surplus lumber. This is not borne out by the facts. When the Army stopped ordering lumber, it only stopped putting in orders for boards still on the trees—not for already processed lumber.

Mr. Speaker, there has been much propaganda relative to this housing problem—maybe I will lose some valuable customers by the position I have here taken, but I would rather lose them and contribute my share toward stopping the wild race toward inflation than have the few dollars I might make out of their business. I am a real-estate man, a builder, and a lumberman, and I know whereof I speak. Think it over, gentlemen, before it is too late.

## Despite Promises, Men in Armed Forces Still Not Being Discharged

EXTENSION OF REMARKS

OF

### HON. JAMES H. MORRISON

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

*Monday, October 29, 1945*

Mr. MORRISON. Mr. Speaker, we have not yet had an answer from the War Department as to why unscrupulous officers are permitted to continue to interpret the point system to the disadvantage of the men who fought for those points. That being so, we here in Congress must immediately help these boys. The following appeal is only one reason:

I'd like for you to write a letter to our Congressmen and ask if they won't do something about this matter. Here are the circumstances. After the war ended with Japan our unit was supposed to return to the States for redeployment to the Pacific but the War Department lowered the point system to 80 points for discharge and 70 for return to the States. Under this revised point system my unit would have automatically fallen in category IV which means eligible for return to the States and demobilization. A circular came down from the War Department asking for the unit's point average and our commanding officer sent in a score computed as of VE-day robbing us of the eight points granted all Army personnel between VE- and VJ-day. Had our score been computed to take in VJ-day approximately 900 men would have been eligible for return to the States out of 1,300. After checking, the score of the regiment would have lost all its key personnel; so in order to keep the organization together so as to hold positions, the correct information as to the unit's score was withheld from the War Department, making us eligible for occupational duties in Germany, and unless somebody comes to our aid we will be detained in Europe indefinitely. I'm asking that you do anything you possibly can but whatever you do withhold my name, because I'd catch plenty hell if anything happens and it is found out I started it. Will you please write that letter immediately and request an investigation be made?

Sincerely yours.

## Prices, Wages, Profits

EXTENSION OF REMARKS

OF

### HON. THAD F. WASIELEWSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

*Monday, October 29, 1945*

Mr. WASIELEWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Milwaukee Journal of October 25, 1945:

PRICES, WAGES, PROFITS

Labor, demanding higher wages, argues the business situation is now such that industry can have adequate profits, can grant all wage demands, and can still sell its product at lower prices than during the war. If this is true, there is, of course, no reason why wage adjustments should not be made, though perhaps not at the rate labor suggests.

The fact is that, whenever there is technological or other advance in production, there is a benefit. That benefit may go wholly to stockholders in the form of higher dividends, or to the workers in the form of increased wages, or to consumers in the form of lower prices. Ordinarily, the benefit does not go to any one class but, in varying degress, to all three. Prices are lowered to a certain extent and, at the same time, profits and wages are increased. The individual manufacturer determines the proportion under the various pressures that are exerted on him.

The point which should be remembered by all is that the greatest good to the greatest number, at least under normal conditions, comes from price reduction, with wage increases coming second and profit rises coming third.

Everybody is a consumer. When prices go down, the benefits reach everybody—wage earners, capitalists, the retired, and the "widows and orphans"—everybody. The dollar goes further, so the weekly stipend,

whether it be in a pay envelope or in a remittance check, can stay where it is and still buy more.

When wages rise, even though prices remain static, only those who work for wages benefit. If the rise is general throughout labor, the distribution is, of course, very wide. Since, however, the stronger elements in labor always get the lion's share of advance, the real benefit is largely confined to them.

When profits rise, the benefits are still spread to a considerable number, for those who own small blocks of stock, as well as those who have millions invested, and those who share in the prosperity of insurance companies and the like, find their incomes or their estates increasing. In these days when millions have investments or live off the proceeds of investments, even profits are widely spread.

Labor at this time must realize that high wages are per se of no value. The dollar with high purchasing power may be worth several inflated dollars, and 52 weeks of sure pay are better than fewer weeks at a higher figure.

Our economic problem today is how to achieve consistently high purchasing power for the greatest possible number. We cannot meet that problem just by raising wages—just by meeting labor's demand for more and more dollars. If those raises mean higher prices and lower profits, consumption will dwindle and capital will get discouraged. Then jobs will disappear.

It is only when the division of benefits is nicely balanced, with the consumer, the worker, and the stockholder each getting a fair share, that enduring prosperity can be expected.

## The Army Service Forces

EXTENSION OF REMARKS

OF

### HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

*Monday, October 29, 1945*

Mr. BROOKS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post:

THE ARMY SERVICE FORCES

The biggest business in the world made its report yesterday to its stockholders, the people of the United States. Its managing director, Gen. Brehon Somervell, reported that in the fiscal year July 1, 1944–June 30, 1945, it trained, clothed, fed, armed, treated, entertained, instructed, paid, deployed, and redeployed an army of 8,300,000 men. Its expenditures totaled $54,000,000,000.

As General Somervell says in his report, the Army Service Forces were taken largely for granted by the American public. When a million men and a hundred thousand vehicles were landed on the Normandy beaches in 169 days, that fact stirred hardly a ripple of comment. When a barren island was occupied and made into a major base in a few weeks' time with airfields, repair shops, motion-picture theaters, housing for 50,000 men or more, that was only what they were organized to do, wasn't it? The Army Service Forces, as the report makes clear, were the men behind the men behind the guns that made victory possible.

The over-all extent of the forces under General Somervell's command probably is little appreciated. The Army Service Forces included practically every activity except that of the actual fighting. There were seven technical services: Quartermaster, Ordnance, Engineers, Medical, Signal Corps, Chemical Warfare, and Transportation. There were the following administrative services: Adjutant General, Judge Advocate General, Provost Marshal General, Finance, Special Services, and Information and Education Divisions and Chaplains. It will be seen that the Army Service Forces therefore were responsible not only for all the physical needs of the combat soldier but for his mental and spiritual needs as well.

Probably more than to any other part of the Army, the personnel of the Army Service Forces—1,250,000 officers and men—went directly from civil life into the ASF. At the end hardly any of the men and less than 3 percent of the officers were professional soldiers. General Somervell gives full credit for the task accomplished to the skill of these men trained, before they ever saw the Army, in organization, production, and transportation.

General Somervell gave to the Service Forces, when he returned to the Army from years of distinguished service in this city as a public works administrator, the somewhat flamboyant slogan: "The impossible we do at once; the miraculous takes a little longer." Looking back from victory at what was accomplished, it does not seem now too broad a statement.

## Hon. James A. Farley

EXTENSION OF REMARKS

OF

### HON. SOL BLOOM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Monday, October 29, 1945*

Mr. BLOOM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by the Honorable James A. Farley at a Democratic rally held under the auspices of the Queens County Democratic Committee, in the Flushing, N. Y., High School, Thursday evening, October 25, 1945:

Not so long ago all our thinking and all our actions were concentrated in the effort to win the war and it is not many weeks since we began to translate our victory into a peace that will help to eliminate the causes which precipitated the war.

New York City, in common with every other community in the land, must do its share in this titantic task.

New York is the greatest city on God's footstool. This may sound extreme, but I think that with only a little study anyone would reach the same conclusion. I may be accused of being a little prejudiced or partial in my views and, if so, I plead in mitigation that I love this city and its people. I have been part of its throbbing, pulsing life for many, many years and I think that I sense the pulse of the metropolis.

Those who have been here as long as I have, or even a lesser period, cannot but help absorb the rhythm and color of this greatest cosmopolitan community on the face of the earth. New York City belongs to no one man or to any one group. It is made up of divers religions, of men and women from every clime who manage to live together in a spirit of give and take and broad tolerance.

I speak, of course, of the general picture, for I do not think we need stress the transient quarrels and disputes that occasionally arise in an area where nearly 8,000,000 human beings go about their affairs from day to day. That these differences should ever arise is to be regretted. But they are not of vital concern. What must amaze one is the fact that there is so little of it. Yet that little is too much and it is the duty of all of us to strive to put an end to it. And, it can be done.

We are now in the midst of a political campaign involving not only the major offices from mayor down, but also our judiciary and the members of the council.

But tonight, I will speak chiefly about my candidate and your candidate for mayor, Brig. Gen. William O'Dwyer, the nominee of the Democratic and American Labor Parties.

Four years ago I supported General O'Dwyer for mayor because I knew him to be an upright man of high personal integrity and courage. It was my considered judgment then that his extensive administrative experience and his unimpeachable record qualified him for the exalted office he was seeking. This year General O'Dwyer is again a candidate and I am supporting him for the second time for the same reasons that were mine in the last campaign. My enthusiasm for General O'Dwyer is even greater now, because during the past 4 years he has grown in stature. As a soldier and statesman he has lately carried heavy responsibilities which he assumed in the interest, not only of his fellow citizens in this city, but of the Nation and of lands beyond the seas.

In the past 4 years General O'Dwyer has changed. He has changed in the sense that his experience as an administrator has broadened out, and that his knowledge of the changed conditions is such that the people may feel confident that he is well qualified to handle the postwar problems of the city as thoroughly and efficiently as he handled the important war assignments given to him by President Roosevelt and his immediate superiors in the War Department.

Time will not permit me to go into a detailed discussion of the many and complex problems that face the city in the immediate future. Most of you have a fairly good idea of these problems, and I have no doubt that a great many New Yorkers have their own solutions.

But I think there will be general agreement among us that such problems as employment, traffic congestion, housing, transit, juvenile delinquency, improved school facilities, elimination of slum areas, and greater recreational facilities for children press for immediate consideration.

Such a program stirs the imagination. There is no easy road to the attainment of the objectives called for in the plans that must be carried out in the next administration. This program will require the meeting of many minds around the council table, the highest engineering skills, and last, but not least, a keen sense of social consciousness and responsibility.

It will call for the integration of all the forces of good government. It will bring into play the full physical and financial resources of this city. It will determine in no small measure the future of our children.

We must recognize that not only must talent and ability of the highest order be enlisted into the service of the people, but that good over-all administration is vital too.

I am fully satisfied, as I know you are, that General O'Dwyer can ably cope with the city's postwar and rehabilitation plans, equipped as he is with splendid personal qualifications and a wide and successful experience as an administrator.

Let us consider the personal equation. General O'Dwyer comes from the people. He has lived among them. He understands them.

He began his public career as a policeman on the beat and as such learned the individual trials and tribulations of the average man, the housewife, and the children.

He saw them every day, he talked with them, he gained a clear conception of their hopes and aspirations.

Later on as a magistrate, as a county judge and as district attorney, he encountered an-

other phase of human life and of human problems.

All this time he was learning from people, as well as from books. It gave him a more humane outlook, a broader and more sympathetic understanding, and because of his background it engendered in him a greater desire to be helpful to members of the community, regardless of their party affiliation or their religious beliefs.

His splendid work as a soldier and as special minister to Italy, together with his designation by President Roosevelt to handle the war refugee problem, are too recent to need any discussion by me at this time.

You all know what a series of grand jobs he did. You all appreciate the kind of administrative ability that was needed in the performance of the duties assigned to him.

I merely mention these things to point out that General O'Dwyer as mayor of New York City will go into this most important post not only equipped from a technical standpoint, but conversant with the needs of the people as simple human beings.

And now I should like to dwell briefly on an aspect of this campaign that borders on the fantastic.

Some of General O'Dwyer's political opponents have charged that he was associated with Communists and would be subject to their influence. The more extreme among them said that he was a Communist. And there were other smearing charges made. And we all know how untrue these charges were. Charges which were brought up in the last days of the campaign.

Like General O'Dwyer, I, too, am opposed to communism, fascism, nazism, and all other "isms" that run counter to Americanism. My record in public life has been such that no one can truthfully deny that I have ever made a statement that failed to carry my strongest convictions, and that do not square with my conscience. And now let me say that those who have made these false charges will receive a well-merited rebuke from the electorate on November 6.

Like General O'Dwyer, I am and always have been against intolerance. I stand, and always have stood, for our democratic process of government, which is alien to intolerance.

Under this democratic process no man can be prevented from expressing his thoughts on public questions nor can he be told how he must vote.

A candidate for office may say to an individual or to a group that he doesn't want their support, as General O'Dwyer said to the Communists and to the Communist Party. But he cannot, under our democratic process, keep these individuals or groups from going to the polls and voting for him.

It follows that a candidate is under no obligation to any individual or any organization advocating a course at variance with our American way of life. You and I know General O'Dwyer well enought to realize how he feels on the subject of un-Americanism.

He could not have made such substantial progress in public life if he had catered to any elements in the community who flouted our democracy and its institutions.

When he is in city hall, he will do a first-rate administrative job because he will cater to no one group and will not yield to pressure from those who would seek to destroy our American institutions and our American traditions.

A vote for General O'Dwyer represents a vote for our American way of life and is an investment in the future well-being of our great city.

I would also urge you to vote for Lazarus Joseph for the office of comptroller and for Vincent R. Impellitteri for president of the city council, and all their associates on the Democratic ticket. It is highly important to make certain that General O'Dwyer will have complete cooperation in putting his program into effect.

## Hospital Care Is Not Charity—Stars and Stripes Editorial Attacks Pauper Oath for Veterans

EXTENSION OF REMARKS

OF

### HON. JOHN L. McMILLAN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

*Monday, October 29, 1945*

Mr. McMILLAN of South Carolina. Mr. Speaker, I desire to extend in the RECORD a piercing and illuminating editorial that appeared in the Stars and Stripes, National Tribune, on October 11, 1945, concerning the much-discussed pauper-oath requirement for veterans.

This editorial is based on two articles carried in the September issue of Veterans Outlook magazine, one by Joseph Leib, vice commander of Costello Post, American Legion, Washington, D. C., and the other by the Legal Division of the Veterans' Administration.

War veterans were greatly favored on September 18 when Representative JERRY VOORHIS, of California, placed in the CONGRESSIONAL RECORD the arguments of a prominent World War II Legionnaire against employment by the Veterans' Administration of the so-called pauper's oath and, immediately following, the reasons given for its use. The latter were not necessarily in reply to the protests of the veteran first quoted, but they were an enlightening treatise by the solicitor for the veterans' agency in defense of the use by it of forms used in dispensing hospitalization to war veterans.

It is our desire to be fair. Solicitor Edward E. Odom doubtless intended to set out dispassionately the reasons why the Administration feels called upon to pauperize certain of our comrades and not necessarily to defend the practice. However, the two cannot be successfully divorced, and we so deplore the movement to term as charity any right extended by the Congress to men who wore the country's uniform in time of war that we desire to discuss the subject once more.

Odom correctly states that the Congress granted certain hospital and medical care to service-connected veterans as a "right." He then gives the history of hospital care under the World War Veterans' Act of 1924, which extended "authority" for hospitalization of others not directly service-connected, who are "financially unable to pay for hospitalization and necessary traveling expenses," and he says that, even though the Congress enacted the law, there is a distinction between a "right" and an "authority" within the limitations outlined.

Going then to the repeal of all veterans' laws in 1933, when the Veterans' Administration grabbed more authority than was good for it, and to the later and final justification for the pauper's oath, Odom cites Public Law 312, Seventy-fourth Congress, August 23, 1935, in which the Congress amended the Economy Act in order to grant hospital care to any war veteran "unable to defray the necessary expenses therefor." He again correctly quotes the law which says that "the statement under oath of the applicant on such form as may be prescribed by the Administrator of Veterans' Affairs shall be accepted as sufficient evidence of inability to defray necessary expenses," but here we note that the Solicitor carefully refrains from acknowledging that the Congress had declared a "right" to hospitalization to certain non-service-connected veterans. Instead, he calls this quotation the pauper's oath "about which so much misinformation has been circulated."

We record that much of the material written for the record by the head of the Legal Division because we are pledged to fairness. That is in truth an application of the pauper's oath, but only a sample of a hateful practice. Some months ago this newspaper, on behalf of veterans, protested strongly against the use of that particular clause on the application blank then used by all veterans, including the so-called service connected, when applying for hospital care. Our friend, Odom, admits that the Administration was in error, uses the flimsy excuse that it was not intended for them anyway, and says that no attention was paid to those answers when service-connected veterans sought hospital admittance. But the fact remains that the form was altered to advise service-connected veterans that they need not answer certain questions; it was altered in other respects; and a bold-faced penalty clause threatening applicants with fines and imprisonment, if they failed to tell the truth, was put on a back page where it did not have to be subscribed to. That much was accomplished, anyway.

The power to remove the oath, says Odom, lies with the Congress. Again, that is fact. It "is prescribed by law," he says, "not by the Veterans' Administration." That is only half-truth. The Veterans' Administration wrote the law and persuaded the Congress to pass it. It recommended the language employed for reasons which the Solicitor in a long statement evidently thinks proper and sufficient. To read it one would believe it is a picnic for a veteran to be hospitalized just to have a pretty nurse take his pulse and feed him pills. He carelessly quotes figures to suggest that, unless somebody prevents it, 20,000,000 veterans will be hospitalized "for free" even though there never will be that many veterans unless we have another war. He says there were more than 3,000,000 admissions in the last 25 years, which would lead the unwary to believe that three out of four of all World I veterans have been in hospitals. Of course, that would be a foolish conclusion because there are a few veterans of other wars still alive, and some patients have been admitted many times, but it all helps to add up to big figures for purposes of argument. And, finally, the Solicitor poses the suggestion that the veterans themselves and their families, making up as much as a third to one-half of the population, had better take a good look at the problem—all nicely balanced and quite alluring argument and every bit of it actually, if not legally, a pleading for continued use of the pauper clause.

There is not a veteran in the country who will be moved by efforts of this sort. All were sent off to war with a promise in their ears that nothing ever more would be too good for them. There is not a single one of them who would purposely ask for something for nothing. They well know that they sacrificed months of their lives and years of their earning power when they donned the uniform.

There has never been any question about priorities to the so-called service-connected. But if or when they require the aid of the Nation they served and of the people they saved, veterans want no strings attached to rights voted to them by the people's representatives, and they want no modification by interpretation or otherwise from the Veterans' Administration, which is the agent of Congress. Least of all do they consent to affixing their signatures to any paper saying, "I cannot afford to pay." That is the abominable pauper's oath. It is as degrading as it is unnecessary. And before war veterans lie in free graves in a national cemetery, they do not wish to feel that that is to constitute charity or that their final resting places are to be paupers' graves.

The new Administrator of Veterans' Affairs, General Bradley, wrote an article for the Philadelphia Inquirer of September 23. In outlining the benefits and opportunities afforded by a grateful Nation to those who

have earned them by sweat and blood, he recorded himself thus: "In no sense of the word can a benefit of any nature to a war veteran be considered as charity." That is a clear statement from a distinguished soldier who has lived with his troops in the field. It is becoming to a fighting general. He has not yet taken a stand on the "pauper's oath" which organized veterans are trying to eliminate by legislation. We hope he will make it indelibly clear that hospitalization or any other right, now or hereafter, which may accrue to a war veteran is not charity, that a beneficiary need not humble himself to receive it, and that a person who is good enough to serve his country in war is too good to be a liability under any circumstances on the community which produced him.

## Resolution of Southern Commissions on Interstate Cooperation

EXTENSION OF REMARKS
OF
**HON. JAMES DOMENGEAUX**
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
*Monday, October 29, 1945*

Mr. DOMENGEAUX. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

RESOLUTION OF REGIONAL CONFERENCE OF COMMISSIONS OF INTERSTATE COOPERATION OF THE SOUTHERN STATES (ALABAMA, ARKANSAS, LOUISIANA, MISSISSIPPI, OKLAHOMA, TEXAS, AND TENNESSEE), HOTEL ST. CHARLES, NEW ORLEANS, LA., OCTOBER 20, 1945

*Be it enacted by the representatives of the Southern Commissions on Interstate Cooperation:*

1. That pending congressional legislation providing for the return of the employment services to the States be adopted immediately and that necessary Federal appropriations be made to match available State funds for the operation of the services in the future.

2. That our system of unemployment compensation be left exclusively to the States, particularly as to matters of administration.

3. That the Federal House of Representatives should insist on the inclusion of provisions of the Senate bill providing for the channeling of Federal aid for airports in the revised Federal aid airport bill which is now being rewritten by a conference committee. The House on two occasions expressed itself favorably on this principle.

4. That the United States Senate be urged to give immediate consideration to S. 1398, by Senator MCMAHON, of Connecticut, providing for the disposition of surplus airports, facilities buildings, equipment, etc., to States and cities wtihout charge through the Surplus Property Administrator.

5. That the Surplus Property Administrator be commended for establishing a dvision to handle State surplus disposal problems, and for immediately making large supplies of tires and other surplus material available directly to States on a priority basis.

6. That the proposed Federal public works program contemplated in legislation pending before Congress be handled on a Federal-State cooperative basis as in the case of the public-roads program and not operated like the WPA program in the past; and be it further

*Resolved*, That in order to implement these conclusions the following steps should be taken:

1. Copies of this resolution should be sent to every member of every commission on interstate cooperation in the southern region, and members of other regions of the council of State governments should be kept advised of action taken by the southern cooperation commissions.

2. Each commission on interstate cooperation in this region should be promptly called into meeting to review primarily pending Federal legislation of serious concern to the States.

3. Copies of this resolution should be sent to Members of Congress and Federal departments particularly interested in the above subjects.

(Adopted unanimously.)

## Sea-Air Transportation

EXTENSION OF REMARKS
OF
**HON. RICHARD J. WELCH**
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Monday, October 29, 1945*

Mr. WELCH. Mr. Speaker, the Propeller Club of the United States held its annual convention in New York from October 17 to 19.

The membership of this organization comes from all branches of the maritime industry. It is a voluntarily supported nonprofit organization, having for its sole purpose the advancement of the American merchant marine. Its 10,000 members are scattered over the United States, Europe, the West Indies, and South America in some 100 or more clubs or branches, known as ports. They are all people engaged in maritime activities and who have a deep interest in the development of the American merchant marine.

The Propeller Club also has some 30 student ports located in American universities and colleges, composed of young people studying courses in naval architecture, marine engineering, foreign and domestic commerce, trade and transportation, business administration, and economics.

There is probably no group of people in this country better acquainted with the problems of the American merchant marine and its development as an agency of national defense. They recognize the absolute need of coordinating our transoceanic surface and air transportation so that our merchant marine can meet the competition of foreign maritime nations.

Mr. Speaker, under leave to extend my remarks, I include the following resolution adopted by the Propeller Club at its recent convention:

The war has brought great improvement in airplane service facilities and equipment throughout the world and demonstrated the necessity of commercial air power to national defense and the establishment of a comprehensive overseas transport service in the postwar period.

It is in the public interest that American steamship lines participate in the development of transoceanic air service to the end that an efficient and adequate American transport service be established and maintained under competitive conditions.

Steamship lines have longe engaged in transportation of passengers, mails, and cargo by water and have contributed to the development of international trade and established the organizations and relationships essential to efficient overseas air service.

A complete coordinated sea-air service under a single management affords the shipper and the traveler the most efficient, adequate, and up-to-date facilities in transportation and is demanded by the public and affects the public interest.

Foreign countries, particularly England, France, and Holland have long been active in the field of air transportation through the facilities of the steamship companies of their respective countries, and these and other foreign countries propose to press the development of overseas transportation service in this manner in the postwar period. It is essential to protect the American merchant marine from the threat of foreign competition that it likewise be permitted and encouraged to engage in transoceanic air transport service to the end that it will be enabled to meet the inevitable competition of foreign steamship lines.

The Propeller Club of the United States urges:

1. That steamship companies are entitled to certificates of convenience and necessity, without discrimination, upon a proper showing before the Civil Aeronautics Board that the proposed air service is required by public convenience and necessity and the applicant steamship company is fit, willing, and able to perform the service properly.

2. That it is vitally essential to the operation of a sound and adequate American merchant marine that the right of American steamship companies to engage in air transport, as an auxiliary and supplemental service to their service operations, should be fully recognized and established at the earliest possible date.

The secretary is directed to send copies of this resolution to the President of the United States, all Cabinet officers, to the United States Maritime Commission, to the Civil Aeronautics Board, to the Senate Committee on Commerce, to the House Committee on Interstate and Foreign Commerce, to the House Committee on the Merchant Marine and Fisheries, to all Members of Congress, chambers of Commerce, and boards of trade in the United States.

## Production the Answer

EXTENSION OF REMARKS
OF
**HON. CLARE E. HOFFMAN**
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Thursday, October 25, 1945*

Mr. HOFFMAN. Mr. Speaker, many of us are thoroughly convinced that production is the answer to many of our problems. Just how to get it with fairness to all, is the question.

What one editor thinks is shown by the following editorial from the Allegan Gazette of October 25, 1945, which reads:

If the average American wants to maintain his standard of living, and there isn't any question about that, then at some time that American must come to the realization that he can't drive automobiles, own a home with all the new, modern appliances in that home and in return produce for 30 hours each week. Indeed, it is doubtful if that standard of living can be maintained on a 40-hour week and this is especially true if there are more than two in the family.

Labor has been talking a lot of nonsence when it thinks it can produce enough value per individual in 30 hours or 40 hours to have all the good things in the average American's life. It can't be done for the

simple reason that as yet, and there isn't any prospect in sight, labor's value just isn't sufficient to permit it to earn enough in 30, 36 hours or even 40 hours. There are of course some specialists who can earn enough in 40 hours to give them a home, a car, modern appliances and sufficient money to raise and educate a family, but insofar as the average man is concerned it just isn't in the cards.

The reason is simple. Labor cannot enjoy high wages without being forced to pay high prices. The price of every commodity on the market is made up, for the greater part, of labor. Each wage increase means and must mean a raise in the price of the commodity being sold and while it is true that, generally speaking, a certain wage rate can be allowed without a resulting increase in price, most business doesn't work on a large enough margin to warrant wage increases without price increases.

High-priced labor means high-priced commodities, and, with labor constantly struggling to get ahead on its end of the schedule, it simply means labor-wage chases price schedules in an endless chain until soon nobody can buy and money is worthless.

Without capital labor is sunk and without labor capital is lost, but the two, working in close unity, can bring the highest standards of living and at the same time a profit for capital. Without a profit, capital cannot be obtained and is not interested. If that happens, and it can and has in earlier New Deal days, the result is no jobs.

Labor is entitled to fair play and a just return for its effort, but a lot of labor has gone wild. Every man is entitled to a job if he can hold one, not if he can get one. Every man is entitled to a home, a family, and a decent standard of living if he wants to earn it, and is capable of earning it, and it shouldn't be necessary for any individual to work 50 or more hours a week to have a decent standard of living, but the idea that average labor is worth anywhere from $2,500 to $5,000 annually is hooey. Yet there has been a lot of ordinary labor which has, during the past few years, earned three thousand and more annually. That pace cannot be continued, not without boosting all labor to a similar income, and if that is done it won't make much difference how large the pay check reads. It will be worthless.

## Atomic-Age Lessons

EXTENSION OF REMARKS
OF
### HON. ALBERT THOMAS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
*Monday, October 29, 1945*

Mr. THOMAS of Texas. Mr. Speaker, under unanimous consent to revise and extend my remarks in the RECORD, I include an article by Hanson W. Baldwin, military analyst for the New York Times.

Mr. Baldwin is a graduate of the Naval Academy of the class of 1924. During the war he has written many interesting and highly constructive articles on our national-defense problems, particularly the problems and functions of the Navy. The following article is well worth reading:

ATOMIC-AGE LESSONS—GOOD INTELLIGENCE SERVICE, AIR POWER AND INDUSTRIAL LEADERSHIP OUR BEST DEFENSES

(By Hanson W. Baldwin)

The details of the atom bomb and its manufacture are still—and will long remain—to the great majority of people, either a closely guarded secret or a scientific puzzle.

But the effects of the plane and the bomb, the rocket and radar and the other military miracles of this scientific age are plain enough. The United States can no longer count on distance for immunity from physical assault, our geographical position is still a strategic asset of major importance against actual invasion by men, but distance and surface forces cannot prevent damaging assaults of terrible consequence through the air.

There are certain conclusions that can be drawn from this. An atomic Pearl Harbor—a stupendous and massive attack by surprise in the atomic age now dawning—could mean virtually a crippling blow particularly against an unprepared nation. Therefore, we must never be surprised again.

INTELLIGENCE SERVICE FIRST LINE

An adequate intelligence service—the world's finest—is today the first line of defense. The present organization in Washington is not the proper one for the best collection, analysis, and presentation of information. The intelligence service of tomorrow cannot be tied down to any one, or two, or three Government departments, though each department must maintain its own specialized intelligence service. But the coordinating agency, the master agency, must be independent of the State, War, and Navy Departments and answerable preferably to the Joint Chiefs of Staff. This is Lesson No. 1. If we ignore it, if we do not develop an adequate intelligence service, it will be the Nation's peril.

Lesson No. 2 was already clear before the atomic bomb was introduced. The accomplishments of air power are too well proved to be argued. Our second line of defense is in the air—not necessarily air power as we now conceive it, more probably pilotless planes and rockets—and it must be offensive air power, not defensive. Air power, particularly strategic offensive air power, must not in the future be subordinated to ground and sea power, even if the implementation of this lesson means a third and separate Department of Air.

Lesson No. 3 is also a byproduct of the preatomic age and of combat lessons, but it has been validated by the lessons so far learned from the atom bomb. The lesson is simple; the future of the Nation probably depends on preeminence in scientific research and development and in industrial "know-how" and production. We proved ourselves in the war masters of mass production, but we often lagged in the race for quality. We have too few scientists and not enough scientific engineers, and the service policy toward scientific education during the war has set us back by some years. Yet the future of our military strength depends fundamentally on the laboratory and the factory—and the hearts of men.

QUIBBLING ON DETAILS HIT

These three lessons are of fundamental importance to our military institutions and to the national future. Yet there is not much evidence that they are well understood. Instead of concentrating on them, we are quibbling about details. We are talking about organization instead of education; we are talking about universal military training instead of scientific training; we are planning hopefully for industrial mobilization but doing little to induce the men who can keep those plans up-to-date to stay in Government service. We speak of a single department of defense as a panacea, instead of devising ways and means of insuring the fullest possible scope for the development of air power, and, as needed, of postatomic land and sea power. We speak of military training when we may need disaster training—the training of the whole civilian population in defense against atomic bombings. We speak of unification in blueprint terms instead of in terms of the mind and the heart.

All these questions are interrelated; none can be solved unless the others are solved. They are not being solved today in Washington. They are being discussed piecemeal and with prejudice. They will never be solved, with safety to the country, by Congress acting through separate and biased committees and by the fighting services acting as partisans. The time is short; the time is now. A commission of distinguished civilians, impartial, objective, chosen for their judicial and mental attainments, should be appointed by the President with the consent of Congress to review our entire postwar military program and its relationship with foreign policy in this atomic age. Atomic legislation itself should form part of this study. But in the meantime such legislation, national legislation of vital importance, is pending before Congress. This legislation provides for the creation of an atomic control commission (this commission would have nothing to do with studying our postwar military problems). This atomic control commission would be endowed, under the proposed legislation, with powers so far reaching and broad that even a cursory study leaves the reader apalled. It is true that legislative grants of such far-reaching powers may be in step with the frightful development of physical power in the atomic age, but there is considerable doubt that the legislation as originally drawn is either desirable or necessary.

SCIENTISTS OPPOSE SECRECY

Scientists say that the emphasis on secrecy in atomic bomb experimentation and development would stifle the development of nuclear physics in this country rather than aid it. Scientists believe in a free exchange of the facts of life—and perhaps an embargo, if that be the national policy, and no international solution is possible, on purely military information. Amendments to insure the freedom of fundamental scientific research and to limit the unparalleled grant of power made to the projected atomic energy commission must be accepted by Congress. Moreover, the rights of property—essential to freemen everywhere—must be preserved, something that the proposed act does not specifically do. Under the terms of the present legislation, the atomic commission could apparently sequester and appropriate almost anything in the United States.

If this be necessary to live in the atomic age, perhaps Americans will make even these sacrifices. But let us see first whether it is necessary; let us put first things first. Let us create not only an atomic energy commission, with requisite powers, but also a fact-finding body of even broader scope, a commission to study the whole military problem of postwar America, to consider how atomic energy magnifies that problem and to fit into proper perspective the fast changing roles of all the instruments of war. Until that is done, until an over-all answer is given to the over-all problem, we shall build the postwar military system of the United States on quicksand.

## Their Own Medicine

EXTENSION OF REMARKS
OF
### HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Monday, October 29, 1945*

Mr. HOFFMAN. Mr. Speaker, in yesterday's Times-Herald there is a piece by Eleanor Patterson passing out to Mr.

Winchell and Mr. Pearson a very small dose of the medicine which they so often prescribe for others. Let me, but not in their order, quote excerpts from that article. First is described a visit to the St. Elizabeths Hospital—but let the author speak:

Dr. William White, beloved humanitarian and for 34 years superintendent of St. Elizabeths Hospital for the insane, explained to this writer some time ago that the mentally deranged follow an orderly pattern within the consciousness of their own minds. Whatever point of reasoning they take off from, they stick to.

On a visit through one of the women's wards at St. Elizabeths, we observed a comely young woman standing still as a statue before a sizzling radiator. She was clad only in a cook's apron. Her blonde hair fell down her bare back. Her hands, thickly bandaged against the heat, rested on the boiling pipes.

"She's got one obsession," explained the doctor. "She's crazy about fire. This way we keep her quiet and contented for hours at a time."

The writer then refers to certain liberals as follows:

And youth—"liberal" youth—girls and boys who are just naturally crazy about playing with fire, like the comely girl we saw standing contentedly, with her hands bandaged against the heat of the sizzling radiator. But the hands of "liberal" youth aren't bandaged. And they're not contented. For, as the sage of the sagebrush, Mr. Cal Carrington, of Wyoming, remarked: "The excitement of life is a wonderful thing, but when the beauty of youth has went, there's no more excitement to it." And we old folks shouldn't begrudge the young ones that which we have lost and once enjoyed ourselves—not unless they raise a little too much hell, that is, in passing.

Another patient is then described, and I quote:

Farther along inside the big room a little gray ghost of a woman stood, her eyes riveted to one of the top windows, her hands clasped in a frenzy of prayer. Her white lips moved incessantly. Nobody ever could find out to whom she prayed, or for what.

Application of this type was made in the following words:

Henry Wallace, for instance, crystal-gazing crack-pot: He belongs as a type along with that little gray ghost of a praying woman. He, too, prays incessantly, to whom or for what nobody knows. A harmless kind of a nut, Wallace. Tilter of windmills. Out to save the world—all alone by himself, of course.

Another patient appeared on the scene. Here are the words of the writer:

Then up swept a well-dressed, nicely turned-out woman with mottled cheeks and flaming eyes. "Get me out of this," she shrieked. "Me, jailed with thieves, murderers. * * * Why, I speak five languages. Railroaded. * * * Jealousy. Spies. International spies. And plots * * * plots * * * plots. I'm worth millions. Perfectly disgusting. Now they've got me and I'm the only lady in the joint. Get me out of here quick, I tell you, it's a filthy plot. * * * Doctor, doctor, please," she sidled up to him with a smile. But with the casual touch of long experience the doctor removed her clutching fingers and brushed her aside.

"Oh, she just gets pretty excited," he explained. "Pretty wild. Persecution mania. Never quits talking."

The application:

Walter Winchell: Hard to tell just what's biting this middle-aged ex-chorus boy. False shame of his race and his family name may be at the root of it all. Anyhow, like the old gal we described above, he suffers from a chronic state of wild excitement, venom, and perpetual motion of the jaw.

You can chuck the whole of PM staff into this same category. Although of evil intention, they are harmless on the whole, but kind of tiresome.

Then came the description of still another inmate:

A little old woman, shaped like a top, stalked by. She wore nothing at all but a big white sheet, draped over one shoulder and under one bare arm. She was almost bald. Her few white hairs gathered into a knot about the size of a peanut on top of her head. Haughty, silent, she passed, waving her free arm grandly, dragging her sheet behind her.

"She's harmless, too," said the doctor. "Believes she's a queen. Has a fine time of it."

Applied in the following words:

Poor puppet-king Marshall Field rightly belongs in the "harmless" ward, too, with a paper crown on his head, trailing his dirty sheet behind him. You remember the little top-shaped old lady? He, too, believes he's "royalty," makes grand gestures, and has a very fine time of it.

Another patient is described:

Visitors are not allowed in the wards of the criminal insane, but from the outside looking up, the strangest object appeared, peering through a barred window.

A white, waxen wedge of a face. Eyes so close together they appeared to overlap. It was sniffing at a red rose held in one hand, while with the other it beckoned with a vaguely obscene gesture.

"Oh, we have quite a few of those," explained the good doctor. "This one loves flowers and little children. We give him a rag doll to play with, and he'll nurse it for hours. But he's a pretty vicious type just the same. Sadist. Torturer. Killer.

"Like Robespierre? He looks like Robespierre's pictures."

"Yes, doesn't he? * * * Robespierre loved flowers, you remember, and canary birds and little children. And he loved blood, too. A very common type."

And a comparison is drawn:

Drew Pearson: Ah, Drew, rose-sniffing, child-loving, child-cheater, sentimental Drew. Vicious and perverted Drew—as like as two peas in a pod to that poor creature who beckoned to us from the ward of the criminal insane.

Incidentally, you GI Joes, when you happen to listen to the phony Quaker Pearson of a Sunday night—Bleeding Heart Drew—never forget that although he was 20 and in perfect health in 1917, he managed to "thee and thou" himself out of service in World War I. Then, as now, Drew was a yellow-bellied slacker. (For further information, please write in.)

All of this happened quite some years ago (the visit to the asylum). But a recent discussion about the wonders of the new "liberal" party, and what could be really going on inside the screwy heads of the poor jerks who belong to it, popped these fantastic scenes back to mind.

For a while we had fun cataloging the better-known "liberals," according to the various types described above.

Then, for good measure, the following:

Now you may ask yourself to what degree is this so-called liberal gang insane, according to ordinary standards. As the great Dr. White has often pointed out, the thin and wavering border line between sanity and insanity is difficult, even for an expert, to follow. Too many of these zanies are crazy all right, but they're crazy like foxes. Winchell and Pearson, for instance, and other quislings (we use the name advisedly) manage to get paid big money for their treachery.

But, to go back again, how can any normal-minded human being choose this filthy work of plotting, planning, sneaking, lying, spying, cheating, stealing, smearing, in the mere hope of one day overthrowing our American form of government, for that's all it amounts to.

Who, with anything approaching a sane mind, would trade freedom, prosperity, and the right to live in peace for the degradation of body and soul and slavery under the bloody fist of Asiatic Soviet Russia?

The answer is that these so-called liberals are not sane, although some of them, like many of the inmates at St. Elizabeths, are crafty and scheming beyond the reaches of the normal mind.

Don't forget that when Winchell and Pearson snidely try to smear our great generals of this war—MacArthur, Eisenhower, and Patton; our great admirals of the Navy; the "brass hats"; the "gold braid"; when they aim their spittle at Congress; sideswipe the judiciary; the Cabinet; our President, and even Mrs. Truman and her young daughter, Margaret; it's true, they're crazy, but there's a fine method in their madness.

It's as simple as this: Once respect is destroyed, once gratitude and decency of feeling for the great traditions of our country are successfully ridiculed and vilified, why then these "punks" figure they will have done their job to clear the way and smooth the road for on-rushing bloody revolution.

Yes; they're nutty all right, these "liberals"—for they can't see further ahead than the first frenzied days of plunder, murder, fire, rape, and prancing about with pole, fresh-cut human heads on bloody pikes.

But if this wild-eyed crew ever studied history—and some of them were once fairly well educated—they have become so besotted in their lust for blood and carnage and dollars that they have forgotten one great and simple lesson. They have forgotten that revolution feeds upon and destroys itself.

As inevitably as the change in the tides of the sea, come revolution. Come counter-revolution. Each one bloodier than the first.

They have forgotten that the big historical names of the first French revolution, and thousands of others, were the first to go to the slaughter of the second terror. Desmoulins, Danton, and Marat were themselves bounced over the same cobblestones of Paris, exposed to the same jeers of the same rabble, wobbled about in the same bloody tumbrils, to the same guillotine to which they had condemned thousands to die.

And Robespierre—the bloodiest of them all, Rose-sniffer, child-lover, sentimentalist, fiend.

Robespierre—what happened to him? Attention: Messrs. Winchell and Pearson.

Well, when Robespierre was finally dragged shrieking to the scaffold, and his lunatic head rolled down into the basket, the rabble went even wilder than on that previous day—only 18 months before—when it howled with joy to see Louis XVI humbly kneel to die.

We haven't space here to tell about the revolutions and counterrevolutions within bloody Russia itself since 1917. Remember that royalty—aristocracy—teachers, doctors, lawyers, clerks, down through the whole white-collar classes—even to the humblest peasant with one cow—all in all, more than 15,000,000 Russians have died to keep one man in power, and we do not count the losses involved in this war.

"The earth is the lunatic asylum of the universe," wrote old cynic Voltaire. He knew.

Wonder how Pearson and Winchell like it.

## May-Johnson Bill

EXTENSION OF REMARKS
OF
### HON. HELEN GAHAGAN DOUGLAS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

*Monday, October 29, 1945*

Mrs. DOUGLAS of California. Mr. Speaker, the May-Johnson bill is one of the most important pieces of legislation to come before the United States Congress. This is what one newspaper thinks about it. Under leave to extend my remarks in the RECORD, I wish to include an editorial which appeared in the Washington Post on October 19, 1945:

MAY-JOHNSON BILL

The folly of trying to legislate in the dark has probably never been more pointedly illustrated than it was yesterday at the hearings before the House Military Affairs Committee on the May-Johnson bill. Witnesses made it unmistakably plain that hasty enactment of that measure might have the effect of crippling instead of fostering future development of atomic power. The striking objections which these scientists piled up against the bill leave no doubt that it will have to be discarded for a fresh start.

Complaint No. 1 by the scientists is that the May-Johnson bill, enacted into law, would drive many of the ablest experts and technicians out of the atomic energy project. The reason for this leaps to the eye of even casual laymen reading the bill. It would give the proposed Atomic Energy Commission plenary power to set up rules on the handling and transmission of data and equipment connected with research in the atomic field. Persons violating those rules could be fined up to $100,000 and imprisoned for up to 10 years. They could be dismissed from any agency of the Government with no recourse. An innocent mistake violating the Commission's security rules could be punished regardless of intent by fines and imprisonment.

Astronomers seeking out the mystery of the stars and medical experimenters searching for new remedies for the benefit of mankind could be sent to prison under the sweeping terms of the bill, according to Dr. H. L. Anderson, of the Los Alamos Laboratories, New Mexico. Scientists cannot be expected to work under such conditions. A measure so gravely detrimental to their welfare might have been aptly called a bill to drive the ablest experts out of atomic research. The tyrannical powers of the proposed commission could also be used to muzzle criticism of its work and thus to stifle advancement of the most important discovery of our age.

Dr. Leo Szilard, physicist of the University of Chicago, demonstrated in detail the administrative weakness of the bill. The very large measure of independence that would be given to the Atomic Energy Commission, he said, might dangerously hamper our foreign relations. The State Department could expect repeated embarrassment from the fact that control over the most powerful of all weapons would be in the hands of a separate commission which could even thumb its nose at the President. Whatever the nature or power of the proposed commission, we think it is imperative to tie it in closely with existing agencies of Government, particularly those which are directing our foreign policy.

Dr. Szilard suggested three operating agencies to deal with different aspects of the atomic-control problem. One would operate the existing $2,000,000,000 plants; another would direct research and development looking toward industrial use of atomic energy; a third would provide machinery for further work on the atomic bomb. Each of these agencies and key Cabinet members would be represented on a board for formulation of over-all policies on atomic power. This is an interesting suggestion, but we think that Congress ought to explore the issue much more thoroughly before attempting to decide what sort of mechanism is needed. Incidentally, this witness in reply to a question from the committee, voiced enthusiastic support for our suggestion of a quickie law to meet immediate needs while permanent legislation is being worked out.

The fatal weakness of the May-Johnson bill is that it attempts to create specific machinery before a national policy has been worked out. It is not much more than an abdication of congressional power into the hands of a commission. We think it is about time for Dr. J. B. Conant and others who are said to have had a hand in drafting this clumsy and dangerous measure to recall it and then help Congress to get off to a better start.

## Exit Japan's Drug Industry

EXTENSION OF REMARKS
OF
### HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

*Monday, October 29, 1945*

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Evening Star of October 20, 1945:

EXIT JAPAN'S DRUG INDUSTRY

General MacArthur's current decree liquidating Japan's narcotic industry ends one of the most shameful phases of that country's ruthless program of aggression by any and all means. The master minds who guided the course of Japanese imperialism long discovered that habit-forming drugs could be useful instruments in the debauching of Oriental peoples especially addicted to such vices, thereby weakening their moral fiber and rendering them less resistant to Japanese domination, while at the same time rich profits could be garnered in the process. Accordingly, Japan and its dependencies went in for the growing and processing of the world's three most harmful narcotics—cocaine, opium, and hashish, which were deliberately forced upon subject peoples and sold in other markets by methods which contravened the League of Nations control agency to which Japan had formally subscribed.

These nefarious policies have been authenticated by factual proof. The league agency has for years found grave abuses and evasions in Japan's narcotic export trade, while MacArthur's headquarters has announced that it is in possession of well-documented evidence that the Japanese authorities had deliberately fostered the use of opiates in Asiatic areas "for attaining their quest for empire and as a means of subjugating conquered peoples." Simultaneously, Dr. Wellington Koo, Chinese delegate to the Preparatory Commission of the United Nations, points out that Japan had reintroduced the drug menace throughout the vast areas of China under its control, supplementing the traditional opium by other narcotics such as heroin and cocaine. "In parts of China where opium had been practically eliminated," says Dr. Koo, "millions of people have again become addicted to it." The league control agency estimates that Japan has been the source of 90 percent of the world's illegal drugs, while MacArthur's headquarters states that stocks on hand in Japan provide more than 30 years' supply on a basis of normal medical requirements.

The measures taken to end Japan's narcotic industry are as drastic as they appear to be effective. All plantings of opium poppies, coca shrubs, and hashish hemp are to be destroyed forthwith and further cultivation prohibited. Stocks of narcotic drugs are frozen under control of the occupational authorities, and exports forbidden except under special license. Thus, Japan's narcotic "fifth column" is being liquidated.

## Congress Should Act To Speed Up Demobilization

EXTENSION OF REMARKS
OF
### HON. AUGUST H. ANDRESEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

*Thursday, October 25, 1945*

Mr. AUGUST H. ANDRESEN. Mr. Speaker, while there has been a step-up in the demobilization of men and women from the armed forces, it is apparent to me that there is a decided need for congressional action to secure maximum results. I am convinced that a large part of the Army and Navy personnel, not needed for occupation purposes, can be demobilized before Christmas.

To bring the question of demobilization to the attention of Congress, I have introduced H. R. 4467, which reads as follows:

A bill to provide for the discharge or release from active duty of certain members of the armed forces and for terminal leave for enlisted personnel.

*Be it enacted, etc.*, That (a) there shall be discharged from, or released from active duty in, the military or naval forces of the United States without delay, any person who requests such discharge or release and who—

(1) has served on active duty 18 months or more since September 16, 1940; or

(2) has, at the time of making such request, a wife or a child or children with whom he maintains (or would but for his service maintain) a bona fide family relationship in his home; or

(3) has, at the time of making such request, a mother or father dependent upon him for chief support; or

(4) desires to resume his education or training by enrolling in an educational or training institution, if his education or training was impeded, delayed, interrupted, or interfered with by reason of his entrance into the service. Any such person who was not over 25 years of age at the time he entered the service shall be deemed to have had his education or training impeded, delayed, interrupted, or interfered with; or

(5) has, at the time of making such request, a status of being essential to the operation of a farm, as certified by the county agricultural agent of the county in which such farm is located; or

(6) has the desire and requests to be returned to his business or profession, which he was forced to discontinue or place in other hands at the time of his induction or enlistment into the military service.

SEC. 2. All enlisted personnel and noncommissioned officers shall be granted the same terminal leave which is now allowed to commissioned officers.

Mr. Speaker, the subject matter of my bill speaks for itself. However, I desire to point out that, in addition to providing for the discharge of members of the armed forces, I am proposing that all enlisted personnel and noncommissioned officers shall be granted the same terminal leave now received by commissioned officers. While there may be some objection from staff officers to giving terminal leave to the enlisted personnel, I insist that the rank and file in the armed forces are just as much entitled to receive from 30 to 60 days leave with pay at the time of discharge as those who have been fortunate enough to secure commissions.

There has been some talk about a recess of Congress in November. I will oppose such recess, as I strongly feel and urge that we should act on the demobilization of persons in the military and naval forces who desire to be discharged before we adjourn. I urge the passage of H. R. 4467, which I have introduced. I am satisfied that if the leadership of the House would permit a vote on the bill today it would be approved by a large majority. I urge the Committee on Military Affairs, to which the bill has been referred, to take prompt action in reporting it for consideration by the House.

## Justice for Greece

EXTENSION OF REMARKS
OF
### HON. PHILIP A. TRAYNOR
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES
*Monday, October 29, 1945*

Mr. TRAYNOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Herald Tribune of October 28, 1945:

JUSTICE FOR GREECE

It was 5 years ago today that Italian troops invaded Greece after that country had refused Mussolini's 3-hour ultimatum. The succeeding months marked one of the most gallant and surprising chapters of the war. At a time when Axis successes were creating in many countries a spirit of gloom and defeatism, the promptness and skill with which the small Greek Army thrust the Italians back on a 120-mile Albanian front astounded and encouraged the free world. After months of continued Italian defeats and withdrawals, some of the best of Hitler's divisions had to get Mussolini out of his ill-advised adventure. In April 1941 the Nazis took Athens and the swastika flew above the Acropolis. But the glorious winter of Greek resistance was left undimmed in history by this final surrender to overwhelming German power.

Since the liberation of a brave and greatly devastated Greece, little has been done for the rehabilitation of a people whose heroism in defense left so many homes in ruins. With an area about the size of New York State, with a population of little more than 7,000,000, Greece is a country of many small, tough-acred farms. According to recent reports, more than 800,000 of her farmers are homeless, existing in huts near their land, with agricultural equipment, down to the smallest tools, looted or destroyed during the enemy occupation. Establishment of political and financial stability in the distressed country is, of course, the more difficult while these conditions of living continue.

Greece complains—and her spokesmen, we believe, are justified—that she was not invited to state her claims at the lately ended Foreign Ministers Council in London. She points out that Italy and Bulgaria, because of armistice clauses, have been able to delay reparations in kind. She is disappointed to find her aspirations toward the future of the Dodecanese Islands and northern Epirus postponed.

## Increase of Minimum Wage Rate

EXTENSION OF REMARKS
OF
### HON. CHARLES R. CLASON
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Monday, October 29, 1945*

Mr. CLASON. Mr. Speaker, one of the important industrial plants in the Second District of Massachusetts is that of Johnson & Johnson located in the city of Chicopee. This corporation has won not only a national but an international reputation for fine products, many of which are household commodities with which I presume every Member of Congress is familiar.

I have, therefore, been particularly interested in the testimony given by Robert Wood Johnson, brigadier general, Army of the United States, retired, chairman of the board of Johnson & Johnson, at the hearings before the Senate Committee on Education and Labor relative to a proposed increase in the minimum wages payable under the Fair Labor Standards Act of 1938. The amendment under discussion calls for a minimum of 65 cents an hour.

I have stated on many occasions publicly that I believe that the present minimum rate should be increased. I am particularly pleased, therefore, to place before you the opinion of a successful manufacturer who has carried on business on a large scale for many years. I believe his statement is well worth consideration by all of us.

TESTIMONY OF ROBERT WOOD JOHNSON, BRIGADIER GENERAL, AUS, RETIRED

As I understand the purpose of this hearing, it is to discuss the plight of the underpaid. We are not here to consider questions of collective bargaining or those who are earning a fair and adequate wage.

The proposals embodied in the amendments to the Fair Labor Standards Act are not aimed to raise the general wage level of the United States, but rather they are aimed to correct certain social and economic distress growing out of substandard wages.

There have always been more underpaid employed than unemployed. I suppose it would be fair to estimate that given six to eight million unemployed, we would in the past expect fifteen to twenty million underpaid.

I suggest that this committee should take the position that the average American workman cannot keep body and soul together on less than $30 per week anywhere in the United States. On the basis of a 40-hour week, I, therefore, am compelled to recommend a 75 cents per hour minimum wage throughout the Nation. On the score of exceptions, and there will be many who dwell exclusively on that feature of the problem, we might assume the exemptions of apprentices, perhaps those under 21 years of age.

It can be said that a large portion of our underpaid are unmarried and that single individuals can exist on less than $30 a week. It is well to add, however, that the great majority of single men and women have responsibilities to parents, brothers, sisters, and relatives that are frequently comparable to those of the head of a family.

I suppose it is impossible to discuss any question of wages, even the establishment of fair minimums, without some consideration of the broader economic aspects of the relation of wages to costs. It is a great surprise to me to learn that this outstanding feature of American economy is so little understood.

Some will say that industry moves to low-wage areas. This is a fallacy. Factories move to markets, not to low-wage areas.

We are surrounded every day from morning to night with thousands of examples that go to prove beyond discussion that the most outstanding characteristic of our country, in terms of economics, has been its accomplishment in the field of production and distribution. On every side we see the proof of the ability of this country to pay higher wages and sell at lower costs. This equation needs no proof beyond the record of the past 50 years.

At times we hear of the loss of export markets through our efforts to correct the substandard wage. Apparently those who oppose reasonable minimums for such reasons, have failed to realize that the products able to pay transoceanic freight, overcome tariff walls, pay the high price of export selling, and compete with cheap native labor are almost exclusively the products of our high-wage industries.

Of course there are exceptions, and we must acknowledge the fact that the components of industry and commerce differ one from the other. In some industries the wage factor is very low, and in others, it is quite high. But here again I should like to remind the committee that we are dealing with minimum wages and the plight of the underpaid, the substandard wage earner not reached through union organization, and that his problem cannot be adequately corrected through State legislation. Only a courageous and realistic Federal law can do the job.

It will be better if we come to realize that in discussing this question of a minimum wage, we are covering the field of commerce, industry, services, and agriculture. For many years the question of wages has been attached in the public mind to factories and factories alone. I am told that factories have never employed as many as 25,000,000 wage earners, and that in the future the percentage of factory employed in relation to the total employed will probably decline.

While I appreciate that this committee is giving its attention almost exclusively to the question of minimum wages, it would seem only proper to bring before you that at same later date we must consider the question of hours. I doubt that a 40-hour week will solve our problem, and, therefore, recommend to you that a part of your staff be assigned the task of preparing legislation for a 36-hour week and a 30-hour week. Commerce, industry, the trades, and services as well as agriculture would be classified into three major divisions—those operating on a 40-hour week; those on a 36-hour week; and those on a 30-hour week.

One method of establishing the workweek for a given business would be the percentage of labor content in the gross cost. In other words, to pick a figure out of the air, if the labor content was in excess of 50 percent, that business would be given a 40-hour basic week. If under 50 percent but above 35, the business would be given a 36-hour week. And if under 35 percent, the business

would be given a 30-hour week. In each instance the same minimum weekly wage of $30 per week would apply in all three divisions.

For those seasonal industries that cannot rapidly be adjusted to these hours, it is suggested that in any and all divisions business be allowed to operate for any 8-week period during the year at a maximum of 10 hours overtime per week to be paid for at double time. And for those extreme cases which require a further extension for a short period, I offer the suggestion business be allowed an additional 10-hour period for 4 weeks a year to be paid for at the rate of triple time.

Even today we occasionally meet a man who believes that working less than 48 hours a week is somewhat sacrilegious—that it is wrong in principle. Let us look at the record in this respect.

Throughout most of Christian history, the western world was influenced by the laws of the church, and it has been found that in those days the church allowed about 100 holidays a year. It was only when the industrial era began in England that the sweated days of 14, 16, and 18 hours came into vogue. And when children were forced to work those hours for starvation wages. We have come a long way since then, but why should we stop now?

What we are really doing is to create a new code of business ethics with the aid and guidance of our Federal Government. It would be hard to imagine a more important task nor one that would make a greater contribution to the world. All observers have long ago concluded that it was underpaid, the unemployed, and the destitute of Europe that caused the political upheavals which led to this great war. We have come to a time when we can honestly say, at least in our country, that man does not have the right to employ his fellow men unless he can pay a subsistence wage.

Recently I found that the Reverend Donald A. MacLean said that "the well-being and perfection of each person is intimately bound up with the welfare of all. Nature has so decreed and there is no other road to the real liberty, the higher welfare, perfection, and happiness of men."

Someone else has said, "None but the brave would be able to fashion that future, and none but the brave deserve it."

## More Support From Home for H. R. 3939 To Banish Polio

EXTENSION OF REMARKS
OF
### HON. WILLIAM H. STEVENSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

*Monday, October 29, 1945*

Mr. STEVENSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

LA CROSSE, WIS., *October 18, 1945.*

Hon. WILLIAM H. STEVENSON,
*House Office Building,*
*Washington, D. C.*

DEAR CONGRESSMAN: Noted in late copy of the CONGRESSIONAL RECORD a bill sponsored by you to help fight polio. Its a noble thing to do, and when there are billions spent to kill why not money to save life? My daughter's son, near 18, is right now in a hospital at Madison for treatments. He was stricken with the disease a month ago. Thanks a million for your effort in behalf of this humanitarian legislation.

Most sincerely yours,
(Mrs.) MARIE A. SANFORD.

## A Governmental Research Foundation

EXTENSION OF REMARKS
OF
### HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

*Monday, October 29, 1945*

Mr. JUDD. Mr. Speaker, under leave to extend my remarks, I include an excellent statement on the desirability, character of organization, and conduct of a Government research foundation. The statement was prepared by the following distinguished scientists at the University of Minnesota:

Ancel Keys, director of the laboratory of physiological hygiene, and professor of physiology, University of Minnesota Medical School; with concurrence by the senior staff of the laboratory of physiological hygiene, Josef Brozek, assistant professor of psychology; Austin Henschel, assistant professor of physiology; Olaf Mickelson, assistant professor of physiological chemistry; Ernst Simonson, associate professor of physiology; Henry Longstreet Taylor, assistant professor of physiology; and Samuel M. Wells, physician.

At a time when one invention or scientific development has the destructive power of thousands of soldiers, not to mention its vast possibilities for constructive purposes in such fields as industry and health—surely there is no more important subject for our earnest attention than maximum stimulation of research under the most favorable circumstances possible:

NATIONAL SECURITY AND THE GENERAL PLACE OF SCIENCE

The desirability, character of organization, and proper conduct of a postwar governmental research foundation have been given careful thought in this laboratory. For several years we have been concerned with the general problem of the necessities for the proper use of scientific research and methods for the national good, including national security. Our views have particular reference to the special field of knowledge cultivated here, namely, human physiology and the effects of age, occupation, diet, climate, and the hazards of ordinary life. From early 1941 until now our efforts have been devoted to military subsistence, human dietary needs, personnel in hot climates, convalescence, starvation, and nutritional rehabilitation.

There can be little debate about the previous accomplishments and present potentialities of scientific research, though far too much attention is generally paid to technological applications without inquiry into their true foundations. Everyone agrees that increased volume, quality, coordination, and application of scientific research is needed for national security. In addition, we all want scientific and technical progress generally, better health and hygiene, and a fuller understanding of the world in which we live. We insist that these latter objectives are inseparable from national security and that to consider security simply a problem of military establishment is totally fallacious.

General Marshall reflects an outmoded and narrow viewpoint when he states that December 7, 1941, found us to be a third rate military power. The inference is that the Army and Navy worked actual miracles to transform us, in scarcely 3 years, to the greatest military power the world has ever known. This is pure nonsense. The readily available manpower, material, scientific, technical, and organizational resources of a nation are the measure of military might far more than the number of men in uniform or the battleships and planes in operation on the first day of crisis. To deny this is to recapitulate the errors of the professional military in Germany, Italy, Japan, and Poland.

The greatest single resource, ordinary or military, of any nation is in the health, morale, and skills of its people. To improve and increase this resource must be a prime objective of any broad and long-time measure to guarantee national security. Our professional military men have agreed that armed conflict is a matter of men and machines and that technical equipment is of extreme importance. But the technical equipment of modern warfare directly reflects and is limited by the scientific and technical development of the Nation as a whole. Innumerable illustrations can be advanced to prove this point beyond question. And with the increasing complexity of the equipment comes the necessity for a large reservoir of special skills and knowledge to produce, improve, operate, and direct such equipment. Clearly there is undeniable need for scientific research to improve the general, and secondarily the military, technical equipment of the Nation. Just as clearly there is the need for increased training of personnel to produce, improve, operate, and direct such equipment.

Scientific accomplishment is not something you can buy on the market by specifying an application of principles not yet known. The basis from which an application can come cannot be predicted and the fabric of useful knowledge is too tightly woven of surprise ingredients to predict the detailed means needed to achieve a desired practical end. Throughout all time the wellspring of scientific accomplishment and creative research has been the free pursuit of a fuller understanding of the world in which we live. It is first necessary to supply the basic ingredients of general scientific knowledge before specific applications can be made. The latter step is frequently not too difficult though it may be spectacular. It is possible to buy such application and the delivery date is dependent on the offering price and the number and skills of the scientists and engineers who are available.

Scientific advances by Army and Navy during the recent war have been improperly portrayed. Generally speaking, these advances has been chiefly simple applications and these have been made by civilians, in or out of uniform, from bases not remotely connected with the military. When the true record is written the waste, inefficiency, ignorance and obtuseness in utilizing scientific knowledge in the recent war will be apparent to all. While the military may admit some of this now, there is no reason to believe that great improvement will result from continuing the authority of nonscientific men in scientific matters by merely ensuring that good advice is available to them. The inevitable tendency of nonscientific men is to confuse scientific research with final adaptation and to recognize basic needs too late.

THE DESIRABILITY OF A FEDERAL RESEARCH ORGANIZATION

In this country scientific research progress is made in the universities, in private industries and in Governmental laboratories. These have serious limitations at present. Besides absence of coordination, each of the major sources of scientific knowledge has its particular handicaps.

The restrictions of industrial research to the immediate or relatively short-time commercial profit motive means that basic work is restricted and whole areas of knowledge are excluded. There is no way in which private investment can be economically justified for research in most of the problems of human biology and medicince. Individual companies or even whole industries cannot

be expected to undertake the burden of research which is really the responsibility of the whole Nation.

Governmental laboratories do much useful work but as at present constituted this is chiefly in applications and not in fundamentals. Unless we are willing to reorganize these establishments drastically and to give them far greater latitude they cannot do much more. In any case, scientific research by a centralized bureacracy must always be relatively inefficient and uninspired. Few good men will accept the low salaries, irksome red tape, rigidity of organization, and political vagaries of direction involved in Government jobs. Once in such a job, the scientists are subject to the deadening effects of overspecialization, absence of wide-ranging intellectual stimuli and the need to "produce" to satisfy nonscientific superiors and political pressure groups.

The universities have been, and are, by far the most important source of scientific research. Research, however, is a side line of university work and is hampered by the following facts:

1. Good research men often have inadequate time for research; the teaching job comes first.

2. Universities are organized in teaching departments and proper research organization frequently demands a breakdown of such departmental lines or the creation of special research departments.

3. Modern effective research needs facilities and assistants beyond the means of university budgets. Scientific foundations and private philanthropy are very helpful but they are likewise limited.

4. The time and energy required of the researcher to enlist and maintain suitable funds is inordinate and tends to become a full-time job in an ambitious enterprise.

Private research foundations have both stimulated and made financially possible much progress in scientific research. The present and future limitations of funds in these foundations have been adequately demonstrated in all recent discussion of the subject. While it may be hoped that these foundations will continue to give crucial assistance on occasion and to sponsor activities which may be otherwise neglected, it is not possible to rely on this source for the greater general progress of scientific endeavor.

At present there is little or no coordination in research between different institutions and even intercommunication is poor. Scientific meetings are too brief, infrequent, and personally expensive for the researchers. The committee meetings of the National Research Council have been very helpful in the war emergency but they have been too hurried and restricted in both scope and personnel for peacetime purposes. Scientific publications are in need of subsidy if they are to provide a prompt and detailed means of interchange of knowledge between scientists.

The present faults in coordination of research do not result in an unnecessary duplication so much as an omission of work on many important problems. Particular efforts are needed to ensure proper development, evaluation, and standardization of methods. Large and complex problems require simultaneous attack from several different directions.

All of the foregoing points indicate that over-all extent and organization of scientific research in the United States is far from adequate at present. Some kind of large-scale organization and financial support is badly needed. We believe that the proper center for research should be primarily in the universities where scientific researchers are trained and where maximal stimuli operate in relative freedom from political and commercial interests. However, it is clear that the universities need encouragement and funds to allow adequate research effort and facilities. The barriers created by the teaching-department structure and by traditional orientation toward undergraduate and purely vocational training must be removed. These barriers persist because of budgetary limits and the traditions established by nonscientific administrators.

Attention should be given to the training and recruitment of qualified young people to enter scientific research as a life work. Finally, the utility of governmental and industrial laboratories can and should be increased by liberalization of working conditions and, in the latter, by more favorable tax and patent laws.

We believe that nothing short of an overall scientific foundation on a Federal scale can possibly meet the requirements. The purposes indicated in the report by Vannevar Bush, and in Senate bills 1285 and 1297, include expansion of facilities and financial support for scientific research, preservation of conditions necessary to the scientist for creative work, improvement in intercommunication between researchers, coordination of related projects, consideration in planning of the general directions for study, and the training of researchers. We are in full agreement with these purposes and believe they can only be achieved by a new organization established by act of Congress.

### THE PROPER CHARACTER OF A GOVERNMENTAL RESEARCH ORGANIZATION

A postwar governmental organization for scientific research is urgently needed, in our opinion. The basic requirements of organization would seem to be indicated from the following points:

1. The experience and facilities of present research laboratories and organizations should be utilized to the full. Besides universities and other research operating institutions, consideration should be given to the various scientific and learned societies.

2. Judgment of scientific merit and accomplishment can only be made by competent scientists.

3. Specialized research institutes within universities have a splendid record of accomplishment and the encouragement of such establishments should be a major item in the responsibility of a new foundation.

4. National security demands that the military organizations have close contact and consultation with the advance of scientific knowledge. This should not mean military domination.

5. The health, welfare, and skills of the people is a matter of vital concern for national security and demands extensive research efforts for maintenance and improvement.

6. The impediments of bureaucracy and rigidity of organization must be avoided so far as possible at both policy-making and operating levels. Centralized direction and master planning research in detail would be fatal to real progress.

7. Improvement in intercommunication between researchers and between researchers and the general public is essential and would go far toward improving coordination at an operating level. Only such items as are agreed to be competent scientists should be guarded in secrecy.

8. Research projects must be established on a relatively long-time basis as only in this way can complex problems be attacked and researchers encouraged to invest their time in the essential planning and development work. While short-time projects are suitable in some instances, in many others periods of at least 5 years must be provided for in advance.

9. The training and recruitment of scholars and researchers cannot be left to chance. Scholarships, fellowships, and other aids must be provided.

10. Absolute freedom from all ordinary political and commercial control and dictation must be guaranteed to the researchers and to the administrators.

11. The organization must be devised to prevent the possibility of domination of the Foundation by pressure groups, scientific cliques, or persons from particular institutions or localities.

Several bills, offered to achieve one or more of the purposes listed here, are now before the Congress. Of these the May bill (H. R. 3440) and the Byrd bill (S. 825) may be dismissed as taking too restricted a view of the problem of national security and allowing undue authority to the Army and Navy. Either of these bills would represent an advance but would be, in our opinion, far from adequate. The Fulbright bill (S. 1248) is limited to certain aspects of technical progress, and even these are considered chiefly from the standpoint of small and medium-sized business. The Kilgore bill (S. 1297) and the Magnuson bill (S. 1285) most closely approximate the requirements as set forth above.

Both the Kilgore and the Magnuson bills have many valuable and desirable features, the chief differences, in the versions printed in August 1945, being in the character of the administrative authority and in the extent to which conditions necessary to freedom from political interference are safeguarded. On both these grounds we believe the present Magnuson bill is far more acceptable than is the present Kilgore bill. To vest the powers in a board serving without compensation is far preferable to providing the chance of a directorship which might become a Presidential "plum," as in the present Kilgore bill. The inclusion of a considerable proportion of Government officials on the controlling board would be dangerous and potentially disastrous. A similar potential political domination of the major committees is also provided in the Kilgore bill. The specific provision in the Magnuson bill for allowing unobligated appropriations to remain available for 4 years (sec. 8b) is an important point in favor of it and in earnest of a better appreciation of the requirements for effective research.

Any legislation effecting the establishment of a science foundation or similar organization will require that the director or board submit an annual report to the President and to the Congress. This is essential, of course, but it is believed that such a report would be greatly strengthened by somewhat independent scientific testimony as to the general conduct and operations of the foundation. We suggest that the legislation provide for printing and distributing with the foundation report such resolutions or recommendations referring to the foundation as may be made each year by the National Academy of Sciences and by the National Research Council.

### THE CONDUCT OF A NATIONAL SCIENCE FOUNDATION

The conduct of a national science foundation will be largely determined by the legislation which creates it and by the character of the top administrative personnel selected. We believe that the cardinal principles to guarantee proper conduct are:

1. Administrators of recognized scientific standing who are free from political pressure or obligations must be appointed.

2. Reduction of red tape and bureaucratic machinery to the absolute minimum should be a major policy.

3. Appointment of committees on a truly national basis should use the advice of the professional scientific societies.

4. A policy of encouraging long-term projects, grants, and contracts on relatively broadly defined problems should be initiated and maintained with vigor.

5. There should be full recognition of the great importance of carefully prepared reports on research as well as of the time and effort needed to prepare such reports.

6. Specialized conferences and committee meetings should not be limited to a few hours

and there should be insistence on careful preparation of agenda and material for presentation. Many meetings should be publicly announced and provision made for attendance on petition of noninvited researchers.

7. Close cooperation and consultation with the scientific and learned societies and with private scientific and medical foundations should be asked in organizing and reviewing the work of the National Foundation.

8. Excerpt files of requests for contracts, as well as of contracts approved, should be available to the public except where national security seems definitely involved.

9. There should be specific recognition of the great importance of the interchange of knowledge and ideas in stimulating and improving scientific research. Besides a review of the whole problem of scientific publication, there should be provision for visits and exchange of personnel between institutions.

10. The dangers of secrecy should be recognized and every effort made to ensure that only such items and projects are hidden as are really vital and potentially disruptive to peace and inimical to military security.

11. The interpretation of sciences and natural sciences should be broad enough to provide aid to such aspects of the social sciences as may be amenable to proper scientific study.

12. Efforts should be made to inculcate the public generally, and the schools in particular, with an understanding of the meaning of science and scientific methods.

## Enlisted Men Should Be Granted Terminal Leave

EXTENSION OF REMARKS
OF
### HON. LINDLEY BECKWORTH
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

*Monday, October 29, 1945*

Mr. BECKWORTH. Mr. Speaker, in my opinion, there is no question that deserves immediate attention more than the one concerning terminal leave for enlisted men. On December 18, 1943, I introduced a bill, H. R. 3875, on this subject. Last January 8 I introduced another bill, H. R. 1160. I am glad to say the bill has the support and endorsement of the American Legion. I trust we shall be able to receive action on this meritorious legislation immediately.

I include in my remarks a letter from Mr. John Thomas Taylor, director, national legislative committee of the American Legion, concerning my bill:

THE AMERICAN LEGION,
NATIONAL LEGISLATIVE COMMITTEE,
*Washington, D. C., October 24, 1945.*

Hon. LINDLEY BECKWORTH,
*House of Representatives,*
*Washington, D. C.*

MY DEAR CONGRESSMAN: We are, as you know, vitally interested in your bill, H. R. 1160, which provides terminal leave to enlisted men in the same manner as is now given to officers, except that it also provides that the compensation to which the soldier is entitled shall be paid in a lump sum, which, of course, is a very good idea.

Demobilization is taking place at such a rapid rate at the present time that unless this is enacted into law quickly it is not going to benefit very many GI's.

It does not seem to me as though it is a very controversial issue and that the House Military Affairs Committee could make up its mind very readily as to how they feel about it. We shall appreciate very much if action can be had on this matter.

Sincerely yours,

JOHN THOMAS TAYLOR,
*Director, National Legislative Committee.*

## Charter Becomes Law

EXTENSION OF REMARKS
OF
### HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES

*Monday, October 29, 1945*

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein an editorial from the Manchester Leader, Manchester, N. H., of October 26, 1945:

CHARTER BECOMES LAW

One cannot fail to note the apparent lack of enthusiasm over the ratification of the United Nations Charter by the required 29 nations, whereby it becomes a part of the law of nations. Why this seeming coolness? Ordinarily one would have expected that this event would be, as Secretary Byrnes labeled it, "a memorable day for all peace-loving nations."

When the United Nations gathered at San Francisco to draft the outline of a world peace organization, the occasion was hailed with great enthusiasm. When those nations completed their work and announced agreement on a world peace charter, enthusiasm was still deeper. All peace-loving peoples hailed this achievement as the beginning of a new era, as it truly was, and looked forward hopefully to the necessary ratification of the Charter and the beginning of its operation.

And then two things happened, and those two things are responsible for any lessening of enthusiasm that may have occurred. One was the discovery of the atomic bomb, which incorrectly created the impression that perhaps the work at San Francisco had been outdated and that the world peace organization was no longer able to fulfill anticipations. The other was the unfortunate deadlock in the Foreign Ministers' Council at London that aroused the fear that the Allied Powers, upon which the success of a world peace organization must rest, would not have sense enough to work together.

But this cooling of enthusiasm and the entertaining of doubts toward the World Charter are a grave mistake, for the world peace organization created at San Francisco is still the hope of future world peace. The Charter has shortcomings and imperfections, but it constitutes a solemn pledge on the part of the nations that have signed it to refrain from the use of military power, or any dread weapons that may be discovered, for any other purpose than the maintenance of peace. This pledge must be the first plank in any foundation for world peace that can be laid.

Moreover, these nations pledge themselves to exercise police power to see that some recalcitrant national leader does not upset the peace. That, too, is essential. Now it is said that the atomic bomb has outdated this machinery. Not so. The basic principle of control of the atomic bomb is a determination of peace-loving nations not to make war and to restrain those who try to make it.

True, the Charter drafted at San Francisco may not be strong enough to curb an aggressor with an atomic bomb in his hands. But that does not disqualify the Charter for what it does accomplish, but only means that it must be developed to meet atomic conditions. One of the members of the Canadian Parliament speaking in the debate in that body on the World Charter put the matter correctly when he said:

"The challenge of atomic energy will not only strengthen the conviction that the United Nations Charter must be made to succeed, but that through it must be developed some special measure of international control, however this is to be done, of the latest and most deadly menace to world security."

The first promise of peace is a world organization based on justice and fair dealing. The Charter provides such an organization. It is up to the nations supporting that organization to make it work and to broaden it to meet any new challenge to peace that may arise.

## Area WMC Director Glen Filley Praised

EXTENSION OF REMARKS
OF
### HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

*Monday, October 29, 1945*

Mr. PRICE of Illinois. Mr. Speaker, if in every section of the country the operations of the War Manpower Commission were carried on as smoothly as they were in the area administered through the agency's office at East St. Louis, Ill., then that wartime organization should be entitled to special commendation from Congress.

I want to pay tribute here to the splendid work done by the War Manpower Commission in the East St. Louis area under the direction of Mr. Glen Filley. Under his guidance the agency won the respect of both labor and management. He performed a notable work in the war effort. He was the type of administrator we need in more of our Government agencies. Mr. Filley possessed the remarkable ability to make the general public understand the program, and he exercised innate good judgment which permitted the agency to avoid mistakes which might have hampered the war effort in the many important industries in St. Clair and Madison Counties which were contributing so much toward final victory.

Mr. Filley's good work was recognized not only by the men of industry and labor who worked with him, but the press of the area also took notice of his remarkable record. Under leave to extend my remarks I herewith submit an editorial which appeared in the East St. Louis (Ill.) Journal of Sunday, October 21, 1945:

THE WMC CLOSES SHOP

Another wartime agency, the War Manpower Commission, is passing from the East St. Louis scene.

The people accepted the WMC here, as did the rest of the Nation, in April of 1943 in the same spirit they had greeted other necessary wartime controls. It had become obvious, particularly in industrialized areas such as East St. Louis, that something had to be done about regulating employment in the war plants. That was the task delegated to the WMC.

Under the guidance of Glen Filley, area WMC administrator, the Government branch

here set up a labor-management committee and went to work. Some of its directives were distasteful; keeping an American workingman literally chained to one job was unprecedented. But it had to be done.

It is to the credit of Mr. Filley and his associates of the labor-management committee that they completed their work without losing the respect of the community.

We all hope that such restrictions of our liberty never again will be required. But if they should, let us hope that they are administered as capably, as unobtrusively as did the War Manpower Commission representatives here.

## Disposition of Surplus Army Kitchen Equipment

EXTENSION OF REMARKS
OF
### HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Monday, October 29, 1945*

Mr. MILLER of California. Mr. Speaker, under leave to extend my remarks I have been granted unanimous consent to include therein a timely article prepared by Margaret Truesdale Gibbs, entitled "For Junior or for Junk?" I commend it to my colleagues in the Congress.

On Tuesday, October 23, 1945, the President delivered a message of prime importance to the Nation on the subject of universal military training as an integral part of our over-all plan for national defense.

In that message he referred to men who were physically unfit for active military service. Why in this country we should have such a large proportion of men in this category is food for sober thought. The statistics and experience of the Selective Service are appalling. Something must be done to raise the health standard in America. The dollars and cents cost of those people whose poor physical condition can be traced to malnutrition or eating habits formed in early youth is a drag on our economy.

Mrs. Gibbs comes forward with a pertinent, constructive suggestion that we turn over to the schools field kitchens and other cooking and eating utensils.

In the long run her scheme will pay many times more dividends than the paltry sum we shall receive for this equipment from the junk dealers.

Here is Margaret Truesdale Gibbs' article:

FOR JUNIOR OR FOR JUNK?

(By Margaret Truesdale Gibbs)

When that great day comes when the mess sergeants have no customers, when our great army camps are dismantled, and the boys go back to "mom's cooking," what are we going to do with our fine and efficient army kitchen equipment? Sell it for junk at 5 cents on the dollar; or use it to build a stronger and healthier generation than GI Joes', in which over half the 4-F's are chalked up to defects from childhood malnutrition? Shall we melt the fine stoves, the great aluminum kettles, the big thermos containers down for scrap metal; or shall Uncle Sam use them "to promote the general welfare" by putting them to service in expanding the hot-lunch program in American schools?

For over 2,000 years all sensible people have agreed that the old Greek ideal of a sound mind in a sound body is a social goal. But so far we have concentrated in our public schools on the first half of the ideal only. It is time we realize that the two are interdependent, and that every American child is just as entitled to good teeth and strong bones as he is to a good understanding of arithmetic. Health and vigor in every citizen is a public asset as valuable in peace as it is in war, and its achievement must be recognized as a public responsibility. The lamentable percentage of our youth found unfit for army service proves lectures and charity cannot answer the national malnutrition problem. No, we must look upon good and adequate feeding of America's growing children as a gilt edge public investment. For one thing, it is the best possible insurance against juvenile delinquency; well-fed youngsters do not get on the road to crime by petty larceny in food stores and fruit stands. For another, they have energy enough to get the most out of their school work and to develop initiative. The futility of trying to teach children too apathetic from bad nourishment to grasp or retain their lessons is bemoaned by teachers the land over. Who knows how much tax money is wasted on this large and limp class of unfortunate children?

As a teacher myself, I know that not nearly all of them come from poverty-stricken homes. Pampered children who get to eat just what they like are often as vitamin starved as the little kids who get nothing but sowbelly and beans. In one Nebraska town we found the banker's 8-year-old son to be the most badly nourished child in school. In other cases the mothers don't know how to cook, or are too lazy to bother, or put too much of the food budget into showy clothes. Shall we let their children grow up with the rickets and hand a little charity out to the very poor?

If the Army feeding program can take under-par boys at 18 and bring them out of it, think what one good Army meal a day could do for them from the time they are 8.

The conversion of Army kitchen equipment to use in the hot lunch program has already proven practical. Before the war a committee in Washington, D. C., who were working to further child health by a hot noon meal established a large central kitchen for preparation of the menu. They obtained out-moded Army field kitchen equipment for their cooking. A dietitian planned the menus, the Surplus Commodity Corporation supplied part of the food, and well-balanced, piping hot meals were packed in huge thermos kettles and rushed to surrounding grade schools by truck.

Why, when the war is over cannot the same thing be done in every city in the land? America has the equipment, America has the food to provide every child in our schools with one good, hot, well-balanced meal a day. It can be done and it will be done if parent-teachers associations and other child-welfare groups speak up and demand it and help organize such a set-up.

## Veterans Return Home To Find Housing Shortage

EXTENSION OF REMARKS
OF
### HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
*Monday, October 29, 1945*

Mr. PRICE of Illinois. Mr. Speaker, day by day the problem of finding housing facilities for returning war veterans becomes more acute. It is a serious situation which should call for immediate attention.

The shortage is so alarming that many articles are appearing in daily newspapers in all sections of the country carrying pleas from returning veterans for a solution of the problem.

In my opinion, the postwar housing program of the Federal Government, if we are to have one, should be placed in operation without delay. I recognize the fact that there were many war housing projects completed in the last 3 years, but the number of homes built during that period fall far short of meeting present and future needs.

Not only the larger cities in my congressional district—Alton, Woodriver, East Alton, Granite City, Venice, Madison, Belleville, East St. Louis, Collinsville, Greenville, Nashville, Waterloo, Edwardsville—feel this housing shortage, but it is just as keenly felt in the smaller communities.

The war-weary young man who spent from 2 to 4 years fighting the battle of freedom in the remote parts of the world returns to his home community in the hope of reestablishing his home—or, perhaps, as in the majority of cases, with the thought of having his own home for the first time in his life.

The following news article from the East St. Louis (Ill.) Journal of Sunday, October 21, 1945, tells the story of what the home-seeking returning GI is finding:

VETERANS FIND HOUSING ONE BIG HEADACHE—RED CROSS AT A LOSS TO SOLVE THE SHORTAGE PROBLEM

The problem of finding housing space for returning war veterans and their families has become almost insurmountable in the East St. Louis area, Mrs. Genevieve Schiffer, executive secretary of the East St. Louis Chapter of the Red Cross, said Saturday.

"Frankly," Mrs. Schiffer said, "we are at a loss for a solution to the problem. We certainly would welcome any suggestions as to our future course."

SHORTAGE MORE SERIOUS

East St. Louis wartime housing shortage has become increasingly acute since VJ-day. Men now in foreign service and men who recently have been discharged frantically are seeking suitable homes for their families. They appeal to the Red Cross for aid and the home-service unit of that organization has been working steadily in an effort to accommodate them.

"But we have reached the point where nothing else can be done, it seems," Mrs. Schiffer explains.

The Red Cross is not the only organization to whom the veterans are appealing. Real estate dealers are bombarded with requests for homes. Veterans are finding themselves in a position of having to buy property, if it is available, whether or not they can afford it.

"Our troubles come from both sides of the fence," Mrs. Schiffer said. "We get requests for aid both from veterans' families who are being evicted due to sale of property and from those who have been forced to buy property, only to find it difficult to evict the tenants. And in many cases the tenants also are veterans' families."

VET COMPLAINS

The Journal received a letter Saturday from a veteran who has seen combat service both in the Pacific and European theaters of operation. As he puts it:

"I returned to the United States (after 4½ years in the Army) on September 21, and expected to find a comfortable home. Far from it. All there was available were two furnished rooms; up to date we have had several cold days. We have had no heat nor a heating stove which had been promised us."

This obviously disgruntled veteran is seeking a four-room house.

## Red Objective

EXTENSION OF REMARKS

OF

### HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Monday, October 29, 1945*

Mr. DONDERO. Mr. Speaker, I offer for the CONGRESSIONAL RECORD an editorial from the Daily Mirror, of New York, of October 16, 1945. It throws some light on Communistic coordination to destroy America.

RED OBJECTIVE

The strategy of communism has been so clearly demonstrated here in recent days that there should remain no doubt in any American's mind of its final purpose.

That purpose is revolution.

The subjugation of private property, the abolition of individual rights and freedom, and the substitution for these of a dictatorship as absolute as that of Stalin's in Russia—those are the brazen objectives.

Red-tainted Harry Bridges and the Red-splashed maritime unions, following the familiar tactics of the Communists to confuse, divide, and take over, moved in on the New York dock strike, which itself was instigated by the left-wing elements within the International Longshoremen's Association.

Bridges came 3,000 miles from California with his offer of "moral, political, and financial support" for the rebel strikers, who had already paralized the world's greatest port and blasted the home-by-Christmas hopes of thousands of United States servicemen in Europe.

Bridges is both of West Coast International Longshoremen's and Warehousemen's Union. With him in his fight for east coast power are five other powerful CIO organizations, including the National Maritime Union, headed by Joseph Curran.

Curran and his NMU have never wavered a hair from the Communist party line. When Russia was Nazi Germany's partner in aggression, the NMU denounced the cause of the Western Allies as an "imperialist war." But when Hitler attacked Russia then, and only then, did the Allied war become a holy crusade.

It is significant that Curran is now in Moscow where Sunday night he hailed "the great and wise leadership of Comrade Stalin," endorsed a Russian idea for an American-Soviet Trade Committee, and pledged that "the CIO will always work hand-in-hand with Soviet trade-unions."

It is significant, too, that Communist-led longshoremen are on strike in England at exactly the same time that a similar stubborn strike progresses here with Communist provocation.

One of the first aims of world revolutionary communism, as expounded by Marx and Lenin, is to gain control of vital transportation.

No one willing to face the facts can doubt that this struggle for control is at the bottom of the present strike in New York or that communism versus American democracy is the basic issue.

At the precise moment that the wildcat strike is petering out, with thousands of men returning to work under the leadership of Joseph P. Ryan, militant anti-Communist and president of the International Longshoremen's Association—at that moment Bridges and the Red-dominated unions leap into the picture.

Mr. Ryan, we are told, has his faults. One criticism of him is that he got himself elected for life to the $20,000-a-year job of ILA president.

In his long career, however, he has fought like an American to protect his men and his country against the encroachments of communism.

But communism, for many years the recipient of political favor—and favors—from those whose sworn duty it should be to fight it with all their strength, is resurgent, openly out again to destroy our form of government.

And there is nowhere in our national political life any public man with guts enough and patriotism enough, apparently, to cut the issue clear and stand up in the defense of America against this imported, invading philosophy of defeat, frustration, degradation and slavery.

## What Is Mr. Truman Trying To Hide?

EXTENSION OF REMARKS

OF

### HON. CHARLES W. VURSELL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

*Monday, October 29, 1945*

Mr. VURSELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Chicago Daily Tribune of October 27, 1945:

WHAT IS MR. TRUMAN TRYING TO HIDE?

President Truman has given the New Deal majority of the Pearl Harbor investigating committee the power to suppress incriminating evidence against his party and its wartime leader, Mr. Roosevelt. Mr. Truman has signed an Executive order providing that witnesses and records may be subpenaed only by majority vote of the committee members. Since there are six Democrats and only four Republicans, another whitewash is inevitable.

In taking this indefensible action Mr. Truman resorted to his wartime powers as custodian of secret Government records and as Commander in Chief whose permission is needed to question Army and Navy personnel still on duty. Although the war has been over for 2½ months, Mr. Truman has refused to issue a proclamation terminating the national emergency. His order yesterday indicates one reason why he insists on clinging to his wartime powers. Under them he can frustrate any effective action to develop the truth about his predecessor's culpability in sacrificing the fleet and 3,000 lives to his desire for war. To allow the evidence to become public knowledge might well arouse such public outrage as to wreck Mr. Truman's party and his personal prospects.

Mr. Truman's order is the more outrageous in that it was issued directly after the administration had been defeated in the House when it attempted, by legislation, to impose the same sort of gag which he has now achieved by Executive decree. His party was compelled to withdraw a bill which would have punished anyone transmitting information obtained from coded messages—either our own or those of any other government—with 10 years' imprisonment and a fine of $10,000. The Republicans could block that, but they could not prevent Mr. Truman from reviving his predecessor's favorite role as "commander in chief."

In fastening the muzzle on witnesses and locking up the secret records, Mr. Truman has abandoned the last pretense that he is a disinterested leader of all the people and has frankly acknowledged that he is a party politician. When he was campaigning for Vice President he made the statement: "I'm an organization Democrat. A statesman is only a dead politician. I never want to be a statesman." We are now obliged to take the description at face value.

There already have been two whitewashes of administration responsibility for the events of December 7, 1941. The Roberts Commission, appointed by the White House, was told to look somewhere else than toward Washington in determining the guilt for the disaster. The Army and Navy boards authorized to conduct new inquiries by Congress last year were allowed a somewhat greater latitude and displayed more courage. It was too much to expect that they would inquire into the actions of Mr. Roosevelt and his Secretaries of War and Navy, who received the reports and decided on the disposition of them, but the investigators did possess sufficient independence to criticize former Secretary of State Hull, General Marshall, the Army Chief of Staff, and Admiral Stark, former Chief of Naval Operations.

Mr. Roosevelt, with the support of Secretary of War Stimson and Secretary of the Navy Forrestal, pigeonholed the reports for a full year and, when they finally were made public, Mr. Stimson gratuitously stated that the findings relative to Mr. Hull were "uncalled for and not within the scope of their [the Army Board's] proper inquiry." It was clear that Mr. Stimson wanted that scope restricted so that no fingers would be pointed at his associates in Mr. Roosevelt's official family. If such lese majesty were permitted who knows but that somebody would have the effrontery to start pointing at him?

In his defense of General Marshall from the Army Board's criticism, Mr. Stimson had the support of President Truman, who expressed "confidence in the skill, energy, and efficiency of all our war leaders." Mr. Truman, however, himself was not wholly disinterested. During the 1944 campaign he had written a magazine article slandering the reputation of the Hawaiian commanders, General Short and Admiral Kimmel, who were nominated as scapegoats within a week of the disaster by the late Secretary of the Navy Frank Knox, and who were subsequently pilloried (but, until this day, denied a hearing) by the Roberts Commission and the Army and Navy Boards. After the release of the reports of these two boards, Mr. Truman was asked if he wanted to recant some of his harsher charges against Kimmel and Short, but he refused to make an apology or correction beyond saying that he was mistaken in his statement that the two commanders had not been on speaking terms.

Now, with 52 pages of the Army and Navy reports still suppressed on the pretext that they concern the national security of a country no longer at war, the public is to be presented with a new and more complete whitewash of responsibility than any of those which had preceded it. The investigation this time frankly is entrusted to a majority of New Deal party politicians, under the leadership of the majority leader, Senator BARKLEY. It will be able to squelch any attempt to bring out embarrassing evidence.

Mr. Truman and his henchmen can continue to withhold from the people the 52 pages of suppressed evidence. They can hide the Japanese code messages which were intercepted and decoded before Pearl Harbor and which gave unmistakable evidence of approaching attack.

Did Mr. Roosevelt and his Cabinet know the attack was to be made at Pearl Harbor and keep this information from Kimmel and Short? Mr. Truman's action indicates they did.

## Understanding the Atomic Bomb

EXTENSION OF REMARKS
OF
**HON. WALTER H. JUDD**
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
*Monday, October 29, 1945*

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Edgar Ansel Mowrer:

UNDERSTANDING THE ATOMIC BOMB

(By Edgar Ansel Mowrer)

Present public discussion of the atomic bomb is confusing the American people. Such confusion is dangerous. Yet the average citizen cannot hope to discover the true situation by himself. Where public men differ so widely whom is the citizen to trust?

There are two quite irreconcilable theses about what the bomb means.

The first, as expressed by Dr. Vannevar Bush, Director of the Office of Research and Development, holds that "the atomic bomb differs in magnitude but not in kind" from existing weapons. It is just vastly more powerful, requiring new and correspondingly powerful defense controls."

This is the view of Secretary of the Navy Forrestal and of General Marshall. It has been expressed by General Groves, military head of the group that built the bomb. It inspires the reassuring statement that "adequate defense" can or will be found. The sort of legislation President Truman recommended to Congress seems to show that he has been converted to this view.

Partisans are extremely active. Recently a major general informed an influential Senator that the atomic bomb did not "save a million American lives" (as the Administration has stated) because the Japs were already beaten by orthodox methods. Another "reassuring" statement is Americans could defy atomic bombs in enemy hands if they would, at the cost of $15,000,000,000 annually for the next 20 years, disperse their key industries and bury their arsenals. Our present cities it appears, should be replaced by new and smaller one-dimensional towns 30 miles long and less than a mile wide.

Radical change in the national defense is unnecessary. Surely the future of the bomb can be trusted to the men who so brilliantly won the last war. The average citizen does not need to be anxious. There are no radical political conclusions to be drawn.

Unhappily, there are other voices. They come from the scientists who accomplished the miracle of building the bomb. What do these scientists say?

First, they deny to any but nuclear physicists like themselves the right to judge the potentialities of atomics. General Groves, they say quietly, is a civil engineer, Vannevar Bush an electrical engineer, George Marshall a general, Secretary Forrestal a banker. If the people want the facts, let them listen to the few score Americans who know most.

These scientists speak like this:

The atomic bomb is not another weapon like the others. It is not just another bomb. It is totally different. The explosive possibilities of TNT are chemically limited and essentially like the fire in your grate or the metabolism within your body. The energy of the atomic bomb is not chemical but cosmic. It is something that heretofore has been wielded by God alone. It is the creative force that shaped the stars, that makes and unmakes suns. It could destroy creation.

They say, further, that bombs will soon be made 20 to a thousand times more powerful than those which atomized Hiroshima and Nagasaki. Against such force there can be no adequate defense. Counter missiles are impractical. Dispersion can lessen but cannot prevent frightful destruction and slaughter. A sudden attack might bring even a powerful country to its knees in 2 hours. Reprisal, if possible, is the only possibility.

They say all competent industrial peoples will soon be making atomic bombs, unless prevented. The only remedy is to prevent the use of the bomb by anyone. The only solution is world government to enforce peace under law.

So speak the men who built the bomb.

Who are right, the military men or the scientists? We citizens do not know. The American Congress does not know. But it is up to Congress to find out. The answer is far too momentous to be left to any individual, be he the President of the United States.

Here is one way Congress could properly go about it. Let the House of Representatives immediately establish with the Senate a joint committee. Let this committee invite to Washington spokesmen of the scientific groups that built the bomb and other nuclear physicists along with such industrialists, engineers, and military people as may care to testify. Let the committee lay before those men in writing all the questions which any Member of either House may care to have answered, not the secret of the bomb but its implications. Let the witnesses answer in writing, collectively or individually. Let the committee study these answers and then summon contradictory witnesses to appear at secret hearings to amplify and explain their reason for disagreement. Let the committee then commit its findings and conclusions to a secret report. And, finally, let the committee transmit its recommendations concerning the care and disposal of the bomb to the two Houses of Congress for appropriate legislation.

Finally, let the committee be sure to tell the people such of its conclusions as can be made public without danger to the United States.

---

## Where Are the Ships?

EXTENSION OF REMARKS
OF
**HON. CLARENCE J. BROWN**
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
*Monday, October 29, 1945*

Mr. BROWN of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Stars and Stripes of October 20, 1945:

THE B BAG—BLOW IT OUT HERE

WHERE ARE THE SHIPS?

Can the current, critical shipping "shortage" be blamed on the transfer to the British of the *Queen Elizabeth* and the *Aquitania*, on dock strikes in the United States, and on storms in the Atlantic?

Or, is redeployment delayed because the War Department has failed to utilize all of America's mammoth merchant marine in the priority I job of getting soldiers home; because it has miscalculated shipping needs; because it has failed to act aggressively in meeting those needs; because it has failed to order freighters converted to troopships; because it has not pressed into service idle ships; because it has not enlisted the aid of the world's greatest navy in redeployment; because in general it has been neglectful of its most important job since VJ-day?

Are the ship transfers reasons for the month delay—at least—now promised us in redeployment from the ETO? Or are they just excuses?

The best case we have seen stated thus far tending to prove the latter, was in a letter submitted to the European edition of the New York Herald Tribune by T/3 William C. Craig, Jr., and T/4 T. S. Hyland. It said:

"All right, whose fault is the latest redeployment crisis?

"1. At the war's end the United States had 5,000 merchant ships (source: Time Magazine, October 15). Using only 3,000 of these converted to carry troops, these 3,000 could have taken every soldier in the ETO home in one trip. Naturally, this would be too much to expect, but it shows the possibilities.

"2. When the United States canceled lend-lease on August 21, the British stated that they would have to withdraw their Queens, as they were badly needed to repatriate their own and Canadian troops.

"3. On October 13, the British withdrew only one Queen and the *Aquitania*. The United States was allowed to keep one Queen for the rest of the year. And the German *Europa* is now ready to replace the *Aquitania*.

"4. If the United States had used only 600 of its own ships, roughly 10 percent of the available total, making only one trip per month, they could have returned every GI in Europe since VE-day. This would leave more than enough ships for (a) the Pacific redeployment and (b) vital commerce and relief.

"5. Operable United States ships are today rusting idly in United States harbors (source of fact: Time magazine, Oct. 15, p. 27. A photograph shows five good new ships laid up in a single small port, Mobile). There is no shortage of shipping. There is a surplus.

"6. More than enough time has passed since either (a) VE-day or (b) cancellation of lend-lease to convert countless freighters into transports. Nobody can plead (a) lack of time or (b) lack of materials or manpower as excuses. Shipyards have undergone terrific cutbacks.

"7. Army spokesmen now blame the latest redeployment crisis on (a) loss of the British ships, (b) storms in the Atlantic and the English Channel, (c) strikes in the United States. These explanations seem flimsy afterthoughts providentially provided to cover up negligence and poor planning.

"It is outrageous to suggest that redeployment has been slowed up by turning over ships to the British in exchange for use of the *Queen Mary*. We have plenty of ships to turn over without taking any out of service.

"High Army and War Department officials have just talked their way out of one crisis over congressional, civilian, and GI indignation concerning redeployment and discharges. And now now another crisis—with no excuse whatever. It is a tragedy to the whole Nation that top Army planners are not wise enough to realize that the peace-time future of the Army depends on its performance during the post-VJ interval.

"When our armies were triumphant on both sides of the globe, any of us thought that perhaps, after all, the professional 'big-brass hats' (General Eisenhower's phrase) were shrewd and competent men. But since VE and VJ, millions of GIs and more millions of civilians have returned to their former deep mistrust of the military mind. They had won our trust, then threw it away in an outbreak of poor planning, chicken, bad faith, confusion and ineptness. The result of civilian mistrust of military authorities may well be a smaller peacetime Army, reduced Army budgets, no postwar training, etc., thus affecting, perhaps tragically, the future history of the American Nation."

Eloquent as are Sergeants Craig and Hyland, however, it would not be fair to the War Department to accept their argument as fact without hearing what the official Army answer is to their seven points.

Thus far, there has been no explanation satisfactory to soldiers in this theater of the

shipping shortage. But maybe there is such an explanation.

It is impossible for us in the ETO directly to ask General Marshall or the War Department's redeployment branch or G-3 or the War Shipping Administration what the explanation is.

All that we can do is ask that some one put the questions to the War Department for us and that, in any case, newspapermen in Washington seek to find the full answers to them.

We ask, too, that in any investigation the answers be examined thoroughly and checked carefully, that the profusion and confusion of figures under which the War Department has thus far snowed the soldiers and the public be avoided, and that especial effort be devoted to an attempt to find, even at this late date, some means to correct any mistakes that may have been made, and to get the eligible soldiers home and out of the Army.

(Thirty-eight signatures, the Stars and Stripes editorial staff.)

## The Country Is Becoming Class Conscious

EXTENSION OF REMARKS
OF
### HON. ANGIER L. GOODWIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

*Monday, October 29, 1945*

Mr. GOODWIN. Mr. Speaker, under leave to extend my remarks, I call attention to a recent article by William Stuart Howe, of Somerville, Mass. Mr. Howe is a constituent of mine, a well-known publicist, trained both in local government and in international diplomacy. He is a keen student of affairs, a prolific and brilliant writer, and his weekly articles in various newspapers in New England are read and enjoyed by a wide circle of readers. The article is as follows:

FULL-EMPLOYMENT BILL A MONSTROSITY

The advocates of the so-called full employment bill are asserting that the Government should guarantee a job to everyone willing and able to work and that this so-called right to work should be considered just as fundamental as the right of free speech, free exercise of religion, etc. Nobody has contradicted this, the same as no one as yet has offered more than perfunctory opposition to the bill, for fear, apparently, that any criticism will be construed as against the desirability of full employment. Yet the so-called right to work is a fallacy and the full-employment bill, as now drawn, a monstrosity.

GOVERNMENT'S DUTY IS TO ALL GROUPS

The right of free speech gives a man the right to say what he wishes, but it does not mean that someone will write his speeches for him. Freedom of religion enables us to worship God as we please but does not build up churches for that purpose if our particular parish cannot afford same. Everyone now has the right to work, but that is very different from saying that the Government is obligated to find and provide work. If it is the duty of the Government to assure jobs at a living wage, it is equally the duty of the Government to guarantee the employer a profit sufficient on which to live, the farmer a regular and liberal income, the investor who depends on interests and dividends a regular and satisfactory return, the lawyer and doctor regular professional fees, the landlord a regular rent sufficient to maintain his property and give him a fair return. We are all members of the country, doing our best in our several ways to earn a living, and we should all have equal treatment.

The answer is, of course, that we are rapidly becoming a class-conscious country. The reason the Government insists on maintaining rent control but cares nothing about the landlords' return is because there are 20 renters to 1 landlord. The reason it is proposed to guarantee jobs and wages but not prices and profits is because there are 15 times as many workers as there are employers. The reason nobody thinks about the owners of stocks and bonds is because it is assumed that these are the wealthy classes, although there really are large numbers of elderly people absolutely dependent on this class of income for their subsistence. The all-important consideration in this country now is votes and the criterion of proposed legislation is not its soundness for the country as a whole but the size of the groups it will attract. The only hope for minority elements to secure justice is where they are very large and well organized. Labor unions, for example, constitute a minority group but one so numerous and aggressive that it seems to hold the balance of power and be more potent than the even larger unorganized group of workers. The farmers are very articulate and consequently they have a farm bloc in Congress which is an effective spokesman, but they also are a minority.

SUBSERVIENCE TO POPULAR BELIEFS EXTENDS TO COMMENTATORS

This subservience to what is popular extends into many fields. Commentators and columnists, for example, are very much affected. The commentator usually depends on a sponsor. The sponsor will only employ him if public reaction to his comments is favorable. The commentator knows this favorable reaction will not be received if he takes a strong stand against something which seems popular because of its title or propaganda enveloping it—such as the full-employment bill. Consequently, the commentator is all for it and his tendency is usually to go along with the group in power. Just think over the number of commentators who take a strongly divergent line and you will find they are almost nonexistent. Yet many of them are intelligent men and must know the stuff they are handing out is neither just nor sound.

CLASS LINES EMBITTERED AS RESULT OF NEW DEAL

As for the politicians, they know only too well on which side their bread is buttered. The New Deal, of course, played to the masses. This tendency is as old as history, but it was the New Deal which not only bowed to it but actually favored it, accelerated it, and made it prime political technique. The New Deal candidates built up the myth that they were the champions of the poor, the oppressed, the virtuous, and the many, as opposed to the privileged, the rich, the greedy, the reactionary, and the few. Before the New Deal, the easy transition between classes existing in this country afforded a strong resistance to demagogic tendencies. As a result of the New Deal, class lines have become hardened, more distinct, and embittered.

NEW-DEAL POLICIES DETRIMENTAL TO ALL CLASSES

Yet all this is killing the goose which lays the golden eggs even though the process is complicated and difficult for people to see. If rents are controlled in such a way that owners cannot build and receive a decent return, if wage policies are enforced and burdens put upon employers so that it becomes much easier and just as profitable to work for someone else, then owners will not build, employers will not employ, and the Government itself must eventually do the building, the employing, and the investing. This, of course, leads straight to more and more collectivism, and the ever-growing spending program pushes us along in the same direction. Eventually (and this is something, perhaps, which labor-union leaders particularly do not realize) not only the professional, investing, and employing classes but the unhappy, overburdened, and disorganized middle class will throw in the sponge and say that if we must be ruled and regimented, it is better to have this by an authoritarian administration than by and for the benefit of a special class. An all-powerful Government at least would put some of the favored groups in their places very rapidly, and the elements at present unorganized might well receive fairer treatment.

I suppose these thoughts may cause me to be labeled as Fascist, Tory, reactionary, and defender of entrenched greed. These terms are certainly not correct, but, even if they were, the words I have written are true.

## Can There Be Freedom From Fear and Freedom From Want?

EXTENSION OF REMARKS
OF
### HON. CLARENCE J. BROWN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

*Monday, October 29, 1945*

Mr. BROWN of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Orange Daily News of October 23, 1945:

CAN THERE BE FREEDOM FROM FEAR AND FREEDOM FROM WANT

A nation, like an individual, is prone to be long on promises and short on the performance thereof. We like to paint the picture in roseate colors. Like a candidate for office we love to tell of the wonderful things we are going to accomplish for a long-suffering public, only to discover belatedly that the human element must be reckoned with, and that the impossible is difficult of accomplishment.

In the early days of the war we were boldly promised freedom from fear and freedom from want. It sounded great. And anyway, why not?

Came the surrender of Germany and a few months later the downfall of Japan. The picture brightened up, and quite naturally so. The world was at last free of those two hobgoblins who upset our waking hours and disturbed our slumbers. With fear and want banished from a turbulent world we could truly lead the life of the fabled Riley.

And what happened? In the closing days of the war with Japan in steps a new gadget that fills us with terror while pondering its implications—the atomic bomb. Its discovery, and the havoc it wrought on Japanese cities, has brought more fear into the world than any other single incident of history. Even America now fears what might happen should Russia come into possession of the secret of this new death-dealing power. So freedom from fear seems to be just another dream gone with the winds of atomic energy.

And what about freedom from want? Reports from England tell us that the shipping industry strikes have put an end, for the time being at least, to the importation of food supplies so necessary to keep England from starvation this winter. Press dispatches predict dire consequences for the people of Continental Europe because of food shortages. General MacArthur reports that thousands of Japanese will perish this winter from starvation. Conditions in China and India are worse than usual, and that is saying a good deal.

So, the question naturally arises: Can we promise a stricken world freedom from fear

and freedom from want until we have mastered the laws of nature, and until we can control the minds, the emotions, and the follies of mankind?

## Stop Drafting Essential Farm Youth

EXTENSION OF REMARKS

OF

### HON. GEORGE W. GILLIE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

*Monday, October 29, 1945*

Mr. GILLIE. Mr. Speaker, in spite of our continued efforts, the military authorities are still muddling along with their demobilization policies. Several outstanding injustices have occurred which I believe should be speedily corrected either by the military authorities themselves or by immediate legislative action. A letter I received from one of the servicemen in my district who has served in Europe and was then sent to the Pacific before the end of the war with Japan clearly reports one of the unfair instances. The other concerns the continued evasion of the Tydings amendment to the Selective Service Act.

Our President has asked for funds and food to aid the starving peoples of the war-torn countries. To produce this food we need farmers. If the Tydings amendment was followed to the letter of the law, there would not be the indiscriminate drafting of the young men needed so badly to raise our crops.

I am dropping into the hopper today a bill to stop this drafting for military service our essential farm youth.

In regard to the unfairness of the military's demobilization plans where pre-Pearl Harbor fathers are concerned, I want to call the attention of my colleagues to the following excerpts I have taken from one of the many letters I have received from a serviceman. It points out a condition that should be corrected immediately in all fairness to a group of veterans who served in one of the theaters of war and was then transferred to another and is now doing occupation duty.

The letter follows:

You have been very kind in answering the letters which I have written to you. In each of them, the subject of which was the unfairness of retaining pre-Pearl Harbor fathers, who are middle aged, in service, you stated that the voluntary enlistment bill will return men to their families quickly. I shall try to give you a serviceman's opinion made after a calm analysis.

The men in this theater who are reenlisting consist of 95 percent of the following type: Men who have 6 or 7 months or less than a year's service, with perhaps a month in the Pacific theater. Under this plan they receive priority over all other returnees to the States for their furlough. They fully expected to be here for a year, but now they are being sent home after only 2 or 3 weeks overseas. There are probably 200,000 of these men who will reenlist and be given priority on return, thereby holding up for 1 month more men who have been overseas for a year to 3 years. We came here direct from ETO after the war was over. Is that fair?

In the above respect this system is as unfair as the point system which gives no credit for age nor enough for pre-Pearl Harbor fathers. I would be very interested in hearing why Congress has ceased all investigations of demobilization and why all efforts to release fathers, whose wives and children are suffering needlessly, were terminated abruptly. Was it because of the War Department's pretty speeches as to their efficiency? If that is the reason, all servicemen, or 95 percent of them, will tell you that they are in favor of investigations, and also even those who have no children or are not married will agree that pre-Pearl Harbor fathers with long-established homes should be returned to those homes where they are needed badly. Don't get the impression that your civilian soldiers like the point system or that they had anything to do with its preparation.

My principal gripe is no age consideration nor father consideration. But all servicemen gripe about the simulated transportation bottleneck. What do you think on this question? If war had made it necessary to move a half million men a month from or to here would it not have been done? Every available means of water and air travel would have been used. And it's just as necessary to move men home. Why not do it?

## Here It Is!

EXTENSION OF REMARKS

OF

### HON. GEORGE B. SCHWABE

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

*Monday, October 29, 1945*

Mr. SCHWABE of Oklahoma. Mr. Speaker, I have consistently condemned bureaucracy. I shall continue to condemn it as un-American. It is an encroachment upon our American liberties, and an undermining of American principles of government.

Before the war, we witnessed the New Deal President advocating planned economy. It was an economy planned by his bureaus to meet what he termed emergencies. The New Dealers reach up into the clouds and grab a new emergency excuse for everything that comes along. Emergency bureaus were created on the slightest provocations.

Then, after planned economy had utterly failed and we openly got into World War II, emergency bureaus were set up on every hand to control our almost every activity in life. Although hostilities have ceased, the President has not yet declared by proclamation that the war is over, and most of the ante-bellum emergency bureaus of the planned economy program continue to function and practically all of these so-called war emergency bureaus are still operating, at the expense of the taxpayers.

Many of these bureaus were created by Executive order of the President and can and should be abolished by Executive order of the President. They can be put out of existence by the mere stroke of his pen, as it were. The President has declared that he is in favor of abolishing many of these useless bureaus, but recent actions of the executive branch of Government indicate that his intentions are to shift the functions of these temporary bureaus into the permanent Department of Government headed by his Cabinet members.

Worse than all and as evidence that the present administration does not intend to get rid of these obnoxious bureaus but intends to continue their functions in newly created bureaus and new set-ups in the permanent Departments of Government, we find a shifting of the personnel from one place to another, instead of dismissing them from service. This is mere camouflage and subterfuge. It is but a device to deceive the people.

Mr. Speaker, I am in receipt of the following letter dated October 26, 1945, on the stationery of the Civilian Production Administration, Washington, D. C.:

HON. GEORGE B. SCHWABE,
*House Office Building,*
*Washington, D. C.*

DEAR MR. SCHWABE: In a WPB release dated October 12, 1945, an announcement was made that the War Production Board as such would cease to exist on November 3. A new temporary agency has been created to carry on the remaining essential activities of the War Production Board. This new agency will be known as Civilian Production Administration.

The press release outlined the proposed functions of the new CPA and a break-down of the various bureaus to be established and the personnel that will administer the new agency.

The House Liaison Office will be continued in the new organization to assist Members of Congress as they have in the past. This office is available to serve you and your staff. Please feel free to call upon Mr. W. K. Chapman regarding your problems. (Phone Capitol switchboard, extension 335 or 1096.)

Sincerely yours,

J. D. SMALL,
*Administrator.*

Here it is. The old War Production Board will be no more, but the Civilian Production Administration will take its place. This is a mere change in name. It is the old bureau operating under a new name. The War Production Board operated during the war, and although the President has not declared the war at an end, he has set up a new bureau to perform the same functions in peacetime.

I call your attention to the statement in the above letter that this is a "new temporary agency to carry on the remaining essential activities of the War Production Board." This is the same old gag. It is called a new temporary agency, but you will note that it is to carry on the activities of the War Production Board, and is to establish various bureaus, and so forth.

Do not be fooled for one moment. This is not a mere temporary agency. Too many people have recently been transferred from other bureaus to the War Production Board, with the advice and tacit understanding that its functions are to be permanent or to continue for a long period of time. Likewise, contracts for office space in cities scattered all over the United States recently have been sought for periods of 5 years, without including the customary 30-day cancellation clause. We have been told that it would be necessary to continue the functions and personnel of the WPB for many years to come.

The American people will not appreciate this kind of deception. They can

begin now to understand the fact that they are being led down the same path that Stalin, Hitler, and Mussolini led their respective peoples under their planned economy schemes, with promises to give the people happiness and plenty. Our Nation has endured, and our people have prospered and been happy without planned economy and without bureaus. Red-blooded Americans cannot be happy and free under a system of planned economy and bureaucracy. The inevitable result of a planned economy is totalitarianism in one form or another.

## King Ibn-Saud's Letter to President Roosevelt and the President's Reply to the King

EXTENSION OF REMARKS
OF
## HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
*Monday, October 29, 1945*

Mr. MUNDT. Mr. Speaker, because of the widespread comment which the exchange of letters between President Roosevelt and King ibn-Saud, of Saudi Arabia, has created and because of the numerous efforts of different people to read into the correspondence either more or less than it actually says, I am inserting in the RECORD at this time the complete text of both letters just as they were released to the public by Secretary of State Byrnes. The letters speak for themselves.

It is unfortunate, Mr. Speaker, that the text of these letters was not made available to the public at the time they were exchanged between the Executive of the United States and Saudi Arabia. Much less misunderstanding would have eventuated from such a course of candor. When our Chief Executive exchanges correspondence with the executives of other sovereign states on matters of public business which are not concerned with our national security such letters should not be made the property of private files.

The release of such correspondence, posthumously, creates understandable concern over discrepancies between the spoken statements and the written commitments of one of the correspondents and the result is likely to make more rather than less difficult the settlement of an already highly perplexing and prodigious problem.

If nothing else constructive accrues from this exchange of correspondence and its belated release to the public, Mr. Speaker, I hope it results in the use of a policy in the future wherein we shall have less secrecy in foreign affairs and fewer covenants and secret commitments by correspondence which are not made a part of the public record.

KING IBN-SAUD'S LETTER TO PRESIDENT ROOSEVELT

MARCH 10, 1945.

To His Excellency Mr. ROOSEVELT,
*President of the United States of America:*

YOUR EXCELLENCY: This is indeed a happy occasion for us to join with you in rejoicing at the triumph of those principles in defense of which war was declared and to remind those great personalities in whose hands, after God, the fate of the world order rests, of a right which has existed unquestioned since the dawn of history.

This right men now seek to destroy by injustice unparalleled and unequaled in history. Such is the right of the Arabs in Palestine, which the spokesmen of Jewish Zionism wish to scorn and abolish by the use of various forms of lying propaganda, invented, concealed, and employed by them throughout the world.

They have acted unjustly and are making hostile preparations against the Arabs, some of which are known, although much remains undetected. They are preparing to create a form of nazi-fascism within sight and hearing of the democracies and in the midst of the Arab countries, as well as in their very heart and in the heart of the East, which has proved itself loyal to the Allied cause in these critical times.

RIGHT TO HOMELAND

All people have the natural right to live in their homeland, a right guaranteed to them by natural law established by the principles of humanity which the Allies have proclaimed in the Atlantic Charter and on numerous other occasions.

The Arabs have a natural right in Palestine which needs no explanation. We have on a separate occasion mentioned to Your Excellency, as we have many times to the British Government, that the Arabs have inhabited Palestine since the beginning of history and that they have throughout the ages been its masters and enjoyed an overwhelming numerical superiority.

We would now make a brief reference to Palestine's history, ancient and modern, up to the present day, to make it clear that Zionist claims in Palestine are not based on historical facts.

The earliest recorded history of Palestine begins in the year 3500 B. C., its first inhabitants being the Canaanites, an Arab tribe which emigrated from the Arab peninsula and had its first abode in the lowlands, hence the name Canaanites. In 2000 B. C. a section of the Jews under the leadership of the Prophet Abraham emigrated from Iraq (Ur of the Chaldees), settled in Palestine and then immigrated because of famine into Egypt where they were delivered into bondage by the Pharaohs.

The Jews remained scattered there until their delivery from exile by the Prophet Moses, who brought them back to the land of Canaan by the southeastern route, either in the time of Rameses II, i. e. 1250 B. C., or his son, Munfitah, 1225 B. C.

If we accept the text of the Bible, we find that the conqueror of Palestine was Joshua, the son of Nun, who crossed with his army and captured the city of Jericho from the Canaanites, with great cruelty and barbarity: witness his words to his army:

"Burn ye all that is in the city and slay with the edge of the sword both man and woman, young and old, and ox and sheep, and burn the city with fire and all that is therein." Joshua, chapter 7, verses 21 to 24.

Thereafter the Jews split up into two kingdoms. One, the Kingdom of the Israelites with its capital Samaria (Nablus), lasted 250 years and then fell into the hands of Shalmaneser, King of the Assyrians, in the year 722 B. C., and was led into captivity. The other, the Kingdom of Judah, with its capital Jerusalem, lasted 130 years after the Kingdom of Israel had perished.

It was later destroyed by Nebuchadnezzar, King of Babylon, who burned down the city and the temple with fire, and led the people into captivity to Babylon in the year 580 B. C.

The captivity in Babylon lasted 70 years, and then the Jews returned to Palestine by order of Cyrus, King of the Persians.

The Greek conquest followed in 332 B. C., under the command of Alexander the Macedonian, their rule continuing in Palestine for a period of 272 years.

The Roman conquest took place next in the year 63 B. C., under the command of Pompey, their rule lasting in Palestine for 709 years.

In the year A. D. 637 the Arabs occupied Palestine, and their rule lasted continuously for 880 years.

The orders of the Caliph to the conqueror were: "You shall not act treacherously, dishonestly, commit any excess or mutilation, kill any child or old man; cut or burn down palms or fruit trees, kill any sheep, cow or camel, and shall leave alone those whom you find devoting themselves to worship in their cells." This was related by Ibn-al-Atheer, the famous historian.

Palestine then passed under the rule of the Turks in A. D. 1517, during the reign of Sultan Saleem the First, and their rule lasted for 400 years. The Arabs were the inhabitants and participated with the Turks in the government and administration of the country. It was then occupied by the British who are still there.

This history of Palestine, an Arab country, shows that the Arabs were its first inhabitants and that they dwelt there for a period of 3,500 years before Christ and have remained there since Christ until the present day.

They ruled it alone or with the Turks for a period of about 1,300 years, whereas the disjointed reign of the Jews did not exceed 380 confused and sporadic years.

No Jewish rule has existed in Palestine since 332 B. C. nor until the British forces entered Palestine in 1918, i. e., for 2,200 years there have been few Jews there and they have had no influence. They numbered not more than 80,000 when the British entered Palestine, and lived comfortably, happily, and prosperously in that country with the original inhabitants, the Arabs.

The Jews were merely aliens who had come to Palestine at intervals and had then been turned out over 2,000 years ago.

The permanent rights of the Arabs in Palestine rest on the following:

(1) The right to dwell there. This they have done since the year 3500 B. C. without ever leaving the country.

(2) The natural right of life.

(3) The existence therein of the Holy Land.

(4) The Arabs are not aliens in Palestine and there is no intention to bring any of them from other parts of the world to settle there.

The historical claims of the Jews is, however, a fallacy. As already mentioned, their brief and sporadic rule gives them no right to claim that they own the country, for to occupy a country and then leave it entitles no nation to claim and demand ownership thereof. The history of the world is full of such examples.

The solution of the problem of the persecuted Jews in the world differs from the fictitious problem of Zionism. For to provide homes for the scattered Jews is something in which the whole world can cooperate, and here Palestine has borne more than its full share. But to bring these scattered people, put them in countries already occupied, and do away with the original inhabitants is an act unparalleled in human history.

We state frankly and plainly that to help Zionism in Palestine not only means to endanger Palestine but all neighboring countries.

The Zionists have given clear evidence of their intentions in Palestine and in all neighboring countries. They have organized dangerous secret military formations. It would thus be a mistake to say that this was the action of a group of their extremists and that it had met with the disapproval of their assemblies and committees.

We declare that the actions of the Zionists inside and outside Palestine are based on a program agreed upon and approved of by world Jewry.

These people began their vile work by wronging the government that had treated them kindly and sheltered them, namely, the British Government. Their assemblies declared war on Britain and organized dangerous military formations, which at present hold in Palestine all the arms and military equipment they require.

Their members have carried out various attacks of which the most shocking was the attack on the outstanding figure, so kind and charitable toward all men and with the greatest sympathy for persecuted Jewry, Lord Moyne.

LAYS TERROR TO ALL JEWS

The proof that all Jews aided and abetted their vile deed is to be seen in the demonstrations and efforts made by Jews everywhere, demanding a light sentence for the criminals in order to encourage others to do the same.

This, then, is the way they behave with the government which has treated them so kindly. What would be the position if they were able to realize their objects and make Palestine entirely their own country, in which and near which they could do as they pleased.

If the matter were left to the Arabs and these aggressors it might perhaps be easy, but they are protected by the British Government, the friends of the Arabs. The Zionists did not respect the sanctity of this protection, but plotted mischief, beginning first with Britain and threatening the Arabs after Britain with similar and more dangerous plots.

Thus, if the Allied Governments, whose friendship the Arabs are aware of, wish to see the fires of war break out and bloodshed between Arabs and Jews, their support of the Zionists will surely lead to this result. What we and the Arab countries fear from the Zionists are:

(1) That they will carry out a series of massacres as between themselves and the Arabs.

(2) That the Zionists will be one of the main causes of dissension between the Arabs and the Allies. The latest proof of this is the case of the two Jews who killed Lord Moyne in Egypt. Had the Jews been able to hide the criminals, a dispute would have occurred between the British Government and Egypt.

(3) That the ambitions of the Jews are not confined to Palestine alone. The preparations they have made show that they intend to take hostile action against neighboring Arab countries.

(4) Supposing that the Jews obtain their independence somewhere in Palestine, what is to prevent them from coming to an agreement with any power that may be hostile to the Allies and to the Arabs? As it is, they have begun taking hostile action against Britain while under her protection and mercy.

NO BASIS IN HISTORY

Such factors should no doubt be taken into consideration in regard to the establishment of peace in the world when the problem of Palestine is discussed. Not only is the gathering of Jews in Palestine based on no historical argument nor on any natural right, and is in fact absolutely unjust, but it constitutes at the same time a danger to peace, to the Arabs and to the Middle East.

The crux of the matter is that the formation of a Jewish state in Palestine will be a deadly blow to the Arabs and a constant threat to peace, for disturbed conditions are bound to prevail between the Jews and the Arabs, and if the patience of the latter is one day exhausted and they despair of their future then they will be obliged to defend themselves and future generations against this aggression. No doubt the Allies, who are working to uphold peace and respect for men's rights, are aware of this. We have no doubt that they are dissatisfied with this uneasy situation which threatens peace in the Middle East.

We did not wish to bother Your Excellency or your ministers with this matter during the present titanic struggle in which you are engaged. Confident that the Allies will treat the Arabs fairly, however, we would have preferred the Arabs to forbear until the end of the war had it not been for the provocative and offensive acts committed by the Zionists who, regardless of war conditions and the preoccupation of the Allies, seek to bring every form of pressure to bear on them to adopt a policy which is inconsistent with the principles of right and justice which the Allies have proclaimed.

That is why we wished to explain the true rights of the Arabs in Palestine so as to refute the flimsy arguments of the Zionist party, counter their aggressive tactics, and set out the facts in order that the Allies may fully understand the rights of the Arabs in their country, the country of their fathers and forefathers.

The Jews should not be permitted to exploit the forebearance of the Arabs or their desire to avoid any embarrassment to the Allies, to obtain concessions to which they are not entitled.

All we ask is that the Allies should fully realize the rights of the Arabs and for the present prevent the Jews going ahead in any new matter which may be considered a threat to the Arabs and to the future of every Arab Nation, in order that they, the Arabs, may be assured of justice and equity in their lands.

With highest respects,

Your friend,

ABDUL AZIZ AL SAUD.

PRESIDENT ROOSEVELT'S ANSWER TO KING IEN SAUD'S LETTER

APRIL 5, 1945.

His Majesty ABDUL AZIZ BIN ABDUR RAHMAN AL FAISAL AL SAUD,

*King of Saudi Arabia, Ryadli*:

GREAT AND GOOD FRIEND: I have received the communication which Your Majesty sent me, under date of March 10, 1945, in which you refer to the question of Palestine and to the continuing interest of the Arabs in current developments affecting that country.

I am gratified that Your Majesty took this occasion to bring your views on this question to my attention and I have given the most careful attention to the statements which you make in your letter. I am also mindful of the memorable conversation which we had not so long ago and in the course of which I had an opportunity to obtain so vivid an impression of Your Majesty's sentiments on this question.

Your Majesty will recall that on previous occasions I communicated to you the attitude of the American Government toward Palestine and made clear our desire that no decision be taken with respect to the basic situation in that country without full consultation with both Arabs and Jews.

Your Majesty will also doubtless recall that during our recent conversation I assured you that I would take no action, in my capacity as Chief of the executive branch of this Government, which might prove hostile to the Arab people.

It gives me pleasure to renew to Your Majesty the assurances which you have previously received regarding the attitude of my Government and my own, as Chief Executive, with regard to the question of Palestine and to inform you that the policy of this Government in this respect is unchanged.

I desire also at this time to send you my best wishes for Your Majesty's continued good health and for the welfare of your people.

Your good friend,

FRANKLIN D. ROOSEVELT.

## UNRRA Appropriations and Future United States Participation

EXTENSION OF REMARKS

OF

## HON. BARTEL J. JONKMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Monday, October 29, 1945*

Mr. JONKMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following Republican Congressional Food Study Committee report to the Honorable JOSEPH W. MARTIN, Jr., Republican leader, House of Representatives, October 29, 1945:

In view of the fact that Congress will soon be asked to appropriate additional funds for UNRRA, officially known as the United Nations Relief and Rehabilitation Administration, and that a large proportion of these funds if appropriated will be used to purchase food, the Republican Congressional Food Study Committee has examined the program and performance of UNRRA and herewith presents for your information its findings and recommendations on that subject.

It has not been easy to arrive at a factual analysis of UNRRA's effectiveness. Press reports from abroad have been contradictory and too often colored by the author's personal prejudices. Statements issued by those in this country with some knowledge of UNRRA's activities likewise have too frequently reflected only the individual's desire to justify a position either for or against UNRRA. Press representatives have not been given free access to all the countries in which UNRRA operates and the details of relief operations within those countries, including the ultimate disposition of relief supplies, have been clothed in many instances with secrecy. These factors, together with the physical reality of the great distance from Washington at which UNRRA activities are carried out and the large number of nations involved have made accurate reporting difficult.

In spite of the difficulties involved, however, the committee believes that it has obtained as accurate and factual a report on UNRRA's operations as can be had without actually visiting, as a committee, the countries where relief is being dispensed. The committee has secured its information from official UNRRA reports; from UNRRA officials, including Roy Hendrickson, Deputy Director; from first-hand statements of members of the press and others who have witnessed UNRRA operations abroad; and from members of this committee who have been in Europe during recent months, including Representatives CHRISTIAN A. HERTER, of Massachusetts, CLIFFORD R. HOPE, of Kansas, WALT HORAN, of Washington, and BARTEL J. JONKMAN, of Michigan.

UNRRA operating funds are contributed by those of the 47 member nations which have not been invaded by the enemy. The contribution requested for 1945 was an amount equal to 1 percent of each nation's income for the year ending June 30, 1943. The total for all nations was $1,866,116,241, and of this amount $1,268,750,254 had been made available by September 15, 1945. The United States share was $1,343,000,000, of which $550,000,000 has not yet been made available to UNRRA.

Additional funds: The United States is being asked now to appropriate the $550,000,000 to complete its contribution for 1945 and, according to statements of UNRRA officials, will soon be asked to make a 1946 contribution of an additional $1,350,000,000 as its proportionate share of next year's operating expenses. Although these requests will be presented separately, they are, in fact, por-

tions of a continuing operation and are inseparable as to subject matter. They are therefore treated jointly by your committee in submitting this report and recommendations.

RECOMMENDATIONS

1. UNRRA should be permitted to finish the job in Europe.

There is nothing in UNRRA's record to inspire confidence in that organization. On the contrary, the record is one of inefficiency, political intrigue, mismanagement, and downright poor administration. In response to widespread criticism, there has been some improvement in the past few months—but not enough to prevent some Congressmen recently returned from Europe from expressing the belief that the organization should, even now, be abandoned and the job of European relief turned over to a more effective organization.

Other things being equal, your committee would agree with those who believe we should do away with UNRRA and make a fresh start. Unfortunately, however, we do not have a free choice. Winter is almost upon us—winter that will bring misery, starvation, and pestilence to millions of human beings in Europe. In spite of its shortcomings, UNRRA's pipe lines are now filled—its organization is in existence. Food, clothing, medical supplies, the tools of rehabilitation, are being delivered to the beneficiary governments. If safeguards such as are proposed later in this report are adopted, a reasonable proportion of such supplies will reach those for whom they are intended.

Neither the Red Cross, the military, nor any other existing organization of which this committee is aware is prepared to step in and take over this job. There is no time to create a new organization. Relief of human misery, not administrative efficiency, is the goal before us.

We believe, therefore, that UNRRA should be continued to do the relief job in Europe this winter—and that it should receive the wholehearted support of this Government and the people of the United States in improving its administrative and operating effectiveness and accomplishing its humane purposes.

2. The $550,000,000 remaining to complete the current contribution of the United States toward UNRRA's operating expenses should be made available immediately.

This is a national obligation. It is unthinkable that the United States should now default on the commitments it has made to UNRRA and which UNRRA in turn has made, in reliance upon us, to the people of the liberated countries of Europe, and the hundreds of thousands of displaced persons now homeless and penniless and without any means of helping themselves.

UNRRA's funds are almost exhausted. The $550,000,000 to which the United States is committed should be made available without delay.

3. The United States should contribute its proportionate share of any additional amount found reasonably necessary to fulfill amply UNRRA's obligations in Europe this winter.

The $550,000,000 remaining of our original contribution will not be adequate to carry on relief activities in Europe throughout the coming winter. The original allocations were regarded as the 1945 contributions to UNRRA's operations and that organization has announced its intention of requesting another $1,350,000,000 from the United States for 1946 operations, and proportionate contributions from other participating nations.

We believe that whatever amount is needed should be made available without stint. Continuation of relief through this critical winter and next spring is more than a matter of good faith. It is a question of basic humanity and of completing the objectives for which we have fought.

Furthermore, our own security and self-interest will be best served by pitching in now to relieve the desperate plight of those people who were lately our allies. The unleashing of the atomic bomb has placed an obligation upon this nation—the awful seriousness of which we are just now beginning fully to realize—to prevent that dreadful power ever being used in warfare again. The atomic bomb cannot be successfully outlawed, suppressed, or monopolized.

We can prevent its use in warfare again only by building a world in which there will be no war. The seeds of peace do not thrive in an environment of hunger, disillusionment, and disease. Everything we can do, therefore, to alleviate suffering in Europe this winter will be a sound investment in peace for the world, security for ourselves, and control of the atomic bomb in the only way it can be controlled—by removing the desire to make war.

4. UNRRA should present a budget for 1946 operations in Europe.

The United States should contribute promptly and generously whatever amount may be needed as its share of completing the relief job in Europe, and UNRRA should be instructed now to prepare a budget on such a basis. The amount required should not be anywhere near the $1,350,000,000 presently contemplated as the 1946 contribution of the United States, for two reasons: (1) the 1946 UNRRA program now includes operations in the Orient, which we believe should be dealt with separately; (2) UNRRA operations are not carried out on a strict calendar year basis and part of the $550,000,000 still due on our 1946 contribution will remain available for 1946 operations in Europe.

UNRRA is prohibited by its own directives from obligating any funds not actually available on hand or on request. Its purchases of supplies in this hemisphere for European delivery are made 1 to 6 months prior to the date of shipment, and average about 2 months. Thus, supplies being purchased now will generally be shipped in December and UNRRA's shipment program for the balance of the calendar year is virtually completed without the $550,000,000 still to be made available by the United States. It is reasonable to assume, therefore, that a major portion of the supplies purchased with that money will be scheduled for shipment during the first months of 1946, and that the additional contributions required to complete this season's operations in Europe might be considerably less than a calendar-year calculation would indicate.

While the United States should contribute generously every cent that is required of it for this purpose, it should insist on UNRRA operations being conducted on a sound, businesslike basis and should safeguard both its own investment and the welfare of those for whom relief is intended by attaching several specific stipulations to expenditure after December 31, 1945, of any funds contributed by the United States, including the amount still to be paid on the 1945 contribution.

5. European relief operations should end with next year's harvest.

This coming winter is the crucial period in Europe. Need for outside assistance will probably carry over into next spring and summer. But by the time of the next harvest—assuming normal growing conditions—the need for relief shipments should have ended.

The expressed purpose of UNRRA is not merely to provide emergency relief, soup-kitchen style, but to assist the recipient nations to become self-supporting. Observers in Europe have frequently encountered the idea in the liberated countries that the flow of UNRRA supplies might continue indefinitely.

We believe that all concerned will benefit thereby if recipient countries in Europe are put on notice now that there will be no UNRRA shipments of foodstuffs after August 31, 1946, nor of rehabilitation materials after October 30, 1946, and that the UNRRA operation in Europe will be dissolved at that time. Our appropriations should make this stipulation.

6. The press should have free access to UNRRA recipient nations.

There has been far too much secrecy surrounding relief operations. UNRRA is extending its operations into the Byelorussian Republic and the Ukranian S. S. R. Little is known about conditions in these countries and it is unlikely that restrictions on coverage by the press which now handicap correspondents in many recipient countries will be any less severe in these areas.

Billion-dollar relief and rehabilitation is a subject in which those who contribute are legitimately interested. Such activities should be conducted in the full light of day and the American public has no reason to be satisfied with the censored reports of Government propagandists or the diplomatically worded accounts of unknown UNRRA observers.

We want to know where relief supplies are going and what is being done with them and we believe we have the right to learn this from the uncensored dispatches of our own press representatives in whom we have confidence. We believe, therefore, that accredited press and radio representatives of the member nations of UNRRA must be granted access to all countries where UNRRA supplies or materials are delivered, and complete freedom to observe and report on distribution and utilization of such supplies, and that our contribution should be made with this stipulation.

7. Markings showing the nation of origin should not be removed from UNRRA supplies.

There are well-authenticated reports of markings on UNRRA supplies indicating that they originated in the United States being removed or obliterated before such goods were sold or distributed.

8. All trade agreements, full information on exports and imports, and periodic financial statements should be made available to UNRRA, particularly showing funds accruing from sale of UNRRA goods.

Lack of adequate foreign exchange is one of the basic qualifications for assistance from UNRRA. It is inconceivable that UNRRA should be able to plan a program of food or industrial imports if it does not have full information as to what foodstuffs or other materials are being imported or exported under secret agreements by the country it is trying to assist. There can be little doubt that such secret agreements are now in effect.

As to accounting for UNRRA supplies, it must be remembered that UNRRA has no control or supervision whatever over disposal of its relief materials. UNRRA supplies are turned over to the government of the beneficiary country and become the property of such government at the time they cross the border or are landed at a port of that nation. Thereafter UNRRA has authority only to observe the manner in which such supplies are disposed of and to protest if it finds that there is discrimination in the use to which the materials are put.

Some UNRRA supplies are distributed free of charge to persons needing relief, but others—probably the greater part of all provided—are sold by the recipient government either through normal trade channels or in any other way it may see fit. It is this feature, most of all, which has given rise to the frequently repeated charge that UNRRA is not primarily a relief operation but a political instrument for bolstering the authority and improving the position of the governments now in control in the various nations receiving supplies.

Be this as it may, it is an established fact that no accounting as such is required

by UNRRA on the sale or other distribution of its supplies. The recipient government must agree to utilize all such income to pay for other relief supplies or services, including the cost of operating the UNRRA mission in the country, but UNRRA has apparently been satisfied if returns from sale of goods have in fact been sufficient to support its mission, and has not asked—or at least has not obtained—any other accounting of such funds.

Equally serious as this slip-shod method of bookkeeping is the charge that UNRRA supplies have actually been diverted from their civilian-relief purpose after becoming the property of the respective recipient governments. There are well-substantiated reports of UNRRA supplies being taken and used by foreign military units stationed in beneficiary countries and some indication that such supplies have actually been shipped out of beneficiary countries for sale elsewhere.

9. Procurement of trucks should be speeded up and all motor-transport equipment should remain the property of UNRRA until its operations are completed.

Trucks are probably the most important single item of relief in most of the European countries in which UNRRA operates. Transportation equipment and facilities were so completely destroyed by the war that they simply no longer exist and transportation in many parts of Europe is still almost entirely paralyzed.

Members of this committee were told repeatedly in Europe of adequate crops of foodstuffs within 200 miles of starving cities which could not be used because there was no means of bringing them in. Growing weather has been favorable in most of Europe this year with the exception of Greece and Italy. In spite of abundant local production, however, we are faced with the anomaly of food actually going unused in some places while people a relatively short distance away are hungry because the food cannot be transported to them. The same situation, of course, inhibits adequate distribution of UNRRA supplies sent into the country.

The committee believes that UNRRA officials are aware of the importance of truck transportation to achievement of the relief program but it believes that the system under which trucks are employed could be drastically improved. UNRRA officials were unable to give the committee, for example, any clear idea of the arrangements which have been made for adequate maintenance and repair of trucks used in their operations. These trucks are surplus military vehicles and while they are presumably in good condition when turned over to UNRRA, any American knows that they must have constant expert maintenance and repair or they will soon be immobilized, and that maintenance of fleets of hundreds or thousands of such trucks cannot be carried on successfully except on an organized technically controlled basis.

Trucks, like all other UNRRA supplies, become the property of the recipient government at the moment they enter the country. They are driven up to the border, title is transferred to the recipient government, native drivers take them away, and UNRRA thereafter has neither supervision over the manner in which they are used nor any responsibility for their continued operation.

We believe UNRRA should have both such supervision and responsibility. Motor transport delivered to recipient nations under the UNRRA program should remain the property of UNRRA until its program in that country has been completed; UNRRA should have direct authority and control over its disposition and utilization, full responsibility for its maintenance and repair, and authority to allocate all fuel and lubricants supplied by the Administration. Any appropriations made hereafter to UNRRA should contain this stipulation.

Such an arrangement will place control and responsibility where it belongs and should contribute materially to the cause of actual relief of suffering by greatly increasing the efficiency and effectiveness of operations. Rigid supervision by UNRRA should set at rest the unsavory stories of misuse and disappearance of UNRRA trucks and give UNRRA the authority to correct such conditions if they are proved to exist.

The committee believes, too, that if relief is to be provided adequately in Europe this winter the rate at which trucks are being transferred to UNRRA from military surpluses in Europe must be considerably accelerated. UNRRA plans to acquire 62,034 trucks for European use. These are now being delivered at a rate reported to be about 600 per day, but 200 of these are from Canadian and British sources. All but 10,460 of the trucks will come from American sources—chiefly Army surplus—and at a delivery rate of 400 per day it will take several months to accomplish the transfer. The job of speeding up these deliveries would seem to be one to be tackled jointly by UNRRA and the Army.

Incidentally, the committee respectfully suggests that UNRRA officials and the War Department give some thought immediately to the possibility of using war veterans to service UNRRA transport equipment in beneficiary countries. It might be that soldiers no longer needed in Army transport units in Europe and still waiting for their return to this country would be willing to volunteer for employment as UNRRA mechanics or maintenance men if given an Army furlough for that purpose or an overseas discharge.

10. UNRRA must not be made the dumping ground for unwanted American surpluses.

A considerable portion of the supplies used by UNRRA can be procured from war and agricultural surpluses of the United States and UNRRA officials have shown a willingness to do this. But there is a limit to which this policy should be carried.

UNRRA directives require that 90 percent of the amount contributed by any nation shall be spent for supplies purchased from that nation. The United States provides 72 percent of UNRRA's total operating budget. It is easy to see, therefore that—in view of the great proportion of UNRRA goods which must be purchased from the United States—undue insistence by our Government officials on UNRRA taking surpluses off their hands, whether they fit into the UNRRA plan of operation or not, would seriously embarrass UNRRA's plans and impede its relief program.

If such surpluses as we have happen to fit into UNRRA's dietary and relief schedule, they should be used for that purpose; if they don't, pressure should not be exerted on UNRRA officials to take over these surpluses just for the sake of helping one of our Government agencies out of a tight situation.

The committee feels that attention should be called to this situation because of the unfortunate tendency manifested in several Government agencies in the past few weeks to regard UNRRA as a convenient dumping ground into which any embarrassing surplus with which an agency finds itself stuck can be quietly unloaded. This may make the agency's record look good on paper, but it will not contribute to the effectiveness of European relief.

Any surpluses on the hands of our governmental agencies have already been paid for once by the American taxpayer. If they are to be given away, there are places other than UNRRA where they may be more appropriately disposed of. UNRRA does not operate in France, Belgium, Holland, the United Kingdom, nor Russia proper. Rather than foisting off unwanted surpluses on UNRRA, they might rather be made available to some of these other countries.

11. Operations under the existing UNRRA set-up should be limited to Europe and a new organization established to conduct relief in the Orient.

China will be the scene of the largest single program of relief and rehabilitation to be undertaken. Relief operations in the Orient will be carried out almost entirely in China and the Philippines, with the Philippines as a natural center of distribution. These programs have as yet hardly been started. There is still time to establish them on a sounder basis than that on which relief in Europe is being conducted, and there seems to be little sense in turning these operations over to an organization which has indicated such doubtful effectiveness elsewhere.

It would seem to be the course of sound administration to make a fresh start in the Far East with an agency geared to the specific requirements of the China operation and unhampered by a background of political intrigue, poor administration, and questionable effectiveness, which is UNRRA's inheritance from its European operations.

It is respectfully suggested, therefore, that the United States enter into conversations with China and the Philippines leading to establishment of a mutually acceptable reorganization to take over at the earliest possible date whatever outside relief activity is required in the Far East.

Respectfully submitted.

THOMAS A. JENKINS,

## Letter of Washington Representative of the National WCTU

EXTENSION OF REMARKS
OF
## HON. JOSEPH R. BRYSON
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

*Monday, October 29, 1945*

Mr. BRYSON. Mr. Speaker, at the request of the National Woman's Christian Temperance Union and for the purpose of rectifying the grave injustice that has apparently been done them by the publication of a garbled version of a letter to the Washington Daily News, I am inserting the text of the letter as it went to the newspaper, showing the date:

AUGUST 20, 1945.

Mr. CHARLES STEVENSON,
*City Editor, the Washington Daily News,*
*Washington, D. C.*

DEAR SIR: As I am sure it cannot be the policy of your paper to publish irresponsible statements from persons having no connection with an organization as the statements of the organization, may I ask the courtesy of a correction of the statement which appeared in your publication of August 14 and was attributed to the WCTU? I am the only person in the city representing the National WCTU, and I was absent from the city on vacation at the time and have only had the statement called to my attention this morning. I have talked with Mrs. Coates, the president of the District of Columbia WCTU and its official spokesman, and have learned that she knows nothing about the statement and did not make it—which, of course, I knew, as the WCTU is not in the habit of making statements of that character.

We certainly should never be guilty of such an unkind and unjust aspersion on the men and women who represent the people of the United States in Congress. There are too many fine men and women here giving their all even until death in the effort to meet the harassing problems of our day both within and without the Nation.

There is too much alcohol circulating in Washington, but let us not forget it was Members of Congress who tried to stop appropriations for "entertainment" which they had reason to believe was largely made up of liquor.

Very truly,

ELIZABETH A. SMART,
*Washington Representative,*
*National WCTU.*

## Doing Business With Nazis

EXTENSION OF REMARKS
OF
**HON. JOHN M. COFFEE**
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

*Monday, October 29, 1945*

Mr. COFFEE. Mr. Speaker, in the October issue of the magazine known as Prevent World War III, there appeared an editorial entitled "Black Lists," which contains provocative and challenging statements well worthy of study by my colleagues and the country.

Here it is:

BLACK LISTS

We are informed that the black list of German and pro-German firms in the Americas and in European neutral countries may be withdrawn in the near future.

This would be a dangerous development. The German war machine has been smashed, but now it appears that Nazi-indoctrinated and pro-German tradesmen in all corners of the world will be given an opportunity to keep the ideology of Pan-Germanism alive.

That is what happened after World War I. Britain made the original mistake of extending a helping hand to German industry. Then we followed suit. Germany took advantage of our errors and built the enormous war machine which launched World War II. The plan was carefully worked out by deceit, selfishness, and fraud, with characteristic German thoroughness, disregarding all morals and ethics. While constructing this war machine, the Germans were pleading good will, friendship, and poverty.

After 1919 the Germans carefully thought out their commercial attack. They openly advocated the breaking down of all business ethics; they relied upon trickery and circumvention to gain their end. They stopped at nothing, from the dumping of goods to crush competition, to false labels and the breaking of contracts. These are plain historical facts.

The dropping of the black-list would open the door wide for Germany to repeat. It would practically demonstrate to the entire world that the Chamberlain appeasement policies are still alive.

We must take a firm stand against such developments. They might possibly be in the interest of individual businessmen, but they are emphatically not in the interest of the American people and the other peoples of the United Nations. In order that the peaceful reconstruction of the world shall not be jeopardized, it is necessary for us to observe closely the economic and commercial steps taken by our allies.

If the German "trade ambassadors" are permitted to operate and to reaffirm their influence in the various countries, they will simply suck foreign exchange into Germany for the war chest of World War III.

We should not allow the healthy competition of American and British economic enterprises to founder in the storm of German deceit and treachery.

## The Detroit Labor Situation

EXTENSION OF REMARKS
OF
**HON. JOHN LESINSKI**
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

*Monday, October 29, 1945*

Mr. LESINSKI. Mr. Speaker, under permission granted to extend my remarks in the RECORD, I include the text of a speech by Walter P. Reuther, UAW-CIO, vice president and director of the union's General Motors department, over the Mutual Broadcasting System Friday evening, October 26. Mr. Reuther's speech sets forth in detail the present labor situation in the Detroit area and contains much valuable information in regard to that subject.

The speech is as follows:

This discussion tonight is more than an argument between General Motors Corp. and the UAW-CIO. It is an argument as to which way America is going. Did the American people fight this war to go back to unemployment and insecurity, or did they fight to win their way forward to a better and more abundant life?

The war has proven that production is not our problem; our problem is consumption. How do we get the means of moving the good things of life from farm and factory to the store shelves, to the homes of America?

The American people know the answer. It is very simple. First, there must be jobs for every American able and willing to work. And, second, such jobs must provide the purchasing power to match our ability to produce.

Secretary of the Treasury Vinson has stated: "The American people are in the pleasant predicament of having to learn to live 50 percent better than they have ever lived before. Only the defeatist can scoff at the inescapable fact that we must build our economy on that basis."

We can learn to live 50 percent better, providing that we put the necessary purchasing power into the pockets of farmers, workers, white-collar and professional groups.

Private industry has the ability and the responsibility to make its contribution toward achieving this goal; and—if it is to survive—it must make the contribution now.

Only yesterday Government economists, after a careful study of the financial position of American industry, advised the President that industry can and must raise wages at least 24 percent without increasing prices as the key to winning the peace.

The facts in the current GM wage negotiations prove that General Motors Corp. can pay 30 percent higher wage rates without raising the price of cars one cent and still make record profits. General Motors can do more; it can make a three-way split among workers, consumers, and stockholders. Chevrolet car prices, we can prove, can be reduced at least $100 at the same time that wage rates are increased 30 percent; while net profits can be higher than any year in GM history.

The outcome of this case will affect the welfare of every American. It will decide whether we are really going to have prosperity, and if so, for whom and for how long. Will there be jobs enough to go around? Will wages and salaries be high enough to buy what our farms and factories can produce in such abundance—at a rate unsurpassed in the history of the world?

Now that we have won the war on the battle fronts, and our men are coming back, are we going to finish the job, or are we going to make a mess of it again—this time with 19,000,000 unemployed?

For example, are we going to take the advice of C. E. Wilson, president of General Motors, that the normal workweek be lengthened to 45 or 48 hours, thereby robbing additional millions of workers of jobs—including millions of veterans, now returning, eager for jobs and a fresh start?

Reconversion Director John Snyder has estimated 8,000,000 unemployed by spring. How long a line of unemployed does Mr. Wilson want?

Are we going to let ourselves be hypnotized by the gigantic lie—the lie that higher wages necessarily and inevitably mean higher costs and higher prices, when the whole secret of our great machine civilization is that more and more goods can be produced at lower and lower prices, with higher and higher wages being paid to insure a steadily rising market for the goods produced?

No domestic issue more directly affects every one of us at this moment than this basic question of wages, prices, and profits. Because the outcome of the GM wage negotiations affects all Americans, the public is entitled to know what goes on in these negotiations. The union has proposed public negotiations. The corporation has refused, preferring to meet behind closed doors. General Motors has stated that if and after a strike occurred, they would then be willing to agree to public negotiations. The union wants public negotiations now, so that the issues can be settled on the basis of facts and a strike averted.

The union has nothing to hide. We want all the cards on the table face up, so the public can see the true facts. We have stated repeatedly that the issue must be settled on the basis of economic facts, and not by the arbitrary use of economic power, either by management or by labor.

Now let me give you a few highlights from our negotiations thus far:

General Motors representatives have told us that prices and profits are—and I quote from the record—"none of your (our) damned business." We have been told that if we would forget about prices and profits, then we could get somewhere.

In other words, if we were to enter into a conspiracy against you, the American people, who are the consumers of General Motors products, we might get a wage increase that would then be made the excuse for charging you higher prices.

This proposal we flatly rejected. American labor will not be a party to jacking up prices. We say that the price line can and must be held. We do not propose to be paid off in the wooden nickels of inflation. We do not propose to eat the bitter bread of a new depression.

In rejecting the corporation's proposal, we made a counteroffer—a firm, fair offer that I want to repeat again tonight. We said that if General Motors could disprove our facts, hard economic facts taken from the corporation's own reports and from Government documents, and could show that it could not pay the 30-percent increase in wages without increasing prices, then we would cut our demand to whatever top figure could be paid without increasing prices. But, we added, unless and until our facts are disproved, we shall not concede one red cent.

The more than 325,000 GM workers represented by their union in these negotiations have built their wage demand for a 30-percent increase—without raising prices—on solid facts.

I can only give you a few of these facts tonight, but if you want more facts—and I hope you do—please write me in care of the UAW-CIO, Detroit, and I'll send you a copy of the economic brief we have presented to the General Motors Corporation.

Can General Motors pay a 30 percent wage increase, maintain 1942 prices, and still make a high return on its investment? Let's see what General Motors did in 1941, its last year of auto production.

In 1941 General Motors actually received more in profits before taxes for each man-hour worked than it paid out in wages. For every dollar a General Motor worker earned in wages for his family, he produced more than a dollar in profits for the corporation.

In the last 9 years, General Motors earnings have paid back the stockholders' investment in full and 45 percent in addition, a total of 145 percent after taxes.

Market surveys show a demand right now for 18,000,000 cars, a demand which cannot be met before 1952. Given this unlimited market, General Motors is left free to achieve capacity production and thus reap the enormous profits which come with maximum output.

Now for the answer to the big lie that higher wages mean higher costs and higher costs mean higher prices: From 1936 to 1941 General Motors wages increased more than twice as much as General Motors prices. Yet profits outstripped both wages and prices, jumping 61 percent. Why? Because volume of output increased 21 percent.

General Motors has predicted a 50-percent increase in postwar sales. GM profits at this greatly increased level of production will so greatly exceed prewar profits as to make possible a three-way split of these excess profits. GM can meet our 30-percent wage demand, can cut the price of its Chevrolet $100 f. o. b. Detroit, and still keep $105,000,000 more in profit after taxes than its average profit for the last 10 years of car production.

Last week the corporation announced that car production would hit a level of 72 percent above prewar—which means that profits will soar to unheard-of heights.

Mr. C. E. Wilson has told GM workers, whose average weekly take-home pay during the war was $56, now cut to $44 per week, that their wage demand is unreasonable. Look who's talking. Mr. Wilson made an average of $8,846 per week—and his take-home pay has not been cut. Is it not more important to the future welfare and prosperity of the Nation to put more dollars into the pockets of 325,000 GM workers who get $44 per week when they work, rather than into the hands of a few GM officials who already have more than they can spend?

More dollars in the pay envelopes of GM workers will keep moving across the store counters of this Nation, into the pockets of farmers, other manufacturers and workers. We want to buy more of the things all the rest of you grow and make, and we want you to buy the cars we make.

The GM profit figures we have cited make no allowance for the enormous advance in labor productivity due to improved methods and machines developed during war production. The Bureau of Labor Statistics tells us we may expect a sharp rise in output per man-hour during the next few years. Improved machines and technology mean greater output at lower cost per man-hour.

General Motors is one of the most efficient corporations in the world and GM workers earn every dollar they get and more. In negotiations this week I proposed to Mr. Anderson, whom you have just heard, that he and I go into a GM plant and work side by side so that he could learn for himself that GM workers do an honest day's work. Mr. Anderson declined my offer.

The production record of the GM workers is second to none in the Nation. They stayed at their jobs throughout war production, despite grievances and provocations. Despite the corporation attack on the union in full-page ads, Mr. C. E. Wilson admitted to the press last week that the work record of GM workers was 14 times better than the average for industry as a whole.

Three hundred and twenty-five thousand GM workers feel that their wage demands are just in terms of their own need and the welfare of the Nation.

The facts prove that General Motors can increase wage rates 30 percent without raising prices and still make substantial profits.

This is our story. We have laid the facts before the American public, with the aid of press and radio. It is up to General Motors to disprove our facts or pay the 30 percent.

---

## Gen. Frank T. Hines

EXTENSION OF REMARKS

OF

## HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

*Monday, October 29, 1945*

Mr. RANKIN. Mr. Speaker, under permission granted me to extend my remarks in the RECORD, I insert the following speech which I delivered at a dinner given in honor of Gen. Frank T. Hines, at the Mayflower Hotel, on October 18, 1945:

Mr. RANKIN. Mr. Toastmaster, I plead guilty to most of the charges preferred, and especially to the one that I seldom attend a dinner. However, the provocation has been rather great tonight for me to break over and change my future course in that respect.

I am reminded of an old fellow down at home who used to go park himself in the amen corner at church, listen to the preacher's sermon rather carefully, and pick it to pieces during the week while he and the minister were fishing or playing golf. One day the preacher decided to quote his text without reading it. He told where to find it and said, "It reads thus:

"The Lord fed 5 people on 5,000 loaves and 2,000 fishes."

His friend laughed, punched the man next to him and said, "I could have done that." The preacher heard him and became rather disturbed.

After the sermon, he buttonholed this fellow and said, "What was it that fool said to you when I gave out my text?" He said, "Fool nothing; do you know what you said? You said the Lord fed 5 people on 5,000 loaves and 2,000 fishes." The preacher almost went through the floor. He said, "That was a terrible mistake; but I'll correct it next Sunday. Just watch me get even with him."

So the next Sunday the old fellow was there waiting for him. The preacher wisely adjusted his glasses, reached over for his Bible, opened it, and read his text. It said, "The Lord fed 5,000 people on 5 loaves and 2 fishes." He closed his book, laid it down, looked at his friend, and said, "Could you have done that?" The fellow said, "Yes, I believe I could." "Well," the preacher said, "how would you have done it?" "Why," he said, "on what you had left over last Sunday." [Laughter.]

So what I see here tonight rather encourages me to say that this won't be the last time.

I just want to add one word to what the toastmaster said a while ago. He left you all out on a limb. He talked you to the end of the ceremonies here and then started you home. But I will give you a tip. One of my predecessors in Congress was probably one of the most witty individuals who ever served in the House of Representatives. He used to tell this one on himself. He said away back in the old prewar, pre-Ford, pre-Volstead days, when he was practicing law at home, they had a court one day and a couple of visiting lawyers met with him down at the only hotel in town and played poker until about 4 o'clock the next morning. He said there were no automobiles in those days and when he started home there was nobody on the street except him, and he said it was a good thing there wasn't anybody else, because it took about all the street for him to get home on.

He said that he eased off his shoes at the door and thought he would slip into bed without waking his wife up. He was just settling down and congratulating himself when his wife awoke, got about half awake. She had a little dog that was always running around over the house and jumping up on the bed, the sofas, and the chairs, and she thought he was that little dog. She reached over and put her hand on his head, shook him, and said, "Get out of here, Fido." He said, "You know, I just did have presence of mind enough to lick her hand." [Laughter].

You may need that tip before daylight.

I want to assure you that it is a sad pleasure for me to come here tonight under these circumstances to bid General Hines good-by, after more than 20 years of service together in the most difficult work connected with this Government. In this connection, I want to say that I agree with Thomas Jefferson when he said that there are three questions to be asked of an applicant for public office: "Is he honest? Is he qualified? Is he faithful?" General Hines measures up to that standard. [Applause.]

I have no reason at all for any flattery. I am not a patronage politican. There is not a man on the pay roll of the Veterans' Administration who was placed there by my appointment. I have not tried to use it for my own interest, but have looked to the best interest of the veterans themselves. I was placed on the Veterans' Committee the day it was created, and for the last 15 years I have been its chairman. I know what it means. I know the hundreds of thousands of disabled men that General Hines has had to deal with, and I know that he is not only qualified, but I will say that no man in America is better qualified for the job than he is. [Applause.]

He has been faithful. In spite of all the abuse and criticism that has been heaped upon him, I can truthfully say that he stands out as one of the most conscientious public servants this Government has ever had. [Applause.]

His integrity has never been questioned by any honest, informed man. I repeat that: His integrity has never been questioned by any honest, informed man.

A few weeks ago there appeared a magazine article written by a man whom I consider a draft dodger. He said he was classified as a IV-A. I said, "What is that?" "Oh," he said, "that meant I was engaged in some essential work." I came to find out that he was out writing just such slanderous stuff as he published on the Veterans' Administration for home consumption, while your sons were fighting the battle of the Republic. When we brought his statements and his testimony in and investigated them, we found them to be not only conglomerations of falsehood and misrepresentations but often quotations from crazy men who didn't know what they were talking about.

Another one of these critics was a Communist, with a Communist record a yard long, with the Dies committee, and a longer one than that with the FBI. Yet that filthy stuff was published all over this country to disturb the fathers and mothers of the sons who were being taken care of by the Veterans' Administration.

The Veterans' Administration is the largest organization of its kind on earth. We have 94 hospitals. There is not another hospital organization in the world that compares with it. When these charges were first published I went myself time and time again to look into the conditions. I remember I slipped into one hospital when nobody was looking for me. They did not know who I was. I started in the storage room where they kept their food, and I went through the entire hospital. I had picked up the dietitian and the head nurse. They said, "We would like to know your name." I said, "My name is RANKIN." "Oh, my goodness," one of them said, "you are chairman of the Veterans' Committee, aren't you? Have you seen the manager here?" I said, "No; I'm looking at the hospital. I'll see the manager when I get through." [Laughter.]

I went on through the kitchen. I have been in enough kitchens to know when one is clean. I went on through the dining room and sat down and ate with them. I just picked up the plate next to me. I didn't let them bring me an extra one. I went through the wards, I went through the clinic; I examined the medical supplies. I made the best investigation I could, and I failed to find any of the horrible conditions these two propagandists described. I have gone through hospital after hospital, and I have yet to find any of the conditions that were publicized to the world in order to discredit the Veterans' Administration and to disturb the fathers and mothers of this country. I sent the members of my committee out on a similar expedition. They came back with the same report.

Occasionally, of course, they would find a man who was a misfit. We had some doctors shoved over onto the Veterans' Administration that we hoped to get rid of. And we would have got rid of them if General Hines had remained as head of the Veterans' Administration. Some of them the Army didn't want, and I don't blame them, and some of them didn't want to get into the Army, because they didn't want to get close to the firing line. So we have had them to contend with.

Yet with all that there is not a State insane hospital in a single State of this Union that begins to compare with any veterans' neuropsychiatric or mental hospital anywhere in the whole country. [Applause.]

Now, they told you that these veterans were abused. I know one fellow who said, "Here is one who will give us a story. He will tell us all about it." They called him in, and he said, "Yes, I will tell you. There are things going on here in this hospital that are terrible." He said, "I will tell you what they do. They don't let it out, but I know it, and since you have come to me I will tell you confidentially." He said, "They take patients in and give them hot baths. They strip them and put them down in the tub and turn the hot water on them and burn them to death. They keep them there until the are thoroughly cooked, and then they slice them up and serve them that night for supper."

They realized then that the poor fellow was hopelessly insane. Yet, stories from just such sources were published in those magazine articles and spread throughout the country.

I want to call your attention to the difference between a veterans' hospital and a State insane asylum. When a veteran becomes mentally deranged, he is sent to a veterans' hospital, where he is given the very best treatment, and when he comes out if he has recovered, he goes back into his usual avocation. I know numbers and numbers of them who are back today in their usual avocations, working and making an honest living, an honorable living, and are respected in the community. If they had gone to a State insane asylum, the chances are they would have been regarded for life as ex-inmates of an insane asylum, and there would have been an atmosphere of suspicion about them. So these men are being taken and rehabilitated and enabled to resume their usual avocations without any such stigma. Two and a half million ex-servicemen have passed through our veterans' hospitals since General Hines has been at the head of the Veterans' Administration, and just think how few cases of just criticism there have been. I doubt if there is another record of its kind in the world that will compare with it. So far as I know not a single person has ever said or inimated that a single dollar of Government money ever stuck to General Hinds' hands. [Applause.]

Yet when he took over he succeeded a man, as you know, who went to the penitentiary for stealing the medicine and the blankets provided for the disabled servicemen.

Criticisms have been made—and I don't say there are not some just criticisms, because these have been trying times to get doctors, nurses, and other employees—but you will find that these young men General Hines has helped to rehabilitate in every nook and corner of the United States will sing his praises long after he has gone out of his present position.

I am saying this because I have been more intimately associated with him, perhaps, than any other man in Congress, because I am chairman of the only committee in either House that deals exclusively with the veterans of World War I and World War II, and that is the Committee on World War Veterans' Legislation. I have never seen the time when he was not more than willing to go on foot and out of his way to assist and serve the servicemen of this Nation.

I am probably taking up too much time, but I am simply telling you what is in my heart. General Hines' successor, General Bradley, came before our committee the other day and his difficulties began to appear, as Shakespeare says, "Not as single spies, but in battalions"; and when the going got a little tough, I said, "Now, remember, General, you have only been through a war up to now. You have a good deal to contend with from here on." [Laughter.]

General Bradley is a splendid general, a great general, a great man, and a great American, and he is assuming one of the most difficult jobs connected with this Government when he undertakes to fill the place now occupied by General Hines.

I am going to give him the same loyal support I have given General Hines, and do my best to help him succeed.

Let me say to our friend, the representative of Panama, who is with us tonight, that I envy you people in Panama. I admire your wonderful country and your wonderful climate, but I envy you because you are taking as our Ambassador to your country one of the ablest men in America, one of the finest men we have, and one of the most conscientious public servants I have ever known—General Frank T. Hines. [Applause.]

"An old man traveling on a lonely highway
Came at evening cold and gray
To a chasm deep and dark and wide
Through which there flowed a sullen tide.

"The old man crossed in the twilight dim
For the sullen stream had no fear for him,
But he turned when he had crossed to the other side,
And built a bridge to span the tide.

" 'Old man,' said a fellow pilgrim near,
'You waste your strength in building here.
'You've crossed the chasm deep and wide
'Why build a bridge at eventide?'

"The builder lifted his old gray head.
'Good friend in the path I've trod,' he said,
'There follows after me today
'A youth whose feet must pass this way.

" 'This chasm, which was naught to me
'To that fairhaired lad may a pitfall be.
'He too must cross in the twilight dim.
'Good friend, I'm building this bridge for him.' "

General Hines has built a bridge for these suffering veterans who came home from the last war and are coming home from this one. They will never forget you, General Hines. [Applause.]

---

## A Thought-Provoking Letter

EXTENSION OF REMARKS
OF
### HON. O. C. FISHER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

*Monday, October 29, 1945*

Mr. FISHER. Mr. Speaker, under leave to extend by remarks in the RECORD, I include a letter from an Army lieutenant now serving in Bavaria. The letter contains a lot of food for thought, and I hope it will be widely read:

OCTOBER 10, 1945.

HON. O. C. FISHER,
*House of Representatives,*
*Washington, D. C.*

DEAR SIR: First, let me make clear who I am and my interest in writing to you. I am a long-time citizen of Uvalde, Uvalde County, Tex., and am currently commanding a line company of an engineer combat battalion located in southern Bavaria. Due to the facts that my point score is low, that my business opportunity in Uvalde is being lost to me because of my absence, that I have a wife I have not seen in over a year, and that I am a civilian at heart, I, like a few million others, am extremely anxious to get home and out of the Army. Because of these facts I feel the necessity of calling attention to one civilian soldier's attitude on certain current questions. I am sure the Congressman has studied all of these matters carefully, but as a member of the constituency it is my duty, as well as my privilege, to express my viewpoints to the duly elected Representative.

I am not at liberty to criticize the Army for many of the things that it has done that has indicated inefficiency and waste, but I am at liberty to say that now that the fighting is just over is no time to castigate and render impotent our Army. I believe we should leave no stone unturned to maintain peace in the world and I am heartily in favor of all men's efforts for peace, but I am certain in my own mind that in time there will again be war on the earth. The attitude of all Europeans that I have met is such that they do not regard war with the great distaste with which it is favored in Texas. We must never be misled to believe that all hatchets are buried and we are all good friends from now on. Treaties are made to be broken and whenever an advantage, real or fancied, can be gained all of our fine agreements will be forgotten. I believe that is the average European's way of thinking and we can prolong the period of peace only so long as we make it a decided disadvantage to disturb the peace. Therefore, occupation of conquered countries is vitally necessary and all other peoples must be made to understand we will tolerate no action threatening the peace. Force is the only language understood so we must maintain the force.

Emotionally, and I am no exception, most Americans are anxious to get away from everything that is reminiscent of war and to get all of our men back home; but we must not lose sight of the hard facts involved. I realize it is not the proper thing

to do these days, but our lawmakers must see the true situation and lead us away from the fatal mistake of losing all we have fought for. If the draft is necessary to maintain our Army, though if all the people knew the need for a large Army I doubt that it would be necessary, then the draft must be continued at all costs. The cost of war never can be equally distributed to all individuals but all eligible individuals should be given the opportunity to contribute at least a portion of their share, and the draft is one way of encouraging some of the more reluctant. All of us who have fought the enemy on the field of battle feel that it is now time for others who were not called upon for so great a contribution to step forward and carry some of the not so great burden.

Another matter that has given me considerable food for thought is the attitudes of Americans themselves toward the principles of democracy. In my numerous talks with soldiers from all parts of the country I have been amazed to find a very predominant leaning toward what by some definitions is socialism. A startling indifference to the privileges and obligations of democracy is found on every side. If such is a true picture, then the way of life that I hold dear and I am sure the Congressman holds dear is ebbing away. I do not know what can be done about such a condition, but some method should be used to arouse enough interest in our way of government to see that it is preserved. The disgraceful labor strikes now sweeping the country convince me that both capital and labor need a thorough indoctrination in the democratic principles of living laid down in the greatest of all books and the Constitution of the United States.

Personally, I have appreciated the manner in which the Congressman has represented the constituency, and for a continuation of such representation my support is always available.

All of my comments are my own and are in no way intended to have any connection to my position in the Army.

Sincerely yours,

*First Lieutenant, CE.*

## American Policy on Palestine

EXTENSION OF REMARKS

OF

### HON. HERMAN P. EBERHARTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, October 29, 1945*

Mr. EBERHARTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following text of memorandum submitted by the American Zionist Emergency Council to the State Department on the occasion of the meeting of Dr. Abba Hillel Silver and Dr. Stephen S. Wise with Secretary James F. Byrnes, October 23, 1945:

1. The exchange of correspondence between President Roosevelt and King ibn-Saud which has now been made public and the statement by the Secretary of State of October 18 raise issues of fundamental importance in regard to the implementation of American policy on Palestine. Viewed in the light of the unequivocal and firmly established policy of the American Government and people as expressed in a long series of public and authoritative acts and pronouncements, that statement and correspondence, it is submitted, call for immediate clarification.

2. In March 1919 President Wilson, who was directly associated with the issuance of the Balfour Declaration, stated that:

"The Allied Nations, with the fullest concurrence of our Government and people, are agreed that in Palestine shall be laid the foundations of a Jewish Commonwealth."

Every President since that date has given his support to the Jewish National Home objective. Most recently, in statements issued by President Roosevelt on October 15, 1944, and March 16, 1945, that is to say, almost contemporaneously with his correspondence with King ibn-Saud, the late President expressed his support for the establishment of Palestine as a Jewish Commonwealth. In addition to these pronouncements by the heads of the executive branch of the Government, the desires of the American people as to the policy to be pursued in Palestine have been repeatedly expressed in the clearest possible fashion.

On two occasions, in 1941 and 1945, a majority of the Members of both Houses of Congress joined in a declaration favoring the establishment of Palestine as a Jewish commonwealth. A similar declaration was made on July 4, 1945, by the governors of 40 out of the 48 States of the Union. Further, the legislatures of 33 States, representing 85 percent of the population of the United States, have recently gone on record in favor of the Zionist objective. In the summer of 1944 the national conventions of both major political parties adopted declarations favoring the opening of Palestine to unrestricted Jewish immigration and colonization and, in the words of the Democratic platform, "such a policy as to result in the establishment there of a free and democratic Jewish commonwealth." The late President Roosevelt, as well as President Truman, were elected on that platform. It must be recalled finally that our Government's support of the Jewish national home is recorded legislatively in two acts forming part of the supreme law of the land, namely, the joint resolution (No. 73) unanimously adopted in 1922 by the Sixty-seventh Congress of the United States; and the United States-British Convention on Palestine, ratified by the Senate on February 20, 1925, and proclaimed in December of that year.

3. The policy therefore to which our Government and people stand deeply committed is clear and unmistakable. Of this fact, however, neither the letter of President Roosevelt nor the statement of Secretary Byrnes take any cognizance whatever. It is true that in neither instance is the traditional American position in fact repudiated. Nevertheless, it is deeply disturbing that it should not have been found necessary to make affirmatively clear that American policy on Palestine has already been established by the public pronouncements of the Presidents of the United States and otherwise—a policy which is predicated upon the right of the Jewish people to rebuild their national home through free immigration and the close settlement of Jews on the land. That omission can only lead, and has already led, to serious doubts and misunderstandings.

It is not conceivable that the law of the land, the will of the American people, and the repeated pledges of the heads of our administration publicly made, should thus be disregarded in official correspondence. The issued raised by the publication of this correspondence cannot be ignored and places upon our Government the responsibility of indicating in clear and precise terms whether or not it abides by, and proposes to act in accordance with, the policy so long and firmly established.

4. President Roosevelt's letter refers to assurances previously given to King ibn-Saud regarding the attitude of the United States with respect to the question of Palestine. The exact nature of these assurances is not disclosed, but it is respectfully submitted that whatever their tenor, they would not be valid if inconsistent with the publicly stated objectives of American policy or with the terms of the Palestine Mandate.

5. At the same time, it is deeply to be regretted that President Roosevelt's letter, while assuring King ibn-Saud that no action would be taken by our Government that might prove hostile to the Arab people, failed to point out that the policy of the Jewish National Home, envisaging as it does free Jewish immigration into Palestine and the ultimate establishment there of a democratic commonwealth under the auspices of a Jewish majority, could not be conceived as hostile to the Arab people. The desire of the Jews to live in friendship and good neighborliness with the Arab countries and with the Arab inhabitants of Palestine is well known, and neither Jewish aspirations in Palestine nor the declared policy of this country in support thereof, nor yet the conduct of the Jewish people in Palestine resulting in great good to the Arabs can be construed as hostile to them.

6. The occasion will be taken separately to deal in detail with the contents of King ibn-Saud's letter and with the Arab claim to Palestine, a matter which had been considered fully by the Allied Nations in connection with the territorial settlements made at the end of World War I and the issuance of the Balfour Declaration and the Mandate for Palestine. It is doubly regrettable that the reply sent by President Roosevelt to that communication failed to repudiate its baseless attacks and its vilifications of the Jewish people. It is painful to observe that such calumnies as that the Arabs have reason to fear "a series of massacres" at the hands of the Zionists, that the latter "are preparing to create a form of Nazi-Fascism" and that it is the intention to "do away with" the inhabitants of Arab countries, should have been allowed to stand unchallenged by one who knew how false those statements are.

7. It is sufficient to say here with regard to King ibn-Saud's letter that the Arabs have neither legal nor moral title to the sovereignty over Palestine. While they conquered the country over 1,300 years ago, Arab rule ceased as early as 1071. Throughout the centuries the role of the Arabs in Palestine has not been creative but destructive. In the eroded, poverty-stricken and disease-ridden country which within the last few decades the Jewish people set out to reclaim, it was difficult to recognize the land of milk and honey described in the Bible. In the 20 years between the two World Wars the Jews have done much to repair the ravages of the previous 1300. They have conquered deserts and swamps, revived agriculture and industry and established in Palestine a sturdy, self-reliant community. The Pan-Arab claim to Palestine is an attempt to add yet another to the immense, but for the most part thinly populated and undeveloped territories of the independent Arab states. This expansionist appetite has recently manifected itself also in the demands put forward by the Arabs for Eritrea, the Sudan, and Cyrenaica.

The great mass of the people in the various Arab states are kept down in ignorance and fanaticism, in dirt and wretchedness by a ruling class which shows little or no interest in the improvement of their miserable lot. As regards the ethnic claims, about 75 percent of the Arabic-speaking people in Palestine today are themselves recent immigrants or the descendants of persons who emigrated to Palestine in comparatively recent times. If Palestine exists as a separate concept, it is because of its immemorial association with the Jews and Jewish history. At no time was there a Palestine Arab state. It was the Jewish people which produced in Palestine the civilization and religious culture which, along with that of Greece, molded the civilization and the spiritual life of the whole western world.

8. In general, it is desired to protest against a procedure which seems to accord a right to the various Arab states to be consulted in the affairs of Palestine. The right of our own Government as one of the principal Allied and Associated Powers in the First World War as well as by virtue of the United States-British convention above-mentioned, to participate in the future disposition of Palestine is obvious and unquestioned. The right of the Jewish people to be consulted is likewise clear and undeniable and is legally confirmed by the League of Nations mandate which, in recognizing the right of the Jewish people to reconstitute their national home in Palestine, authorized also the recognition of the Jewish Agency for Palestine as representing the interest of all Jews in the establishment of the national home. The Arab states are in this matter without legal standing of any kind and we submit that their attitude in recent years is certainly far from giving them a moral voice in this issue.

9. We feel constrained, at the same time, to make a frank statement of our views with regard to the course of action pursued by the executive branch of the Government and the State Department in particular, over a period of years. Despite the unbroken chain of pro-Zionist acts, promises, and pronouncements to which we have referred, the policy they express has not been translated into action. On the contrary, numerous acts and omissions have emboldened the Arab leaders to allege that the American Government was, in fact, withholding its support from the Zionist cause, and that the pronouncements made here from time to time were meant for home consumption. We have consistently disregarded these allegations as unwarranted aspersions upon the good faith and political integrity of our Government.

10. We are now compelled to review the situation in the light of the recent correspondence. We must recall that so far as we are aware, the Government took no effective action to protect the interests of the Jewish national home, at the time of the issuance of the British white paper in 1939, or to rectify that wrong in the years which followed. The Government did not energetically intervene even when opening the doors of Palestine became an urgent humanitarian necessity because of the wholesale slaughter of the Jews of Europe. It appears further that our Government failed to advise its representatives abroad, particularly in the Near East, that it was definitely committed to the policy of the Jewish national home and to instruct them to be guided accordingly. The State Department has on various occasions appointed to positions of importance in the Near East persons known as avowed opponents of this policy and has had to rely in turn upon reports and advices emanating from them. On two occasions the executive branch exerted its influence to prevent the adoption by Congress of a resolution reaffirming the traditional American policy on this subject. Above all, our Government has failed to utilize the fluid political conditions created by the war and the process of political reorientation and reorganization under way in the Near East, for the purpose of insuring the status of the Jewish national home in the context of its Near East policies.

11. On the other hand, our country has given generous support to Arab aspirations. It was among the first to recognize the independence of Syria and Lebanon. It has encouraged Arab States to make last-minute declarations of war against Germany on the eve of the San Francisco Conference, assuring them places of honor among the United Nations, irrespective of their war records. Nor has it withheld its support from the Arab League despite the fact that the League has declared its opposition to Jewish aspirations and has proclaimed the liquidation of the Jewish National Home as one of its major objectives.

12. The one gratifying positive act in relation to Palestine has been President Truman's recent request to Prime Minister Attlee, the outcome of which, however, is still uncertain. We take grateful note that the statement of Secretary Byrnes indicates that measures to facilitate immigration into Palestine of substantial numbers of the survivors of European Jewry should, and can be undertaken forthwith, and that such immigration does not affect the basic situation in Palestine. The basic situation is in fact that established by the Mandate, which calls for the facilitating of the immigration of Jews into Palestine and their close settlement on the land. We therefore earnestly hope that our Government will continue to press for the immediate admission of 100,000 Jews from Europe in line with President Truman's request. But the statement of the Secretary is silent regarding the attitude of the Government in relation to the basic situation. The only light which it sheds on that issue—which is the crux of the whole matter—is the statement that "it would be the policy of this Government not to reach final conclusions without a full consultation with Jewish and Arab leaders." This is a point of procedure rather than a definition of policy. Moreover, the statement indicates an intention to wait until any proposals emerge, rather than to act on its own initiative in conformity with established American policy.

13. The point has now been reached, at which ambiguity and delay are no longer feasible. Millions of American citizens, who have a strong moral and humanitarian interest in this problem, look to the Administration for immediate and forthright action, which will once and for all dispel any possible uncertainty regarding its present position and future intentions. We cannot believe that the menacing words of the spokesmen of countries which did not lift a finger in their own defense during the war and which were, indeed, either actively or passively hostile to the democracies, should be allowed to deflect our country from a just course of action. The request is made on behalf of masses of suffering humanity who cannot wait. It would be cruel to deny their last hope for individual and national rehabilitation; but it would be the very refinement of cruelty to keep them further in suspense, or to feed them with promises which turn to ashes in their mouth.

## Compulsory Peacetime Military Training

EXTENSION OF REMARKS
OF
### HON. FRED BRADLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Monday, October 29, 1945*

Mr. BRADLEY of Michigan. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include a recent broadcast on the subject of compulsory peacetime military training over radio stations WMAM, Marinette-Menominee; WDBC, Escanaba, and WSOO, Sault Ste. Marie, Mich.:

SHALL WE HAVE COMPULSORY MILITARY TRAINING?

President Truman stirred up a mild hornets' nest down here in Washington with his speech to Congress last Tuesday advocating compulsory training of our youth between the ages of 17 and 20. Naturally, it is a very controversial subject and there is a great diversity of opinion down here as to the merits of his proposal as to the mechanics by which it will be worked out, if adopted by the Congress, and as to the results to be obtained therefrom. Naturally, Mr. Truman presented the most plausible arguments for his proposal but most Members are anxious to learn the reaction from the folks back home after the subject has jelled in their minds for some time and a more considered and thoughtful opinion reflected in correspondence with their Congressman. Hasty opinions are usually of doubtful value, but after the matter has been commented upon in the press and over the radio and possibly over various public forums of the air, it is likely that Members of Congress will receive considerable and varied opinions on the subject.

Certain it is that, to say the least, many Members of Congress—myself included—are not overenthusiastic on the President's program nor were we too much impressed by his speech. That was best illustrated by the fact that about the only applause the President received during the speech was when he referred to the splendid accomplishments of our armed forces in winning the past war.

It seemed to many of us that the President drew a very narrow line of distinction when he said that his proposed compulsory-training program was not conscription. If you will recall, he claimed that the difference was found in the fact that conscription means enrollment in the armed forces, whereas under his compulsory-training program the young men would not actually be in the armed forces but rather would be a citizen group in training. The fact remains, however, that those who are physically fit would be trained in Army camps; they would be in uniform; they would be away from home; they would be under Army discipline and instruction, and all of this would be done by compulsion. There would be no escaping the training program by anyone except those completely physically disabled. It seems to me that a rose by any other name would be just as sweet; likewise a dandelion by any other name would be just as bitter.

Now, I want to look backward into history a little bit. I remember when the Selective Service Act first came before the Congress—and, incidentally, I voted against it. At that time we were told exactly the same thing that Truman said last Tuesday, namely, that these boys were going into training only—not getting ready to fight anyone, and that it was to be a 1-year proposition, at the end of which they would be free to return to their homes, farms, and work benches, and all after being presumed to be benefited by such training in exactly the same measure as the President proposed last Tuesday, namely, that they would understand how to use modern arms; that they would be benefited physically, morally, and intellectually as well, and that they would have an opportunity, perhaps, to learn a trade at Uncle Sam's expense. Well, we know what happened then.

At the end of the year President Roosevelt came back to Congress again and demanded that we forget our previous promises and that we not only keep these boys in the Army for further training, but then went on to say that if we break up the team, where would we be in the eventuality of war? Well, I voted against that extension, too, because I felt it was breaking faith with the boys and making liars out of Members of Congress. We now know in retrospect that what we needed then, just as we need right now, is more candor from the White House in letting the American people know what our foreign policy is; wherein the danger, if any, lies and into what dangers our foreign policy may be leading us. Let us look at the first point I have just made. A year after this

compulsory-training program goes into effect—if it does—we may well assume, because it is specifically stated in the Truman proposal that these boys will be trained in large units, that we will again see combat teams formed, and will we then be told that we dare not break up the various teams?

Furthermore, if I understand the matter correctly, these boys will not go into this training program in any large groups, but rather, as the President said himself, they will go into the training service on their eighteenth birthday, or whenever they have completed their high-school course, whichever comes the later; so that we can expect these boys to be moving into the training groups at spasmodic intervals, and it seems to me that it is going to take a cleverly devised mechanism to work out the system so that they will be activated to fit into the team at proper intervals. Now this brings up another point with reference to his delineation between compulsory training and conscription. His proposal provides that after these lads have received a year's training they will then be placed in a first-line reserve for a period of 6 years, subject to recall at any time for refresher training, and then in a secondary reserve to be called up to the colors later if it should become necessary through a selective-service system. Now to go back again.

If a class, let us say, should start next January and a large group formed, they will receive, according to the program, 8 weeks of what the Navy calls "boot training," and then they will have some special training and will end up with about 2 months of maneuvers. Presumably thus we will have completed a combat team of citizen soldiers. If this group should later be called upon to fight as a unit, how else is that going to be done unless the entire group is called up at once regardless of any selective-service program? If they are not called up as a group, then that puts the lie right on those who told us when they called for the extension of the Selective Service Act that it was absolutely imperative not to break up the teams. In short, the administration ought to keep their story straight down here in Washington.

Now let me go back to our foreign policy again for a few minutes. President Truman told us, as has been the custom of the White House for the past 13 years, that this was an emergency measure and the time to act was now. This prompts me to ask: Just what is the emergency? Who are we getting ready to fight? Surely it is not Germany or Japan—both not merely beaten to their knees but rather flat on their back. Surely it is not Britain nor France, both of which countries tell us they are flat broke and are over here with hands out-stretched for alms. Surely it is not China. Surely it is not Latin America. Can it be the only one major country left that Mr. Truman is afraid of? Can it be that we are preparing to fight Russia after all she has been through and is now herself over here seeking a cash loan of some $3,000,000,000 to say nothing of ships and other equipment? If that be our danger, why then are we debating whether or not to give her our atomic-bomb secret? Why did we some time ago send her a complete analysis of our naval-training program and of our naval tactics and strategy? I just want to know and I think it is up to President Truman to tell us just what enemies we are getting ready to fight, if any. And if we are not getting ready to fight again; why all the rush about the enactment of this legislation and why institute compulsory military training along the lines suggested by him at this time?

Are there not better alternatives open to us? To start with we are going to have in our Regular Army over 900,000 troops as armies of occupation or as garrisons for outlying possessions. I believe that we are safe in saying these garrisons will be more alert in the future than they were at Pearl Harbor; will be far better equipped with ordnance, munitions, and matériel, and I believe that our armies of occupation will be able to take care of themselves for a long time to come.

The Navy will have a nucleus of 500,000 men and this time our ships are not going to be cut up for scrap nor sunk as a result of some idealistic treaty.

We will have a huge merchant marine in reserve and in service.

Mr. Truman called for a greatly expanded National Guard and a trained Officer Reserve. With these two points I am strongly in accord. And we will, of course, be maintaining a relatively small but nevertheless highly mobile and effective regular Army in the continental United States. Those will be your first-line combat teams, organized to work together.

There is no intention of decreasing our scientific research into new discoveries both of weapons and munitions of war and, inasmuch as every war has demonstrated that when war actually starts there is a rapid improvement in both weapons and munitions and a discard of the older weapons, of what value is it then to train an 18-year-old boy on a 1945-model gun and have to retrain him again 5 or 10 or 15 years later on the newer models?

Would it not be better to greatly expand our Reserve Officers' Training Corps, both in the high schools and the colleges wherein those boys will not only get their basic training but as they are permitted to continue uninterrupted their school course they will continue to get more advanced military training. Then couple those training courses with two or three summer encampments for maneuvers at our larger military establishments or for advanced training and study in the latest weapons of the day; thus letting the youth improve his military knowledge more gradually and in line with the latest scientific and ordnance developments.

The President stressed the fact that once we have these young men trained we will have created in their minds—and in the minds of their parents—a very definite opposition to war and that it will thus serve to maintain our Nation at peace. My answer to that is, when has this Nation ever sought to be an aggressor nation or sought to provoke a war? As a matter of fact, it is doubtful if the peoples of any nation ever sought war, but as very definitely happened in this last war, it is their leaders who commit them into the struggle. Well do we recall the frequently uttered promises of the late President Roosevelt that our boys would not be sent to fight on foreign soil unless we were attacked. Following the sneak attack on Pearl Harbor there remained no possible course for the Congress but to declare war. Whether or not the attack on Pearl Harbor was deliberately provoked along the line of since repeated statements attributed to Mr. Winston Churchill will remain for historians to decide.

It is not improbable that the congressional investigating committee may uncover some damaging testimony to that effect. We can only wait and see. One thing is certain—that a definite slyly conceived attempt to muzzle that committee through the denial of any information that had ever been coded or decoded was smacked in the face by both parties in the House last Thursday, and the bill was withdrawn.

In conclusion, I want to make one more reference to our foreign policy. Some time before Pearl Harbor a statement was made on the floor of the House by Representative DAN REED, of New York, that it was primarily British and French capital that had created the Frankenstein monster, Adolf Hitler, and had paid for the rearmament of Germany making it a threat to world peace. Representative REED further charged that an agreement had been reached between the British, French, and Germans that a mock war would be staged in Europe to partition up the smaller countries of Europe and to preclude the spread of communism in those smaller European nations. Some time later, upon inquiry of a leading British statesman in this country, he told me that both charges were absolutely true and undeniable but, further, that we should not condemn Britain nor France for contributing to the cost of rearming Germany when we, ourselves, contributed more heavily than both countries combined. Therefore, I say to you, my friends, that in our foreign policy for the future we should be very careful and our State Department should certainly be ever in possession of the facts and make sure that American dollars do not again contribute toward the creation of another Frankenstein monster who would disturb the peace of the world. This can, this must be prevented by our own Government.

Well, the fact of the matter is that the House Military Affairs Committee will consider President Truman's proposal in hearings starting on November 8. Senator JOHNSON of Colorado, acting chairman of the Senate Military Affairs Committee, has said that their committee would not consider the matter before January 15 next at which time it is hoped that the chairman of the committee, Senator THOMAS of Utah, will have recovered his health sufficiently to resume his congressional duties. The evidence introduced in those hearings will be intently watched by every Member of Congress. This is one of the most momentous proposals ever to have come before the Congress of the United States and it is one on which, in my opinion, we in Washington should have the most considered advice, recommendations, and council on the part of each and everyone of our constituents back home. I repeat—hasty, impetuous decisions are of little value. Considered opinions are extremely important at this time. Won't you please write me and give me your views.

In the best interest of our country, which I try to maintain uppermost in mind at all times—I am keeping an open mind on this subject because I want to cast my vote based upon the evidence submitted to the committee, based upon your opinions from back home—because it is your boys who will be called upon for training if the proposal is adopted—and lastly—based upon the final form in which the bill may be presented to us for a vote. One thing is certain—it appears very likely at this time that the Committee on Military Affairs will report some sort of a bill embodying most of—if not all—the President's suggestions. Nevertheless, I predict it will find awful tough sledding on the House floor. The reactions of the public will be watched with a great deal of interest by all of us down here in Washington. We all want to do and vote for what we conscientiously believe to be for the best interest of this Nation.

---

## Capt. Joseph J. McCarthy

EXTENSION OF REMARKS

OF

## HON. EDWARD A. KELLY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, October 30, 1945*

Mr. KELLY of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following citation made in connection with the awarding of the Congressional Medal of Honor to Capt. Joseph J. McCarthy. Although Michigan may have claimed this man,

because of his wife's residence and because his allocations and insurance were sent to the city of Ironwood, Mich., he has lived in Chicago, in my congressional district, all his life. Captain McCarthy is a member of the Chicago Fire Department and in that position has brought honor upon the department and to the people of the Third Congressional District of Illinois.

CAPT. JOSEPH J. M'CARTHY, USMCR, TO RECEIVE MEDAL OF HONOR FROM PRESIDENT TRUMAN

For his conspicuous gallantry at the risk of his own life above and beyond the call of duty at Iwo Jima, Capt. Joseph J. McCarthy, USMCR, will receive the Medal of Honor from President Harry S. Truman at the White House on "Nimitz Day," October 5.

Captain McCarthy's award is for action described in the following citation:

"For conspicuous gallantry and intrepidity at the risk of his life above and beyond the call of duty as commanding officer of Company G, Second Battalion, Twenty-fourth Marines, Fourth Marine Division, in action against enemy Japanese forces during the seizure of Iwo Jima, Volcano Islands, on February 21, 1945. Determined to break through the enemy's cross-island defenses, Captain McCarthy acted on his own initiative when his company advance was held up by uninterrupted Japanese rifle, machine-gun, and high-velocity 47-millimeter fire during the approach to Motoyama Airfield No. 2. Quickly organizing a demolitions and flamethrower team to accompany his picked rifle squad, he fearlessly led the way across 75 yards of fire-swept ground, charged a heavily fortified pillbox on the ridge to the front and personally hurling hand grenades into the emplacement as he directed the combined operations of his small assault group, completely destroyed the hostile installation. Spotting two Japanese soldiers attempting an escape from the shattered pillbox, he boldly stood upright in full view of the enemy and despatched both troops before advancing to a second emplacement under greatly intensified fire and blasted the strong fortifications with a well-planned demolitions attack. Subsequently entering the ruins, he found a Japanese taking aim at one of his men and with alert presence of mind jumped the enemy, disarmed and shot him with his own weapon. Then, intent on smashing through the narrow breach, he rallied the remainder of his company and pressed a full attack with furious aggressiveness until he had neutralized all resistance and captured the ridge. An inspiring leader and indomitable fighter, Captain McCarthy consistently disregarded all personal danger during the fierce conflict and, by his brilliant professional skill, daring tactics, and tenacious perseverance in the face of overwhelming odds, contributed materially to the success of his division's operations against this savagely defended outpost of the Japanese Empire. His cool decision and outstanding valor reflect the highest credit upon Captain McCarthy and enhance the finest traditions of the United States naval service."

Captain McCarthy was born in Chicago, Ill., on August 10, 1911. His mother, Mrs. Catherine Hart, now resides at 5715 South May Street, Chicago, and his wife, Mrs. Mildred G. McCarthy, lives at 205 Wilson Street, Ironwood, Mich.

He first enlisted in the Marines in 1937 and served 4 years. After 1 year of civilian life, he reenlisted in February 1942 and was discharged in June of that year to accept a commission in the Marine Corps Reserve.

Joining the Fourth Maine Division shortly thereafter, he went overseas in January 1944 and is a veteran of the Roi-Namur, Saipan-Tinian, and Iwo Jima campaigns. For gallantry as a rifle company commander at Saipan, he was decorated with the Silver Star Medal, and for wounds suffered at Saipan and Iwo Jima he received the Purple Heart and Gold Star in lieu of a second Purple Heart.

## Who Pays for Federal Aid?

EXTENSION OF REMARKS
OF
**HON. DANIEL A. REED**
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

*Tuesday, October 30, 1945*

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks, I am inserting a letter written by the Honorable Samuel B. Pettengill, a former Member of this House, to the editor of the Wall Street Journal and published in that paper under date of October 30, 1945, with reference to the source of Federal aid. I wish that every taxpayer in this country might study the contents of this letter and reflect upon it as it might affect him and the heritage which, as a good American, he hopes to transmit to succeeding generations.

The letter follows:

ON FEDERAL AID

The EDITOR, THE WALL STREET JOURNAL:

The other day you commented effectively on the demand of Controller Oakman, of Detroit, running to Washington for "Federal aid" on the ground that if "Federal aid" ever stops, the city, town, and county government would go broke.

A man who rates a job of controller of a city like Detroit ought to know there is no such thing as "Federal money." That except for the printing press, there is no money whatever that the Federal Government can send to the people, except what it takes from the people.

There is, however, another aspect of this matter of relying on the Federal Government to support local and State governments which the fiscal problems of the next few years may bring acutely to our attention.

States and cities are forbidden to print or coin money to pay their debts. They cannot make the money markets their creatures nor depreciate interest rates at their caprice. When States, counties, cities, and towns undertake to borrow money, they have to pay interest rates established in a free market, and have to satisfy the lender that the loan is sound and secure. To pay interest and principal of debt, States and municipalities have to get the cash the hard way—by taxing the people. This puts some brake on their borrowings, some resistance to socializing the business of their taxpayers. You see this force at work in every municipal ownership election.

The Federal Government, however, is under none of these restrictions. It can force interest rates down, borrow huge funds cheaply, pay its obligations of interest and principal by converting more of its promises into Federal Reserve notes, or by devaluing its gold and silver hoardings—clipping the coins to pay the bills—or by outright greenbacks.

The Federal Government has a printing press; the States do not. This easy-money route promotes the extension of Federal power, subtracts from State and local self-government, and greases the road to bankruptcy.

If the American people and their public officials have so little character as to continue to charge their public expenditures to their unborn grandchildren, it would be far better for Detroit and every other city to go into bankruptcy, as some 2,000 municipalities did in the 1920's, than for the Federal Government to do so. This, for the reason that the Federal Government alone controls the money in which all obligations, public and private, are paid. Federal insolvency would ruin not only Federal bond holders, but every insurance policy holder, savings bank depositor, social security card holder, and so forth, in the land.

Nothing would do more to assure confidence in the future of our country than a reassumption by State and local government of their responsibility to pay their own bills.

SAMUEL B. PETTENGILL.

NEW YORK CITY.

## Getting Our Boys Home

EXTENSION OF REMARKS
OF
**HON. JOHN E. RANKIN**
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES

*Thursday, October 25, 1945*

Mr. RANKIN. Mr. Speaker, several days ago, I offered an amendment on the floor that provided for the immediate discharge, on his own application, of anyone in the armed forces of this country who has served continuously for 18 months, or more, or who has dependents at home to look after, or who desires to return to school.

That provision was knocked out on a point of order; and I am now urging my friends in the Senate to put this amendment back in the bill. If that is done, I feel confident that the House will sustain the amendment by a vote of at least 5 to 1, and probably more.

I have just received a letter from a member of the armed forces now stationed in Hawaii, in which he enclosed the following clipping from a Honolulu paper:

SAILOR DIES IN DOWNTOWN SUICIDE LEAP

Irvin Lincoln Pike, 23, Navy torpedoman second class, plunged to his death in a suicide leap from the third story roof of the central branch YMCA building, Hotel and Alakea Streets, Friday at 5:10 p. m.

The sailor, who was not further identified, was said by police to have left his personal effects on the ledge of the roof before jumping to the concrete border of the swimming pool enclosed in the building.

Detective Herbert Cockett, who investigated, said the victim told a waitress in the YMCA restaurant, Mrs. Marie Santiago, 2017 Kaumualii Street, a few minutes before his death that he was depressed because he "didn't have enough points to go home."

A witness to the fatal plunge was Police Sergeant Harry Shupak of the vice squad, who saw the sailor's body hit a canopy in the pool enclosure and then crash to the pavement below.

Sergeant Shupak was off duty at the time, and preparing for a swim.

The shore patrol is investigating to learn fuller identity of the sailor.

Coroner Moses Branco termed the case a suicide.

The letter enclosing the clipping reads, in part, as follows:

Representative JOHN E. RANKIN,
*House of Representatives,*
*Washington, D. C.*

DEAR SIR: Enclosed you will find a newspaper clipping from a Honolulu newspaper.

Your colleagues in the House override your efforts to help servicemen with long service, interrupted education, and children, out immediately, but what can they know of our frustrated feelings out here, with 2 and 3 years' service behind us and still not enough points to go home.

I sincerely hope you will read this attached article to them. Can you imagine my feelings upon becoming eligible for discharge with 38 points this 1st day of January 1946, after 4 years service, to have my rate in the Navy classed as essential, and making me ineligible for discharge.

No, Mr. RANKIN, it wasn't very hard for me to understand why that sailor committed suicide.

I repeat what I have said before and that is that the point system is a miserable failure.

Congress is going to have to enact a law for the discharge of these men; and for that reason I am urging the Senate to adopt my amendment.

## Poland

EXTENSION OF REMARKS

OF

### HON. THOMAS S. GORDON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, October 30, 1945*

Mr. GORDON. Mr. Speaker, under leave to insert in the RECORD, I include an article on Poland that appeared in the New York Times on October 23, 1945, and also an editorial that appeared in the Chicago Daily Tribune on October 6, 1945:

[From the Chicago Daily Tribune of October 6, 1945]

TURNCOAT

Oscar Lange came to the United States 11 years ago as a beneficiary of the Rockefeller Foundation. In the succeeding decade he was admitted as a graduate student and employed as a teacher by a number of American universities. Two years ago he was granted the privilege of American citizenship. This was upon the condition, of course, that he forswear his allegiance to his native Poland and pledge his fealty to the United States.

About the same time he was made a professor at the University of Chicago. Shortly thereafter he made a pilgrimage to Russia and was granted an interview with Stalin. He returned to the United States and began to make assertions that the puppet government that the Russians had set up at Lublin was not really a puppet government but was "democratic," and similar statements useful to Russian propaganda in this country.

That same puppet government, now installed in power in Warsaw, has tendered Lange the post as its ambassador to the United States. He has accepted the job and in so doing has renounced his American citizenship and the fidelity to this country and its principles of liberty which he pledged only 2 years ago with, no doubt, all the sincerity of which he is capable.

He asserts that his motive is to further Polish-American relations. He has little training in diplomacy and the appointment obviously has been made because of his supposed usefulness as a propagandist for the Communist-dominated government of Poland.

Lange, we think, is bound to fail. The detestation of the American people for turncoats is such that none of his assertions on behalf of his new masters will find credence in this country. As a Nation we are well rid of him.

If Lange thinks he can use his new position to address his propaganda over the head or behind the back of the State Department to the people of the Nation, he should be disabused the moment he arrives in Washington and warned that if he undertakes a propaganda campaign in this country his withdrawal will be demanded of the Polish Government.

---

[From the New York Times of October 24, 1945]

POLISH REDS RULE BY ERSATZ PARTIES—TWO POLITICAL GROUPS CREATED TO MISLEAD VOTERS INTO SUPPORTING UNITED FRONT—FALL SEEN IN ELECTIONS—MIKOLAZCZYK'S PEASANT PARTY IS EXPECTED TO GET 60 PERCENT, LEFTISTS VERY LITTLE

(By Gladwin Hill)

WARSAW, POLAND, October 14.—Poland is in the throes of an intense political struggle. It is a struggle led by Moscow-trained Communists to get permanent political control of a country that is historically conservative.

These Communists are a small minority, but at present have a strong advantage in that they dominate the Moscow-created Polish provisional government. This government, while nominally representative, is actually ruling by decree. This gives the Communists a wide scope, although not unlimited.

They cannot flout Polish opinion too badly or there might be a popular outburst. They know, furthermore, that their time is limited, that the Potsdam agreement calls for free elections in which their present governmental inside track may be obliterated.

Their strategy is to use the intervening time to spread voluntary acceptance of their ideas and to build up from virtually nothing an effective political machine. This they are attempting by some of the cleverest devices in the politicians' handbook.

PREWAR VOTERS CONSERVATIVE

Before the war, although temporarily suppressed by the semidictatorship, something approaching a majority of the Polish electorate were actual members or political followers of the conservative Peasants Party. The Socialists had a potential command of possibly one-quarter of the electorate. The rest of the vote was distributed in small blocs among a number of groups, ranging from the center to the right.

The Communists were conspicuous by their absence. Some of them, like Poland's present President, Boleslaw Bierut, operated from exile in places like Czechoslovakia and Russia.

Most Poles still are adherents of the Peasants Party and there has been no great upsurge of leftist sentiment, particularly communistic. How then, did communism get established in Poland?

The first thing the Communists did was to establish a disguised Communist Party, the Polish Workers Party. The next thing was to launch an offensive on the established parties. The strategy was to split them. This was done by the incredibly bald device of simply setting up in the postoccupation confusion duplicate parties, superficially indistinguishable from the original ones, even in name. Thus the Peasants Party, led by Stanislaw Mikolajczyk, one of the two London government-in-exile Poles allowed in the provisional government, found itself confronted by an opposition Peasant Party, which in the confusion drew a lot of Mikolajczyk followers.

In the case of the Socialist Party the trick was easier because the Socialists had split in 1938, one faction going with the war to London the others staying in Poland. One fragment of this split was revived by the new left-wing operators, who installed as its head the present Premier, Edward Osubka-Morawski, who in 1943 went to Moscow to coordinate the left-wing Polish underground with the Russians.

Like some other parties, the Socialist faction has not yet set forth a clearly defined program but to many Polish observers it seems about as far from the old Socialist Party of Marshal Joseph Pilsudski, of which it claims to be a direct descendant, as it is from the Communist Party.

The next move of the Communists was to organize a government of the four principal parties, their Polish Workers Party, Socialist Party, the Peasants Party, and Democratic Party. No other parties are represented in the government, although they are allowed to exist rather vicariously. Although the Peasant leader, Mr. Mikolajczyk, is included in the government, it is the ersatz Peasants Party rather than his Polish Peasants Party which the government recognizes. Thus the Communists have increased their original strength of virtually nothing into domination of the regime while maintaining a front of multi-party government.

The 20-man cabinet that is running Poland is composed as follows: Workers Party and Socialist Party, 6 each; Peasants Party, 3; Democrats, 1; non-party, 2. But this doesn't tell the whole story. At least 1 of the Peasants Party men is a member of the Communist-inspired ersatz Peasants Party. The one "Democrat" is Foreign Minister Wincenty Rzymowski, one of the Polish Moscow alumni who is a sort of front man for the Vice Minister of Foreign Affairs, Zygmunt Modzelewski, former leader of Russia's Union of Polish Patriots.

POWERFUL MAN IN BACKGROUND

Invisible in this picture are Mr. Bierut and his Communist aide, Jacob Berman, who holds the obscure post of cabinet Under Secretary, but is recognized as one of the most powerful men in Poland.

To assure complete weighting of the government scales to the left the Communists arbitrarily impose the principle of "united action."

"Between these four parties," Premier Osubka-Morawski said a few days ago, "no fight can be allowed." In arguments within the government the leftists prevail.

The same pattern is applied down through the other ostensibly democratic processes in Poland, which up to now consisted chiefly of workers' election for union factory and industry representatives. These elections were rigged on the grounds of the need for "national unity" by the device of a "unified list of candidates." A single slate containing representatives of all parties and also possibly non-party candidate was drawn up by party leaders.

The "unified list" comes out with a curious preponderance of Leftist candidates. If rebellious workers concentrate their votes on candidates unfriendly to the regime there is a solution, which has happened several times in recent weeks in various places in Poland. That is to declare the election illegal and postpone it until things can be rearranged.

All these machinations haven't altered the fact that most Poles are small farmers and that a large number of them are followers of Mr. Mikolajczyk's Polish Peasant party. The Leftist provisional regime has wooed their support by rushing through agrarian reforms, in which several hundred thousand peasants received small holdings. But any good will thus acquired has been more than offset by Government moves favoring the industrial workers—a more likely Communist target—in which the farmers charged they are being victimized.

So, while the Leftists have been trying desperately to keep afloat their ersatz Peasantry Party, preposterously denouncing the Mikolajczyk group as "separatists," the latter is gaining strength to the point where some

observers believe they will garner 60 percent of the voters in the election and return the Leftists to obscurity.

While it looked at first as though the Leftists would try to delay the general elections a long time while by their various devices they built up strength some observers now think they may suddenly call elections within the next few months before the opposition gets any more powerful.

REMOVAL OF RED ARMY URGED

LONDON, October 23.—Thirty former members of the prewar Polish Parliament, in a memorandum circulated today, demanded that the Red Army, all Soviet political police and militia and all Soviet officeholders be removed from Poland before the elections ordered by the Yalta agreement are held.

The signers included 12 senators and 18 deputies of the preoccupation parliament. Among them was Jan Kwapinski, one of the leaders of the exiled government in London.

The parliamentarians, who oppose the Warsaw regime of President Boleslaw Beirut, charged that "in Poland a Communist infiltration with all its attendant consequences has taken place in the same way as in Bulgaria, Yugoslavia, and Rumania."

The memorandum said "the country continues under the occupation by the Red Army and the Soviet political police—the NKVD—continue to be active, and the Public Security Department is entirely in the hands of the Communists."

It charged "that about 1,000,000 people have been deported into distant Soviet provinces and further groups running into the millions are at present scattered all over the world. Under present conditions they cannot return to Poland, yet it would be difficult to refuse them the right to take part in the elections."

## The Evils of Pork-Barrel Legislation With a Depleted Treasury

EXTENSION OF REMARKS
OF
**HON. CLIFF CLEVENGER**
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, October 30, 1945*

Mr. CLEVENGER. Mr. Speaker, on October 22, 1945, there appeared in the Bryan Democrat the following article by Cass Cullis, publisher, and chairman of the Williams County Democratic Committee:

CLEVENGER OPPOSES BILL FOR AIRPORTS—SAYS NEW FIELDS ARE NOT NEEDED—DISTRICT PLANS SEVERAL PROJECTS

Congressman CLIFF CLEVENGER, of Bryan, voted "no" on a bill authorizing the expenditure of $650,000,000 over a period of 10 years on airport construction. He was 1 of 82 Members voting against the bill, which carried with 279 votes.

To a Blade correspondent he explained that he is not against air transportation, but that the places which have enough air travel to pay for airports already have airports. He also said there is only one county in his district, Paulding, which does not have passenger-train service.

In Congress, Mr. CLEVENGER represents a seven-county district where there is considerable interest in aviation, and where several cities already have made progress in the development of airport projects and are hopeful of receiving Government funds to aid these fields.

Bryan, the Congressman's home city, has been recommended for a $305,000 airfield, which would serve this area, providing excellent passenger, mail, and freight service. Montpelier, Napoleon, and Paulding also are working for the establishment of ports so apparently people of the Fifth District are more air-minded than the man they elected to Congress.

Now, the gentleman conveniently changed the Blade article that said "one county-seat town, Paulding, has no rail passenger service" to read as above although he well knew other towns in the county had passenger service on the Wabash and Nickel Plate lines, and that the New York Central had discontinued passenger service on its lines from Cincinnati to Jackson, Mich., nearly a decade ago, thus leaving Paulding without passenger service, or that Paulding has bus service to Fort Wayne Field 25 miles away.

The fact that a field is under development by my own county does not change at all the "pork barrel" evils of this measure. This field was advanced by local capital and by our county boards of adjoining counties. This new field is within 15 miles of Paulding, a dozen miles from Hicksville and 22 miles from Montpelier over level country, and with excellent highways to all of them.

On October 18 a bill authorizing $700,000,000 be spent for building 7,000 air fields was before Congress. I voted against this monstrous pork barrel. Not for 14 years has our country taken in taxes enough to cover its spending. Our debt has multiplied fifteenfold as of the end of 1946 fiscal year—twice the amount of assessed property in the 48 States. But let a leading Democrat tell the story, the man who prepares the great spending bills of this Government, the Honorable CLARENCE CANNON, of Missouri, chairman of the Appropriations Committee:

ECONOMY BLOC

Mr. CANNON of Missouri. Mr. Speaker, I ask unanimous consent to address the House for 1 minute, and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Missouri?

There was no objection.

Mr. CANNON of Missouri. Mr. Speaker, I hope no one will overlook the list of 82 men on page 9808 of this morning's RECORD. It is a notable list of notable men. They not only preach economy but, extraordinary as it may seem, they actually vote for economy.

Mr. Speaker, that list of names ought to be printed in every newspaper in the country. I do not know just how interested in economy the newspapers are, but there have been so few votes for economy lately that it ought to be in the same class with the story of "Man bite dog."

We have all kinds of blocs here—the farm bloc, the labor bloc, the railroad bloc; now, at last, we have an economy bloc.

May I suggest that formal meetings of the bloc be convened here on the floor of the House every time a bill is up to spend money we do not have for something we do not need.

You will recognize a brother of the bloc when he gives the password. The password is the word "No," spoken clearly and distinctly when the Member's name is called on a vote to appropriate borrowed money for something we can get along without. The uninitiated are earnestly invited to affiliate at any regular meeting of the bloc.

Twenty-four other Democrats joined with Mr. CANNON of Missouri in his long-overdue march to the mourners' bench. It was a welcome reenforcement to those of us who have so long held the economy line, many times with less than 30 votes and sometimes less than a dozen. Who knows, we may yet save the Republic.

## China and the Peace

EXTENSION OF REMARKS
OF
**HON. WALTER H. JUDD**
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, October 30, 1945*

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Fred H. Lysons, of the Seattle bar, on the subject China and the Peace, before the King County Democratic Club, at Seattle, September 1, 1945:

The problem of permanent peace, confronting the world today as never before, can be solved or at least greatly simplified if we will but turn the pages of China's history through the past half century.

Put on the chopping block just prior to the turn of the century by certain European powers, China was saved from dismemberment by the application of Secretary of State John Hay's open-door policy. Her integrity was again preserved in 1914 by President Woodrow Wilson's courageous ultimatum to Japan, staying her hand in which she held the threat of taking over China under her notorious Twenty-one Demands.

It being apparent that Japan still nurtured her designs of conquest, China launched a trade boycott against her, of such intensity that it was felt by the United States, a fact established by a congressional investigation of the subject. Negotiations and consultation between the parties resulted in our calling the Washington conference of 1921, and the conclusion there of the Nine Power Treaty which obligated the signatories, the United States and Japan included, to respect the sovereignty, the independence, and the territorial and administrative integrity of China.

Recognized as assuring to China the full adjuncts of independence in government which its 14 pungent words expressed, the treaty was uniformly acclaimed as a finality in that accomplishment. It was appraised by (present) Secretary Stimson as "One of the most admirable and farsighted treaties in the history of modern civilization." Charles Evans Hughes, then Secretary of State and chairman of the conference, expressed the opinion that by the treaty the open door in China has at last been made a fact. Baron Shidahara, Japanese Ambassador to the United States and head of the Japanese delegation to the conference, said that "the treaty has disposed of the Chinese problem which, it was often asserted, would one day lead to world-wide conflagration."

But Japan started that conflagration, nevertheless. In 1931 she seized Manchuria and in 1937 opened full-scale war on China.

The vice of the situation which has been made our corrective concern was that we were supplying Japan the matériel for her war. Our people protested and Congress was flooded with bills, all of them, with one exception, ignoring the Nine Power Treaty. The one exception was a bill by Senator Lewis B. Schwellenbach, of the State of Washington, which directly invoked our Nine Power Treaty obligation.

The Schwellenbach bill received wide acclaim, there being general concurrence of statesmen in Secretary Stimson's public endorsement of it in a statement urging its enactment because, as he said, "Drafted in treaty language, its passage would have the great advantage of demonstrating more clearly than any other method the reason for our action and the emphasis which we place on right conduct in international relations and particularly upon the treaty for which we are mainly responsible, undertaking to respect the integrity and independence of China."

The same high purpose and regard for righteousness which prompted Senator Schwellenbach's drafting of the measure characterized also the motive of its introduction. "I did not present this matter from the point of view of our interests in China," said the Senator from the Senate floor. "I presented it from the point of view of our responsibility and our obligation as a Nation under a treaty into which we entered. * * * In our action in reference to Japan and by our violation of the Nine Power Pact we become just as flagrant a violator of international agreements as any other nation in the world."

There can be but little doubt but that, denied our critical war essentials, Japan would have been incapacitated militarily.

As assurance of world peace no international machinery devised could be superior to the Nine Power Treaty. To assure to a nation its sovereignty, its independence and territorial and administrative integrity is to assure to that nation every governmental function and adjunct essential to its security and existence on an equality with every other government in the family of nations.

Dependent upon the United States for their future prosperity, it should not be difficult for us to bargain the "have" nations into paths of peace and world amity. In such manner was Japan brought into the Nine Power Treaty.

Senator Schwellenbach in his Senate address on the subject August 2, 1939, quoted this testimony of Dr. WALTER H. (now Representative) JUDD (whom the Senator vouched for as the highest authority) given before the Senate Foreign Relations Committee, on China's protective boycott against Japan's aggression: "It was slowly but surely bringing Japan to terms. * * * China promised to call off the boycott if the Japanese would get out * * * and stay out. * * * If all the nations would stay out of China. We all promised. That is what the Nine Power Treaty meant from China's standpoint. She trusted America."

Let there be negotiated and concluded between the nations of the world the Nine Power Treaty in replica, with its obligations of the strong nations to the weaker, from the "have" to the "have not" nations; and with good-faith observance of those obligations, permanent world peace and tranquillity will be an established fact.

## Reduction of Government Expenditures

EXTENSION OF REMARKS

OF

### HON. JOHN W. GWYNNE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, October 30, 1945*

Mr. GWYNNE of Iowa. Mr. Speaker, it seems to be a part of the national policy to fight every war on a high level of cost. It has always been a matter of regret to me that the Baruch plan of price control was not adopted at the beginning of World War II. The freezing of prices of finished products and of all elements entering into the cost of such products would have reduced the cost of the war by many billions of dollars. Furthermore, where would have been the inequity to any group since it was proposed to maintain the relationship then existing?

Every country, having enjoyed a synthetic prosperity during the time it was engaged in the business of killing, now is determined to keep up existing levels by artificial means. England proposes to do this by going socialistic—that is if we will lend her the money. In America, we are undertaking it by a continuation of our spending program. Both nations will eventually learn that wars can be paid for by only one method and that is by hard work and sacrifice.

Every spending program in Congress has its enthusiastic supporters but the taxpayers get little attention.

As part of these remarks, I attach a letter written to me by a well-known and successful banker in Lime Springs, Iowa. It occurs to me that this Congress, and particularly the minority party, had better listen to Mr. Cray. I am sure there are millions in the country who agree with him. Some day they will find a way of making their influence felt, and it will be greater than all the pressure groups combined.

The letter follows:

DEAR MR. GWYNNE: Another bond drive is on and it does not look as though the people were going to buy as freely as before and their principal objection is that so much money is being wasted by the administration that it is unfair to ask people to subscribe since the war is over and there is no attempt by the administration to economize and reduce the number of persons on the pay roll.

Money is being appropriated for every thing that comes up without any regard to balancing accounts.

Another thing the people do not like is the scandalous graft by the Army engineers. That is a few of the engineers. There is going to be a big flare-back if our Congress does not take a hand in reducing the operating expense of the Government.

You are at liberty to use this letter as you see fit.

Yours very truly,

A. J. CRAY.

## The Weapon of Oil

EXTENSION OF REMARKS

OF

### HON. HUGH DE LACY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, October 30, 1945*

Mr. DE LACY. Mr. Speaker, on October 16, when I spoke to this House on the Palestine question, I said that there will be no end to imperialism while powerful groups within the United States and Britain are permitted to play Arab against Jew and Jew against Arab for the sake of oil concessions.

It was not 8 days until this statement was confirmed by the daring threats of King ibn-Saud of the British-created Arab League to terminate American oil concessions in Saudi Arabia if this Nation persists in seeking justice and democracy for Arab and Jew alike in Palestine.

As reported in the New York Times of October 25, the Arab Leaguers offer oil to Standard Oil and the Texas Co. if we compromise with our conscience and with our own deep devotion to democracy and to the rights of man.

Actually, of course, Mr. Speaker, unless ibn-Saud is counting on British help, carrying out his threat would be to kill the goose which lays his golden eggs. The Arabian American Oil Co., Texas, and Standard Oil in Arabia, has accounted for large and increasing contributions to ibn-Saud's treasury through rents, royalties, and—during the war—through loans. These companies have also appealed to our State Department, often most tender in its consideration of oil interests abroad, for aid in stabilizing ibn-Saud's currency and for agricultural and irrigation missions and equipment. Saudi Arabia was declared eligible for lend-lease aid on February 18, 1943. Through June of 1945 they had received direct lend-lease equipment worth $1,500,000 on their own account and much larger amounts on the British account.

Yes, King ibn-Saud, unless he confidently expects British help, would be tossing away the financial aid he needs to keep himself in power should he carry out this latest threat.

Ibn-Saud is playing a game with the future of democracy and with the question of a homeland for the Jews of the world. It is a vicious game. But he, and the entire Arab league, which by no means represents the plain Arab people, can be beaten at this game of theirs. They are counting on Standard Oil's persuasive power with the United States Government.

If we can and do keep our foreign policy on the level of humanity and democracy and the greater good of the people of the world—the level established by our late great President, Franklin Roosevelt — then the Arab League will have outdealt itself.

When King ibn-Saud and the rest of the Arab League learns that the United States believes more firmly in democracy than it does in oil concessions, his game will change.

As in earlier times, this Nation has billions for defense, and not one cent for tribute. America's will to see justice done will be strengthened by the threat of the Arab League. We will not be intimidated. Let King Saud wipe the oil off his hands and its black blot from his royal conscience if he wants a hearing before the court of America's opinion.

At this point, Mr. Speaker, I desire to include with these remarks the article from the New York Times to which I made reference. The article reads:

ARABS PLAN OIL BAN IF UNITED STATES AIDS ZIONISM—AMERICAN FIRMS FACE LOSS OF CONCESSIONS IN REPRISAL FOR INTERVENTION

(By Clifton Daniel)

CAIRO, EGYPT, October 24.—The recurrent threat of economic sanctions against American commercial interests, especially oil companies with Middle East concessions, is being used by Arab politicians in their campaign against Zionism.

American support of Zionism, it was reported from Beirut today, was cited in the discussions of a Lebanese Parliamentary sub-

committee as one reason for disapproving a proposed concession for two companies to establish refineries in Lebanon at the terminus of the pipe line from Iraq. A satirical statement by a Turkish newspaper that "His Excellency, Mr. Gasoline, is in process of vanquishing Zionism" appeared prominently in one Cairo newspaper today.

King ibn-Saud, who has assumed new stature as the champion of Arab nationalism as a result of the publication of his exchange of letters with the late President Roosevelt, has been described by Egyptians who know him as prepared to terminate American oil concessions in Saudi Arabia if America persists in a pro-Zionist policy. "He can do it, too," one American said.

American business representatives here have been made to feel acutely conscious of Arab chilliness toward business dealings as a result of American declarations on behalf of Jewish immigration into Palestine. This matter has a broader aspect in that in some Arab countries, especially Egypt, there is growing sentiment for ending the economic privileges enjoyed by foreigners.

The opposition to a concession to Standard Oil of New Jersey and Socony-Vacuum to erect refining facilities in Lebanon is so great, it was reported, that the parliamentary subcommittee postponed its discussions and will refer the proposed agreement back to the government for revision. The two companies jointly own a 24-percent interest in the Iraq Petroleum Co., in which British interests predominate.

News reached Cairo today from Haifa that the concession for the Transfarabian Pipeline Co. to build a line across Palestine to Haifa from the American-operated oil fields in Saudi Arabia would soon be signed by Field Marshal Viscount Gort, British Commissioner in Palestine. This was confirmed by informed quarters here and a representative of Transfarabian is expected to go to Palestine from New York soon to complete the deal. This does not mean, however, that the pipe line will definitely be built; that decision will be made later on the basis of whether such a line would be worth its cost.

The trans-Arabian line, which would be about the same size and length as the famous "Big Inch" in the United States and would cost more than $75,000,000, was originally projected by the United States Government during the war. Its construction is now in the hands of Trans-Arabian, a subsidiary of the Arabian-American Oil Co., owned jointly by Standard Oil of California and the Texas Co.

The construction of another pipe line to Haifai from Kikuk by the Iraq Oil Co. was reported this week by the Palestine Post to be already under way with 3,000 tons of materials on hand. The line would be 620 miles long—about half the length of the suggested Arabian line.

## The Secret of the Atom Bomb

EXTENSION OF REMARKS
OF

### HON. CLARE BOOTHE LUCE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, October 30, 1945*

Mrs. LUCE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address made by me over radio station WDRC, Hartford, Conn., October 28, 1945:

I welcome this opportunity to talk with the people of my own State about the most important question that has ever faced our Nation: The atom bomb. The answer that our legislators and statesmen give to that question will determine the survival of America.

As you know, there is a bill before the House Military Affairs Committee which seeks to keep secret and develop all processes, formulae, patents, and methods; and to control, take, and work all raw materials and properties; plants, and lands related to the production of atomic energy.

But before we discuss that bill, let us enumerate briefly seven facts about the bomb, which are now widely accepted by all experts, scientists, statesmen, or journalists who know, as the expression goes, the "atomic score."

First. About the so-called secret of the bomb: The fact is that no fundamental secret of the bomb exists. German, Japanese, Russian scientists, and scientists of other lands, know methods and procedures of nuclear fission, or splitting the atom, fully as well as our own. The secrets which we still have to protect are the blueprint, formula, and mechanical secrets by which the actual bomb can be made and detonated. However, every scientist who has appeared before the Congress has testified that it is only a matter of time—from 2 to 5 years—before Russia, for example, will be able to manufacture bombs quite as deadly, if not more deadly, than those we are making now.

Second. About the raw materials of which the bomb is made: We cannot hope, as a nation, to monopolize the bomb by monopolizing its raw materials. Great deposits of uranium ores are to be found in Czechoslovakia and Russia now, and many new sources are sure to be found in other nations in other parts of the world in the next decade.

Third. About winning a secret atom bomb race: A race with other nations to manufacture secretly the biggest pile of atom bombs will not, even if we win it—which we probably can—give us a military advantage. The nature of this weapon is altogether different from the nature of other military weapons. Airplanes, guns, battleships combat one another. In the past, the general who "gits thar fustest with the mostest" has had tremendous military advantage, although we have seen that the one who "stays in thar lastest with the mostest" generally wins. But an atom bomb is not designed to strike against another atom bomb. It is designed to obliterate ports, home-front war installations, industrial centers, whole populations. If we had buried away, ready for use, say 10,000 atom bombs, such as we dropped on Hiroshima, and our enemy had only a thousand, he could, nevertheless, destroy us utterly with his one-tenth as much, if he struck first. In one surprise attack he could destroy every one of our great cities and kill 40,000,000 of our people. The war could be lost exactly 1 minute after it began, and before we could release our own bombs.

Fourth. About the fear of retaliation as a control over the use of the bomb: The fear of retaliation will not prevent, and is not preventing, its manufacture in any nation today, and the very fact that nations are manufacturing it may hasten its use. The dread of just such an overwhelming 1-minute atomic war that will grip nations and peoples will tend to precipitate such a war. Every worsening of international relations will cause an attack of atomic jitters throughout the civilized world, and a real crisis anywhere—say, in the Arabian oil fields, the Dardanelles, India, Manchuria, or Spain—might encourage a nation which thought its vital interests threatened in any of these or other areas to seek a military decision in its own favor by launching a 1-minute or 1-hour or 1-day atomic war.

Fifth. About the defense against the bomb: There is no defense against the atom bomb that any scientist can envisage today, except for a nation to disperse its industries and to go underground. This would be a vast and incredibly costly enterprise, particularly in a democratic country. It would involve a building program costing billions and the resettlement of millions of people away from their present jobs and homes. Indeed, to accomplish such a program this country might have to abandon democracy itself and submit to extreme dictatorship.

Sixth. About outlawing the bomb: The bomb cannot be outlawed. In order to outlaw anything, you must have an international law which can be guaranteed by an international government, backed by an international police force. We witnessed, in 1922, the signing of the Kellogg Pact to outlaw not only weapons but war itself. Every civilized nation in the world signed that pact, and yet war came. If tomorrow every nation in the world signed an agreement never to use the atom bomb, what power or force exists that could prevent one nation from breaking that agreement if it felt it was to its own selfish interest to do so? Absolutely none exists.

Seventh. About the ability of the United Nations Organization to control the bomb: The United Nations Organization, as created at San Francisco, has no power today which enables it to control the development of the atom bomb in our country or to prevent our use of it should we decide to do so tomorrow, and this means, of course, that it has no power to do so in any other nation.

And we have seen the proof of this last statement in the fact that we have today before the Congress legislation to control and keep secret atomic-bomb manufacture in the United States of America.

Early in October the War Department sent this bill to the Military Affairs Committee, of which I am a member. There is not time now to discuss the details or import of that legislation beyond saying that it is the greatest grant of dictatorial powers in the history of our country.

Now, in view of the facts that we have reviewed today, do you think that this bill in its present form will (a) permanently secure the defense of America against the atom bomb attacks of other nations; and (b) tend to prevent another world war? I most emphatically do not. In my opinion, this bill will simply serve notice on all the other countries of the world that the atom-bomb race is on, and that we have begun it. The passage of this bill, in its present form, will certainly heighten the terrible tension that already exists in our foreign affairs by multiplying fears and suspicions between us and Russia and other nations, thus causing future conferences of the UNO to be held in an atmosphere of increasing fear and hatred.

And yet, you ask, shall we give away now in one great generous gesture, all the temporary secrets we do possess to every other nation, in the hope that this gesture will soften their hearts toward us and incline them permanently to peace? We know that it will not, for we have seen that in the past America's military weakness, in a world of sovereign nations, has been an eternal invitation to war among them, and in the end upon us. As Professor Einstein said yesterday, for Uncle Sam to give Russia the bomb now would be like a man giving away one-half of his capital to a prospective partner for fear he might become a rival. Then what is the answer? I think the answer is to pass this bill, but with an amendment which will make it perfectly clear to all the nations of the world that it is merely an interim piece of legislation, a necessary safeguard to ourselves—a sacred trust, as the President called it—until we can create some mechanism of truly international control over armaments, backed by a far greater measure of international government than we have now.

We should pass this legislation including an express statement that it shall be repealed the very day that we and the other United Nations can agree to form and operate an international commission for atomic inspection—a commission which can inspect at

all times, in all nations, what is being done, or rather not done, about atomic war weapons.

In short, I think that this legislation should be passed only with the inclusion of the Congress' clear intent to instruct the President and the State Department forthwith to call a world conference on atomic energy, with the view to preventing its use for destruction, and developing its use for peaceful purposes.

For here is another fact: the use of atomic energy for constructive, rather than destructive purposes, could change the face of the world for incredible good.

As Norman Cousins said in a searching editorial in the Saturday Review of Literature: "Man now has it within his grasp to emancipate himself economically. * * * He has at last unlocked enough of the earth's secret to provide for his needs on a world scale. The same atomic energy that can destroy a city can also usher in an age of economic sufficiency. * * * There is power enough and resources enough for all * * *." But if man cannot, or will not use for peace the power he has unleashed during this war, then "modern man is obsolete."

Will atomic energy be used for good or ill? For life or death? The answer is the only secret of the atomic bomb. And the only secret of the atomic bomb still lies locked in the heart of man.

## Molasses for Dairy Feed As Well As for Liquor

EXTENSION OF REMARKS
OF
### HON. EDWIN ARTHUR HALL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, October 30, 1945*

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

EASTERN FEDERATION OF
FEED MERCHANTS, INC.,
*Sherburne, N. Y., October 23, 1945.*

Congressman EDWIN A. HALL,
*House Office Building,*
*Washington, D. C.*

DEAR CONGRESSMAN HALL: Speaking for 750 feed manufacturers and retailers of the 12 northeastern States who comprise the membership of our federation, this is an appeal to you to help us convince the national policymakers that it is vitally important that a substantial supply of molasses be made available for use in the manufacture of livestock rations and for direct feeding to dairy cows.

As you well know, our Northeast is a deficit feed area and because corn isn't moving to the Northeast, and protein supplies for livestock feed use are in tight supply, livestock feeders in our section of the country are right up against it in securing an adequate feed supply to maintain their dairy herds and poultry flocks. The situation is as acute now as at any time during the war period.

Our Government, during the war period, has purchased and imported large quantities of molasses, which for the most part was supplied to alcohol manufacturers, and on good information, we are informed that the Government will very soon purchase and import a large tonnage of molasses which, under present Government plans, will be supplied to alcohol manufacturers.

With the feed supply as critical as it is in the Northeast, livestock feeders should have first call on this molasses supply. On any appraisal that is fairly made of the situation, this molasses is more greatly needed for livestock feeding than for the manufacture of alcohol.

Added to the problems of livestock feeders in the Northeast in solving the problem of maintaining their dairy herds and poultry flocks on an inadequate feed supply is the problem of poor quality roughage.

Due to the unusual amount of rain in the Northeast this summer, and labor shortages on the farms, the hay harvested is way below par in feeding value. However, if an adequate supply of molasses is made available for use on roughage, the hay supply will be stepped up in feeding value.

An urgent appeal to the Feed Management Branch of the Department of Agriculture is being made by our federation for the establishment of a policy that will make available a large portion of the molasses imported by your Government for livestock feeding. Your support of our effort to secure Government recognition of the needs for molasses for livestock feeding in the Northeast will be greatly appreciated.

Very truly yours,
EASTERN FEDERATION OF
FEED MERCHANTS,
A. W. CARPENTER,
*Executive Director.*

## Rehabilitation of Veterans

EXTENSION OF REMARKS
OF
### HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Monday, October 29, 1945*

Mr. DOYLE. Mr. Speaker, at the request of H. J. Lieb, service officer of the American Legion Post, Washington, D. C., I herewith present a letter to him dated October 6, 1945, from W. B. Jones, service officer at Atlanta, Ga., for the East Atlanta Post, No. 159, together with a resolution dated September 18, 1945, by said East Atlanta Post, No. 159, together with a list thereto attached dated September 18, 1945, sworn to by Roy H. Bryant, M. D., chief medical officer. Certainly the fullest possible information about and in connection with the hospitalization, treatment, and rehabilitation of the veterans of the American forces is what we all seek. And certainly the highest ability and professional accomplishment there is existent, is not too good for these lads as they are compelled by physical or mental conditions to enter our hospitals, clinics, and other places which should be havens.

THE AMERICAN LEGION,
EAST ATLANTA POST, NO. 159,
*Atlanta, Ga., October 6, 1945.*

Mr. J. H. LEIB,
*Service Officer,*
*Post 15, American Legion,*
*Washington, D. C.*

DEAR BUDDY: As requested in your letter of October 1, attached hereto is complete file properly signed and dated, also report on Hospital 48, Atlanta, Ga., by committee appointed by our Fifth District Commander, William G. McRae, together with statement by Dr. Bryant concurred in by Dr. Daniel, and resolution passed by my Post 159, which was handed to General Bradley while on his visit here by Commander McRae.

Hoping this additional information will assist you in bringing some relief to a very bad condition in our veterans' hospitals.

I remain,
Your friend,
W. B. JONES, *Service Officer.*

---

Whereas the committee appointed to investigate conditions at United States Hospital No. 48 has made a report outlining conditions at that hospital and making certain recommendations in connection therewith; and

Whereas it is the opinion of the members of this post that said recommendations should be adopted: Therefore be it

*Resolved*, That the recommendations of said committee be adopted and approved and that the same be transmitted to the Veterans' Administrator with a request that he take action to place the recommendations therein contained into effect as soon as possible; be it further

*Resolved*, That a copy of this resolution together with said report which is hereto attached, be immediately transmitted to the Veterans' Administrator.

Unanimously adopted by the East Atlanta Post, No. 159, the American Legion, this 18th day of September 1945.

ERIC M. BURK,
*Commander,*
R. A. SEWELL,
*Adjutant.*

---

*To All Posts in the Fifth District:*

Pursuant to motion adopted at conference of posts of the fifth district at meeting held September 17, 1945, your district commander, together with Buddy W. B. Jones, of Post 159, and Buddy C. Price Williams, of Post No. 1, were designated as a committee to conduct an immediate investigation into the conditions presently existing at United States Hospital No. 48, with respect to determining the needs of said hospital necessary to improve the standard of care and treatment of patients at said hospital, and to make recommendations to the Veterans' Administrator which would, in the opinion of the committee, if placed into effect, result in improving the said standards of medical and hospital care.

The committee, with the exception of Buddy Williams, met at the hospital at 8:30 a. m., September 18, 1945, and immediately obtained interviews with Roy H. Bryant, M. W., chief medical officer; Robert L. Daniels, M. D., chief of medical service, and John M. Slaton, Jr., manager of the Veterans' Administration facility.

We secured from the chief medical officer a written statement outlining the immediate needs of the hospital from a medical standpoint. The needs for equipment will be met when deliveries are made on an electrocardiograph machine and new X-ray equipment now on approved order.

The needs for additional personnel of physicians, surgeons, and technicians is very acute.

The chief surgeon of the hospital has been ill for practically 1 month, and there is no first assistant to the chief surgeon. A first assistant to the chief surgeon is indispensable and should be obtained immediately. A neurosurgeon is badly needed, together with two neuropsychiatrists, all of them for full-time employment at the hospital.

One neuropsychiatrist is now conducting examinations for all out-patients, as well as hospital patients, averaging about 15 a day. The load is too heavy and cannot result other than in a more or less superficial examination, because not more than five examinations a day may be made efficiently. A Roentgenologist must be added to the hospital staff if proper use is to be made of the X-ray equipment on hand and on order. All of the above

should have a rating as Senior Medical Officer and be specialists in their respective fields.

In conference with Robert L. Daniel, M. D., Chief of Medical Service, the committee ascertained that there is a critical need for one full-time physician, P & S-4 for ward relief. Due to illness of present physicians, we found that one doctor has had to care for as many as 100 patients, which is predictive of overwork to the doctor, lack of proper care to the patients of the hospital and forebodes danger of the worst sort. The Chief Medical Officer and the Chief of Medical Service have had to act as utility men in every branch of the hospital in order to meet the emergency which has arisen. We find that of nine Army doctors assigned to the hospital, five of them will be due their release between now and December 15, and this presents an acute problem of replacement.

There is an urgent need for an Assistant Laboratorian in Bacteriology and Assistant Laboratorian in Roentgenology and additional Pharmacists.

Attached hereto is the written statement of the Chief Medical Officer as to medical needs of the hospital. The committee discussed these needs with Mr. Slaton, Manager of the Veterans' Administration, and he stated that the entire trouble now was due to a shortage of doctors and that if he could secure the doctors, he would be able to improve the standard of care and treatment. The committee noted that there had been considerable improvement in the caliber of nurses and attendants within the past year and there appears to be no deficiency in nursing and attendants' care.

The manager informed the committee that due to his inability to secure full-time doctors for work at the hospital, he had been authorized by the Veterans' Administration to make arrangements with certain private physicians and to employ private physicians as consultants for part-time work at the hospital and examinations downtown. The manager stated that he had been handicapped in securing appropriate office space to establish a downtown clinic where patients not needing hospital confinement might be examined and treated, but that there was some delay encountered in obtaining the necessary space. He expressed the hope that this matter would soon be worked out and the downtown clinic established.

It was the consensus of opinion of each of these three officials that the major difficulty in attracting skilled medical personnel to the Veterans' Administration is the lack of adequate compensation for full-time employment. The preponderance of members of the medical staffs of veterans' hospitals in the early years following the World War I were composed largely of young doctors who took employment with the Administration in preference to battling the economic hazards which so often beset men of small means in establishing themselves in the medical profession. In later years, it appears that the Administration has attracted as full-time employees many physicians who have not been too successful in their private practice.

The case load of this hospital is bound to undergo rapid expansion in the years immediately ahead. Monetary considerations should not be a barrier to providing the very best of medical skill in these hospitals. More attractive financial inducements must be offered for skilled members of the profession to accept full-time employment with the Veterans' Administration. Obstacles which block the attainment of this objective, whether due to low salaries established by law or to the system of classification under the Civil Service Act, should be suspended or set aside in view of the emergency which now confronts this hospital.

The committee recommends that every effort be made by the Veterans' Administrator to enhance the financial inducements to members of the medical profession to accept full-time employment with the Veterans' Administration and to exert every effort to channel into the services of veterans' hospitals skilled physicians and surgeons from the ranks of the Army and the Navy.

Respectfully submitted.

WILLIAM G. MCRAE,
*District Commander, Member Post No. 1.*
W. B. JONES,
*Member Post No. 159.*

---

NEEDS—HOSPITAL (MEDICAL)

PHYSICIANS AND GRADES

First assistant to chief surgeon, senior medical officer.

Neurosurgeon, senior medical officer.

Two neuropsychiatrists, senior medical officer.

Roentgenologist, senior medical officer.

One full-time physician, P & S 4, for ward relief.

TECHNICIAN

Assistant laboratorian in bacteriology.
Assistant laboratorian in roentgenology.
Pharmacist.

EQUIPMENT

Electrocardiographic machine. (This machine has been approved and should have been delivered before now. Letter has been sent to the Procurement Division to find out to what the delay in receiving same is due.)

New X-ray equipment. (This has been approved and bids let on September 15, 1945, making our present X-ray equipment into two diagnostic machines instead of one diagnostic and one fluoroscopic as this is a bottleneck if we increase out-patient examinations beyond the present call in.)

ROY H. ERYANT, M. D.,
*Chief Medical Officer.*

Attest:

A. S. TILLER,
*Notary Public, Fulton County, Ga.*
My commission expires January 2, 1948.
SEPTEMBER 18, 1945.

---

## The Navy's Peacetime Role

EXTENSION OF REMARKS
OF
**HON. ROBERT HALE**
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, October 30, 1945*

Mr. HALE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech delivered at Portland, Maine, October 27, 1945, by Lyman A. Thackrey, captain, United States Navy, U. S. S. *Portland:*

I know I speak for the Navy present here this evening—and most particularly for those from the U. S. S. *Portland*—when I say that we are happy indeed to be spending this first peacetime Navy Day in the city of Portland. The State of Maine and this city, in particular, have been closely associated with things maritime and naval since colonial days. You not only build ships, you sail them. You speak the language of the sea, and when we return to this port it is with the feeling that we are among people who understand us. Regarding the quality of the merchant ships you built, I cannot speak except that I know you built them rapidly and that they run. But your destroyers I have lived in and know their sturdy qualities. Among the first questions a young officer ordered to a destroyer asks is, "Where was she built?" And if he finds that she was built in Maine, he is happy, for he knows she'll keep her station when others are breaking down.

The U. S. S. *Portland*, on August 9 of this year, when the first hints of a Japanese surrender spread across the world, was anchored with the other ships of Task Force 95 off Okinawa. The force expected to sail on the following day (10th) for a strike into the East China Sea and conclude with a bombardment of Japanese strong points in Korea. But our sailing orders never came. Peace came instead. And soon we were on the long voyage home.

On this voyage with the ships no longer darkened and the gun watches secured we had much time for thought. "What of these splendid ships, with their war-seasoned crews?" we pondered as we looked out across the task force. "Would we tie them up and disperse their crews? Now that the enemies of law and order had finally unconditionally surrendered, was there any need for a United States Navy—for any navy in fact? If they were all scrapped what would become of the peace—would it remain? If so, for how long and on whose terms?"

One answer is to consider the Pax Britannica—that splendid 100 years of peace which the might and prestige of the British Navy gave to the world. This great era started with the Battle of Trafalgar about 1812, when Napoleon's hopes of world conquest were finally blasted, and extended to the summer of 1914. During this period the fleets of Great Britain were the glory of her empire. They literally policed the world. While there were many local conflicts in the land areas, no great intercontinental holocaust enveloped the world because the vast water highways were controlled by the British fleet. It was only when Germany had built her own high seas fleet and felt it strong enough to challenge Britain's power that she was able to plunge Europe and the world into war in the summer of 1914.

The fact that Britain had been able to achieve world domination for 100 years was no coincidence. With conscious design for world power she had for centuries carefully and arduously trained the youth of her ruling classes in world strategy and politics. Her statesmen, generals, and admirals had assurance and background, and could more than hold their own with those of other powers.

The United States stands today where England stood after the downfall of Napoleon—to use Churchill's words, "At the summit of the world." Our enemies lie defeated around us and we have at our disposal a victorious Navy of almost unbelievable power and range. But we lack what England seems always to have had: a long-range, world-encompassing policy and the men trained to carry it out. But the policy and the men, I believe, are on the way. Even now they are emerging and our present big problem is not to allow the magnificent Navy which should be their reservoir of strength around the council tables of the world, to be frittered away as it was after World War I.

The crippling effects of the lack of sea power are reiterating themselves in the lessons already coming out of this war. For instance, the Japanese have stated since their surrender that the reason they did not follow up their sneak attack on Pearl Harbor with an invasion was because they knew they did not have the supply shipping to support it.

Von Rundstedt, the German, when asked why Hitler did not invade England instead of attacking Russia, said that although the Germans felt certain a toehold could be obtained in England they knew they did not have the sea power to reinforce and maintain it in the face of Britain's home fleet.

Stalin, at the time of the Normandy invasion, said what a fool Hitler had been to

embark on a career of world conquest without a powerful navy.

The most poignant example, however, as far as we are concerned was our own naval weakness during the campaign for Guadalcanal. Due to the lack of carriers and cruisers, withdrawal from Guadalcanal with all the loss and delay it would have entailed was seriously considered about midpoint in the campaign. During this campaign the ship that I was in stayed at sea for 72 consecutive days—there were many whose time at sea was 100 days and over—keeping the thin supply line open.

Those were our darkest days, for soon after, the effects of your efforts at home were felt by way of additional planes, and ships, and we moved on with new confidence. In a few words I will review this expansion and our subsequent advance across the Pacific in order to remind you again what the Navy has done and what it should be kept to do in the future if need be.

The Japanese struck at Pearl Harbor with the assumption, of course, that we would never be able to recover. They realized our tremendous potential but thought we lacked the courage, the fighting heart, and skill to recuperate from the staggering loss of most of our capital ships, let alone be able to concentrate for an offensive capable of penetrating their powerful island bulwarks. Similar thoughts were in the minds of many naval officers in those early days. We knew the Japs were wrong but would we be able to prove it? By scraping and straining we put sufficient ships and planes together to meet them successfully in the Coral Sea and again at Midway. These were defensive battles both. But they showed that our technique was sound, that the spirit and courage was there and that when the planes and ships came from the mainland we would be ready to roll.

But in good American fashion we started to roll before we were ready—into Guadalcanal on August 7, 1942. From this date for the next 6 months the bloody battles for this island continued with sometimes ourselves on top and sometimes the Japanese. One night they sank four of our cruisers with no loss in return. Another time they sank one and torpedoed three others. Then we sank two Jap cruisers and three destroyers with no loss to ourselves. And so it went until the culminating night battles of November 13 to 15, 1942, when, with heavy ships newly arrived from the Atlantic, we smashed them, in what since has become known as iron bottom bay, so they never returned. Thus successfully concluding our first offensive started on a shoe string 6 long, dark, months before.

From that time on there was no doubt about the ultimate end. We had found ourselves and had begun to move in earnest. The pattern of the advance was always the same—island after island captured solely for their air strips and fleet anchorages to be used to spring to the next island—with the carrier task forces always out in front spearheading the advance.

To illustrate, we had consolidated the Gilberts and Marshalls and were ready to spring 1,000 miles to the westward to Guam and Saipan. But there were hundreds of Japanese planes on Guam and Saipan, which our land-based fighters could not reach and which could successfully thwart our attempts to land there. So carrier task forces, in foray after foray carried naval fighter planes to meet the land-based enemy planes on Guam and Saipan until the enemy air strength there had been so depleted that our landing attempt was a reasonable risk, and when undertaken in June 1944 was successful. And so it went—on to Palau, the Philippines and finally Iwo Jima and Okinawa—with the carriers and their planes protected by battleships, cruisers, and destroyers always in the lead.

The final outcome you all know. There has been nothing like it in the entire previous history of warfare—a great nation surrendering unconditionally while the bulk of its army was still undefeated, but with its navy and air force annihilated. One single Japanese capital ship floated upright on VJ-day—the battleship *Nagato*—and this was not manned!

Had there been no carrier task forces to lead the way, we should still be sitting on Hawaii, casting balefully eyes across the western Pacific, waiting for long-range land planes capable of carrying atomic bombs to Japan, with sufficient gas for their return and guns to protect themselves en route.

Spectacular as were the contributions of the carrier task forces, we must not overlook the brilliant achievements of our submarines. When I tell you that the majority of Japanese aircraft carriers sunk during this war were by torpedoes from our submarines, that they sank 42 enemy destroyers and 10 enemy cruisers, you will realize in a measure their magnificent work. Their average monthly sinkings when Guadalcanal was staged, was about 70,000 tons; when the Japanese surrendered, it was over 350,000 tons a month—about the same as the U-boat monthly average in the Atlantic at its peak.

Isn't it reasonable then to retain these carrier task forces and underseas craft which served us so admirably in war for policing and safety insurance in peace? Not at their full wartime strength but in sufficient numbers to insure our safety and make clear to the world we are ready for any emergency?

There is much talk about the atomic bomb having made the surface Navy obsolete. And that land planes will soon be developed of such range and armament that carriers will no longer be needed. To both of these, I say perhaps, many years from now. The effect of atomic bombs on task forces at sea is incomparably less than on cities and fortifications ashore.

Also many years from now is that idylic day when the great nations of the world will have revised their sovereign rights until all the armed force in the world is vested in a single international authority. Before that day arrives, literally years will have been spent around the council tables in London, Washington, and Moscow. And at these meetings it isn't the size of one's bank roll that counts. We learned to our sorrow that our bank roll an i our vaunted potential had little effect on Hitler and the Japanese. The only thing that counts when the chips are actually down in these round-table sessions is the number of warships and planes you have, first, and, secondly, the size of your Army.

As people we have cast off our isolationism and have stepped out boldly in the role of international leaders. It is now essential that we give our statesmen the means, in the form of an existing Navy and Air Force, of accomplishing in this international structure what we as a people want.

In closing, I will try to make another point, by asking a question. What are the predominant changes you have noticed in the young men returning from the service? Are they returning strengthened in body and spirit, broader, more self-reliant, and with less thought for themselves and more for their neighbors? I believe they are.

At the start of the war, in the spring of 1942, I was attached to the battleship *North Carolina*. We were in the Brooklyn Navy Yard, fitting out with all haste for the Pacific. We held drills, instruction periods, and lectures, and did our best to prepare for what we knew was in store for us. But we got little response from the majority of the crew who were recruits of about 6 months' service. At morning muster after morning muster, we would have 100, 150, sometimes 200 absentees. They weren't interested in winning the war, in wiping out the ignomy of Pearl Harbor. Their whole concern was in having a good time—movies, cabarets, girls.

"Could a war be fought and won with such material?" we asked each other over and over again. Finally we put to sea, and after a brief shake-down in and around Casco Bay, headed for the Pacific. By the time we reached the forward areas, 3 months later, the whole tone of the ship's morale had changed. Away from the indulgences of the land and into the rigors of the sea in wartime, they had responded as only the American youth can respond. Their bodies hardened, their spirits came alive, and after 4 months out of New York, when our first action came, we could not have asked for a finer team. They not only were willing to fight, they wanted to fight—they were on the stalk with the pioneer blood of their ancestors coming to the fore.

And so I say that we should keep the homecoming youth and the youth that is growing up from returning to these old indulgences. Unfortunately this depleting self-indulgence is an American trait sprung from the bountiful conditions under which we live. If we are to survive as a great race it must be submerged and restrained by emphasis on those pioneer virtues which have won this war for us.

Universal military training is a thing deplored by many as un-American. But it seems to most of us in the Navy that 1 year away from his chosen calling, during the malleable period of his life, is a small price for a young man to pay for the inculcation of those pioneer virtues of faith in himself, restraint and integrity which this training is designed to give, and will give.

I must say I view with some alarm the feverish haste with which we are demobilizing on one hand, and on the other hand rushing on with our reconversion so that we may get the jump, economically, on our late allies. We have the jump on them already and they do not like it. An undercurrent of ill will is developing even with England. But whether they like it or not we can keep our advantage if we wish—and build a vast economical empire of great prosperity. But, if in this building we neglect the military foundation on which it must rest, the next great world crisis will bring it down in pieces about our ears.

I do not mean to strike an unnecessarily pessimistic note; however, I feel that this is a time for serious thought as well as great rejoicing. We are truly at the "summit of the world," and a magnificent future stretches ahead if we build soundly and with care, playing the game of give and take in our international relations as it is meant to be played—with a reasonable amount of "give" and not all "take."

## A Comment on the Atomic Bomb Controversy

EXTENSION OF REMARKS
OF
**HON. JOHN M. COFFEE**
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, October 24, 1945*

Mr. COFFEE. Mr. Speaker, the Press Alliance, Inc., recently issued a statement on the subject of the atomic bomb i. which the so-called May-Johnson Act is discussed. There is much thoughtful material in the article. Can we sit on a scientific discovery and keep it a secret

from the world? Furthermore, if we can or could what effect would that have on world peace?

Here is the article:

ATOMICS—A QUESTION OF GENERATIONS

These are the times that try men's wits—old men's wits.

Under the influence of the President and the War Department, two scientists, Vannevar Bush and James Bryant Conant, with appropriate legal counsel (allegedly), drew a bill for the control of atomic energy. This bill has been introduced simultaneously into the House of Representatives and the Senate as the May-Johnson Act.

Mr. Bush and Mr. Conant are very distinguished scientists. They are no longer young men.

Mr. Bush is 55 years old. Mr. Conant is 52. The average age of the nuclear physicists who built the atomic bomb is 24½ years. Mr. Bush and Mr. Conant have one notion about the bomb which is at the bottom of their thinking about how it should be controlled. Almost without exception, the young nuclear physicists have another idea. They are in vocal revolt against the ideas of Messrs. Bush and Conant. Some of them even go so far as to state that if the May-Johnson Act is passed as written, they intend to violate it publicly as a patriotic act of civic disobedience and go to jail.

The point—in this writer's judgment—is that Messrs. Bush and Conant grew up in a different world. In their world—the world they first learned about—the universe was composed of 92 different sorts of bricks called elements, eternal, immutable, dependable. Together these constituted matter. Matter was limited and indestructible. Time could be regarded as the unfolding of an unyielding determinism, according to which everything that happened had to happen. It was an inhuman world but it was relatively small. In it a trained mind could find its way without more difficulty than when navigating the crowded front hall at home in the dark.

During the lifetime of these living older men, that universe decayed. Today it is completely dead. Not a single one of its cardinal assumptions has stood the test. But the memory of it still haunts and confuses the minds of people born into it.

The new universe is utterly different. It can best be considered as, well, a field of cosmic forces, probably in the end, of one force. The immutable 92 elements composing indestructible matter can each and every one be changed into something else. One of them has just been transformed into two brand-new elements. All of them may vanish, to merge as pure energy. Energy, mass, and velocity are inextricably linked.

The key to this universe is the atom—and most of the atom is empty space. Within that space fascinating entities called electrons, positrons, protons, neutrons, what nots, move and have their being. They are the only "bricks" of the new universe and they are as hard to put your finger on as fleas. Streaming into these atoms from an undetermined source come life, rain from heaven, invisible ultrapotent cosmic rays.

Yet, strangely enough, over these limitless forces mankind, with the atomic bomb, has begun to establish control. Cooperative development of this control is a prerequisite of human survival.

Iron-clad causation has broken down into major probability. In last analysis, most anything can happen.

In this new, freer world the young generation of scientists are at home. They take it for granted. Compared with the survival problem it offers, the problems that haunt the rest of us—political, economic, social—seem temporary. These young people calmly announce that the only safe antidote to the new bomb they have built is world government. When told that this is impossible they smile scornfully. Why should anything be impossible when it is also necessary?

To them, science is the key to future human living, the common inheritance of all nations.

Above all, science must be free. Scientists, not government, must direct research if it is to be successful. Scientists must consult among themselves freely, without interference.

The young nuclear scientists who discovered and built the atomic bomb believe the May-Johnson Act would, if it became law, limit atomic research. It would permit a governmental commission, possibly headed by an outsider, to decide what young scientists should experiment with. It would limit international cooperation in research.

Thereby it would defeat its own ends. Gagged and directed American minds would be no match for free minds in other countries. In seeking to secure American leadership in atomic research, the May-Johnson Act would kill that leadership.

Therefore they oppose the May-Johnson Act and hope the President will have it modified or withdrawn.

## Ode to Ie Shima

EXTENSION OF REMARKS

OF

### HON. BARTEL J. JONKMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, October 30, 1945*

Mr. JONKMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following poem from the Grand Rapids Herald, of October 24, 1945:

ODE TO IE SHIMA

There's an island Ie Shima;
  Just a stone's throw from Japan.
Now it's marked with wooden crosses,
  Where once was no man's land.
These are the graves of peaceful chaps
  Whose love for freedom's bliss;
Caused them to give their lives, their all,
  For just a hole like this.

If one of you could see it,
  I'm sure you'd wonder why;
All these lives were given,
  Why all these boys must die.
It's really not worth fighting for
  As far as land's concerned;
It's only just a coral reef
  From ocean's depths upturned.

But these lads did not fight for land,
  For conquest or for fame;
They fought, you know, for freedom's love,
  For loved ones, home, and name.
For the stripes that make Old Glory,
  For the land across the sea;
So we could go on living
  In a country of the free.

Though they didn't live to see it,
  Their job is now complete
By others who followed in their steps
  The lowly Jap to beat.
Now Old Glory flies so proudly,
  O'er the palace in Japan.
We came, we saw, we conquered,
  Did the job for Uncle Sam.

It's little that we ask tonight,
  As we toss in restless sleep;
We only want to shake the hands
  Of lads upon our street.
We only want to wander,
  O'er the meadow's beauty green,
Or sit at night 'neath starlit skies,
  Our arm around a queen.

This may be our gray-haired mother,
  Or the wife we loved so well;
Who has prayed each day for safety
  For her boy out in this hell.
Now that it is over,
  Our troubled hearts doth yearn;
To see the smiles upon their faces
  As all their men return.

So take us back that we may feel,
  Good earth beneath our feet;
Or shake the hand of little lads,
  That play upon our streets.
Or take that gray-haired mother
  In our arms once more;
Or kiss the lips of faithful wives
  Who wait upon the shore.

So that the island Ie Shima,
  With its rocks, its cliffs, its caves;
May be just another name some night,
  Nightmare of hell's own days,
But never shall we e'er forget,
  This coral-rock domain.
Let us bow our hearts in silent prayer
  At the mention of its name.

For here are others whose dreams like ours,
  Can never be fulfilled.
They rest tonight 'neath coral's sand,
  A cross on Ie's hill.
Let us not forget them;
  May we make this world secure;
So our sons shall never see
  The rocks of Ie's shore.

—*Staff Sgt. Robert Cox.*

## UNRRA Supported by Michigan Council of Churches and Christian Education

EXTENSION OF REMARKS

OF

### HON. GEORGE G. SADOWSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Monday, October 29, 1945*

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following letter received from the Michigan Council of Churches and Christian Education:

MICHIGAN COUNCIL OF CHURCHES
AND CHRISTIAN EDUCATION,
*Lansing, Mich., October 12, 1945.*

HON. GEORGE F. SADOWSKI,
*First Congressional District,*
*House Office Building,*
*Washington, D. C.*

DEAR SIR: We, the undersigned members of the staff of the Michigan Council of Churches and Christian Education, realizing the desperate need of Europe for food and fuel, and believing that America as a Christian nation should render all help possible, urge you to support all measures for necessary rehabilitation, particularly release of UNRRA funds. We believe that the future peace of the world is in jeopardy as long as Europe is allowed to go hungry.

Respectfully yours,

J. Burt Bouwman, Kearney Kirkby, Edwin C. Earl, C. Walker Hayes, (Mrs. A. C.) Grace B. Evans, Birdice Lawrence, Lucy C. Smith, Pauline M. Ryder.

## Training for Defense

EXTENSION OF REMARKS

OF

### HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, October 29, 1945*

Mr. DOYLE. Mr. Speaker, President Truman commented on what he thinks is in the country's best interests. Unanimous consent having been granted me, so today I ask you to read an editorial which appeared in the Press-Telegram in my home city of Long Beach on October 24, 1945. It is a splendidly written editorial, self-explanatory, and expresses some of the thinking of one of the ablest newspaper staffs that I know of:

TRAINING FOR DEFENSE

If there is going to be a World War III—and nobody today can say confidently there won't be—the United States ought to have military training of its youth. The nation that is not ready to defend itself when the next attack comes may not survive the shock.

As President Truman told Congress, the development of technological warfare does not lessen the need of training men for military service, but increases it. When musket or rifle was the principal weapon, America might rely for its defense upon the million men who would spring to arms before sunset of the day when war started.

It is different with the machinery and chemistry of modern warfare. Scientific technicians are the product of thorough training. A year's advance training of them, says the President, might make the difference between life and death for the Nation.

During the recent war universal military training was opposed as being untimely. Opponents of it said the Nation should concentrate on winning the conflict it was in, and postpone until after the war the argument over training for a future war. Some of them now probably will say consideration of military training should be postponed until it is learned whether the United Nations Organization can end war.

A wiser plan is for the United States to find out by experience that it and nations associated with it can prevent war before America puts all of its trust in the new league of nations. Military training is not war. If war can be prevented, the boys who are trained never will be inducted into the armed forces.

President Truman deserves commendation for the courageous and patriotic stand he has taken for what he thinks is in the country's best interests. The question is highly controversial and is sure to arouse serious, even violent, opposition from a number of sources.

It is better to admit frankly that what the President proposes is military conscription, regardless of the technical distinction he draws between training and induction. It is compulsory service in peacetime, which is contrary to American traditions, and advocates of it, as something shown by two world conflicts to be necessary to the national safety, cannot deny that it will mean a year's delay in boys' entering college, or the loss of a year in beginning their life work; but two wars have proved to this generation of Americans that nothing is as disruptive of the lives of a people as war for which a nation is unprepared.

Though everybody is entitled to his opinion on so vital a question, those opposing universal training should concede that Americans, whose only desire after participation in two world wars has been to return to civilian life as quickly as possible, are not going to be made militaristic in spirit by a year's training. Furthermore, the existence of a body of trained civilians will avoid the need of a large standing army, which is even more repugnant to the powerful antimilitary sentiment in the United States.

## Einstein's Idea

EXTENSION OF REMARKS

OF

### HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, October 30, 1945*

Mrs. DOUGLAS of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial which appeared in the Washington Post, October 29, 1945.

Mr. Speaker, now that we have found the secret of secrets, now that we have gotten hold of the string that can unravel the universe, man is gripped by fear. A fear that he has never known before. We can use this fear to weld the peoples of the earth together into a harmonious, unified whole, or we can allow this fear to drive us farther apart and finally ring down the curtain on our civilization.

Already, as the Washington Post says, the shadow of the atom bomb has fallen across the conference table.

We cannot allow this shadow to remain for long.

The following editorial discusses what Albert Einstein, the original discoverer of the secret of atomic energy, has to say on the course we must follow at this time if we are to survive:

EINSTEIN'S IDEA

Anything that Albert Einstein, the original discoverer of the secret of atomic energy, has to say is bound to be significant, though it must be borne in mind that he is a physicist and not a political scientist. He and men like him have been at work for the past 2,000 years in improving and strengthening our physical organization. So shrunken has the world become as a result of their discoveries and inventions that mankind now finds itself living in a common room. Professor Einstein, in an interview with Mr. Raymond Swing in the Atlantic Monthly, recommends that we acknowledge the sameness of our living quarters in our political organization. Authority, in other words, would henceforth be universal. Instead of subjecting ourselves to the nation-state, we should subject ourselves to a world government.

The trouble is that there has been so little preparation for the world state. The riddle of the universe has been unraveled to a generation which is still wedded to life under separate sovereignties—to the authority of a unit instead of a cosmos. There is no form in our planetary life in the shape of a common religion let alone a common polity. Accordingly most people, we fancy, will approach the issue of political accommodation to the atomic age in terms of preparation for a world state. At any rate, this has been this newspaper's approach. However, the administration thinks differently. The President on Saturday talked of keeping the secret of the knowhow of the atomic bomb as a "sacred trust." The fact is attested by all nuclear scientists that the trust would be temporary. Within 18 months, according to Professor Oppenheimer, any nation armed with the Smyth handbook issued by the War Department and a hunk of U-235, or the kind of uranium which is at present fissionable, will be able to make an atomic bomb. Maybe by that time other materials will be fissionable. In another 5 years or so, according to Sir James Chadwick, the energy in the atom can be canalized for peacetime uses as well as exploded for war purposes. This is an age that has dawned suddenly, not slowly, as did the age of steam or of electricity.

This fact alone makes imperative an adjustment in the thinking of our statesmanship. We are thinking mainly of American statesmanship. For the responsibility is singularly ours, since this Nation is, in Mr. Churchill's words, on the summit of the world, and, moreover, took the lead in the first use of the atomic bomb for lethal purposes.

Action, in our opinion, should be taken at once to sound out the other governments of the world on a project to institute world government over all applied research on atomic energy. This would involve a proffer on our part of the secret of atomic knowhow. In return we should require that these properties in every country be brought under control of a world body to be set up by UNO; all factories engaged in atomic work and all uranium and thorium deposits. In addition, the world body should be given the right of inspection for its technical police in the countries of participating governments. If one or more countries refuse to help set up this world body, the proffer should be withdrawn, steps should be taken at once to form an alliance with those who had offered a partnership, and the objecting countries should be declared world outlaws. This is a suggestion which we advanced when the atomic bomb was first announced; we have seen no suggestion as yet which would improve upon it.

Certainly Professor Einstein's idea belongs to the future. It is the present we are concerned with. It is obvious from the setting up of atomic commissions in one country after another that a new and highly dangerous arms race is on. Already the shadow of the atom bomb falls across the conference table, and will continue to do so as long as the United States holds it as a "sacred trust." It is a shadow that by the same token is falling over the entire human race, making people prey to fears and nations anxious only to protect themselves by making bigger death-dealing missiles. No civilized life can be redeemed out of the holocaust of the last war unless this country makes a move along the suggested lines.

## Blueprint for Postwar Prosperity

EXTENSION OF REMARKS

OF

### HON. ROBERT F. RICH

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, October 30, 1945*

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. Samuel B. Pettengill, a former Member of the House:

BLUEPRINT FOR POSTWAR PROSPERITY—THE MOST SUCCESSFUL POSTWAR PLAN EVER DEVISED—IT PULLED EARLY AMERICA OUT OF INFLATION AND CHAOS—IT WILL WORK AGAIN IF WE RETURN TO IT

(By Samuel B. Pettengill)

One hundred and fifty-seven years ago the Constitution of the United States was signed.

Following the Revolutionary War it was the plan upon which the postwar America was built. We are now concerned with the postwar America of 1945 and thereafter. We are looking forward with hope to the ending of the war, and then with much doubt and uncertainty to the peace years that will follow.

I wish to speak of the Constitution today, not with reference to freedom of worship, a free press, the right of self-government, etc., valuable as they are. Instead, I wish to speak of the Constitution in terms of jobs, prosperity and happy homes.

Many plans are being discussed with reference to jobs in postwar America. It is important that we plan. But it is doubtful if any of these modern plans will long succeed unless we fit them into the American Constitution. The Constitution has proven itself to be the greatest bread and butter document in the history of the world. Under it more people have enjoyed more of the goods and comforts of life than any other people under any other form of government.

Why is this so? It is to this question that I invite your attention. I believe its understanding by all Americans will go far to provide jobs for our soldier sons when they come home with banners flying, for demobilized war workers and our 2,000,000 young people who become of age each year.

Despite the cost and loss of war, our marvelous scientific advance has made it possible, for the first time in human history, to produce enough to provide a decent living for every American family. We have the physical, financial and the scientific resources, as well as the human skills, to produce the greatest era of prosperity the world has ever known. Nothing can cheat us out of this, except our failure to understand the reasons why America has prospered so greatly in the past and why it can do so again.

Why is it that by 1930 New York City had more telephones than all Russia? Why did Texas and 6 other American states each have more automobiles than England or France or Italy or Germany? Why did 7 percent of the world's people, living in America, have 45 percent of the world's wealth, and among themselves do almost half the business of the globe? Why did we have more life insurance than all the rest of the world? Why were we able to spend more on the education of our children than was spent by all other people in the world for their children?

There were many reasons for all this; but in planning for postwar America, we must not overlook the greatest reason of all. That was a stable and completely solvent Government under the Constitution of the United States, operating in the interest of all the people, with an enterprise system free from what President Wilson called the "palsied hand" of a vast governmental bureaucracy.

Compare our progress with that of any other country in Europe or Asia. For example, France during the past century had three republics and three empires, at least six different forms of government in 100 years. In such an atmosphere of uncertainty no one could make long-range plans for the future. As a result, France had a per capita income about one-third that of ours. Under such circumstances, she could not enjoy the tremendous advance that we have had. Other European countries had a similar experience and a similar fate.

The European country which had the most stable and predicable government was England, and it enjoyed the highest standard of living of any country overseas. But our 130,000,000 Americans by 1930 had greater income and a smaller debt than England, France, Italy, Germany, and 10 other European countries put together, with 435,000,000 people. That is the one reason why we are going to win this war.

What was it that we had that these other nations did not have? Our great asset was a written Constitution and a people devoted to it, who believed that they should support the Government rather than the Government support them. Both of our great political parties swore to defend the Constitution. As a result, despite many hard-fought political campaigns, when the votes were counted, the losers accepted the results in good spirits. They wheeled the winners around the courthouse in wheelbarrows, shook hands and went back to work.

The chief reason for all of this is the fact that the great basic rights and freedoms of Americans were never at stake in a political campaign. As the pendulum has swung from one party to the other no temporary majority of either party ever thought of challenging these basic rights.

But are they safe today? That is not my question. That is what millions of people are now asking.

The Constitution's safeguards have been a priceless asset to us in the past and can be still more valuable to us in this unsettled world. I pray to God that the men and women of both great parties will continue to remain loyal to the American Constitution in the days to come. Our happiness, our prosperity, our domestic concord, and jobs for our soldier sons, the workers in our great factories and those who till the soil depend on it.

Despite the immense importance of freedom of religion, freedom of speech, of the press, and of assembly, etc., the Constitution was the bread-and-butter side of life, and that was the chief reason why our fathers adopted it. They wanted to make life, liberty, and property secure; to make contracts enforceable, to make government stable and predictable and thus encourage business to plan and expand. In short, our fathers wanted government to provide ground rules by which the game of life could be played. They wanted to prevent the umpire from changing the goal posts every time the ball was put in play.

The Constitution was written in 1787 when there was almost total collapse of confidence in the future of America. All real wealth had gone into hiding; no credit was available anywhere.

Fear of inflation and repudiation hung over the land. In such an atmosphere of chaos the Constitution provided that no State could impair the obligation of contracts, including its own. No man could be deprived by his Government of life, liberty, or property, except by due process of law.

No man's property could be taken for public use except for just compensation and under lawful procedure.

All taxes had to be uniform. This assured all men of equal treatment by government. The United States guaranteed each State a republican or representative form of government. This was designed to end the threat of any budding dictatorship. Every citizen was to have the same legal privileges and immunities as all others.

The Federal Government was given only limited power over the lives and business affairs of our people. This was intended to prevent national socialism, which requires a government of unlimited power. It enshrines free enterprise as opposed to political ownership or management of business. It gave men the assurance that they could plan their own futures. Elections were made nonpostponable and frequent in time. This assured men that they could get rid of a government which abused its powers over them.

The Constitution made the liberty of the citizen the keystone of progress. Under it every American had the right to choose any lawful occupation without leave from anyone, to change jobs or employers, to move to better one's chances in life, to keep what one makes, to own property, and enjoy its fruits; to have and to hold. The Constitution thus released the most powerful incentives to work and climb the ladder of success, the world has ever known.

Patents were protected by the Constitution, and we became the greatest inventors in human history, constantly creating slaves of iron and steel to lift the burden of soul-killing drudgery from the backs of men.

The Constitution protected property, stocks, and bonds, and because it did so, our thrifty investors promoted these patents into enormous production which reduced unit costs and so brought them within the reach of millions.

The Constitution gave our courts the right and duty to hold unconstitutional any law of Congress or the acts of any President which infringed on our basic freedoms. It assured them against oppression by government; against government by bayonets. It placed the citizen for the first time in history on equal terms with the state itself.

This was done and then what happened? Within 3 years Alexander Hamilton, as Secretary of the Treasury, was able to borrow money from Holland for the United States on better credit terms than any nation in the world save one. And then to this new land of few people and little capital hundreds of millions of dollars poured across the Atlantic to build our canals, our turnpikes, our railroads, and our great industries. Foreign investors found in America, behind the mighty dikes of the Constitution, the safest refuge in the world. As we accumulated capital of our own, we began to invest it in the 10-, 30-, or 50-year promises of American industry, realizing that while we took the business hazards of success, we were free from the political hazard of confiscation, or repudiation.

The Constitution thus released the springs of energy, the ideas, inventions, dreams, and ambitions of millions of freemen to march forward in the greatest pilgrimage of progress the world has ever known. It turned work, thrift, sweat, and hope loose in this free and fortunate land. The American standard of living became the most revolutionary fact in the modern world.

This is what our farsighted forefathers did for us. If I were planning a postwar business now, I would try to locate the home road once more. I would try to understand and get my fellow citizens to understand why for a century we had the greatest prosperity, national unity, and good feeling ever known to history. If we preserve the Constitution now from being undermined, we can rebuild the wreck of war as our forefathers did.

If we let our charter of freedom slip from our hands, we may wade through debt, repudiation, and domestic discord for long years to come.

Let us return to the Constitution.

Give our billions of American capital, now choking our banks, the same confidence in the stability of American institutions that European capital had 100 years ago and we can march forward again.

Maintain the Constitution and its guarantees of liberty and property, elect men to public office, Democrat or Republican, who will fight to preserve liberty under law, and the rights of the States against concentrated power; restore free markets for goods and money, prevent monopoly wherever it exists, and we can have a hundred and twenty-five billion dollar national income—we can pay our huge debt with honest dollars, secured by reasonable taxes levied against a huge base of national income; we can give the green light to the new Edisons, Burbanks, Whitneys, and Fords.

We can climb new Pike's Peaks; we can go on to new Klondikes; we can harness these billions of dollars to the Aladdin's lamp of

modern science, technology, and power to rebuild this war-torn land; we can tear down our slums; we can provide employment for all who want to work and succeed.

And we can again become a great, a free, and happy people.

## High Cost of Being President, U. S. A.

EXTENSION OF REMARKS
OF
**HON. THOMAS J. LANE**
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, October 30, 1945*

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein an article which appeared in the American Weekly magazine on October 28, 1945:

HIGH COST OF BEING PRESIDENT, U. S. A.

If your little man who is going to be President some day is not rich when he steps into the White House he is going to have a hard time to make ends meet.

Any mother's son, of course, can aspire to the top job in this free country, and may get it as threadbare Abe Lincoln did—but today it's no place for a poor man.

Harry S. Truman, up from the grass roots, knows this as well as anyone, and many Congressmen are saying it's time to save him from financial worries.

With no private income to fall back on, as the late millionaire President Roosevelt did through 12 years he can sharpen his pencil point as often as he wants to, and still have to figure that financially he isn't sitting as easy as a $2,600 a year Government clerk.

"Well, his take-home money comes to $75,000 a year," someone may say right away. "He ought to be able to scrape along on that."

Let's see.

He is Commander in Chief of the Army and Navy, and as President he holds the Nation's highest honor, but like any John Doe, he pays an income tax. It's a whopper.

Congress fixes his pay by law, and unlike the head of a big industrial corporation, he can't reduce his salary figure and thus net more in a lower income bracket. He can't incorporate himself as some movie stars do. He must take the rap on the whole $75,000.

First, Uncle Sam reaches out and whacks $46,000 off the $75,000. (Until President Roosevelt took office, the Presidential salary was immune to taxes.)

Next, his home State of Missouri swings. It knocks off about $3,000.

Before the President has even bought a pack of chewing gum, his salary is down to little more than $25,000.

He isn't through with taxes yet. He's a home owner. In Independence, Mo., just outside Kansas City, is the Truman house. On that he pays a varying tax rate, as any small-town property owner does.

"But he gets free rent in the White House, doesn't he?" the question sometimes bobs up.

Of course, he does. Also he meets so many expenses there, not paid by the Government that he would be better off living in the modest Washington apartment he had when he was a Senator and then Vice President.

The White House is a big domestic establishment. It has to have a host of servants. They have to be fed.

Guests come and go, and keep on coming. Until you are President, you don't know how many people can drop in, nor how many you have to ask as a matter of course.

When Gen. Charles de Gaulle, provisional President of France, is a state guest at the White House, as he was recently, expenses are paid out of a special fund. But a group of Senatorial friends, or run-of-the-mill diners and house guests from hither and yon are people of another stripe. The President foots the bills.

So there goes $7,500 a year more for food.

Now, with Federal income tax paid, State income tax paid, local property taxes paid, and food bills met, the $75,000 is down to $15,000.

Still the President hasn't tackled the normal expenses of the head of the family. He hasn't stopped to say to himself, "I had a hundred bucks Wednesday morning. Now all I've got is a fin. This is funny."

One considerable expense he's probably glad to meet. He can feel warm inside about it. What's a man want money for, anyway, more than for something like this? He's sending his daughter through college—George Washington University.

Then there is the clothing bill for the family. There's life insurance and home insurance. Lodge dues, gratuities, and contributions. Incidentals and always the procession of unexpected drains on the wallet that any family man knows come as inevitably as a change in the weather.

President Truman, by careful housekeeping and frugal living, under the circumstances, is lucky at the end of the year to have anything left of his 75 grand.

Heads of some other great nations must smile about this. A President has to skimp and pinch. Americans are funny people. The people elsewhere must think so.

King George of England, for example, rereceives enormous royal grants. That's the King's lot. President Truman, when he stepped up to the top job, actually took a loss. He was getting along better financially during the short time he was Vice President.

President Taft was the only President ever to receive his full $75,000 a year. The President's pay was increased from $50,000 to $75,000 in 1909. In addition he received a $25,000 yearly fund for traveling expenses.

President Truman receives $30,000 yearly for travel expenses and for entertainment on state occasions. This defrays the cost of such Presidential trips as Big Three conferences and United Nations parleys, and it takes care of visiting foreign dignitaries and White House receptions.

Its use is strictly limited to state purposes and it is not an additional item of Presidential income.

The actual income has been going down in purchasing value much of the time since the first Presidential salary was put on the books on September 24, 1789. The Continental Congress on that day fixed it at $25,000. A lot of money then.

President Washington, as it turned out, didn't care much whether it was a lot or not. He was wealthy in his own right, had large land holdings, and his beautiful plantation at Mount Vernon on the Potomac below Washington. Food wasn't something bought all the time; it grew. There was no servant problem.

The Presidential salary remained at $25,000 until 1873, when it was raised to $50,000 during the administration of Ulysses S. Grant. Then in 1906, when Theodore Roosevelt was President, Congress voted the travel fund, at first, $25,000.

The White House itself always has been a kind of Government stepchild. It has had to get along a good deal on its own, and no one ever has seemed to want to claim it.

It is, of course, the executive branch of government, as the Congress is the legislative branch, but it never has received appropriations on the basis of other Government departments.

It is far more than merely an Executive Mansion where the President lives. In a way it is a business organization of fair proportions.

For the Mansion and Grounds there is a force of employees, usually about 70. They include ushers and servants in the White House, and gardeners, electricians, painters, engineers, and a variety of smaller fry.

In the Executive Offices of the White House, a section in the west wing where the President works, there is a clerical force of about 260. Almost none are on the White House pay roll. Most are under civil service and are really employed by another Government agency such as the State Department, Agriculture Department, or other agency.

The size of the force varies with the needs of the White House, with war years and the present postwar work keeping it large. The employees are regarded as being lent to the White House, although some may work there for years.

When duties let up, the personnel is sifted; some may stay, some may go back to the department which had employed them.

Since President Truman has been in office, he has instituted some economies, and here and there the staff has been reduced.

Like the other White House employees, the police force there came over from another branch of the Government. The police, charged with the protection of the White House establishment in general and the surrounding grounds, are under the Treasury Department and their salaries are paid by it.

The Secret Service operatives at the White House also are from the Treasury Department.

In the White House's east wing are the offices of John W. Snyder, Director of War Mobilization and Reconversion. It is an important office and its work is complex.

War and postwar work adds to the scope of the duties performed there. This has meant, and still does mean, crowding here and there. Some of the functions of the White House had to be transferred to the adjacent State Department Building.

In that building, for example, were the offices of the six Presidential assistants whom the late President Roosevelt described as "men with a passion for anonymity." President Roosevelt, while in the White House, paid the salaries of two private secretaries, and Mrs. Roosevelt paid one secretary. When necessary, they hired extras.

Their affairs were multifarious, and they were satisfied only with expert assistants. This ran into money, but not to any sum which could have caused them much concern, considering the mode of life to which they had been accustomed.

President Roosevelt paid the salary of Reynolds, his butler, and the wages of servants who were brought from Hyde Park and New York on special occasions. Besides the butler, regularly, there was a second man, a chauffeur, a private cook, first, second, and third maids, and a laundress. Mr. Truman never had such a retinue of servants; in fact he had just a hired girl.

Mr. Roosevelt did not mind the expenses. The huge income-tax slice out of his salary did not trouble him, either. He always had the solid Roosevelt fortune to depend on.

Both he and Mrs. Roosevelt favored holding salaries down long before an actual limit was fixed. Mrs. Roosevelt in 1942 suggested a limitation in her newspaper column, and Mr. Roosevelt in messages to Congress on April 27, 1942, asked that a net of $25,000 be established. Both the House Ways and Means Committee and the Senate Finance Committee discussed the plan but did not take action.

Then Mr. Roosevelt in a Presidential directive on October 3, 1942, ordered that net salaries, after taxes, should not be more than $25,000. Congress, in April 1943, nullified the order by amending the public debt limit bill.

The short-lived limitation, even if it had been extended indefinitely, of course, would

have given no financial twinge to Mr. Roosevelt. His private income was $140,000 a year.

Harry Truman's position is one in sharp contrast. Soda clerk, newsboy, railway paymaster among tough section hands, artillery officer, unsuccessful merchant, notably successful politician, he has worked diligently, paid his debts, learned his various jobs, and come through the hard way to a position of great trust.

Coming to it that way, he hasn't piled up a stack of bonds with coupons ready for the shears. He isn't a President who can depend on a big, steady family income to pay part of his current expenses.

He still must keep an eye on pay day.

He remembers having heard that when President Roosevelt was 5 years old his parents took him to the White House. President Cleveland, then in office, patted him on the head, and said:

"Young man, may you never have to be President of the United States."

Cleveland, of course, was thinking of the cares and responsibilities that bow down the heads of Presidents. Times were easier then, and a man with a few dollars in his pocket could make them do more than he can today.

Realizing this, and realizing that many a successor may be in Mr. Truman's financial position, too, many Congressmen believe there should be no more delay in raising the President's salary.

They feel the country will be behind them in the idea that the President ought not have to pinch nickels. They even go a little further.

They think the country will stand back of the principle that a worker is worthy of his hire—and ought to be able to lay by a little something for the days ahead.

## Leon Henderson on Wages and Prices

EXTENSION OF REMARKS

OF

### HON. A. WILLIS ROBERTSON

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, October 30, 1945*

Mr. ROBERTSON of Virginia. Mr. Speaker, if, when the Government was awarding defense contracts of 1941, the public had been as much concerned over the prices the Government would have to pay for war materials as it now is over the prices it will have to pay for peacetime goods, the advice given to the Ways and Means Committee by Mr. Leon Henderson in 1941 might have carried more weight.

It will be recalled that Mr. Leon Henderson came to national prominence as an economist advocating the cause of labor. In that capacity he played a major part in the drafting of labor legislation of that period and especially in the drafting of the Fair Labor Standards Act, which in addition to fixing minimum wage standards also employed devices of penalizing employment beyond 40 hours a week for the purpose of spreading employment.

In 1941, when our democratic allies were on the verge of utter defeat and our major problem was how to get aid to them that would be neither too little nor too late, Mr. Henderson, serving as Administrator, Office of Price Administration and Civilian Supply, suggested the relaxation of the 40-hour workweek as an appropriate method of speeding up production as well as for the control of prices. His advice was not followed, and we had a resulting price increase of approximately 30 percent. No one has attempted to figure what that price increase cost the Government on its war contracts or what it has cost and is still costing the consuming public, but the total runs into the billions.

No one has been more opposed than I to a general sales tax as a peacetime method of financing the Government, yet every economist will tell you that price inflation is more drastic than the same percentage of sales taxes. We are already trading in 70-cent dollars, which means that nearly one-third of the income of the Nation before any other expenses are paid has been consumed by price inflation. Experience has demonstrated that while some may temporarily gain from price inflation, it is impossible for all to have their incomes increased as the cost of living goes up, and it is likewise impossible to prevent a period of inflation from ultimately turning into a period of deflation when all will suffer.

Since this is the most serious issue that now confronts us, the following testimony of Mr. Leon Henderson, given before the Ways and Means Committee on May 7, 1941, should be reexamined since he was a friend of labor and voiced his honest convictions as to what would be best for labor as well as the general public:

Mr. ROBERTSON. Mr. Henderson, if Mr. Baruch's statements that uncontrolled prices in World War I added an unnecessary $15,000,000,000 to the cost of our armament, what did those prices add to all the purchases of consumers in the country?

Mr. HENDERSON. I would say at least twice as much a year.

Mr. ROBERTSON. That would be, in cost to the taxpayers and to the people generally, many times the emergency taxes that are now proposed partly to finance our defense program; and partly, as you say, to be used in connection with other things in preventing runaway prices.

Mr. HENDERSON. That is right. The effect on the civilian is not as marked as it is with the Government. The Government was using a very high percentage of borrowing, and that debt was projected into a later period when the price level had been reduced. Now, a lot of prices that are paid currently in connection with the price rise represent income payments to some individuals as well as cost to others. And there is what you might call an adjustment constantly taking place. But somebody gets stuck at the end when the play is over, just as happens in stock-market inflation.

Mr. ROBERTSON. The gentleman from New York, Dr. Crowther, and I have been trying to develop the theory that the small-income man is paying considerable taxes under the existing laws, more than he realizes, and more than the public realizes.

Your chart indicates that under existing laws, the man with an income of under $500 per year pays a higher rate of taxes than any income group until you get up to $10,000 per year.

Mr. HENDERSON. At the present time; yes, sir.

Mr. ROBERTSON. And that under the surtaxes proposed in the Treasury plan, you would get up to an income of $3,000 a year before that man would pay as high a rate of taxes as the $500 a year man.

Mr. HENDERSON. That is correct.

Mr. ROBERTSON. And that is the reason you oppose even the excise taxes proposed in the Treasury plan except on certain luxury goods and durable goods that compete in the defense program for essential raw materials.

Mr. HENDERSON. That is correct. I would put it this way, Mr. Robertson. As I said, we are going to have 4,000,000 automobiles next year. We made 5,300,000 in the last year. The demand for them would probably run 6,000,000 if there had not been a curtailment by Mr. Knudsen. That curtailment was for the purpose of getting essential materials and skills. Now, one of the things which would help keep that in line and help keep a diversion going, and add pressure also on the automobile industry, would be a tax of 20 percent.

Mr. ROBERTSON. There should be no doubt in the mind of anyone that the lack of price control in World War No. 1 was a very costly error for our Government, and the necessity for it now should be quite apparent. But did we not attempt price control during World War No. 1?

Mr. HENDERSON. Yes; but a lot of damage had been done. The war broke out, as you know, in August 1914, and it was 3 years later before we got into it. And it was in that period, as I recall it, that the wholesale price level went up about 75 percent.

Then in the period of control, they only controlled certain items. There was another 10- to 12-percent advance, and then when these controls were taken off, at the conclusion of the war, we had another 20 percent. So that the highest part of the price rise in the last war was really before and after we used the controls.

Mr. ROBERTSON. I recall quite distinctly that the Government indicted a lot of coal operators for selling coal at $15 to $20 a ton, which was about three times the Government price, and then abandoned the prosecution because they reached the conclusion that they had no adequate law to sustain the program.

Have you got enough law now to sustain this necessary program that has been loaded on you?

Mr. HENDERSON. Yes. At the present time we have got everything that the War Industries Board had, and even more, as far as the ways in which you secure compliance are concerned, leaving out the principal thing, which is the general support of the community for price ceilings.

Let me point out that where the Lever Act fell down was on a constitutional matter of the application, and it was not due to the general powers that had been exercised. The Lever Act tried to control exactly the margins which retailers would be permitted to charge, and I think it failed on a technical point there.

Mr. ROBERTSON. You have all the law that you want to handle this?

Mr. HENDERSON. We have got all the law that we need at this present time. We have had only a four-point rise in the index since this defense program started. I do not know how long that will continue.

Mr. ROBERTSON. Well, let us see what this present time is and what may lie immediately before us. You probably heard the radio address last night by the Secretary of War?

Mr. HENDERSON. No, Mr. Robertson. I was working on my statement.

Mr. ROBERTSON. I think he said in effect that we have got to do whatever is necessary at the present time to get our supplies to Great Britain.

Mr. HENDERSON. Well, I agree with that.

Mr. ROBERTSON. That is a big order, is it not?

Mr. HENDERSON. That is a big order.

Mr. ROBERTSON. You probably noticed in the press this morning that after sending up a budget in January, estimating defense appropriations at $28,500,000,000, it was then

raised to approximately $40,000,000,000, and now it is proposed to increase that greatly.

Mr. HENDERSON. I do not think it is big enough yet. I think it should have been bigger, and it should have come earlier.

Mr. ROBERTSON. I believe you told us that if we spent the money that is necessary to be spent to get the production that is necessary to be had, we will have to add four or five million workers in industry alone.

Mr. HENDERSON. What I said was, if we can get that much, we can put that many people to work.

Mr. ROBERTSON. You mean get that much money?

Mr. HENDERSON. No; it is not marks to the credit of the Treasury, such as flow out of an appropriation. What I mean is, get the actual pig iron capacity built, the blast furnaces, things like that. You can appropriate money, but that will not get 10,000,000 more tons of iron ore down from the Mesabi range. You can appropriate money, but that will not get 5,000,000 more tons of scrap. The demand is already there, Mr. Robertson, and I am saying if we can find, by working with the steel industry how we can get additional capacity, we will get $4,000,000,000 more of income, and we will get more people back to work. I said if we had no bottlenecks at all, if we could get next year's production the way we got last year's production, by merely taking up idle capacity, we would put four or five million people back to work.

Mr. ROBERTSON. I was struck with your statement to us, because it defines our experience in agriculture; that it is very difficult to set aside the laws of supply and demand. When we have too much cotton and too much wheat and too much tobacco, a Government stabilization program does not get us very far because everybody sees the visible supply, and if the demand is not there, the price will not be there.

I believe you applied that to consumer goods.

Mr. HENDERSON. That is correct.

Mr. ROBERTSON. That one means of keeping down too rapid advance in consumer goods would be to produce more goods to equalize this income which you say may go to $108,000,000,000.

Mr. HENDERSON. I said I thought it would go around $95,000,000,000.

Mr. ROBERTSON. In which year?

Mr. HENDERSON. In the coming year; that it might go to $108,000,000,000 if we had no bottlenecks.

Mr. ROBERTSON. That is an unparalleled income.

Mr. HENDERSON. That is correct.

Mr. ROBERTSON. I was wondering if other forces are not going to be at work that may make your task more difficult. For instance, you said that the machine-tool workers have found a way to step up production, to meet the stepped-up demand. And is not the way they have found to do that a two-shift program, working one shift 50 hours a week and another shift 55 hours a week?

Mr. HENDERSON. Let me go back. I did not say the machine-tool people had found enough. I meant to imply that they had always found some way, even when they felt they had reached their limit of going further. They have done it in many ways. They have done it sometimes by financing their own plant expansion. They have done it by financial expansion with Government funds. They have done it by reorganization of their own efficiency methods. They have done it by more shifts. Even at that, there is still quite a bit of lag. Some of the machine-tool industry is a 2½-shift basis, but on the average they are only working about 65 or 70 percent even of that basis.

Mr. ROBERTSON. I do not know whether I have been correctly informed or not, that the machine-tool industry is working 50 to 55 hours a week.

Mr. HENDERSON. I cannot answer that specific question.

Mr. ROBERTSON. I got it from high Government source.

Mr. HENDERSON. I presume it is correct.

Mr. ROBERTSON. Then I went to a machine-tool manufacturer and I said, "What are you paying in overtime per week?" And he said, "An average of 12 hours a week." And I said, "Who pays for that?"

Now, what is your guess as to who pays for that?

Mr. HENDERSON. I think since the Government directly or indirectly is taking most of the machine tools, the Government is.

Mr. ROBERTSON. That was his answer, and he said, "Not only does the Government pay for that overtime but we have an escalator clause in our contract, if wages go up still further, the Government pays still more."

Mr. HENDERSON. That is correct.

Mr. ROBERTSON. That is true, is it not?

Mr. HENDERSON. That is true.

Mr. ROBERTSON. I saw in the paper this morning—I do not know whether you had the time to read the paper, getting all these figures ready for us, or not—that the workers in the shoe industry had notified you that they wanted a 20-percent increase in wages, but that you must not let the price of shoes go up.

Mr. HENDERSON. That is correct. I might say that is the first time I ever knew a union to make a move toward helping control prices; usually it is the other way. The union and the employers get together, and they say, "We will give you a wage increase" and "we will let the price go up." So this was refreshing. And you have got to keep in mind that I was at the NRA.

Mr. ROBERTSON. I have not forgotten that.

Mr. HENDERSON. And I have not.

Mr. DINGELL. Can you do that?

Mr. HENDERSON. Do what?

Mr. DINGELL. Give them a raise in wages and still hold the price where it is.

Mr. HENDERSON. In many industries, yes. In many industries sometimes wage increases can come, as they always have come, out of increased productivity of the industry working at a high level of activity.

Mr. ROBERTSON. It was estimated by the operators that an increase to a dollar an hour, 7 hours a day, for 5 days a week in coal would probably add $200,000,000 to the cost of coal. And I believe you finally eased off a little bit on the question of the price of coal.

Mr. HENDERSON. I did not ease off. It went back under the aegis of the Bituminous Coal Commission.

Mr. ROBERTSON. A few days ago, the chairman of the board of the Steel Corporation observed that the recent increase in wages paid by the Steel Corporation would add $60,000,000 a year to the cost of the United States Steel Corporation. They do not know yet what the added cost to the coke will be in the production of steel, but they estimate that it would probably be $1.25 a ton.

Mr. HENDERSON. Did you take a pencil and their statement, and do a little arithmetic and see how much they would still have left, after they paid that increase?

Mr. ROBERTSON. Yes. I saw that in 1940 they had a net income of approximately $100,000,000. But I also saw that on substantially the same amount of business in 1929 they had a net income of $190,000,000.

Mr. HENDERSON. That year, 1929, is a sport as far as the earnings of the Steel Corporation is concerned. Between 1922 and 1928, the period of their greatest activity, the average was around $80,000,000, and I do not know of a statistician yet who works with figures that does not throw out 1929 in the Steel Corporation's earnings.

Mr. ROBERTSON. Well, I am neither an economist, nor an expert, but I saw a chart prepared by Mr. David Lawrence's experts; they are supposed to be economists, and you will see in that chart that between 1929 earnings and 1941 estimated earnings, the earnings of all these big companies, would be about $600,000,000 more, while the wage shows an increase of some two billion. Do you think that chart is correct?

Mr. HENDERSON. If it is in the United States News I would assume that it was.

Mr. ROBERTSON. Yes.

Mr. HENDERSON. But, Mr. Robertson, I do not want to leave the impression that I agree or approve of the distribution of income as between profits and wages in 1929.

Mr. ROBERTSON. Well, I am not referring to that, but the point I am coming to is this: When you fix prices, you have got to take into consideration the cost of production.

Mr. HENDERSON. That is correct.

Mr. ROBERTSON. And wages are a part of the cost of production.

Mr. HENDERSON. That is correct.

Mr. ROBERTSON. At the present time, in industry in 1941, what percentage of the value of the manufactured product is represented by the wages?

Mr. HENDERSON. On a national-income basis I think it would be somewhere around 63 percent for wages and salaries.

Mr. ROBERTSON. 63 percent of the value of the product is represented by wages and salaries?

Mr. HENDERSON. No; I said that as a percentage of the national income, salaries and wages——

Mr. ROBERTSON. I am trying to get a breakdown, if I can, as to the cost of production, showing what percentage of the cost of the manufactured product is represented by wages and salaries.

Mr. HENDERSON. It varies from a very low percentage in the chemical industry and the cigarette industry to a very high percentage in the coal industry.

Mr. ROBERTSON. What would the average be? I am sure that you have some averages.

Mr. HENDERSON. Well, I know the disadvantage of an average like that, using the average between the cigarette manufacturer and the coal industry. I can give you an average if you want it, but I do not think it is useful. I would rather go to the cost of production in a particular industry that we had put a price ceiling on.

Mr. ROBERTSON. When you appeared before the Joint Committee on Labor of the House and Senate on behalf of the 40-hour week did you not give an average in making your point as to what would be the result if you put a limitation on the hours of work to 40?

Mr. HENDERSON. Well, I presented five pages of industries.

Mr. ROBERTSON. What is the general average cost of labor given by you in your statement that if you put a high enough penalty for working more than 40 hours industry could not afford to do it?

Mr. HENDERSON. I do not recall my testimony before the committee, but I will say I will stand back of it.

Mr. ROBERTSON. Here is your testimony before the joint committee of the House and Senate at that time, in which you state that, based on 1936 production, the wages and labor represented 38 percent of the manufacturers' cost.

Mr. HENDERSON. I would say that I had made a calculation by taking a weighted average of all the industries that had reported to the Department of Commerce, and made a very careful estimate upon it.

Mr. ROBERTSON. There have been many increases in wages since 1936, have there not?

Mr. HENDERSON. Yes.

Mr. ROBERTSON. Therefore the percentage now would be greater?

Mr. HENDERSON. Not necessarily, because we have got higher productivity from workers.

Mr. ROBERTSON. Well, some, but not as much higher as the increase in many industries in wages; is that not true? You may have some increase in individual production since 1936, but the increase in most plants has not kept pace with the increase in wages.

Mr. HENDERSON. No; no; it has not in the durable-goods industries. It has in the nondurable; and even in the durable-goods industries it has since 1937.

Mr. ROBERTSON. All right. If we go ahead with our defense program, as you have indicated, and I favor it, and most Members of Congress favor it, and also increase the production of consumer goods that do not compete with it, do you think we will reach maximum employment of labor, that is, of those who are ready, able, and willing to have a job?

Mr. HENDERSON. That depends on how well we plan our expansion. If we let things run for a while there can be a few months of inflation when we would have, I suspect, nearly full employment.

Mr. ROBERTSON. I believe in 1937 you estimated unemployment at 7,900,000.

Mr. HENDERSON. That is about correct.

Mr. ROBERTSON. And in order to put people to work I believe you recommended a high penalty for working anybody engaged in any interstate-commerce activity—of course, since that date all distinction has been wiped out, as you well know—a heavy penalty of 50 percent for working a man more than 40 hours, and if you work on holidays or some other such occasions, 100 percent. Is that not correct?

Mr. HENDERSON. I do not recall that I made that specific recommendation, but at times of low employment that is not a bad idea. At a time of low employment, when naturally we require a great number of people to be employed, I would be in favor of any kind of a reasonable strategem that would put more people on the pay roll.

Mr. ROBERTSON. At the time of that hearing you quoted with approval the study by Mr. Witt Bowden, of the Bureau of Labor Statistics, that you said was published in January 1937, studying the employment of 2,200,000 workers, and you said the wage reduction following the NRA of so much gave a cost average which was reflected in lower prices.

Mr. HENDERSON. That is correct.

Mr. ROBERTSON. Well, if wage reduction would result in a lower cost average, high wages would operate just in the reverse, would it not?

Mr. HENDERSON. Not in the same ratio; depending on how large your operation was.

I have got some figures, the best I could possibly get, of the unit labor costs. You can get those by calling on the Department of Labor, Bureau of Labor Statistics.

Now, let me see, that was 1936 or 1937, was it not?

Mr. ROBERTSON. Yes; 1937.

Mr. HENDERSON. In 1936 hourly earnings on durable goods were about 91 in the index, based on the 1935–39 average. They are now 112, but output per man-hour was only 98 and now it is 113.

The unit labor cost was 93; it went up to 104 in 1937; 108 in 1938; but then it went down to 99 in 1939; and 99 in 1940.

That is, while hourly earnings were going up, the output per man was going up, too. Labor costs are lower than in 1937.

The index of production in that time on the same goods went up from 108 to 135.

Mr. ROBERTSON. I want to read you a sentence from your testimony in June 1937, which is found on page 158 of the printed hearings, in which you stated:

"Many lessons are to be learned from the NRA experience, many of which relate to administration. Certainly it was learned that penalizing overtime needs to be stiff to force reemployment."

Mr. HENDERSON. That is correct.

Mr. ROBERTSON. The 50-percent overtime was presented by you at that time, not as a fair wage, but as a penalty to spread employment.

And are you still of that same opinion?

Mr. HENDERSON. If we are in a low level of employment, yes.

Mr. ROBERTSON. That is the very point I am trying to come to. And, it has been bothering me all through these hearings about stepping up production of consumer goods and keeping the price down for the manufacturers who must increase production, but if they work their men more than 40 hours a week we will penalize them up to 50 percent for holidays, Sundays, and Saturday; but we are asking them for 100 percent production, and yet we penalize them for meeting the requirements.

Now would not the reasons that you advanced in 1937 for the penalty apply with reverse English for taking off or relaxing the restrictions which in 1937, on the basis of employment in 1936 you said would apply to 12,000,000 men?

Mr. HENDERSON. Mr. Robertson, I stand on that testimony, and I think it was good. I think at the present time that those in charge of the Wage and Hour Division—and I notice in the press this morning the statement that there were cases where wages and hours interfered—would consider relaxation.

Mr. ROBERTSON. It seems to me that the production problem is already sufficiently acute for some action, and do you think they have got the power, in interstate commerce, to relax the 40-hour week?

Mr. HENDERSON. Well, I think there have been many modifications, and there have been a number in the defense industry.

Mr. ROBERTSON. I don't think they could do it.

Mr. HENDERSON. I think he could do it—that is my impression—and I think he said he would.

Mr. ROBERTSON. Do you not really think, with this program confronting us, it is vitally necessary to keep down these prices not only for defense articles but in order that we should give people work, and that it is advisable not to penalize an employer who works a man more than 40 hours a week, since when you are putting that on, you are penalizing the expansion of employment?

Mr. HENDERSON. I think that ought to be given serious consideration if he can't increase the number of shifts.

Mr. ROBERTSON. Thank you very much. That is a better answer than I got from an economist last week when I ask if the economists had endorsed his supplemental statement, and he said they did not endorse his statement but they endorsed the general atmosphere.

Mr. HENDERSON. I think you will find the Defense Commission has been giving a lot of serious consideration to this, and I would guess, although I am not in the Labor Division, that what was stated in this morning's paper represents the kind of consideration they want to give at this time as between the responsibility for producing and the responsibility for wages-and-hours standards.

Mr. ROBERTSON. I think that will be fair.

* * * * *

Mr. ROBERTSON. I have just one matter, and it won't take me but half a minute. When the labor shortage occurs that the gentleman from Michigan referred to, shall we relax the restraint upon production of a 40-hour week if we want to carry out your program with the fullest production possible?

Mr. HENDERSON. In the arsenals, Mr. Robertson, when they have run smack up against that, there has been relaxation. I think that Hillman has found time and time again that there is a lot of complaint where there is no real difficulty, and where they won't take on skilled workers. However, I think on every legitimate case we ought to; I think that that is what the purpose of the flexibility act is for.

Mr. ROBERTSON. You and I will have to get together on an amendment to the law, because since you have testified this morning General Fleming advised me that no matter how acute the shortage might become he has no power to relax the 40-hour requirement in interstate commerce.

## A Proposal for Advancing the Science of Human Relationships

EXTENSION OF REMARKS
OF
### HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

*Tuesday, October 30, 1945*

Mr. MUNDT. Mr. Speaker, the following proposal has been prepared in pamphlet form by two young servicemen of the recent war. It is encouraging to find America's veterans turning their thoughts to peace and devoting their thinking to the evolvement of constructive proposals for marshaling the brain power of this country for the solving of current problems. I am happy to pass the suggestion of these two young men along to the readers of the CONGRESSIONAL RECORD both in and out of Washington.

One of these young men is remotely related to me as he is the son of a cousin of mine; the other is Ensign Clawson, who is presently on his way to Tokyo. Either of these servicemen, however, can be contacted at the permanent addresses given at the conclusion of their proposal, so if there are those who read these remarks who desire to correspond with the authors of this suggestion for creating a national research committee to devote its time to the finding of solutions for specific domestic problems, you will know where to write to them.

The proposal follows:

WHAT ABOUT THE HUMAN PROBLEMS OF DEMOCRACY?

In a single issue of the New York Times readers wrote their opinions of the atomic bomb. "It is a stain upon our national life * * *." "It is simply mass murder, sheer terrorism * * *." "Let us * * * dump the whole thing into the Atlantic or Pacific * * * man is too frail to be entrusted with such power."

The Archbishop of Canterbury, Dr. G. F. Fisher, was not afraid of "endless destruction" but he did warn: "Men must become better men. That is the moral of it all."

Radar is another of the fantastic, Buck-Rogerish inventions of World War II. So is jet propulsion.

These dramatic advances, achieved under the fearful impulse of war, have stretched almost to the breaking point one of the most dangerous maladjustments in modern civilization—the lag of human science behind physical science.

Yet plans are already under way to continue research in physical sciences through a peacetime version of the Office of Scientific Research and Development—to the entire and flagrant neglect of social science.

It is, therefore, urged that a committee on human research and development be organized to coordinate human research and experimentation on a Nation-wide scale. It was with national coordination that the Office of Scientific Research and Development produced the atomic bomb and other decisive weapons.

Whatever the final organization of the committee, it should somehow perform these vital functions:

1. RESEARCH AND EXPERIMENTATION

It would farm out projects and funds to social research centers all over the country calling for the solution of specific problems. To do this, it would encourage the study of

problems such as strikes, depressions, unemployment, Government reorganization, the revitalization of religion, race riots, family stability, juvenile delinquency, etc. Thus it would initiate and support scientifically controlled, real-life experiments on possible solutions to these problems and eventually secure reliable answers to them.

The applied part of the research and experimentation would go hand in hand with pure or basic research and experimentation, since basic social and psychological laws underlie specific solutions.

Graduate students and teachers in psychology, sociology, anthropology, economics, public administration, and other pertinent fields would work on pure and applied projects, sometimes initiated and proposed by themselves, sometimes as directed by the committee.

It is urgent that human research be now put under forced draft and that the advances of the next quarter century in this field be telescoped into a much shorter interval. The physical sciences have already proved that this can be done. Though miracles cannot be expected overnight, the first step must be taken now. The social sciences admittedly lag far behind the physical sciences, but they are nevertheless advanced enough to be useful from the very start. The impressive list of wartime contributions by the social sciences include their achievements in the fields of morale, public-opinion measurement, food habits, consumer habits, spending and saving, radio, and communications, national psychologies, personnel selection, rumor control, race tensions, etc.

2. DEVELOPMENT

The committee would fill its fundamental purpose when it makes its findings known to the public, to the Nation's leaders, and to its future leaders. This it must do as rapidly and steadily as possible, carefully avoiding the propagation of half-digested or undependable social knowledge.

In carrying out this educational function the committee would not only benefit the people by enabling them to make wise decisions on national problems, but it would place highly valuable information in the hands of their leaders, who must take confident action.

How would the committee be financed? Funds might most logically be obtained from a congressional appropriation, through contributions by philanthropic and research foundations should be accepted as well.

How would the research problems be selected? Government officials, unions, factories, churches, farm bureaus, consumer organizations, veterans' groups, and educators could submit problems to the committee through their group representatives. The committee would then consider the proposed projects, select those of widest concern, and assign them to the proper research and experimentation agencies.

Would the administration in power be able to use the committee for propaganda purposes, perhaps tending toward regimentation of national opinion? No. The political members of the committee could easily be selected in a bipartisan manner. Moreover, they could be outvoted by the other members of the committee.

Would the committee have any powers to force its findings into use? No. The committee as such would have no power (other than the assignment of projects and funds to its researchers and the publication of their findings). However, it seems desirable to steer away from having a committee of public-spirited but powerless individuals offering unwanted advice to uninterested administrators. That is why it is suggested that the committee members be actual organization heads who so far as possible have the executive power to put new solutions into effect in their own organizations if they so desire. That is also why it is urged that projects be problems actually facing their respective organizations—a guaranty of self-interest.

To summarize:

1. The committee will enable human science to overtake and ultimately control the soulless instruments of physical destruction to which the twentieth century has given birth.

2. The committee will prove to the world that a democracy can solve its problems without resorting to regimentation. It will show that free men can courageously and efficiently obtain security and happiness without taking refuge in arbitrary, State-imposed solutions.

3. America's leadership for peace in world affairs depends primarily on national unity, which can be strengthened immeasurably by a committee facilitating the realization of common national goals and ways of achieving them.

4. Not only would the committee's program aid our powerful military and political leadership toward peace, but it would provide a free and invigorating atmosphere for human progress in the cultural and spiritual fields.

5. The committee's work would recapture the spirit of the American town meeting. Communities which participated in the experiments and projects would be taking a personal part in the progress of knowledge and in the control of their own destinies.

6. The need for an undertaking such as the Committee on Human Research and Development has penetrated down to the humblest citizen. Now is the time to encourage his interest and request his cooperation.

Lt. JOHN MUNDT, U. S. Army,

## Labor Solution

EXTENSION OF REMARKS
OF
### HON. HOMER A. RAMEY
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, October 30, 1945*

Mr. RAMEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter.

Mr. Van Nest, of Toledo, should be Secretary of Labor for 10 days then we could release about a thousand who are having "just conferences."

His letter follows:

NATIONAL LABORATORIES,
*Toledo, Ohio, October 25, 1945.*
The Honorable HOMER A. RAMEY,
*House of Representatives,*
*Washington, D. C.*

DEAR HOMER: The present widespread labor unrest and increasingly serious outbreak of strikes are a cause for deep concern of every citizen.

Neither the Government nor any group or individual seems to have a plan to straighten out the present mess; and it seems to me that if this is not done, then not only the reconversion to peacetime production will be very seriously delayed, but possibly the economic structure of the country will be weakened and perhaps disrupted if some solution is not found soon.

With this thought in mind, I would like to suggest a plan which in our own small company employing about 50 people has worked out very satisfactorily for the past 15 years. This plan, in simple words, is to pay every employee a percentage of the net profit of the company each year. While we set the amount aside each month and then pay it only once each year, it could be altered so that the payments were made monthly, quarterly or semiannually. Thus when the profits of the company are up, the bonus increases; and when profits go down, it decreases. Employees therefore receive more bonus when business is good and, of course, less when it is bad.

It seems at present that industry is afraid to guarantee any fixed increase in wages to labor generally, due to the uncertainty of what their volume of business will be in postwar and also because of uncertainty over the amount of income taxes. On the other hand, labor is afraid that any amount of increase they accept may be too small and that a huge business boom will take place during the next 5 to 7 years so that they will "miss the boat" or not receive what they feel is a fair share of the increased profits which will result from this boom. I believe if industry knew that they would only have to pay increased wages if their earnings were proportionately higher and that this increase would be reduced if their business profits were lower, then they would not object to such a sliding scale of pay increase. On the other hand, it seems that labor should be satisfied if they knew that they would "cash in" or receive a larger amount of bonus or income when the company for whom they were working was making larger profits. I believe they would realize that the company for whom they were working could not afford to pay these increases if their profits declined.

It therefore appears to me that this bonus plan would be mutually acceptable to both labor and industry. In our own company the bonus plan has resulted in a much better spirit of cooperation in our employees, because they feel they are sharing in the profits of the business and it is, therefore, to their interest to make the business as efficient and profitable as possible. The percentage rate could be varied and does not necessarily have to be standard, but the principle remains the same.

Do you not believe that this offers a fair and sensible solution to the present problem? If so, I hope you will find this suggestion of some merit. Personally, I believe that it will work.

Sincerely yours,
NATIONAL LABORATORIES,
V. L. VAN NEST, *Treasurer.*

## Golden Jubilee of St. Elizabeth's Church, Baltimore

EXTENSION OF REMARKS
OF
### HON. THOMAS D'ALESANDRO, JR.
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, October 30, 1945*

Mr. D'ALESANDRO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Catholic Review:

ST. ELIZABETH'S OFFERS THANKS, GOLDEN JUBILEE—MANY OF PIONEER PARISHIONERS AMONG THOSE PRESENT AT CELEBRATION

Maybe the fresh air sweeping across Patterson Park on which St. Elizabeth's Church, Baltimore, fronts might have had something to do with the vigor and the enthusiasm of the members of that parish in the 50 years of its existence. Or, and more probable, the sturdy faith and the generous hearts of its members have maintained the devotion and loyalty of the parishioners and former parishioners to the parish and helped it to accomplish so much for God and church and country.

It was nothing less than vision which led the Reverend Thomas Stapleton, first pastor of the parish, to build the first church on the site which it occupied and on which the second and present church was built. Fortunate, that Mrs. Elizabeth Peppler, a parishioner of 50 years ago, owned property opposite Patterson Park and gave part of the property for the erection of the first church.

All who are familiar with the story of the development of the parish know that the combination church and school, the first building in the parish, gave way in the course of the years to the present beautiful church, the commodious school, the pleasant convent, and the rectory of the parish.

While the environs of many churches built 50 years ago have changed, not so with St. Elizabeth's frontispiece, Patterson Park. It still remains a preservative of the neighborhood. To the north and west and east of St. Elizabeth's what once were fields have become a great residential section of happy home owners, homes by the hundreds with the white marble steps which are uniquely the boast of Baltimore.

It may be said by way of parenthesis, that it has been Patterson Park, with its various athletic facilities, which has enabled the baseball teams and other teams from St. Elizabeth's to win so many championships in sports in recent years. In this respect the youngsters of St. Elizabeth's are probably the luckiest to be found in any of the city parishes in the archdioceses of Baltimore and Washington.

By virtue of their environs, most of the parishioners of St. Elizabeth's, including the Sisters of the Third Order of St. Francis who teach in the parish school, have been kept in the best of health. We never have heard that any classes at St. Elizabeth's have been suspended even briefly through illness of the Sisters.

Undoubtedly such healthy conditions accounted for the presence of so many of the pioneer members of the parish at the golden jubilee celebration held last Sunday. From the looks of some of them they are the nearest thing to immortals this country has known.

In his congratulatory remarks following the Solemn Pontifical Mass, of which he was the Pontificant last Sunday, the Most Reverend John M. McNamara, Auxiliary Bishop of Baltimore and Washington, referred among other things to the choice location of the parish buildings.

Indeed, it was in Patterson Park that many of the 1,100 young parishioners who wore the uniform of their country in the recent war were helped to become strong and stalwart young men, of whom 39 made the supreme sacrifice.

Reference to the 1,100 members of St. Elizabeth's Parish who served their country in the war was made by the Right Reverend Monsignor John J. Russell, pastor of St. Ursula's Parish and the son of St. Elizabeth's Parish. Monsignor Russell is the nephew of the late Bishop William T. Russell, who died as Bishop of Charleston.

BISHOP IMPRESSED BY RECORD

His Excellency, Bishop McNamara, at the beginning of his talk of congratulation to the members of the parish after the mass, said that His Excellency the archbishop had looked forward to being present on the occasion of the golden jubilee day, but the veil of darkness which had descended upon his eyes had prevented him. The archbishop had asked him [Bishop McNamara], to extend his congratulations, thanks, and blessings to priests and people of the parish.

CALLS RECORD REMARKABLE

Bishop McNamara in alluding to the 1,100 young men of St. Elizabeth's who had responded to their country's call and to the 39 who had made the supreme sacrifice said that the record was indeed a remarkable one.

These young men of the parish, he declared, had been summoned by their country to war. They had gone in response to that call. Their country had summoned them from their homes, and they had answered the summons. Their country had told them to go to training camps, and they went. Their country told them to go overseas, and they went. They were told to go into battle and they went. Thirty-nine of them were called to give their lives for their country, and they gave them so.

His Excellency said that in no parish in the section of Washington in which he lived had so many been called upon to make such sacrifices. He spoke of the young men from his parish who had called upon him to say goodby and to ask for his blessing before they went forth to answer their country's call. It was evident that such visits had saddened him.

CAN TAKE LESSON FROM COMMUNISTS

Bishop McNamara alluded to the difference between such young men and the Communists who work not for their country but work against it. And yet the Communists in their campaign to extend their subversive doctrines have shown a determination which is not matched in some respects by those of us who have the faith. The Communists teach us a lesson. If many of us Catholics were as zealous in promoting love for God we would do far more for God.

"If you and I loved God and worked as hard for God as the Communists work for their cause we would do more for Him and show Him how truly we love Him."

In his sermon at the mass Monsignor Russell had paid tribute to the long pastorate of the Right Reverend Monsignor John J. Murray, for more than 40 years at St. Elizabeth's. Monsignor Murray, who is now at Jenkins Memorial Hospital, was in the sanctuary at the mass. He received a hearty welcome from his parishioners after the mass.

PRAISE FOR FATHER SEBASTIAN

In referring to Monsignor's Russell's sermon, Bishop McNamara said that Monsignor Russell had done well to show what the venerable prelate, Monsignor Murray, had done for St. Elizabeth's in the many years he had worked in the parish. But, added His Excellency, he himself wanted to pay a tribute likewise to the Reverend Jerome D. Sebastian, now administrator of the parish and who has been stationed in the parish since his ordination 23 years ago.

"I am especially happy to pay my tribute to Father Sebastian," said His Excellency, "since I have known him many years. When I was an assistant at St. Patrick's parish in Washington I used to give catcheism instructions to him and the other pupils. He has done a marvelous work in his years here. He has been indefatiguable. He has given himself unstintingly to you and he has kept the spirit of this parish the vibrant one it is."

His Excellency paid tribute to the children's choir which sang the mass. He declared he never had heard a mass sung better. He congratulated the young singers. He said that the sister who was in charge of the choir had trained them well and stated she was indeed entitled to both thanks and congratulations.

The church was crowded to the doors with present and past parishioners. Among the special guests who assisted at the mass were Gov. Herbert R. O'Conor, Congressman Thomas D'Alesandro, Jr., and Thomas W. Pangborn, of Hagerstown.

The assistant priest at the mass was the Reverend John Volk, C. SS. R., chaplain in the United States Army. Chaplain Volk's mother lives across the street from St. Elizabeth's. His father was a daily communicant for years at St. Elizabeth's. The latter was stricken ill while Chaplain Volk was in the European war zone. The chaplain flew to this country in the hope he could see his father before he died, but learned on landing in Delaware that his father was dead.

The deacon of the Mass was the Reverend Mr. Joseph Coyne and the subdeacon the Reverend Mr. Martin A. Schalwenberg, both members of the parish and both of whom will be ordained to the priesthood before Christmas. Other members of the priesthood and sons of St. Elizabeth's parish were present in the sanctuary. Present also were members of the religious sisterhoods and the religious brotherhoods, sons of the parish.

Father Sebastian was host at dinner to the visiting clergy and other guests.

On Monday morning there was a Solemn Mass for the children of the parish. The Reverend Charles W. Dausch, of St. Mary's Church, Hagerstown, and son of the parish, was the celebrant. The Reverend Francis J. Childress, the deacon, and the Reverend Edward V. Echle, of St. Elizabeth's, subdeacon.

On Tuesday morning there was a Solemn Mass of the Blessed Mother for all the parishioners and former parishioners and friends of the parish, with Father Childress as celebrant; the Reverend Leo V. McGrain, of St. Elizabeth's as deacon, and Father Echle as subdeacon.

On Wednesday morning there was a Solemn Mass of Requiem for the 39 boys of the parish who gave their lives in the World War. Chaplain Thomas A. Farrell, USA, was celebrant; Father Childress, deacon, and Father McGrain, subdeacon.

Last night 400 parishioners attended the jubilee banquet in the ballroom of the Emerson Hotel.

## Characteristics of the World in Which We Live and Attitudes of Life Which Must Guide Us

EXTENSION OF REMARKS

OF

### HON. J. BUELL SNYDER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, October 30, 1945*

Mr. SNYDER. Mr. Speaker, under permission to extend my remarks in the RECORD, I include herewith the very scholarly address delivered before the thirtieth session of the FBI National Academy in the Department of Justice auditorium at 10:30 a. m., Friday, October 26, 1945, by Dr. Joseph R. Sizoo, of New York:

Mr. Hoover, distinguished guests, members of the graduating class, ladies and gentlemen, I am not unmindful of the very great honor of having a part in this closing impressive ceremony and for that honor I wish first to express my sincere gratitude. A man's value to society is determined not by what he begins but by what he ends. Anybody can begin a thing, but to bring it to a successful conclusion gives you the earmarks of a great spirit before God and man. What you began you have ended and with your friends I pause to express gratitude.

Emerson once said that any movement is always the lengthened shadow of someone's life, and I cannot help but feel again this morning that we have here a dramatic and spectacular demonstration of something that has come to pass through the genius and through the inspiration and through the imagination of one who is the director of this enterprise, Mr. Hoover. And with you I pause to express also my gratitude. Now,

no one can take his place in the work of the world unless he understands that world. To serve your generation you must know your generation. A physician cannot heal or cure unless he has made an accurate diagnosis. No man can help build a better tomorrow until he knows what is wrong with yesterday. Because your work and mine have so much in common, I want to think a little while of some of the characteristics of the world in which we work and then to point to some attitudes of life which must guide us.

Obviously there is this to be said about the world into which you are going. We are living in a world which is taking a moral tail spin. You don't have to live long or read much or travel far to discover that the tides are running out upon ethical values. There are well meaning but misguided people who live in our country with a pleasing illusion and because this illusion is pleasing it is so deadly and fatal. It is this, that the enthusiasm for unselfishness and high idealism generated by the war will be permanent.

Many have made themselves believe that the lofty standards of devotion to country, disciplined living, and restraint of common life in time of war will run over into the time of peace. Well, history holds no such warrant. After the Napoleonic era with the signing of the peace treaty of Vienna in 1815 there followed a period of exploitation, of class consciousness, of undisciplined nationalism that ended in chaos. At the close of the Civil War, which in the North was fought that union might be obtained, there followed a period of dark political corruption striking an all-time low in the Tweed Ring. After the First World War, fought to make democracy safe for the world, there came this period of freedom. Let yourself go. Obey that impulse without asking yourself if you are worthy of expressing, bringing social irresponsibility, untutored nationalism, and undisciplined restraint in conduct. High moral effort is always followed by moral lassitude. That is the kind of a world in which we live. And you have to take it into consideration in all the enterprises to which you are committed. I don't have to stand here and tell you about that for it is perfectly obvious. Vulgar indecencies, the inordinate display of wealth, flagrant violations of decency, juvenile delinquency, sordidness of thought, dreadful deterioration on the stage and on the screen—how real it is, this thing we call modern moral lassitude. But I am not thinking of that, for this kind of moral tail spin of which I am thinking goes deeper than that because it becomes something that goes to the root of our national life in its moral instability.

Going up and down the country—and I do it a great deal—going up and down the country, I find that thoughtful people are not asking, "Is the Nation turning to the right of center, or to the left of center?", but they are asking if there is a center. People are wondering if there is some standard of ethical idealism. Is there some North Star of morality by which we shall sail the ship of state? Is there, in the last analysis, some great form of moral conviction by which we live? For we now know that we have got to stop fooling with the Ten Commandments and the arithmetic table; moral instability; letting "I will" wait upon "I would"; following the line of least resistance; constant vacillating; sending up a trial balloon to find out which way the wind is going before a conviction is expressed; gyrating from one side of the street to the other; living with expediency; obeying the impulse of pressure groups; accommodating ourselves to this point or to that point without first asking, "Is it right or is it truth?" That is the peril which you will have to deal with in all the problems in the world of tomorrow. And it is on that basis that contemporary communism becomes such a tragic force. For at least my indictment of communism is not its social attitude or its political construction or its economic structure, but rather this, that it is so utterly unprincipled in advancing its call. It gains its converts so unscrupulously. There is no sense of moral conviction behind its progress. It advances by creating confusion and by creating fires of chaos and misunderstanding. It is so utterly unethical and immoral in its advance. And you have to deal with it, so I say we are living in a world which is taking a moral tail spin and you can never play your part unless somehow you begin with that fact.

Now there is a second characteristic in the world of today which you and I, in our separate spheres of activity, must deal with. It is this. We are living in a world with a new kind of frontier. There was a time when the frontiers of nations were determined by geography. The boundaries between peoples and races were largely natural barriers. People separated themselves from one another by these ordinary frontiers, a ridge of hills, a tall range of mountains, a wide river, swamp areas, thick forests, and as long as these stood nobody from without could come in. Nobody from within could go out and they thought themselves secure. But modern science has shrunken this earth and these frontiers are no longer tenable.

There are not two points in the world which are more than 50, or at the most 60, flying hours apart. Why, you can go around the whole thing in 150 hours. Barriers are meaningless. Frontiers are imaginary lines. Walls have become windows. The old frontier is gone, but in the place of it races and nations are building a new kind of frontier, and this frontier is invisible. It isn't something you can put your hands upon. It is much more impenetrable. It is much more difficult to hurdle. It sinks so deep long before you dream it exists, for the new frontiers are in the frontiers of the mind and of the heart. They are the frontiers of suspicion and fear and hate and greed and power, and we can never have a better world until these new frontiers are penetrated, and you can never take your place in modern society until you deal with these new frontiers which are coming in the world of today. Well, at any rate, there you have something of a diagnosis, a world in a moral tail spin and a world with new frontiers. Now the question arises: "How can we play our part in that kind of a world?" I would like to suggest at the very beginning that to live in a world like that we shall have to walk with caution. By the mercy of God and the gallantry of men, our enemies have been utterly conquered and subdued. But their evil dies hard in the world. It may coo like a dove. It is still a serpent at heart. It may wear sheep's clothing, but it is still a wolf inside. We have invaded their land. We have not yet invaded their conscience. We have destroyed their power to make war, but we have not yet destroyed their will to make war. And in this other conflict we shall have to use other weapons than the weapons we used to invade their land or destroy their power, and I have been asking myself the question whether we have these weapons of the mind and of the heart. We shall have to walk with caution. What is true in the world outside is true in the world within.

One of the most magnificent and inspiring sights of modern American history was the sense of unity which held us together. We buried our differences. We put aside the areas of disagreement and we held together to a common task. But the peril of it is, and I have seen it up and down this country, that the honeymoon is over. And it may be that we are beginning to tumble apart into broken and brittle groups, each seeking some advantage at the expense of the other. Why, there are men who are beginning to think that if we only hate enough we will build a better country and bring in prosperity. I say to you men, if you are going to minister to a world in a moral slump and with new frontiers, we shall have to walk with caution.

Now there is a second one. If it is true that we shall have to walk with caution, it is also true that we shall have to live with courage. Believe me, yesterday will never come back. Yesterday is dead. Yesterday ought to die. It was not good enough. Mankind deserved something better. Man was entitled to something different. I haven't lost my faith because so much of yesterday has been shattered. If the things that are wrong did not tumble apart every now and again then I would lose my faith and life would be insanity. Live with courage, because there are coming into being new attitudes, new attitudes to life; a new sense of value to living; new concepts of wealth and of race and of government and of stewardship. Live with courage. There is coming something in the world to which you men may appeal. We have got our chance. It may be our last chance to build a world without hate; without disease; without panic; a world in which childhood shall not be forgotten, womanhood not neglected and old age not abandoned; a world in which man shall come before the machine and personality before profits; in which man's inhumanity to man shall be supplanted by the higher law that we are our brother's keeper. Live with courage. The age into which you are going needs men and women with imagination, with courage, with adventure, who can live creatively. Never forget, it is better to light a candle than to curse the darkness. The kind of a world into which we are going to live was the kind of a world of which Wordsworth wrote of the French Revolution. "Bliss was it in that dawn to be alive and to be young was very heaven." Walk with caution. Live with courage, but that isn't enough. You may be cautious. You may have imagination and you may still make a wreck of the universe. Our enemies were cautious. They were resourceful. They were adventurous. They had imagination, but look what they did to the world, and look what has happened to them. There must come another attitude in the minds of those who would serve this kind of a generation.

During the war I went up and down the Army camps and naval bases for a long time in many places. One day I found myself in a camp. Early one morning at dawn three regiments were to march out into an open field a few miles away and there sit down in the morning dew on the long grass to listen to a lecture from an officer overseas on how to advance one's position. I marched out with them. There we sat at dawn on the wet grass and the colonel was describing how men should advance.

He would first describe the wrong way and then demonstrate it. Then he would describe the right way and he would demonstrate it with seasoned troops. So in the course of his lecture he was talking about how to take a certain objective out yonder on the edge of another hill. And then he described how it should be done correctly and we saw a group of seasoned soldiers creeping through the grass hugging the soil, keeping close to the earth. You could hardly see them move on their hands and knees, and as they advanced the colonel said, "When you advance on your knees your are always safe." Men and women, that sentence should be written on the door post of every school and on the lintels of every home. "When you advance on your knees you will be safe."

Five months before Pearl Harbor the first of my two boys who are in the service, was spending the last evening with me. We were talking together and at the end of a long conversation he said to me, "Where did your generation break down that all this had to happen?" Oh, I think we know the answer. I could give him the argument of political chicanery. I knew something about the economic maladjustment of the world and I was familiar with the social injustices up and

down this universe. I knew something about political chicanery and diplomatic double talk. I knew something about crackpot ideologies and it was all a part of it, but it wasn't the truth because the world became what it was, not because it did not have enough or did not know enough, but because it was not good enough. We have seemingly forgotten that the basis of a nation's greatness is not in its political technique or in its social structure, but in the character of its men and women and a new day for the Nation can never come in the last analysis except through the reconversion of the human spirit. The same God who gave us eyes to see and ears to hear and lips to speak gave us knees to bend. It is still true that the nation alone is great whose God is the Lord. So you and I are each of us now going back to the task committed to us; in a world with a moral slump; in a world with dangerous frontiers, and we shall walk with caution. We shall live with courage and we shall advance on our knees.

Once a week I go to Halloran Hospital to see some of the men there who have been pretty badly shot up. A few weeks ago I was there and I was visiting with a room full of men and we were talking about things that we are talking about now; about a braver tomorrow and a better country and a finer concept of national oneness and integrity. And after we had talked about it a little while a chap over yonder in the corner with one arm shot off, the other arm in a sling, paralyzed from the hips down, craned his neck and lifted it from the pillow and said to me, "Padre, do you think anything will come of it?" Well, will it?

## Speech of Rear Adm. Thomas L. Gatch

EXTENSION OF REMARKS
OF
### HON. W. STERLING COLE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

*Tuesday, October 30, 1945*

Mr. COLE of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech by Rear Adm. Thomas L. Gatch, United States Navy, Judge Advocate General of the Navy, to the Military Order of the World Wars at the John Paul Jones Monument, Washington, D. C., on October 27, 1945:

Hasdrubel said to Hannibal, "You know how to win a victory, but not how to use it."

Just as peace is more difficult to maintain than war, so victory is more difficult to use than to win. After the object lesson of the First World War, that truth should be patent to the densest American. Every one of us should realize that the hardest part of the wars we have just finished fighting lies before us. We cannot throw away this victory.

It is a pleasure to talk to veterans because you completely understand what I am driving at. Every veteran in this land must talk in season and out, must iterate and reiterate, that the only hope for our country in a world that can breed Nazis and Jap warmongers, lies in our own strength.

You, who fought in this war and prior wars, know full well what we fought for. Volumes have been written on that subject; eloquent speeches without number have been addressed to that subject; but as individuals, and concerned primarily with our own affairs, I feel that I can truthfully speak for every veteran when I say that what we really fought for, way down in our hearts, was that our sons and grandsons would never have to fight. And I say that we veterans do not propose to have our sacrifices thrown away again. We feel deeply in this matter and we are very realistic about it, for we deal with realists.

Down the ages men have prayed for peace. Peace is probably the greatest boon that men may be granted. How can we expect to win such a boon by wishful thinking? The world does not run that way; what we get we earn. We earn victory in war by sacrifices of life and treasure, by devoting our whole national effort solely to that end, by oceans of blood, sweat, and tears. And then when we have won the victory we expect to win the peace by sacrificing—nothing. Many of our countrymen throw up their hands in horror at the thought of our young men devoting a year of their lives to military training so that peace may endure; a din now fills our land that our brave soldiers and sailors be returned home immediately—without waiting a moment to clinch our victory—blithely throwing away all that we have won in four terrible years—because, apparently, peace is not worth turning a hand for. Unless we pay for peace we shall not have peace.

I cannot believe that solemn conclaves of statesmen, that charters and covenants, no matter how laboriously produced, are going to be considered by fate as an adequate price for peace. I believe that we shall be granted peace when we have sacrificed sufficiently to show that we are worthy of peace, and not before.

I get over my depth. You and I, veterans, are merely fit to fight for our country; we are not qualified to have any say about the victory that we win. Now is the time when cloistered men, who helped to victory by valiant words and doughty papers, will take the helm from our incapable hands. Thus it was after the last war, and thus it will be again if we do nothing about it. Already our our cloistered experts have the atomic bomb making all navies obsolete. Such a song was first sung when David toppled Goliath with a lucky sling shot, and it was resung with the advent of firearms, the explosive shell, the ship's ram, the torpedo, the submarine, the airplane.

One of the most remarkable facts of these last wars is that poison gas was not used against us. Why? Because our inhuman enemies knew that we were fully prepared to make its use recoil on them with telling effect. They would have heeded nothing less. So it will probably be with the atomic bomb—a far more horrible thing than gas. As long as we stand fully ready, the atomic bomb will probably never again be used in war.

Any day now we may expect our cloistered pundits to bring forth the idea that we are being too hard on the Nazis and the Japs. With the evidence spread before our eyes at every turn that the one thing nature will not tolerate is softness, still they preach softness. Consider the Japs. In the sixteenth century a Portuguese ship came across a Jap junk foundering in the South China Sea. The Portuguese went alongside and rescued the Japs. A few days later the Japs seized their chance, murdered every white person, and sailed the ship to Japan. That was the first contact of civilization with the Japs. About the last contact with Japs who thought themselves still free agents, was on Palawan Island last December. The Japs drove 150 white prisoners into an air-raid shelter, poured gasoline into it, and threw in a torch. That shows the progress of 400 years. There might be hope that they could become semicivilized in 4,000 years.

This world is too small to hold 70,000,000 Japs and twice that many Americans unless the 70,000,000 change radically, and that would take scores of centuries. The only answer is an unremitting, vigilant, strict watch over them; the absolute prevention of their ever copying their betters in matters of war so that they can egotistically think they can defeat them. If we fail there, our children will pay for our softness.

One cannot use moral precepts with beasts.

If there is to be any hope for peace in a world that Japs live in, it lies solely in our displaying constantly to those Japs such patently overwhelming power that they even in their ignorant provincialism cannot decry.

Our pacifists who, remarkably enough always fancy themselves great amateur strategists, are strong for overthrowing the most successful war-waging machine the world has ever seen; a set-up that simultaneously won two great wars half the world apart; that finally took an overwhelming expedition 7,000 miles across the world's largest ocean, and beat an embattled nation to its knees in its very homeland. Some of us dare to think that such an eminently successful institution should be tampered with very gently if at all, but the appeasers, who always welcome confusion, and revel in inefficient and wasteful war, are strong for change. Never under any circumstances does wasteful war waste their lives. Our doves are still rather quiet for them but the signs are abundant that they lurk in their nests, ready to spring forth instantly in full song. We veterans failed after the last war in that we did nothing to keep peace talk out of the realm of dreams. This time, I, for one, do not propose to sit back supinely while the millenniolists prattle us into a situation where my grandson would be forced to fight to save their languid pacifistic souls.

It is timely that we here and now echo the words of the man at whose monument we stand, and highly resolve that in the achievement of that peace for which over a million of our brave men were killed or wounded in the past four years—in that achievement, we have not yet begun to fight.

## Army Demobilization

EXTENSION OF REMARKS
OF
### HON. JOHN C. KUNKEL
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

*Tuesday, October 30, 1945*

Mr. KUNKEL. Mr. Speaker, for some weeks I have been advocating and urging the establishment of more separation centers and separation points, and also the use of civilian personnel to hasten the demobilization program at these centers and points.

Just recently I received a letter from Secretary of War Patterson, indicating that these policies were being followed by the War Department insofar as possible. There has been a tremendous improvement in the whole demobilization program during the past 6 weeks, and we should give the War Department credit for its great accomplishments during this period. I hope and trust further improvements will follow. Also, I feel strongly that a similar concentration upon the transportation bottlenecks in the Atlantic and the Pacific areas will cause similar good results, and I continue to demand this be done at once.

Secretary of War Patterson's letter is included as part of my remarks, as follows:

OCTOBER 24, 1945.

Hon. JOHN C. KUNKEL,
*House of Representatives,*
*Washington, D. C.*

DEAR MR. KUNKEL: Your letter of October 8 has been received, and I have studied with

considerable interest your suggestion for activating additional separation centers.

You will be interested to know that discharge procedures are no longer confined to separation centers and hospitals. During the past 60 days additional separation facilities have been established at more than 136 Service Forces camps, posts, and stations, and at 43 Air Forces bases. In accomplishing this, we are utilizing every installation having the necessary facilities for discharging military personnel.

The rate of discharge has increased from 5,000 per day on August 1 to 40,000 per day at present. Over 1,000,000 men will be discharged in the month of October alone, and with the existing organization the rate will probably increase in the future.

We will soon be able to process personnel in the United States as rapidly as they become eligible for release, and facilities will be more than adequate to handle the flow of returnees from overseas. We will continue to lower the critical score progressively at a rate which will keep the separation facilities working at peak capacity. Very soon the sole factor controlling the discharge rate will be availability of shipping space.

We have granted authority to the commanding officers of separation facilities to employ civilians, but this has not always been possible due to a shortage of skilled manpower in certain areas.

Your interest in our problems is greatly appreciated, and I wish to assure you that we are exerting every effort toward a speedy demobilization of the Army.

With kind regards,

Sincerely yours,

ROBERT P. PATTERSON,
*Secretary of War.*

## Demobilize Faster—Use Liberty Ships and More Naval Vessels

EXTENSION OF REMARKS
OF
### HON. EDWARD O. McCOWEN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, October 30, 1945*

Mr. McCOWEN. Mr. Speaker, the question has been raised again and again in this House as to when the demobilization of American men and women still in military service will be completed. The American people in their homes are still writing many letters to the Members of Congress asking for speedier demobilization.

The mothers and fathers and wives cannot understand why fathers and husbands, who have served so long and who have fought so well, should be kept in the service longer, now that the war is really over although it has not been declared so officially. They want them out now and why not?

Many men, in the Army and Navy in particular, are writing very serious complaints to their people back home and some of them are even writing to their Members of Congress in spite of the fact that they have the feeling in many cases, and the knowledge in other cases, that they are not supposed to do so.

In order to present a clear picture of this situation to the Congress, I shall quote from a few letters from servicemen and others. I do not care to disclose the names of these soldiers whose names are not already disclosed, while they are in the service because I want to make sure that no displeasure will fall on them because they have dared to write; but I have the letters and I shall be very willing to show them to individual Members of Congress.

The following quotation is from a Sergeant:

I am a thirty-two-year-old father of two children who need me. I have been in the Army more than two years. Speed up the brass hats.

The following is from a soldier in Manila. I quote:

MANILA, PHILIPPINES.

I am 28 years, 8 months in age. I have served in our armed forces for 2 years. We served 9 months in Europe, then without leave or furlough, we were shipped over 15,000 miles to take part in the Pacific campaign. Treated somewhat worse than cattle on the 47 day voyage, we did not complain. I find, however, that there are thousands of troops here that are not needed. We are doing street repair jobs, mending curb and gutter, cleaning up debris on property that the Army has not the slightest interest in nor shall be interested in. Conditions in Manila would be a national scandal if the truth was to reach the public. Then the order for the release of thousands all over thirty-eight was announced. Many men have already been started on their way. Two of eleven men in our company had been approved for discharge when the rest of us were informed that we would have to serve on—on the order of the commanding officer of this depot. In other words, there has been discrimination between enlisted men and the rest of us must sweat out 3 more months in this hell on earth merely upon the whim of some "brass hat." I thought that you should know the above-named facts.

The following excerpts are from a letter written by a soldier to his sister:

You probably read how well they are taking care of the boys overseas. The man that did the fighting is really getting treated poorly. We don't get one d—— point for fighting. A fighting man didn't live long enough to get many points to start with. We had about 45 men left out of 106 the first day of combat. I saw 500 men go up one hill and not come out alive. I'm one of the few guys that came out alive. Why in the h—— they are going to keep me over here, I don't know. There isn't a d—— thing we guys can do. We can't go after the government or say anything about it. We are sure counting on the people back home to help us out. If people back home would write their Congressmen, we would get home sooner. The way I feel right now, I don't give a d—— if I never get home.

I give the following quotation from a soldier stationed in Nebraska, to show how some things are even in continental United States:

While the officers are free to enroll in the University of Nebraska here at Lincoln for the regular courses because of the 24 hours a day free time they have, the enlisted men sweep the officers' barracks, clean the officers' latrines, serve as KP's in the officers' mess halls, and are detailed to the officers' clubs, gratis, of course. We enlisted men have been living by this caste system long enough and desire at this late date a real chance at proving our worths as compared to that of the officers.

The following excerpts are from a letter written by a wife regarding her husband:

He has been in active service in the Pacific for 32 months and is now at Saipan supposed to be on his way home. He left Iwo the latter part of August and has been stranded at Saipan now for over a month. The conditions these boys are living under must be terrible and that is why I am writing you.

Then she quotes from his letters as follows:

You and the people at home don't realize what a mess this is. Men and more men, living the same as cattle in the yards; tents that leak as if they had no canvas over the top; and large warehouses jammed so thick with cots, we can't walk around; in camps built for prisoners of war. Well, you would not think it was possible to get so many men in such a small place, and the odor at night, well, I would much rather be on the battle front. There one expected to live like a rat for a time, but the war is over and living like this does not make sense. Honestly, if the people at home could know and see all this it would not last long. All these men here just sweating it out and empty ships in the harbor. The food is rotten; the drinking water—if it rains and you are lucky you might get a drink; other than that you stand in line for at least a quarter of a mile and take a chance that it will not run out. The showers are blackish water and you wallow around to get clean worse than in a hog pen. We are all so jittery, nerves shot, and getting so bitter, we are hating ourselves. The officers must be in hiding, there is not anyone to complain to. All we hear is the big celebration in the States for Navy Day. We are out here 32 months—for what—Navy Day!

The following quotation is from a letter, dated October 8, from the wife of a soldier:

I am a soldier's wife and my husband has been in the service over 3 years. I have a little boy 3 years old. I have to live by myself. My rent has been raised and I want to know if there is any way of my husband getting a discharge. If you can help me, I would appreciate it a lot.

I have a letter, dated October 9, from a prominent resident of my district, from whose letter I quote:

All of these young men and young women who want to come home, should be released now or at the very earliest time possible. They suffer with discontent to a degree that is nothing less than torture. The war is over. Most of them are idle or performing meaningless tasks. They want to get back home and adjust themselves to living at once. Service that is now meaningless, and delay in their discharge, is to them frustration. That is unjust and selfish on the part of the leaders of the armed forces. They want to come home. We want them home as fast as their release can be effected. It is not enough to say we are doing a job the best we can. If it is an emergency, they will find some way to get it done post haste. That is the traditional American way. The trouble seems to be that there is hesitancy. If that is so, away with it. We want action now, not for one but for all. We write to you to ask your help to get this done.

Quotations from many other letters could be given, but these seem to be enough to show, in particular, the great dissatisfaction among soldiers themselves, as well as back home, not only with conditions, but with this slowness of demobilization.

I also have letters from soldiers whose education has been interrupted and who want to be released to continue it. There are many letters also from fathers and mothers who want their sons released to further their education.

I have one letter in particular from a sailor, seaman first class, who was a school teacher when inducted, and who is now being required to attend school, which will likely be continued for 9 months. He complains about having to be away from his wife and children, now that the war is over. He claims that his attendance in school is only costing the Government money, and that the trainins will do no good either to him or the Government. He states further that there are hundreds of men in the same position. Why waste their time and taxpayers' money? Why can these men not be released now?

The following is quotec. from the issue of the Daily Pacifican of October 12:

NAVY DAY

EDITOR: The demobilization farce is, I dare say, the cause of all the bitterness and animosity toward the Army, Navy, Government, and those who can exert pressure in the right places, if they but would.

Take Navy Day, for instance; Navy tradition, big ceremonies on the east ccast with ships that should be bringing men to the west coast.

What we GI's over here want is cards dealt from the top of the deck, not a "raw deal." Get us home.

Technical Sgt. WALTER U. WARDEN, Jr.

The following is from the issue of the Daily Pacifican dated October 17:

WAITING FOR SHIPS

EDITOR: I've been sweating out a boat at the Twenty-second Replacement Depot for 16 days, but just think of Jack, Spencer, Wendel, Frank, Fortin, Murray, Deerfield, they're all 80 pointers and they've been waiting there for 4 weeks. That's the truth; I know these boys who have been in the Twenty-second for a whole month and they're still waiting, without a boat in sight.

If they don't take off soon, how long will I have to wait? How long will the 70 pointers and the 60 pointers have to wait?

To round out this paradoxical picture, I read an article in Reader's Digest, and I quote: "Our Navy today has 25 battleships, 70 cruisers, 105 carriers, 125,000 vessels in all. That is more vessels than the Navy had men when the war clouds first gathered."

Everything was sacrificed for the sake of freedom, whether we fully understand the meaning of that word or not.

The sacrifices have been made; we mourn the dead, but the living want to be returned to life. That should be the solemn obligation of our leaders. Where is the vast armada now that will bring us home? Have the issues at hand been befogged? Does the gala Navy Day celebration take precedence over the interest of thousands of men?

Corp. PHILIP B. AIN.

A few other letters from the Daily Pacifican follow. Scores like them could be given:

EDITOR: What has become of the world's greatest two-ocean navy and merchant fleet that could accomplish anything short of miracles during wartime? The answer appears to be that they are preparing to return to the States to celebrate and demonstrate the power of this mighty armada on Navy Day, while we sweat it cut here waiting for the luxurious transport ships that are to return us to our loved ones someday.

It was all right to bring us over packed like cattle in every available and conceivable vessel from the lowliest scow to the most luxurious liners. It was all right to ship us from island to island on our road to victory in old Liberty ships and FS boats.

But now, when we would be more than willing to go through the same hardships for our last and final boat ride, we are told "there are not enough ships available."

Sgt. R. SCHULTZ.

EDITOR: Colonel Amy's reluctance to use cargo ships to send GI's home is far outweighed by the men's desire to go home in anything available.

Fresh in the men's memories is the means of transportation used to carry them from one combat zone to another.

Most GI's believe that every day they spend away from their loved ones is a day of their lives wasted.

Put it on a voluntary basis. Ask the men if they want to go home on unconverted freighters or if they want to wait their turn to go home at the convenience of the War Department.

Pvt. ROBERT A. GLASGOW.

DELAY FEARED

EDITOR: The news of the Army's recruiting campaign has caused us great concern. The provision that reenlistees will get an immediate furlough has given rise to an utterly demoralizing fear. Will the "red apple" delay the 60, 70, or 2-year men from getting home?

We refuse to believe that the Army will not make every effort to fulfill its widely publicized promises. We refuse to believe that there is any significance in the fact that 60- and 70-point men were announced eligible on October and November 1 while reenlistees shall receive immediate furloughs. We refuse to believe that there is any significance to the fact that authority to send home the 35-years-olds, 60- and 70-point men is delayed while a colonel speaks in detail about the "red apple" 15 minutes after it is announced.

We are certain that the Army realizes that we are not mentally deficient children but men with memories, voting privileges, responsibilities, tired of military life, and a hungry yearning to return to civilian life not after the reenlistees but now.

Sgt. MARTIN FLEER.

ENDORSEMENT

EDITOR: I—and 600 officers and men of the One Thousand Two Hundred and Eighty-ninth Engineer (C) Battalion, European theater of operations and Southwest Pacific area veterans—heartily endorse Lt. Col. C. H. Davidson's cry in the wilderness of outfitting Liberty ships as troop transports.

Apparently the Army doesn't think Liberty ships are good enough to be used as troop transports for they are not as comfortable as the *Queen Mary* or the *Lurline*. Who cares about comfort if a little discomfort means we will get home weeks or months sooner? The Liberty ships were comfortable enough to be used as transports during wartime when the chips were down, so they should be good enough in peacetime. The men in this theater don't care how much discomfort a few weeks aboard a Liberty ship demands just so they get home a few weeks or months sooner.

If Colonel Davidson needs any volunteers to convert Liberty ships, there are thousands of men sitting around Manila more than willing to work hard to get the high pointers home so that the rest of us can leave this hellhole.

Lt. J. E. WILBURN.

This exposition of conditions could go on ad infinitum.

May I urge that all men not now needed in the armed forces be released immediately by those having the authority to do it? Or if that will not be done by the high command, let Congress pass a law at once to declare the war ended and to demobilize as promptly as possible.

## Memorial to Correspondents Who Lost Their Lives in the Late War

EXTENSION OF REMARKS

OF

### HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, October 30, 1945*

Mr. LUDLOW. Mr. Speaker, I have today introduced a bill providing for the erection in the city of Washington of a memorial to newspaper correspondents who lost their lives in the late war.

The text of the bill is as follows:

Whereas in the late war many American newspaper correspondents lost their lives; and

Whereas the services of these correspondents were of the highest value toward creating an enlightened public opinion and making possible the final victory of right and democracy over wrong and repression; and

Whereas these men were as essential a part of our national forces as members of the armed services and died like soldiers on the fighting front; and

Whereas they performed their hazardous duties in a manner that conformed to the highest ideals and traditions of the public service, entitling them to the recognition of a grateful country: Therefore,

*Be it enacted, etc.*, That there is hereby appropriated the sum of $50,000 to erect a memorial to the American newspaper, newsreel, and magazine correspondents and associated radiomen and photographers who lost their lives in World War II.

SEC. 2. The task of carrying into execution the purpose of this act is delegated to the president of the National Press Club and the chairman of the standing committee of congressional correspondents and a committee to be chosen by them.

SEC. 3. Square 225 in the city of Washington is hereby designated as the site for this memorial.

I believe the merit and propriety of this bill will appeal to everybody. Correspondents like Raymond Clapper and Ernie Pyle were more valuable to the United States in the recent war than many major generals, and that is no reflection on the splendid services of the major generals. Between 600 and 800 American correspondents were engaged in covering the war on all fronts. According to Editor and Publisher 38 correspondents and photographers lost their lives. I do not believe that any citizen of America will disapprove the idea that it would be very fitting and proper to erect a modest memorial to these men in the capital of the Nation they served so well. As president of the National Press Club when Raymond Clapper was on its board of governors, I learned to know him intimately and I never knew a more thoroughly honest, genuine, manly man or a more devoted American than Raymond Clapper. Ernie Pyle had just renewed his membership in the National Press Club before he began his last journeys with his beloved GI Joes.

I have purposely provided a relatively small appropriation for the memorial for the reason that, knowing my old comrades of the press as I did, I feel sure they would not want a costly memorial. The amount provided in the bill, I believe, would be sufficient to erect a suitable modest memorial and to place with it a bronze plaque setting forth the names of all of the deceased correspondents.

The location which this bill proposes for the memorial is, I think, highly appropriate. Square 226 is on the south side of Pennsylvania Avenue between Fourteenth and Fifteenth Streets where the Office of Information is now in a temporary building. It is Government-owned land and the site would cost nothing. This is the nearest available site to historic old "newspaper row," which was on the east side of Fourteenth Street extending from Pennsylvania Avenue to F Street and including the present site of the National Press Club. The establishment of the memorial there would bring it into close association with the ancient traditions of newspaperdom at the Nation's Capital. We can pay our country's tribute of its love to our fallen comrades of the press by passing this bill, and I hope that early and favorable action will be taken on it.

## A Serviceman's Letter

EXTENSION OF REMARKS
OF
### HON. JACK Z. ANDERSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, October 30, 1945*

Mr. ANDERSON of California. Mr. Speaker, I continue to receive a number of communications from men in the service in the South and Southwest Pacific similar to the following. I am impressed with the fact that where there is so much smoke there must be some fire, and I trust that both the Army and the Navy will make it their policy to return to the United States the high-point men who are eligible for discharge before transporting men with low-point scores. A bitter resentment is being built up in the minds of young men who have had sufficient points for discharge for some time but who are left to "sweat it out" while less eligible men are returned to the United States and released.

One of the communications follows:

MANILA, P. I., *October 18, 1945.*

DEAR MR. ANDERSON: Wish to call your attention to a damned unforgivable situation—the delay in transporting high-point men home from the Philippines.

For weeks now, Washington and local "brass" have promised us immediate shipment home. I have 90 points and now—because there are "no ships" we are stranded with thousands of others in replacement depots. It has been possible to get the Aussies, PW's, and others out—but not us.

The divisions are shipping 60-point men home while high pointers sweat it out. Why? No ships, and yet the Navy plans for a Navy Day demonstration in the United States to tell how the Navy won the war—while we stay here and rot! Why?

This is my thirty-fourth month in the Tropics. No; I haven't been stationed in New Zealand or Australia. I have met the Pacific face to face. Now it is time to go home.

Generals Styler, Trudean, and Plank—the masterminds of AFWESTPAC and other commands have things badly screwed up—or we would be coming home.

When MacArthur wanted ships for a beachhead he got them—but what about us now? I've seen whisky, officers' club dance floors, etc., travel by air and enlisted men kicked around. We could stand it then—but the war is over now.

I supported you when I worked for the old Santa Cruz News and when I had my own little weekly newspapers at Saratoga. I had to leave that little paper for the Army and lost everything. In the Army I felt I did my share—now I want to get out and get going for myself, I am not a military parasite. And I am only one of thousands in the same frame of mind.

Let's go home. You can help us, Mr. ANDERSON, by finding out. You can give the "hot foot" to the right parties. Please help.

Sincerely.

## Navy Day Address

EXTENSION OF REMARKS
OF
### HON. W. STERLING COLE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, October 30, 1945*

Mr. COLE of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech by Assistant Secretary of the Navy for Air John L. Sullivan at the Navy Day dinner, Mayflower Hotel, Washington, D. C., on October 27, 1945:

I am honored and made happy by the opportunity to meet tonight with the members of the District of Columbia Council of the Navy League on this joyful occasion. The United States has just concluded the greatest naval struggle in the history of mankind. It was a sea power struggle waged over jungle islands, through typhoons, and across vast water spaces which make the land areas of the world seem small by contrast. Victory, in the end, rested with what is today the world's greatest Navy—greatest in number of ships; greatest in the fighting qualities of its officers and men; greatest in the strength and resources of the people who support it; and greatest in its ability to defend its country and preserve the peace—the biggest and the best concentration of air-sea power the world has ever known—the United States Navy.

Today, in cities all over the country, people are participating in ceremonies honoring your Navy. There are ceremonies far from the sea, in those inland communities from which so large a proportion of our naval personnel is drawn. At inland ports, the smaller vessels of the Navy—those small vessels which bore so heavy a share of the Pacific naval struggle—are being inspected by the people who own them—by the people whose sons manned them in the battle which has just ended. At the coastal ports lie great ships of the Fleet—the battleships, the cruisers, the destroyers, and the carriers, from whose flight decks the war was carried to Japan itself. Some of those ships are whole histories in themselves. Tonight, for example, many of us think sentimentally of the *Enterprise*. The gallant "E," now on display at New York, is no longer regarded as a first-line fighting carrier. But there was a time when she stood almost alone between the Jap battle fleet and our survival.

The tribute paid our victorious Navy today is a tribute to the 4,000,000 men and women who fought and won the titanic naval struggle. Leaving their farms and factories, their schools and their offices, America's amateur sailors proved themselves apt pupils with indomitable spirit. The superb way in which they learned their tasks and performed their duties was the real secret weapon of the war and is today the source of America's great strength. Indeed, even as we meet here tonight thousands of those men are at work maintaining the ceaseless vigil which is the Navy's never-ending job. Even as the *Enterprise* rides at anchor at New York, other carriers are patrolling the western Pacific. Still more carriers and other combat ships are engaged in the task of bringing our fighting men home from overseas.

In speaking of the Pacific victory, I do not intend to give the impression that anybody in the Navy believes that the war against Japan was the Navy's exclusive business. Victory was the product of partnership—partnership with the Army; its ground forces and its Air Forces. Each service was organized and trained separately, as each had to be, in order to accomplish its special tasks in the joint effort. Each service was led by men who knew its special problems and its special duties. And then, for operational purposes the services were joined under operational commands so that the special abilities of each service could be used to mutual benefit and for the common purpose.

The Navy's part of the job, of course, was separate and distinct from that of the Army, because the Navy's job was seapower. But within the Navy, teamwork was also the explanation of success. To win the seapower struggle, the Navy employed an extremely high degree of integration—the same high degree of integration which will govern the composition and the operation of the Navy in the future. Naval aviation, the surface forces, the submarine service, the marines, and Coast Guard were members of the same organization and served under the same command to do the same job—to win that seapower struggle. Hence, the credit for victory rests equally with all of them.

So out of the experiences of the Pacific war, and the Battle of the Atlantic, came reaffirmation of the fact that integration of air, surface, and subsurface forces is essential to successful naval operations. But out of the experience of the Pacific war there also emerged a newer fact: That the influence of naval airpower on seapower is decisive. The demonstration of that fact began on that day of infamy when Japanese naval airpower struck us at Pearl Harbor. It gained strength when our carrier supremacy frustrated the enemy's supreme effort to move against Australia—at the Battle of the Coral Sea. It was conclusive when our carrier supremacy scattered an enormous Jap invasion armada at the Battle of Midway. Naval airpower flanked and supported the strides along New Guinea which were pointed at the Philippines. Naval airpower wrote finis, in the early days of the war, to the enemy's use of Rabaul, once a powerhouse, as an important naval base. The Gilberts, the Marshalls, the Marianas, the Philippines, Iwo Jima, and Okinawa were all made vulnerable to our surface and land forces by our carrier-based air supremacy. Naval air power is the punch of a modern navy—and of any future navy. That is why when we speak of the Navy, we speak of a combination of air and sea power. For naval purposes, air power is indistinguishable from sea power. The plane, as much as the surface vessel and the submarine, is the symbol of our modern Navy, our air sea power.

Thus, America faces the future with the most modern, efficient Navy in the world. Today it prepares to defend the Nation from

attack, to defend this hemisphere from attack, and to make our power available for use against any would-be aggressor or international criminal. How well your Navy will be able to discharge these responsibilities depends largely upon the people of the United States who own this Navy. I doubt if there exists in this country tonight widespread public appreciation of the task that lies ahead. No people ever supported its fighting forces as well as the American people backed up their fighting men in this war. No other people ever supported their fighting fronts with such a prodigious increase of uninterrupted production. No other people were ever in such complete partnership with their government in financing a war. The unrelenting effort, the stamina, and the determination of the American home front is one of the most thrilling chapters of this war. Unfortunately, no other people, when wars end, let their armed forces become impotent as quickly as we do.

Now that the war is suddenly over, and there has been superimposed upon the war-weariness of our people confusion growing from the use of atomic energy, the American people appear to have lost for a time their unity of thought and tenacity of purpose. The American people must appreciate what is involved in preserving the peace so hardly won and must wage the peace with the same vigor with which they waged the war.

I would like to speak of some issues upon which I think a degree of confusion exists. I think you will agree with me that most of this confusion is the unmistakable child of wishful thinking.

At the moment we are all eager to end the burdens of war and we are all preoccupied with the problems of reconversion and demobilization. Demobilization is today, and properly so, one of the primary objectives of our armed services. It is the desire of the Navy to return to their homes as speedily as possible all of those men who will not be needed for occupation roles or for our post-war military forces. This, the Navy is doing everything in its power to expedite, but we are genuinely concerned with the extension of the trend of demobilization-thinking which has swept this country. I doubt if any war ever died as fast in the hearts and minds of a people as this war has died in America. I speak of this tonight in anticipation of possible future public demands to accelerate and expand demobilization of men and matériel faster and further than our present plans contemplate. I remind you that late in 1918 and early in 1919 we were all anxious for the boys to come home. We were all anxious to return to normalcy. The boys came home, most of them, very quickly and the Nation spent the 23 years regretting that they had not gone through to Berlin.

The military forces of this country spent over three and one-half years fighting their way back from Pearl Harbor to Japan. If a public demand arises for the early release of our occupation forces in and around Japan, it might be well for us to recall our regret that World War I died so soon after Armistice Day. The will to implement our war and peace offensives may be dissipated in direct proportion to a premature and extended demobilization of military personnel and military power.

There are a great number of fine young American boys whom no point score can demobilize. They are the valiant heroes who gave their lives to win this war. Their lives won for us a temporary military advantage The true value of their sacrifice is for history yet to record and its evaluation will depend largely upon the way the American people pursue victory to secure peace.

Another topic upon which I believe confusion exists today flows from the discovery of atomic energy. The view seems to be growing in America that, thanks to this great invention, the next war can be fought and won by pushing buttons in an office and that, because of the high degree of scientific development and mechanism, it will be possible for us to keep our men at home and send our machines to war.

The substitution of machines for men has ever been the quest of the military scientist. The emptiness of that hope seems to be established by the records of this last, the most mechanized, war in history which employed the largest number of soldiers and seamen in any war the world has ever known.

An atomic-bomb-laden plane or guided missile must be launched from some platform. Obviously, the nearer that platform is to its target the more efficient the operation. To state that this bomb has outmoded navies is to disregard one of the fundamental facts learned in this war: namely, that the only way to stop a determined air attack is at the source. Ask any of those gallant men who sailed with the fleet that came to stay—and did stay—off Okinawa, and they will tell you that no matter how good your fighter patrol or how accurate your antiaircraft gunnery, if there are enough fanatical kamikazes coming from enough different directions some of them will get through. Ask those veterans who lived in London through the war and they will tell you that the valiant RAF could not stop all of the bombers when they came over on a determined mission. They will tell you that the only defense against enough buzz bombs fired from enough different directions is to do what was done—transport men across the ocean to fight through to capture the launching platforms from which those bombs started on their fearful mission. Obviously, in the atomic age, it will be truer than ever before that the best, and perhaps the only, defense is an effective and successful offense—one that captures the site from which the atomic weapons are launched.

Curiously co-existent with the belief that the atomic bomb eliminates the necessity of an army and a navy, we find two incompatible public views. The first indicates that this discovery has conferred upon us permanent military superiority; the second demands our immediate sharing of this secret with the rest of the world. History reveals that supremacy in any military arm shifts rapidly from one nation to another, and that the leader who ceases for a moment in his endeavors to increase his lead finds himself following a new leader. That is why the Navy 5 years ago was first to investigate the possibilities of atomic propulsion. That is why the Navy must do its utmost to discover the potentialities and the limitations of atomic explosives and to develop all possible defenses against this new weapon. We can leave no stone unturned in the development of this new energy. Neither can we afford to neglect the maintenance and improvement of the weapons which won this war. The Navy, therefore, paraphrases Alexander Pope's warning: Be not the first upon the new to have relied, nor yet the last to lay the old aside.

We hear in this country an insistent demand that the secrets of this great discovery immediately be made known to all the nations of the world. It is argued that our retention of this information creates ill will. I share the Nation's great respect for many of those who make this argument. However, I can neither follow their reasoning nor arrive at their conclusion, that we should share these secrets before the world's organization and machinery for peace has been established and has demonstrated its effectiveness. In two great wars in the last 27 years, this country has done a great deal not only for humanity but for many individual nations. If our actions have not by now convinced others of our good will, nothing ever will. We cannot buy with military secrets or superior technical knowledge respect which our conduct has not already earned.

The last general topic upon which I wish to speak this evening is the proposal that the defense of this Nation could be secured with many fewer men and at substantially less cost if the Army and the Navy were merged into a single Departmen of Defense. We always seek to improve upon the best. It is typically American that within less than 2 months of our achieving the greatest military victories the world has ever known we immediately embark upon a program to improve our military system. With that objective I am in complete accord. With the idea that there is room for improvement within our military departments I completely agree. But I cannot support the theory of a merger of the Army and the Navy within a single department and under the control of a single Secretary, who, however brilliant, could ever hope to be adequately informed about all branches of the services. Should such a merger occur, it is inevitable that from time to time the influence of one branch of the service will be dominant to the great, and perhaps irreparable, damage to the other.

Coordination between the Army and the Navy can be perfected while maintaining the advantages of the present system. America will suffer far more from the termination of competition and free expression from separate War and Navy Departments than it ever did from imperfect coordination. Early in its history, America recognized the value of competition. We early learned that lack of competition was a serious sociological, as well as an economic, threat. Hence there was developed in this country that great body of antitrust laws and decisions which assured for America in the business and industrial world one of our greatest assets. Yet there are those who today seek to persuade us that in the military field, unlike every other phase of human endeavor in this country today, monopoly is desirable.

The pattern of action followed by America after every war has been identical. The Navy has been somewhat reduced and the Army has been more than decimated. In the years between wars America has looked to its Navy as its first line of defense. This tradition, traceable to the distrust of professional soldiers which was born in the early days when foreign troops were billeted in the homes of our ancestors, has survived because the American people know that the Navy is not only the indispensable line of defense but is the most economical method of purchasing national security. Thus, after each of America's wars, the Army is shrunk almost into an organizational chart, and the Navy—though reduced—has remained the major military force in being. Within the next 12 months that process probably will be repeated.

I submit to you that it is unthinkable that the military forces of this country should be entrusted to any single individual with Army background, influences, and conviction at a time when by far the greatest part of its military force is Navy. With equal vigor, I suggest to you the absurdity of the control of a single department of defense by any single man with naval experience and naval traditions who could not possibly appreciate in full the significance or the urgency of the development of equipment and procedure and doctrine peculiar to land fighting.

But in addition to the departmental organization for defense, the people's mental outlook, their awareness of the task ahead must be our major concern. Peace must be more than a pious wish in our minds. We like to believe that America is the most peaceful nation in the world. Certainly, we have always been one of those least prepared for war. Yet in the 156 years since this Republic was established, we have fought the War of 1812, the Mexican War, the War Between the States, the Spanish-American War, and two world wars. Few nations have fought more wars in that same period. Such a record is conclusive evidence that peace does not come automatically to the nation

that wants peace or has deliberately courted military weakness.

"Peace at any price" for generations has been anathema to Americans. Perhaps that is one reason why we have come to believe that peace has no price. The record disproves that belief. The record shows that peace demands its own price, though an infinitely small fraction of the price war demands. The record shows that a nation can achieve peace only by waging it, by relentlessly working for that objective with the same unity and the same determination with which war is waged. Passive defenselessness has never won peace and probably never will.

The world stands tonight on the threshold of its greatest opportunity. I believe we will seize that opportunity. I feel that this may be humanity's last opportunity. I pray God the day may come when there is no longer a need for any navy or any army. The arrival of that day can be speeded by the reasonable maintenance of America's might until the hopes and dreams of today are translated into the living, effective world organizations of tomorrow. I fear that happy event will be postponed and perhaps may never materialize unless America retains and develops a navy which will be capable of snuffing out any threat against the just and enduring peace for which the entire world yearns.

## Ceiling Prices on Undershirts

EXTENSION OF REMARKS
OF
**HON. B. W. (PAT) KEARNEY**
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, October 30, 1945*

Mr. KEARNEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I desire to include therein an article which appeared in the New York Times for October 10, concerning the sale of imported undershirts. I especially refer to the statement made by the president of the Underwear Institute that if the Office of Price Administration would grant a ceiling which would permit a small profit, American mills could sell the same or a better shirt at retail for 55 cents.

I am informed that on December 6, 1944, the armed forces ordered 65,000,000 lightweight undershirts. Mills had to produce these shirts at a loss and did so as a patriotic service when the armed forces made a direct appeal for them. The mills took the loss rather than have servicemen wait until they had had a chance to induce OPA to change the ceiling prices.

It is the duty of the Office of Price Administration to encourage production and prevent inflation. It is doing neither when it keeps ceiling prices on American production so low that mills cannot produce; and yet the market is open to foreign manufacturers at almost double the price.

The article follows:

UNDERSHIRT SALE STIRS WRATH AT OPA—IMPORT IS SNAPPED UP AT 98 CENTS, TWICE DOMESTIC CEILING, AND UNITED STATES MILLS COMPLAIN

Eighteen thousand men's cotton undershirts, imported from South America and put on sale at 98 cents a few days ago in a local department store, became one of the fastest sellers of the day. New Yorkers who were able to get a few of the garments considered themselves lucky in view of the current shortage of low and medium-priced underwear.

The Nation's underwear manufacturers said yesterday that they could have made shirts of equal or better quality to retail at 55 cents, but were blocked by the Office of Price Administration.

The Underwear Institute, charging the OPA with discriminating against home industries, said that unless there was an early revision of price ceilings on domestic goods the men of America would have to pay higher prices for imported products or go without underwear by next spring. Women and children will be in the same fix, according to Roy A. Cheney, president of the industry organization.

FORTY-NINE-CENT RETAIL CEILING

The retail ceiling on domestic undershirts comparable to the 98-cent importations is 49 cents in most cases, said Mr. Cheney. Rather than lose money making shirts to retail at that price, most of the mills are not making any, he reported. Mr. Cheney said a 55-cent retail price would permit a profit to manufacturer and retailer.

"But the OPA holds us to our prices based on costs in the fall of 1941," asserted Mr. Cheney. "Since then our material costs have gone up 38 percent and our labor costs 45 percent."

Mr. Cheney pointed out that the higher retail price for imported garments was sanctioned by the OPA. Officials of the regional OPA headquarters in the Empire State Building were reluctant to discuss import ceilings, saying legal prices on goods from abroad were fixed in Washington. They admitted, though, that imported commodities might have higher ceilings than domestic goods of the same quality.

The discrepancy, according to the OPA, is due to the fact that it can control manufacturers' prices in this country but has no authority over foreign factories. As a result when it comes to fixing sales prices on imported items, the national OPA takes the cost to the importer of bringing the goods here and permits a mark-up over the "landed cost."

An OPA spokesman said that a domestic manufacturer could file with the national office an application for a ceiling-price adjustment if he found himself in a squeeze of rising production costs.

NOT AN EXCEPTIONAL CASE

The 18,000 cotton undershirts were not an exceptional case of discrimination against United States mills, Mr. Cheney declared. He said that as shipping becomes easier, imports of men's, women's, and children's garments from South America are increasing, and that prices are generally higher than if the garments were made here. He said other New York stores are receiving shipments from time to time.

Warning of the underwear crisis expected by spring, Mr. Cheney said September and October were the months in which jobbers usually bought from the mills for the spring trade, but that most jobbers were getting nothing at present.

A survey among 36 principal jobbers in all parts of the country disclosed to the Underwear Institute that 23 were finding it impossible to obtain any stock at present and 10 were getting from 2 percent to 20 percent of their normal amount.

A separate poll of underwear manufacturers, said Mr. Cheney, disclosed many instances of lightweight goods being produced at a loss. He said a sampling of 17 of the largest mills brought reports of the discontinuance of unprofitable items, reductions of as much as 70 percent in lines of spring goods, and predictions of employment reductions within the next week or two by several plants and the shut-down of one mill.

Earle E. West, secretary of the institute, said that while cotton yarns were still scarce the yarn supply was improving since the war ended. He said that the legitimate manufacturers could use all the yarn available if they could produce goods at a reasonable profit.

## Don't Go the Way of the Mob

EXTENSION OF REMARKS
OF
**HON. J. BUELL SNYDER**
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, October 30, 1945*

Mr. SNYDER. Mr. Speaker, in the unanimous-consent request to extend my remarks, I here include the fine thought-provoking address delivered by Postmaster General Robert E. Hannegan before the FBI National Academy at the graduating exercises of the thirtieth session, held October 26 in the Department of Justice auditorium:

When Mr. Hoover invited me to speak to you on this occasion, I asked him what subject, in his opinion, would interest you most. He answered that as a rule the speakers at these graduation exercises of the FBI National Academy take up some phase of law enforcement, local or national.

Well, right at the start I am going to break that rule. I am going to talk for a little bit about J. Edgar Hoover.

Not that he needs any introduction to you, or to Americans anywhere. I once heard Francis Biddle, the former Attorney General, tell a story on himself which proves that Mr. Hoover is not exactly unknown here.

In 1941, many war-emergency measures were in force. To get into an office in the Department of Justice after 6 o'clock, a person had to show a pass to the guard at the door. One evening shortly after his appointment as Attorney General, Biddle wanted to get in to finish up some work. The guard asked to see his pass. Biddle couldn't find it. The guard therefore refused to let him in. "I suppose you don't know who I am," Biddle said. The guard admitted his ignorance. "I'm Francis Biddle." Whereupon the guard replied: "That's O. K. with me. But you can't get in here without a pass, I don't give a damn if you were J. Edgar Hoover."

In my opinion the FBI, in the 5 years past, has made the greatest achievement in preserving internal security in time of war that has ever been made in the history of the United States. And the man who led America to that achievement is J. Edgar Hoover.

You are going back to your respective communities, prepared to do all you can to improve the quality of law enforcement. And here, in the record that is before us from December 7, 1941, to August 14 of 1945, we have a brilliant performance in law enforcement, a textbook of action upon which we may well draw for guidance whether in time of war or peace.

During the period when danger was abroad in the world, America was held safe from danger at home. The spy, the saboteur, the enemy propaganda stooge, all the members of that sinister institution known as the fifth column, were here in force, and still others were on their way over. They were confident that they could pursue the same methods here that had been so effective in other countries.

But in America those methods did not work. It would not be quite accurate to say that enemy dynamiters and arsonists found it hard going—they never even got started! In all of World War II there was not a single instance of a successful operation by enemy-directed saboteurs!

It seems that the climate in America disagreed with them. For their purposes there was too much light over here, and also too much heat. In fact it disagreed with them so violently that some half a dozen of them were shocked to death.

It was the FBI, an alert FBI, an FBI trained and developed and guided by J. Edgar Hoover, which created and maintained that unhealthy climate for the internal enemies of our country.

But that was only part of the job. To me, the brightest spot in this record of internal security lies in a still greater achievement—the fact that America, in combating all the elaborate machinery which the Axis powers had set up for espionage and sabotage, in disabling that machine and rendering it harmless, America remained true to herself. Through it all, this country played her destined role of a democracy faithful to democratic ideals. Fighting for her very life, she clung to the democratic method of enforcing her law.

In the matter of democratic law enforcement we have been moving forward through the years. For the measure of that improvement, we need only look back into the history of our own times. Some of you remember what happened in World War I.

We had no FBI then as we know it now. We had a Bureau of Investigation—with no J. Edgar Hoover in it—and we had 21 other Government agencies authorized to handle matters of internal security.

But spy hunting was not the exclusive business of those Government agencies. The public took it over. The grocery store, the barber shop, the street corner—these became the legal game reserves of the amateur spy hunter in World War I. Neighbor gossiped about neighbor. Privately sponsored "national security" organizations, so-called, ran full-page advertisements in the newspapers, inviting the public to track down German secret agents by becoming members of the organization—at $1 a head.

The result of all this was that thousands of innocent persons suffered. Families made up of loyal, patriotic American citizens were held suspect because they happened to have German-sounding names, and on that ground alone. Many were persecuted for that reason alone. We were interested in saving the world for democracy, but we were neglecting to try it out at home.

Now, how about World War II? As you all know, the American people did not repeat that performance. Throughout the conflict we have been remarkably free of persecutions.

As we look back over the record of these two wars, we see a remarkable contrast, one that should gratify every American and make him feel proud of his country, proud of his Goverment, and proud of its firm and gallant adherence to that same democratic principle which it holds out to a groping world today.

I know you share this pride with me. And I think you will agree with me, too, that a major part of the credit belongs to J. Edgar Hoover. I know this, because I happen to know that there were powerful pressures to make him abandon the clear-cut policy which he adopted at the beginning of the war emergency.

That policy, you know, was to discourage amateur spy-hunting. It was to take a strong stand, right at the beginning, against vigilantism and mob action. Again and again Director Hoover told the public, "If you suspect anything or anybody in this war, tell the FBI. Don't tell your neighbors. Don't take the job of saving America into your own hands. Don't join witch-hunts. Don't go the way of the mob."

In Europe the mob had served as the most useful tool of fascism. We didn't want that to happen here. But while fascism was still on the march and going strong, there were some people with those leanings, some who were susceptible to that disease, in every country. And we had them in America. We had some who wanted to set aside due process of law and who wrapped up their sinister purpose in the drapery of patriotism.

Against these efforts at sabotage—and let me remind you that it was a kind of sabotage more deadly than blast and flame—America was held safe. And I therefore take this occasion to express the gratitude that I, as an American citizen, feel toward the one man who had so very much to do with preserving us from that danger at home—J. Edgar Hoover.

That kind of sabotage, however, does not end with the surrender of our enemies in war. There were attempts, many years before December 7, 1941, to scuttle democracy in America, and there will be attempts to do so many years after August 14, 1945.

Because the majority of these attempts involve no criminality under the law, and because it is natural that our people should now relax from their wartime alertness, they are even more difficult to deal with in time of peace. And for that very reason they are more dangerous.

You are officers of the law, whose job is enforcement, or the supervision and direction of others engaged in enforcement. When a crime is committed you or your men go after the fellow who committed it.

But the whole framework in which you operate rests on the principle of justice as the means of protecting a law-abiding society.

Society punishes criminals—and engages you to go out and catch them—not because men want revenge, or because by putting the criminal in jail we believe we can educate him, or because prison labor can makes shoes cheaply.

No; the reason society sends you out to arrest a thief or a murderer is to protect itself. You catch your man, he is tried, and if he is found guilty he is punished. The justice done to the man is his punishment. But the justice done to society is the force of example which will prevent a dozen or a hundred or a thousand other men from repeating the crime for which one man has been punished.

What interests society, then, is not primarily the apprehension and punishment of the criminal. That is only the means to an end. The end is the safety and well-being of humanity.

Now, the machinery of law enforcement is not like the machinery in a factory that turns out automobiles or refrigerators or prefabricated houses. It is a human machine, working with the materials of humanity. There are no prefabricated crooks. Murderers do not emerge full-grown, gun in hand, from a factory assembly line. And a person who works at this human machine of law enforcement does not stand at one corner of it and perform a single operation over and over, through an 8-hour day, as the fellow who works with a wrench in a mass-production plant.

No; the man who works at law enforcement has got to understand not only the process, not only the mechanics, but the principles that underlie that machine, its reason for being, its place in the community and in the world. He has to know his raw material, what it consists of, where it comes from, what creates it.

As public servants in this field, therefore, your interest extends far beyond the apprehension of the criminal. It reaches into crime prevention to the building of good citizenship, to the elimination of influences in your community and your country that breed crimes and bad citizenship.

To do that kind of work well, you have to know why criminals act as they do, what brings on crime. Sometimes those influences are wholly personal or pathological. Sometimes they exist in the broader fields of sociology or economics. Whatever they may be, you want to discover them, and wherever you can you want to correct them.

Therefore, you are as deeply interested in events which may involve no criminality themselves, but which lead up to crime, as you are in the end result.

There have been recently, for example, some very disquieting outbreaks among our youth, those who will follow us into the voting citizenry of America. Doubtless you have read in the newspapers over recent weeks about school strikes and threats of strikes over race issues. They have followed other flare-ups of mob action from time to time in recent years, directed against religious minorities. Only last week the newspapers carried the story that the Ku Klux Klan was once more burning its fiery crosses—after lying low through our war with fascism.

Now, it is true that we have not had very many occurrences of that kind. They have been scattered, sporadic. But they are symptoms. They are danger signs. I do not think the specialist in crime prevention can afford to overlook them, or the underlying conditions that bring them on, any more than the specialist in medicine can afford to overlook the symptoms of disease in his patients, or the public health expert can afford to ignore the danger signals of epidemic in his community.

These outbreaks of race and religious hatred in the schools and among those of school age have taken place in times when juvenile delinquency has been in an uptrend. The Nation was shocked to learn, from your own FBI reports, that last year 40 percent of the crimes against property in this country were committed by persons under 21. That means that out of 110,000 known crimes, our youngsters committed 44,000. It means that one out of five thieves and arsonists and vandals is under voting age.

The FBI found that 17-year-old boys and 18-year-old girls committed more crimes during the war years than any other age groups. Crime among young girls more than doubled, and in the overcrowded centers of war industry and military camps the numbers of these young victims of our times were increased three- and four-fold.

Now, I am not going to burden you with any more statistics. But I think we should take these figures seriously. They are more than cold percentages and totals that statisticians can juggle around and arrange in neat tables. They are stark tragedy, the blighting of personal lives and the damaging of our whole body politic. They are liabilities on the future of America. And they cry aloud to us to do something about it.

Juvenile delinquency has always been an accompaniment of war, and of the stress and displacements of wartimes. We cannot, however, pass off the significance of these trends and these figures merely by pointing out that the war is over now.

War does disrupt the lives of our young people and it does divert many of them into dangerous paths. But this does not mean that the end of war automatically straightens them out again and takes care of their troubles. Far from it. I believe this period of transition is in certain ways more dangerous to the emotional balance and the level-headed thinking of our boys and girls than war itself. Many things are happening now that will try the stamina of these youngsters, and that will also try our own ability and our willingness to help them.

But we must prove ourselves able and willing to help them or take the consequences. Sometimes, you know, we don't see those consequences right away. Sometimes there is no visible sign—not until a new wave

of crime hits us and we find ourselves wondering what could have caused the youth of our country to do such things. Sometimes we hear nothing about it until the Fascist philosophy of race and religious hatred breaks out where we least expect it—in our schools—and we are shocked and bewildered and we wonder what these misguided youngsters could have been thinking about while their older brothers were overseas, fighting and dying to keep that same philosophy from being brought over here and forced upon us.

Make no mistake—that can still happen here. We were once troubled, you may recall, by the prospect of winning the war and losing the peace. Our Government and the governments of other nations have been making herculean efforts to find the way to peace, and I believe they will succeed.

But we Americans want to be at peace not only with the outside world, but also with our own consciences and our own souls. Unless we are vigilant here at home, unless we are awake to the trials that beset our own people, and especially that generation which is to follow us in accepting the leadership of the world, I say that we can win the war and win the peace and still lose that which we fought for; we can still emerge with an empty victory; we can still bear on our consciences the unfulfilled obligation to our heroic dead.

What are we to do, then, to safeguard our youth? What policies can you officers of law enforcement support, what projects can you undertake?

In this academy, you have been instructed in the methods of the FBI. The FBI is a fixture of democracy. It has been built to function as a democratic agency, adhering faithfully to democratic procedure in the enforcement of law. I need not go over that ground, but of course this principle is requirement No. 1 in your own community just as it is here in Washington.

But there are other policies, other projects, beyond the curriculum here, which in these times are directly related to your job.

First, within your respective communities, you will have to face the reality that peace in the world does not mean peace in the police department, and you will have to convince the citizens of your community, the parents and householders and businessmen, of the importance of maintaining the police force both in quality and quantity.

The end of war has brought broad general pressure for retrenchment of government expenditures. You will have to show your communities why this retrenchment, necessary though it may be in many branches of public service, is not justified in your branch of government.

Both in numbers of police officers employed and in salaries paid, we are now down to inadequate levels throughout the country. Through the war years there has been a steady drop in police personnel, and I was disappointed to see that this trend has carried over into 1945. As of April 30 of this year, the total stood 8.2 percent below 1942.

Salaries have not been kept in line with the increased cost of living, and as a result, even when the manpower shortage is ended it will not be easy for you to attract as high a caliber of personnel as you would like. You should consider it a part of your duty to fight and fight hard for a budget that means grade A people to do a grade A job.

In tackling the problem of juvenile delinquency, your interests will have to go far beyond the traditional limits of law enforcement. You will have to keep yourselves informed on the broad social and economic picture in the world of today.

If the police personnel of these times are to do the whole job that society assigns to them, they must know these world events and these changes in world trends, because such events and trends are translated directly into happenings in their home communities, no matter how small they may be or how distant from the main stream of our national and international life. The world is a smaller place now. And just as it takes less time for a person to travel from one country to another, it also takes less time for a habit of thinking to cross the ocean, or an influence on character, or a way of life.

Finally, there are the new recreation and child-care projects that have sprung up in your communities, projects that Government agencies and public-spirited citizens undertook when they saw the sad toll that war was taking in the character development of our children, and when they resolved to counteract it in every way they could. There are the high-school canteens, the various recreation units, the child-care centers, which were created to fight the spread of juvenile delinquency.

These, too, are facing the pressure of postwar retrenchment. You will hear it said that, now the war is over, there is no reason to keep them up, to spend the money necessary to maintain them.

But I urge you to keep those institutions going. Point out to the people of your town or your city that to close them now is no saving—not even in dollars and cents, and certainly not in the far more precious currency of our human resources. For if those places where boys and girls could get wholesome entertainment were needed during the past 4 years, they are needed more than ever now.

We have entered, here in America, a new and wonderful age. But it is also a dangerous age. If the criminal mind ever again should rise to a ruling status as it did in Nazi Germany, the tools that science has now placed in the hands of men will enable the aggressors to destroy all civilized life on earth. And you men who have studied the subject know that big crimes grow out of little ones.

Mr. Hoover has warned us of the danger that lies ahead of us here at home if the tide of crime is not checked. To that timely warning, I want to add that unless America sets the example that is needed in the world today, the danger will not be confined here at home.

Let us not forget that it was crime that we had to suppress in winning World War II—the greatest and most hideous crime in the history of mankind. The governments that we had to defeat were not made up of statesmen who were simply fighting for an ideal that differed from our own. No; they were thugs, a gang of thieves and murderers; and by their every action, before their surrender and after, they themselves have proved it. They have shown none of the attributes of statesmen who have been bested in the field of honor. The leaders of the aggression that set off World War II were acting the part of criminals from the outset, and they stand properly indicted as criminals today.

We want no more of their breed. With atomic power now a reality, we do not have living space anywhere on this earth for those who would attempt the crime of using it in an aggression on their fellow-man.

Let us remember, too, that these criminals of World War II began their career of crime at home. They started it with the persecution of racial and religious minorities. They developed it in book burnings, in confiscations, in the suppression of their own people, and from there they carried their crime abroad.

We are determined that no such careers will find their starting point here. And we look to you, the officers of the law in America, to see to it that they do not.

To the boys and girls of your home town, wherever it may be, the uniformed man serving under you is something more than just the policeman on the block.

In their world that man is law, he is justice, he is order, he is the integrity of democratic society. He is most of the things that the civic authority of a self-governing people means in the lives of those boys and girls.

Now, that is a pretty large order. It puts a heavy responsibility on his shoulders. Nevertheless, in practice that is the way it works out. If the officer of the law carries himself properly, the boys and girls of the neighborhood respond with respect for the law. If he is fair with them they react not only to him as an individual, but to the whole concept of justice in a democracy. If he is dependable, they trust not only him but the society that gives him his authority.

If he fails in any of these, his failure will likewise be reflected.

The respect and trust that children place in the police—most children in most neighborhoods—is pretty good evidence, I think, of a job well done. You don't get that respect and that trust from youth unless you deserve it—whether you wear brass buttons or not.

But no matter how well the task of law enforcement is done, there is always room for further achievement, and there are always danger spots that need attention. You have been given here in Washington the finest training that any chief of any police force could get anywhere in the world. I know that no matter how high your standards have been in your respective communities, as the result of this training you will find ways of raising them higher still.

In your work that is always possible and always important. For yours is a stewardship on which the future of our children—and this means the future of America—depends. That is the measure of your job. May the hand of God guide you, may He be with you always in your resolve to do it well.

## The Atomic Bomb

EXTENSION OF REMARKS
OF
**HON. MELVIN PRICE**
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

*Tuesday, October 30, 1945*

Mr. PRICE of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter that I have received from a senior high school student, Miss Georgia M. Goepfert, who resides in my congressional district, regarding the atomic bomb:

DEAR SIR: I am a senior in high school. Through my civics class I have become deeply interested in governmental affairs and hope I might take a big part in them some day. But for the time being you are my Representative and now I realize you depend upon the people, whom you represent, to know what actions to make.

I want to express the thoughts of my civics class on the atomic bomb. The majority of us agree that Russia should be let know of the secrets of the bomb. One student suggested that scientists of the Big Five form a commission and make laws concerning the atomic bomb. They could forbid its use in war as was the use of poison gas. I think Mr. Truman suggested this.

There are two outstanding reasons why we should let Russia know. First, her scientists will work continuously until they discover the details, which is predicted to happen soon. Besides our scientists can work harder to find a way in which to counteract the effects of the bomb.

The second point is—Russia would have more faith in us. If Russia would have discovered the bomb first and given the United States the formulas the people of our country would trust Russia, have faith in her, and not act so stubbornly to her. So don't you think if this story would be vice versa, it would be a great advantage to the world?

I sincerely hope that our opinions might help you in deciding the answer that is so hard to solve.

Respectfully,

GEORGIA M. GOEFFERT.

BELLEVILLE, ILL.

## Speech of Rear Adm. George F. Hussey

EXTENSION OF REMARKS

OF

## HON. THOMAS D'ALESANDRO, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, October 30, 1945*

Mr. D'ALESANDRO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech by Rear Adm. George F. Hussey, United States Navy, Chief, Bureau of Ordnance, Navy Department, in Baltimore, Md., October 27, 1945:

It is a privilege to be here in Baltimore on this first Navy Day after victory. It is first a personal privilege because my own connection with the Navy League goes back to my high-school days in Massachusetts. I think perhaps one of the earliest influences toward my Navy career was an address under the auspices of the Navy League made by Rear Adm. "Fighting Bob" Evans shortly after he retired during the cruise of the fleet around the world. Next, it is a privilege to be in Maryland again because, as was brought home so forcefully during the celebration of the Naval Academy centennial a few days ago, Maryland has for 100 years been the cradle of naval officers. It is not the slightest disparagement of the brave and loyal Reserve officers who made up 95 percent of our commissioned personnel during the war to say that without the Regular officers trained at the Naval Academy in Annapolis the Reserves could not have done their job, nor could the 5 percent have carried on without the 95, neither could do without the other, but together they made an unbeatable Navy, on the surface, under the surface, in the air, and in support of the fleet.

The work of the Navy League has continued steadfastly over many years, keeping before the people of the United States in sound presentations the country's needs for naval strength, and the reasons behind those needs. To my mind the Navy League has been one of the primary sources of a well-informed public opinion in support of a strong first line of defense. To those sources you of the Navy League in Baltimore have added the very real demonstration of Maryland hospitality in your Navy League Club. And your public-spirited women both in and out of their smart uniforms have made Baltimore a welcome port of call for the Navy, the marines, and the Coast Guard.

My own experience during this war has been very largely behind various desks in Washington. For the first 4 months of the war I had the privilege of commanding a task group made up of two squadrons of converted four-stack destroyers equipped especially for mine-sweeping and mine-laying at high speeds. We had also special anti-submarine gear and constituted the offshore patrol for the Hawaiian Islands area. Figuratively speaking we sat on the doorstep off Pearl on an antisubmarine mission. We reinforced ocean escorts for convoys coming and going, escorted transports and merchant shipping within the island area, and did various and sundry jobs among the islands, all the while maintaining a constant picket line against submarines. From that position we saw come and go the task forces that carried the ball for us in the early months of the war. You are accustomed to seeing in the newsreels or reading in newspapers and magazines of mighty Task Forces 38 and 58, the great armadas that have carved for themselves lasting niches in the Navy's hall of fame. The task forces of the days I am recalling were pitifully small—one carrier, two cruisers, five destroyers. Of course we took special precautions to insure that the way was cleared whenever such a task force left Pearl or returned. In spite of the confidence that I had in the commanding officers of my ships and their ability to perform their jobs I must admit that I always hove a big sigh of relief when the task force was clear of our area and making high speed toward the horizon, or when the last returning ship was safely inside the nets. The Navy came a long way from those days until the *Missouri* and her cohorts dropped anchor in Tokyo Bay.

I should like to tell you first-hand details of the Navy's exploits during those stirring days when the Navy came from behind to win overwhelmingly, but far more able and better informed representatives of the Navy than I have told you in written and spoken words of the amazing deeds performed by young Americans in times of stress. Not only that, there has been brought home to you the many times young Americans stood up under long-continued periods of inactivity during which there must be maintained constant alertness against a competent and ruthless foe. Hardly a week goes past without the newsreels, illustrated magazines, and the daily papers being filled with scenes where real heroes are decorated. In the face of such concrete evidence of real exploits I can hardly talk to you of them. There is, however, one phase of the Navy's service which I should like to mention, perhaps partly because I had no direct connection nor personal responsibilities for any part of it—that branch is the Hospital Corps. When the Surgeon General returned from one of his trips to Pacific bases he told me that in a number of hospitals he had talked with the wounded, an amazingly cheerful lot, and in each case he would ask the men, "How long was it after you were wounded before you got first aid?" To that question he got a puzzled look and a reply, "I don't understand what you mean, sir." He rephrased his question, "Well, after you were hit how much time elapsed before a hospital corpsman got to you?" The answer to that question was, "No time at all, sir; the hospital corpsman was right there." Only occasionally do we hear of the outstanding valor of these men who—unarmed—went through the hell of the landings, the terrors of the beachheads to save lives. Theirs was an outstanding contribution and a major reason why the mortality rate among the wounded has been so amazingly low.

I said that I had spent most of the war behind desks in Washington. First, as Director of Production, then as Assistant Chief, and now as Chief of the Bureau of Ordnance, I have had a first-hand contact and a close-up view of what American industry has done to make winning the war speedily an actual accomplishment. You have heard speakers from to time, particularly those concerned with the presentation of the Army-Navy E, that visible symbol of appreciation from the armed services, tell of outstanding accomplishments on the production front of both management and labor. Teamed with the military they performed miracles of production to place in the hands of the bravest and most competent Army, Navy, Marine Corps, and Coast Guard the world has ever known, the finest possible weapons.

Happily all of that is in the past and it is not of the past that I want to talk to you this evening, but of the future—the future of the country and what the Navy's share must be in that future. Without the enlightened support of a well-informed public opinion the Navy may well be denied means to carry out its essential share in preserving for ourselves, our children, and our children's children, the peace which this generation has fought so valiantly to acquire.

If the advertising pages of magazines are any criterion this Nation is insurance minded—life insurance, fire insurance, accident insurance, health insurance, liability insurance—insurance against all manner of mishaps and misfortunes—the American people at large are insurance minded. It must be brought home to the country that the Navy is national insurance. So long as people of this country run their own lives on the basis that insurance is the last expense to be dropped, and that luxuries must be laid aside first, there is little reason to believe that the country as a whole will not support insurance in the form of an adequate Navy. Insurance to be worth buying must be adequate—by the same token the Navy to be worth paying for must be adequate for the purposes for which it is intended. The Navy of the United States is intended to maintain the national interest, to protect the continental United States from invasion, to maintain securely our island possessions and advanced bases, to carry our share of the United Nations effort—all with the end of insuring that no enemy may disturb our peace.

The composition of the Navy necessary to carry out those ends has been set before Congress after prolonged studies by trained officers well versed in weighing the problems and the necessities. The Committee on Naval Affairs of the House of Representatives, of which your Representative SASSCER is an able member, gave careful consideration to the Navy Department recommendations and reported to the House of Representatives a recommendation to pass a resolution setting forth the sense of Congress as to the size and composition of the Navy.

It should be noted that the resolution embodying the details of that size and composition deals only with combatant ships. It is particularly significant that other sections of the resolution provide that there shall be maintained an adequate number of auxiliaries and a sufficient Shore Establishment to support the fleet. If that resolution is passed by the Congress there will devolve upon the Navy Department the duty of maintaining in the best possible condition the active fleet, the reserve fleet, and the inactive fleet. Maintaining the active fleet in prime condition, in a condition of complete readiness is a comparatively easy task. It calls for constant training and material upkeep and a judicious disposition of the active units to the end that they may be in the areas where they are most likely to be needed, and at the same time that the morale of the personnel may be of the highest. The comings and goings of the active fleets will once again become routine sights in our larger coastal naval bases, Casco Bay, Narragansett Bay, New York, Norfolk, San Diego, San Francisco, Puget Sound, and Pearl Harbor, all will be accustomed once more to see the fleet come and go upon its normal business. Maintenance of the inactive ships is another matter since the shore stations must support them. A ship out of commission, in spite of advances in dehumidification and other means of preservation, must necessarily turn in for storage a considerable portion of her equipment, particularly her ammunition. The vast merchant fleet and the tremendous number of auxiliaries which supported the activities of the fighting fleets and moved assault troops, garrison forces and their supplies to

the various beachheads, which later became advanced bases, all were armed with modern, effective antiaircraft and antisubmarine weapons. Those weapons, too, must be preserved against the day when they will again be required to rearm like ships in another conflict, which we hope will never come. To preserve this ammunition and equipment it has been necessary to keep as permanent parts of the naval ordnance Shore Establishment, a very considerable array of ammunition depots, magazines, and ordnance plants—many of them constructed during the war when their production was vitally needed to keep the fleets supplied. The ordnance plants in particular were set up in 1940, 1941, and 1942, located in areas of good labor supply within the interior of the country and specially equipped for the particular purpose for which each was intended. Without painting a picture of lavish extravagance these plants must be described as splendidly equipped with the finest tools that America's exceedingly able machine-tool industry could produce. Naturally enough those plants have been eyed by many alert chambers of commerce, corporations, and able individual businessmen with a view toward converting them to peacetime production.

In each case the Navy has had to say "No," because of the lessons of the war. At the close of World War I we had one gun factory, one large ordnance plant, and one very small one, and three torpedo stations. Those plants, preserved through the peace interval and operated to the extent necessary to maintain the peacetime Navy, were by no means adequate to build, equip, and maintain the wartime Navy. By the availability of the naval ordnance plant, South Charleston, W. Va., which had been preserved as a war plant from 1922 to 1940, the Bureau of Ordnance was able to get an early start on the production of armor and gun barrels for the new fleet. Against the day when with far less warning than we were vouchsafed for this war, a national emergency may again arise, it is only the part of wisdom that these plants be preserved by and for the Navy. After due consideration, as Chief of the Bureau of Ordnance, I submitted to the Secretary of the Navy recommendations for the conversion of those plants which were contractor operated during the war to Navy operation as part of the permanent shore establishment. The Secretary approved those recommendations and steps are now in process, some already completed, to transfer from operation with high employment figures to a stand-by status under complete Navy control with officers, a few enlisted personnel, and a nucleus of civil-service employees. Such an action has been, naturally, disappointing to many, but mindful as I am of the urgent necessity for creating the maximum possible employment in the country I should still be derelict in my duty if I failed to recommend to the Secretary that these plants be preserved for the Navy's use in time of need.

Ships, reserve equipment, and stand-by plants will be of but little use to us if we allow our research and development to fall by the wayside. In this well-informed country hardly a person can fail to be aware of at least some of the contributions which science has made to the winning of this war. The atomic bomb has captured everyone's imagination. The VT fuze, of which the Navy is particularly proud, and which our antiaircraft guns used with such deadly efficiency, is another striking example of what the best brains of science and the skill of American industry can do when faced with a particularly tough problem. If you have ever dropped your bedside radio set you probably recall the disastrous results; imagine then the problem of developing and manufacturing a radio set no bigger than my fingers and capable of being fired from a gun at 2,500 feet per second. That in a nutshell was the problem handed to the scientists of Section T, of the Office of Scientific Research and Development, those same scientists who now man the applied physics laboratory of your own Johns Hopkins University. Thanks to the broadmindedness of Dr. Bowman as president of the university and of the very able board of trustees who support him, Johns Hopkins has taken on further projects of very great importance in devising weapons for the Navy. One problem laid before them was recognized as requiring at least 2 years for solution. Already they have made such strides that while the final solution is still far distant there is every reason to believe that they will come up with an answer not merely to the precise problem presented, but an answer on which solutions to numerous other problems all in the same general field may be shaped. I am particularly happy that I can tell you, who are so close to Johns Hopkins and to whom Johns Hopkins is so close, how keenly the Navy appreciates the very real contribution of that university to the winning of the war and the preparations for maintaining the peace.

I had the privilege of sitting during the summer of 1944 as a member of the Wilson Committee on Postwar Military Research. Presided over by Mr. Charles E. Wilson, of the War Production Board and the General Electric Co., the board included four eminent scientists, four general officers of the Army, and four flag officers of the Navy, each with a personal responsibility for some phase of the material readiness of the armed services. Having in mind the outstanding accomplishments of the Office of Scientific Research and Development and the National Defense Research Committee with their widespread sections, groups, and committees, the efforts of the Wilson committee were bent toward establishing for the peace era a sound basis for continuing the interest of the best minds of science in the problems of national defense. There was neither confusion nor conflict in the committee as to the ends sought. Naturally, there were considerable differences of opinion as to the best means to those ends. After very illuminating discussions the committee finally submitted its report to the Secretary of War and the Secretary of the Navy at whose behest the committee had been established. The first concrete result of that report was the establishment under the National Academy of Sciences of the Research Board for National Security with Dr. Carl Compton, the distinguished president of the Massachusetts Institute of Technology, as its chairman. The board comprises 20 outstanding scientists selected from various fields, 10 Army officers, and 10 Navy officers, including the chiefs of the technical branches of the Army and of the technical bureaus of the Navy. Currently there are before Congress various bills looking to the establishment on a permanent basis of some sort of national research organization. The bills differ in details, some are wider in scope than others, but all of them emphasize the vital necessity of bringing to bear on problems of national welfare and national defense the active support of the best scientific minds of the country.

Men of science, and I am construing science broadly to include the engineering branches, have given of their best during the war. It is vital that along with their peacetime contribution to the country's prosperity and the constant improvement of the American standard of living the country recognize that contributions to national defense problems on the part of scientists are also essential. We must bring ourselves to the frame of mind where the scientists who solve a crucial national defense problem receive the same public acclaim as the men who develop new means of combating disease. With the backing of the American public, American scientists can and will contribute of their best to insure that the United States Navy, now in a preeminent position in the world, maintains that position throughout the years to come. On the sustaining of the American Navy and its readiness rests no small share of the peace of the world.

There, ladies and gentlemen of the Navy League and of the Propeller Club, are the Navy's most pressing problems for your attention. The Navy looks, as always, to the Navy League for help in establishing and maintaining a well-informed public opinion to the end that a Navy of adequate size, backed by sound research in the constantly expanding fields of science, may be at all times ready to preserve the peace of these United States.

## Victory Day Speech

EXTENSION OF REMARKS
OF
### HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, October 30, 1945*

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein a speech I delivered at the welcoming home celebration of the veterans of Chelsea, Mass., on Sunday, October 28, 1945:

VETERANS OF CHELSEA, WELCOME HOME

Just 5½ months after VE-day, nearly one-half of the millions of troops we sent overseas to fight and win this war for us have been returned home. Those still in Europe will be back by February; those in the Pacific, by June. At the present moment the Navy is transferring seven aircraft carriers and six cruisers to help the transports in the job of bringing our men home as quickly as possible.

Already, on the streets, we see increasing numbers of men and women wearing the discharge buttons which identify those who have been returned to civilian life after the months and years they gave in honorable service to our Nation. They are young men and women who have traveled far, who have seen and done so much, and now they are coming back to live as we have lived during these past 4 years, as free and responsible Americans. The families and friends who have missed them so are gathered here to honor them and, what is more important, to rejoice in seeing them and being with them again.

The long days and nights of anxiety and loneliness are over. Families are being reunited, and a great Nation reaches out with her arms to gather these, her finest sons and daughters, into the embrace of her heart. America is proud of her young men and women. They cheerfully sacrificed some of the best years of their lives to save her. Wherever they have gone they have brought credit to America. All over this world, oppressed peoples have seen the flower of American youth; they have been stirred by their fairness, their generosity, their faith and hope, that a better world can and shall be created out of the chaos of war. Our service men and women have been our best ambassadors By their actions, they have cleared away the hate and fear that darkened the lives of so many millions. Their example has served to revive our feelings of human brotherhood. They have won the war, but they have also planted in every country of this earth the seeds of mutual trust and friendship. They have already won the beginnings of the peace.

The returning service man or woman has a deep love and respect for home, even greater

than ours because he knows what it is to be without one. From barracks to battlefields, in airplanes and submarines, for the few minutes each day that he could take from the grim business of war, he talked with his comrades of the home that was, and of the home that could be. These men had no time or wish to fool themselves. They had seen death and suffering and ruin and misery such as we at home can never know. From this realistic experience they had come to understand the essentials of living. Quietly and earnestly they talked, heart to heart, about their girls back home, of the new jobs they wanted, of the Nation which would have to change some of its ways to be worthy of their sacrifices.

The first few days, to those who have already rejoined us, seemed like heaven. The old home town, unscarred by war, looked so good. His hard-working and unassuming dad, whom he had never quite appreciated before, he greeted as a buddy, somewhat older, but a buddy nonetheless. In the privacy of the home, his mother's cooking and her concern for his every want, was a foxhole dream come true. Then he took his best girl to a dance or the movies. Afterward, as they talked over a coke, he thought he had never seen, in all his travels, such a sweet, attractive girl as his. He thought of the home and the life they would share together. The old home town, and all the people in it never looked so good. This was worth fighting for.

After a month, however, the homecoming honeymoon was over. The veteran started to look around for a job so that he could get started in life again. Here, he experienced his first disillusionment. People were courteous to him, but somehow he couldn't seem to get going again. There were so many papers to fill out and so much confusion in civilian life, and there was no one to help him. The veteran drifted, and became bitter. Was this what he had fought for?

Did people really know what he and others went through out there? Did it have any meaning to them? As he watched them passing him on the street, he wondered and began to doubt.

From somewhere he remembered a chaplain speaking just before his outfit went into action. It was a serious moment, and all knew it to be so. The chaplain was telling them that a man going into the mortal danger of combat needed more to sustain him than just concern for his own safety. Teamwork was needed to win, and every man was a part of the team. No one could stand aside. The chaplain spoke of selflessness and generosity—so great that a man gives his life, all that he is, to save a buddy.

Where was that? Anzio, Normandy, Iwo Jima? It was these and many more. And then they went into action and men fought and suffered and died for each other.

But the picture passed from the veteran's mind as he was jostled by someone hurrying by in his home town. The veteran stepped into a doorway. It was not a dream, what he had been through, but it must be just a dream or a story that is told, in the minds of these civilians hurrying by. He looked at his own clothes. He was no longer in uniform. He was dressed after the manner of these people hurrying by, but he felt a difference between himself and them. They had a job and he had none. And he thought again of the chaplain who spoke to the men out there before they went into battle. The veteran frowned. Does the Golden Rule belong only on the battlefield? Must a generous life be led only for those few bloody moments of battle? Isn't it possible for men living together in peace to offer each other the same selflessness? How else is the world to find a way of survival? Where, how, can I find an opening for myself in my home town? For teamwork is needed at home as well as abroad. Yet, somehow, they don't seem to want me on this team.

Though the people seem indifferent to the returning veteran, in reality they are not. No city in this Nation wants to see a veteran problem come into being and disrupt the life of the community. The city of Chelsea, like all other cities, has many agencies to help the veteran in his adjustment to civilian life. It is not alone a question of agencies, however. Each citizen has the responsibility of knowing these organizations, where they are located, and what they can do for the returning serviceman so that the veteran can be given helpful advice. For our responsibility to those who fought for us is a continuing one. They did so much for us. Now it is our turn to do something for them.

This was not a "glory war." We had no bands and no parades as our men and women went away. They were going off to do a grim and life-breaking job. Now that it is over, the time has come for us to welcome them back and to do all in our power to fit them into the ways of civilian life. We are happy but at the same time we want to be helpful. The veterans don't want charity. They want a job, and a better one than they had before. Let us keep this uppermost in our minds this day even as we extend our hands and say: "Well done. It's good to see you home."

The veteran's first and rightful concern is for a job. But he had other interests as well. Having fought for his country, it has a greater meaning for him. He has had a chance to compare it with other countries and with other people. He is coming back home with a wider horizon and with a world experience that will be needed as our Nation faces up to the problems of the peace. We shall need his advice on questions of national policy.

A Congressman, as you well know, receives much mail. Some of it is quite frank. During the course of the war I received many letters from men and women in the service. They were in far-away places as they wrote of home and of our country. They had been thinking earnestly of both and they had come to have mature and definite opinions. Men from Massachusetts had rubbed elbows with men from Georgia and Ohio and California. Catholic and Protestant and Jew, brown, yellow, white, and black men had fought and died helping each other, as Americans. Our service men and women have learned through dangers shared what many at home have not yet learned, that tolerance is the first step on the road to wisdom and the goal of justice between man and man.

One soldier believed that we would have a better nation if every section of the country had the same standard of living. Writing from Italy, he said: "No one State in the Nation can be rich while others are poor. New York should help Arkansas, California should help Mississippi, so that the children of poor States shall have a chance for a common education. We must learn to live together regardless of race, color, creed, or what sections of the country we come from. If I had my way, I would make racial discrimination a Federal offense."

A sailor wrote from somewhere in the Pacific: "Out here we have learned, the hard way, how foolish are those distinctions we made back home. Here you are taken at your face value. You are judged by your manhood, not by your name or your church or your skin. Democracy works in the armed forces because each man must think of and depend upon the next. Having seen it work out here, we expect to see it work back home."

Many veterans are dissatisfied with our educational system. They believe that America was unprepared for danger because the public, during its school years, was not taught enough about the world, about international relations and the effect these have upon our security. A soldier wrote to me from England saying, "Why is it that our colleges do not require a course in world history? We stand on the threshold of world leadership, yet our people are not being trained for it. It is necessary to train a man for a job in life, but why not also prepare him to measure up to his thinking responsibilities to his city, his State, and his Nation? We will spend hundreds of thousands of lives and nearly $300,000,000,000 before we defeat the enemy. All this might have been saved if our people had been trained to an awareness of world affairs and if our Nation had been prepared * * * for then the aggressors, seeing us strong, would not have dared to attack. It was the mental and material unpreparedness of the democracies that encouraged the aggressors. I know it is too late to think of what we might have saved, but let us look to the future and make certain that the next generation will know what is developing and will be able to check aggression before it can get rolling."

The veterans are coming home with their eyes open. They will not be satisfied with some of the things they see. For a stronger America, they will want compulsory high-school education, a more modern system of vocational education that will have the benefit of industry's advice, and the opportunity for every man to have a job. They want to see our slums torn down and decent housing accommodations put up in their place. They want low-cost hospital and medical service which will be available to everybody. They want to see prices for all commodities kept within reasonable limits and they want our Nation to be prepared for any emergency.

They want a job, a good home, good schools, and good churches. They want these not for themselves alone, but for all. By getting these the veteran knows that he will be happy and so will his fellowmen. The veteran will be a home man as his father was before him, but he will be alert and informed in a changing world. And he will expect us to go forward with him. Nothing less will do.

The Congress, anticipating the new viewpoint of our homecoming veterans, has passed the GI bill of rights, which is the most liberal and comprehensive legislation affecting veterans in the history of this or any other nation. It is not a law providing for cash awards or land grants. It does provide for disability benefits and hospitalization, but its primary purpose goes much further than this because it knows that the veteran wants to get going in civilian life again. The GI bill of rights helps the veteran to get a loan which will enable him to buy a home or get a start in business. It also helps those without money to get an education at the Government's expense, realizing that education is our greatest asset in the complex world of tomorrow. The United States is blessed with great material wealth. Now it needs the brain and the character to use it properly.

These are the sobering thoughts that fill our minds as we try to put ourselves into the veterans' shoes on this homecoming day. But there is a lighter side to it. Reunion with loved ones long parted is a rich and overwhelming human emotion. All the pent-up human needs of years speak out for fulfillment. Like all supreme delights, the joy is sometimes too much to stand. A neighbor of mine had such an experience, a few weeks ago. Her boy had been overseas for 2½ years. The good woman spent all her spare time in praying for him, in writing to him, and in worrying about him. Then she got the glad news that he would be home on Thursday. So she set about preparing the house for him and as she worked the tension mounted. There had been a change of orders, however, and the boy, without notifying his mother, walked into the kitchen on Wednesday, a day before he was expected. When the mother saw him she fainted. The boy, who was

healthy enough, having survived the African, Sicilian, Italian, French, and German campaigns without batting an eye, was completely unnerved by this reception. He fainted, too. The presence of someone else in the house saved the day. Mother and son were revived and the reunion proceeded on a joyous, though less intensive scale of emotion.

Perhaps it is safer to welcome you home, as we do this day * * * all together. There are so many of your friends and relatives here, bringing their personal greetings. The city of Chelsea, which is a home, second only to that of your flat or tenement, welcomes you through Mayor Bernard L. Sullivan. As your Representative in Congress, I am happy in your happiness and I want you to call on me in any matter in which I can be of assistance to you. Many others are here to meet you: Representatives of labor, of industry, of the churches, of the schools, of the veterans' organizations, all glad for your safe return and anxious to help you in your adjustment to civilian life.

We ask you to be patient with us. For a little while, some of our attitudes and opinions may seem strange to you because we did not share your experience. But give us time. As all of us, veterans and stay-at-home's alike work to bind up the Nation's wounds, we shall stand, men, women, and children together, all Americans, facing the future which we share in common.

To the boys and girls who left Chelsea to fight our battles and who now come back as men and women, no words of ours can express the gratitude we feel in our hearts. Only by our actions can we tell you what this means to us.

That is why all of us are here today. Your loved ones at home, who never complained as they endured eternities of anxiety, working, waiting, praying for your return, they have the first claim on your affections. Remember, however, that all the people in Chelsea are proud of you. As friends, we share in your joy and wish you the happy future which you have so gallantly earned.

---

## President Truman Clearly and Emphatically States Sound Policy re Wages and Prices; Corporation Net Profits Would Permit Wages Increase Without Commodity Increase; Unemployed Men Who Want Work and Cannot Find It Are Not Normal-Acting Citizens

EXTENSION OF REMARKS

OF

### HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, October 31, 1945*

Mr. DOYLE. Mr. Speaker, last night the President of the United States, as the Chief Executive of this Nation, stated so clearly and emphatically the policy and objectives of this Government with reference to wages and prices, which declaration went over the radio and throughout the press of the Nation, that it is not necessary to here restate what he so much better said.

In his speech he referred to the excess-profits tax, and its possible repeal by Congress, as one of the items to be taken into consideration as to ways and means by which industry could well afford to pay increased wages, without increasing prices. Yesterday afternoon, late, this Congress did repeal the corporate excess-profits tax, and as a result thereof, it can now be fairly well estimated that this repeal of this corporate excess-profits tax will result in making available for net profits or for dividends, or for operating capital, or for promotion and expansion, a sum estimated as not less than $2,500,000,000. From another viewpoint, this sum, distributed as wages, would approximate a 10-percent increase in wages for the workers in industry and the manufacturing in our Nation..

Corporation profits more than doubled after taxes between 1939 and 1944; from $4,200,000,000 in 1939 to $1,900,000,000 in 1944. According to the United States Department of Commerce, another $26,000,000,000 has been retained as undistributed profits. The total corporate profits after taxes 1940-45 come to $52,000,000,000. In addition, Congress passed a law assuring corporations carryback credits amounting to another $30,000,000,000 for tax refunds, should postwar profits happen to fall below the levels of 1936 to 1939. Industry can raise wages and salaries an inadequate 10 percent now without adding to unit labor costs, through elimination of overtime alone, without even calling on its earned net profits.

Today, due to increases in productivity, four workers do the work of five. This represents another 25 percent saving which can be restored to workers without affecting the unit cost of items. Corporate profits will reasonably continue to rise. In 1946, now that the excess-profits tax is repealed, profits will be $10,500,000,000.

Two other factors which our President mentioned as factors to be taken into consideration in anticipating increase in wage rates without an increase in prices were reduction of overtime and elimination of wartime up-grading. It is estimated that the reduction of overtime would reasonably result in a 4 percent less wage output, and by the elimination of an estimated wartime upgrading there would be a reasonable saving of at least 9 percent in wage output. Adding these three figures, to wit: Corporate excess-profits tax at 10 percent, and the reduction of overtime at 4 percent, and the elimination of one-half of wartime upgrading at 9 percent, there is a total of 23 percent reduction in wage output; which would reasonably be available in increase in wages to the American worker—and without an increase in prices of goods, wares, and merchandise.

Granting that industry's ability to pay higher wages does depend upon many factors, some of which are measurable and others nonmeasurable at this time, it is estimated by scholars in that field that the cost of increases in average manufacturing wage rates would be reasonably compensated for by these three factors which I have given. For instance, if no changes whatsoever are made in basic wage rates, a reduction in the length of workweek will however reduce the gross average hourly earnings. Therefore premium pay for overtime work will practically disappear. And allowing for the same amount of premium pay at overtime rates as of January 1941, gross hourly earnings will reasonably approximate 99.3 cents per hour. Therefore, the average American worker in American industry and manufacturing would earn $38.95 for a 39-hour week. This is a reduction of 17 percent in weekly earnings from the level of April 1945. And a drop of from 48 hours to 40 hours per week determines a 23-percent drop in weekly earnings of these same people.

It is reported that much of the difference between the general wage-rate changes and changes in average straight-time hourly earnings adjusted represents wartime increases which are "reversible" and that the "up-grading" which resulted from the necessity of war hours "reversible," that this "reversible" will tend to increase as unemployment increases, and as wage-rate schedules are naturally administered with greater peacetime "frugality." Also, "shift premiums" will practically disappear and jobs will be reclassified downward instead of upward. Normally, also, workers who have received rapid "up-grade" promotions will be replaced by returning veterans, by new entrance into industry, and by workers displaced from other jobs. It is estimated that if all the wartime "up-grading," "merit increases," "shift premiums," "incentive-pay plans," and so forth, are eliminated on account of the removal of the war conditions surrounding industry, that then the average weekly earnings in the manufacturing and industrial enterprises would likely fall to $30.96, which figure is 34 percent below the April 1945 level and is only 16 percent higher than the level in January 1941.

The effect of the successive elimination of various components of weekly wages in April 1945 is shown in the following table:

| Assumptions to average gross weekly earnings | Gross weekly earnings | Percent change from January 1941 ($26.64) | Percent change from April 1945 ($47.12) |
|---|---|---|---|
| 1. Workweek reduced to 39 hours; no reduction in hourly pay except elimination of most premium overtime | $38.95 | +46 | −17 |
| 2. Workweek reduced to 39 hours; return to 1941 distribution of employment | 36.95 | +39 | −22 |
| 3. All factors listed above, plus elimination of half wartime upgrading, merit increases, incentive pay, shift premiums | 33.96 | +27 | −28 |
| 4. All factors listed above, plus elimination of all upgrading, etc | 30.96 | +16 | −34 |

It should be noted that the gross weekly pay of the average American worker in industry and manufacturing has increased from $26.64 in January 1941 to $47.12 in April 1945, or 77 percent. But making allowance for the increase in the cost of living and in personal income taxes during that period, the value of the worker's take-home pay in terms of 1941 dollars only increased from $26.64 to $31.47—assuming an income tax exemption for only one dependent—or an increase of only 18 percent. Furthermore, of this 18-percent increase which

did occur in gross pay of the average American worker during the war period, 36 percent of that 18-percent increase resulted from increasing hours of work and these hours of work will normally be reversed in 1946.

It is reasonably estimated that a money wage of $33.96 in 1946 represents 3 percent less purchasing power than a wage of $26.64 in 1941. When allowance is made for payment of 1946 income taxes, the purchasing power of take-home pay for an average worker with exemptions for one dependent will be $23.55 in 1941 dollars, or a reduction of 10 percent from January 1941.

Between April 1945 and the spring of 1946 total salaries and wages paid will reasonably decline by between thirty and thirty-five billion dollars. Accompanying this reduction will likely be a fall of total national output of more than $40,000,000,000 and a sharp decline in profits before taxes and in farm income.

It is estimated that 1946 profits after taxes of manufacturing corporations will be over $6,000,000,000, a figure higher than the wartime peak. This estimate assumes an increase in wage rates sufficient to maintain average hourly earnings in each manufacturing industry at the April 1945 level.

In my judgment there is a determining factor with reference to this whole subject of wages and profits and taxes on corporate profits which I have not heard mentioned as yet on the floor of this House. Nor have I observed it in reports or by commentators; I therefore venture the statement that inasmuch as American industry in wartime was necessarily furnished the great bulk of its wartime operating capital by the Government from taxes and other federally raised money, therefore American industry in a larger sense should consider a substantial portion of its wartime profits in a substantially different light than it would had industry itself furnished its own total operating dollars. In other words, the American taxpayer furnished the great bulk and amount of operating capital for American industry during the war, from the use of which American industry made its great accumulated net wartime profits. What, therefore, should be the duty and privilege of American industry with reference to the American workingman and the American taxpayer who furnished them the great bulk of their operating capital, as a result of which they made their great wartime net profits—the greatest net profit in their history? Granting that there was no other way provided whereby we could win the war; granting that it was absolutely necessary and sound for American industry to be thus furnished and supplied with the necessary armament of such operating capital, both in terms of money, plants, and machinery—this does not eliminate the fact that in a truer sense American industry morally owes an obligation of considering some reasonable portion of these war-gained net profits as a fund in reserve for the protection and security and the stability of the American public against the hazards and tragedies of unemployment in this period of reconversion from wartime to peacetime.

If the world economy were such that no money profits could be made out of war, then there would reasonably be no war. I wish it were so now. And assuming it is true that one of the factors entering into the frequency of wars is the making of huge money profits by war lords, then the time must sensibly and soon come that the patriotic call to the voluntary sacrifice of human life will also be a patriotic call to the sacrifice and elimination of huge money profit in a war period.

When ambitious, sober, patriotic men—fathers of children and husbands of mothers of American children—are unable to obtain reasonable employment at a decent wage, which permits them to raise and educate their children in reasonable decency and security, these American citizens can hardly be expected to be normal in their attitude toward their Government and toward their duties of citizenship. Hungry men can hardly be expected to be reasonable men. Nor can honest, industrious men, who are not reasonably sure of steady employment, be expected to form the basis of a strong, sound national resource in terms of human endeavor and relationships. Steady, dignified, compensating employment is an absolute necessity and is a requisite to soundness in national domestic stability and security. Nothing less than this sort of opportunity for such employment can be tolerated with candor and fairness. Material things are only valuable as they make the people happy and healthy. And material wealth is only a national asset when it is used to the end that the people who create it are increasingly made more happy, and secure and sound in their daily life.

## Suppression of GI Free Speech

EXTENSION OF REMARKS
OF
### HON. HOMER A. RAMEY
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, October 30, 1945*

Mr. RAMEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from a soldier to Hon. Harry N. Hansen, of Toledo, veteran of World War I. The soldier reports discrimination which he was not allowed to write his Congressman:

SUPPRESSION OF RIGHT OF FREE SPEECH IN ARMY

OCTOBER 17, 1945.

MY DEAR MR. HANSEN: The next election must be a Republican victory.

I have never been more sure of that fact than I am now, after being in the Army 3 years and 9 months and having spent some of that time down here in South Carolina, the State capital of a deep South State. I have seen so much rotten politics.

This letter would have gone to RAMEY long ago but since the War Department has taken over so that we can't write direct to our own Congressmen, I shall have to direct it to you and perhaps you can sneak it through to RAMEY or some other person you feel might like to read it.

These times are to my sense, and a lot of other GI's here feel the same way, the formulative months for the coming elections. The fellows in the Army who feel they should have been discharged a long time ago are hot under the collar and are doing more political discussing than I have ever heard before in the Army. You see most of the time the boys know it is wise to shut up and not be heard by the wrong man, but now I have heard statements that if turned in would cause much trouble for the men themselves, but no one seems to care these days. They want to have one thing happen: to get discharged and home, then watch the political battle start.

But we can't wait till they get home to formulate in their minds how they should vote. Democrats in the Army are even fed up with the way their gang have messed up on handling this entire discharge program and lots of other programs, so now is the time to get busy.

Naturally most of the GI's are watching the comments by various Senators and politicians and seeing how they stack up. The War Department and Congress are not fooling anyone in the Army these days with the "what's going on." The fellows in the Army have been in cheap politics ever since the day they got into the Army and the big stuff doesn't fool them any.

Let me give you some examples of what the GI's wonder about.

Enclosed is an article by Drew Pearson telling about how our mail and that of our family members writing to Congress concerning discharges is being taken care of. That article raised a stink from high heaven down here about the fort ——— and why. This thought is expressed. If this is a democracy and one function of its leaders in Washington is to know what the people think about a matter, then how can such a vital question be bucked over to the War Department, where stock answers are sent back to the folks at home and in some cases GI's suffer from the letters they write complaining about the conditions. It just doesn't add up.

Lots of men down here are saying now, "Well, our Congressmen just passed the buck to the War Department and are happy to let them whitewash the figures and report back to them that all is well on the discharge front, when the truth of the matter is that it stinks for most men today."

You remember I spent a year overseas, so this is not personal. But what about the fellow that was drafted back in early 1941 for a year's service, only to find that he is still in the Army.

One of my friends, a staff sergeant and a fine boy, has now been in 4½ years. He has about as much chance of getting out right now as a peanut, for he is physically unfit for overseas and thus has been in this country all that time and has now only 55 points and 4½ years' service. Boy, is he burned up? Just because the Army won't send him overseas back when he got in, now he has to sit by and watch fellows with three and four kids getting discharged, and they have been in only sometimes 1 to 2 years, but their points because of children are in the high brackets.

Then please notice the article on surplus Army enlisted men. What a laugh that is here at Fort Jackson, and I daresay all over the States.

There is no surplus of men in the Fourth Service Command today, and certainly if they find one or two there, they never will in this organization. Why? Because every outfit on this depot are adding more men today than they have had in their Table of Organization before. But let's say a man should be declared surplus by the officer he works for. The next thing he goes to a surplus detachment. There he is up for auction to any

other outfit that might want him, and should he not be asked for in this depot by any outfit (and that's almost impossible for everybody is crying for more men) then he is sent on paper to Fourth Service Command after post headquarters says they don't want him. Then for sure the Fourth will find some place for him to work should he ever get that far from Fort Jackson. So all the Army gang knows that the surplus article is War Department whitewash, and printed only for those back home so that the storm can be quieted.

But the GI does not forget. He is already so filled with the stench of Army politics that he wants that fixed, and fast.

Here is one story I picked last week. A chap went home on furlough and found that the camps around New York are putting out discharges much faster than we are here. So he comes back with this idea. He is asking everyone he knows to write this statement on a plain page of paper: "Don't forget the soldier vote beat Churchill," and then to send it to every Congressman that man can think of. Well be that for what it may. I personally think writing to Congressmen a so-called pressure letter not much use unless you know they are interested in knowing what the score is with what the GI is thinking today in the camps.

The War Department has not recognized length of service at all now. The 3- and 4-year boys that were kept in the States have no more chance than a peanut of getting out right now. December might be a different story, but if it is coming for them let's try and tie it up to Republican work, for it will count.

Length of service is one way to please many.

Recognition of 50 points is another way—but I think the 3 years' service more important.

So I have run on now with some talk that I hope may get to our good friend RAMEY and he can noise it around in the places it will help as I know he can and then for the sake of good living once more let's have that Republican victory.

A Republican President is not enough—get that Congress vote first.

When I get home we will talk again. I worked a bit with the young Republicans once before and served as a poll official but never have I been more sure that this time there can be nothing but a Republican victory and that now is the time to form the groundwork among servicemen for that victory.

Your friend.

P. S.—This letter is confidential to you but I hope you will sneak it through to RAMEY. He can use it I feel sure.

## Veterans' Discharges

EXTENSION OF REMARKS
OF
### HON. GEORGE H. BENDER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
*Thursday, September 6, 1945*

Mr. BENDER. Mr. Speaker, I would certainly like to show my colleagues the letters which I have received from literally hundreds of young men who are sweating it out in forgotten corners of the world. Most of these men overseas and in camps right here at home are doing absolutely nothing. There is not a reason in the world why they should not be furloughed home while they are waiting for discharges. I have said this once and I shall say it a thousand times until the War Department wakes up.

The absolute pointlessness of keeping men in Army camps playing indoor baseball, cutting shrubs with bayonets, and in at least one camp going through basic training again—although many of the men are veterans of the European war—has not been lost on the American people.

It is certainly time for the Government to propose a program for volunteer enlistments to attract whatever standing army we need for occupation or defense. Increased pay, educational opportunities, and advancement in service rank would stimulate these enlistments.

The men who enlisted to fight are entitled to better treatment than they are getting. Immediate furloughs home while they are waiting for their discharge are certainly better on every score than idleness and frustration waiting in a camp far from home and loved ones.

## Did Hitler Win the War?

EXTENSION OF REMARKS
OF
### HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Monday, October 22, 1945*

Mr. SHAFER. Mr. Speaker, David Lawrence, one of the most respected news analysts in America, points out in this week's issue of the United States News that, while victory has been achieved over enemy nations, the philosophies of the leaders of those nations remain dominant in the world today. Promises of rule of reason and justice remain unfulfilled as the theory of might makes right prevails. Under permission to extend my remarks, I include Mr. Lawrence's editorial:

DID HITLER WIN THE WAR?
(By David Lawrence)

Less than 3 months have passed since VJ-day. Less than 6 months have elapsed since VE-day.

And yet as we look around we see no signs of the new world that was promised us in the wartime slogans and the eloquent speeches of our statesmen.

We were promised a world in which reason would prevail, in which justice would be administered to all peoples, in which greed for territory and economic resources would give way to a rule of law and equity. For this many millions of young men gave their lives.

Democracy was extolled above fascism or communism; above totalitarianism and one-man rule. Enslaved peoples were promised emancipation. America, the great unselfish power, was to help reconstruct war-torn lands and resuscitate international morality.

But what do we see?

A world dominated by a single idea—that might makes right. The talk is not of freedoms but of exploitation; not of emancipation of peoples but of more and more enslavement. Nations with colonies hang on desperately to their possessions. Movements for independence and autonomy are squelched.

Hitler cried out again and again that the democracies had refused Germany a chance to live. He argued that Germany had tried reason in the years after the Versailles Treaty but was scorned. Germany had wanted her colonies back. They were to be trusteed for her by the Versailles Treaty—not annexed by her enemies. For in World War I the pledge was "no annexations," just as in the Atlantic Charter. Hitler said Germany had tried reason with the democracies but that they never gave up anything. So he concluded that force and only force could talk.

THE LANGUAGE OF FORCE

The whole Nazi philosophy was built on the principle that there is not only a master race but a master class within the race and that force—military power—is the language of government internally and externally. Japan in the Far East adopted the same philosophy. She, too, wanted to expand. The democracies refused to let her, she said, and she felt that her whole Empire was frustrated. Inside Japan arose the master class to dominate the liberals, to tell the Japanese people that force and only force would win for Japan her place in the sun.

Hitler had a plan. He would divide the world into three major systems. America was to dominate this hemisphere. Japan was to dominate the Asiatic world. Germany was to dominate Europe.

But the basis of the Hitler concept was power—economic, military, political.

Today we see the same pattern, only Russia takes the place of Germany and means to dominate central and eastern Europe, while Britain can dominate western Europe, and this hemisphere can be ruled by the United States. Also Russia would like to have a controlling voice in the Far East.

POWER POLITICS AGAIN

The theory of "power politics" and "spheres of influence" is back again in all its majesty. Even in the United States apologists have risen to defend it. What else do we expect in this world, they ask, except systems based on power? And, they inquire, what's wrong with "power politics"?

To those who differ with them the cynical answer is given that "idealists" must be brushed aside as "perfectionists." So today we see in full vision the result of that concession of spirit during the war. It began at Yalta, where the late President Roosevelt compromised with idealism so as to buy Stalin's continued support in the European war. It was pursued at Potsdam, where President Truman followed the same policy in order to assure Russia's participation in the war against Japan.

Today Russia, believing earnestly in the Hitler philosophy of force, wants her spoils. She feels entitled to the fruits of victory because, as she sees it, that was what was promised her. She insisted on carving up Poland. British and American public opinion went along. The despoliation of an ally was rationalized as in the interest of Russia's security.

But what kind of a world has this given us? Less than 6 months have passed since the United Nations Charter was drafted. The world was to be committed to peaceful methods of resolving disputes.

Is that the kind of world we are living in or really expect to live in? We ourselves—our leaders—are distrustful of it. We are saying with tongues in our cheeks that, of course, we expect the United Nations Charter to be useful but that until it is useful we must have force and more of it. This was foreseen after the Yalta Conference. On this page, the writer predicted then that if the rule of force were to prevail, the United States would have to maintain the biggest army, navy, and air force in the world.

The rule of force is today dominant. President Truman speaks it. General Marshall speaks it. Secretary Patterson speaks it. Our whole Government is beginning to adopt the philosophy that the United States must have a big army, navy, and air force.

What for?

To fight Germany or Japan? Presumably both these nations have been buried deep in defeat and their war-making potential destroyed.

To fight Britain? A nation so badly off financially that we are considering a loan to her? Of course we are not arming against Britain.

To fight Russia? Some people in this country say so openly, others say so privately.

The idea is illogical. The Russian people are peace-loving. The Russians admire Americans—they don't have hate in their hearts for us. Yet because our diplomatic relations have been bungled—and there is a good deal of blame on both sides—we are beginning to think again in terms of force to secure compliance with our wishes. Only last week the President of the United States made this remarkable statement to Congress in connection with his plan for universal military training:

"It has been suggested in some quarters that there should be no universal training until the shape of the peace is better known, and until the military needs of this country can be estimated and our commitments under the United Nations Organization can be determined. But it is impossible today to foresee the future. It is difficult at any time to know exactly what our responsibilites will require in the way of force. We do know that if we are to have available a force when needed, the time to begin preparing is now. The need exists today—and must be met today."

TWELVE MILLION RESERVES ALREADY

What need? We have had 12,000,000 men under arms. Their training will not evaporate over night. They will be useful as potential reserves for another 5 years anyway. Why do we have to tear 18-year-old boys from their homes and plunge them into military camps where record of the Army in the recent war has been none too good in maintaining conditions of morality or sobriety?

If we need a big military force, why not a standing army of volunteers or, if need be, why not allow the training to be given in connection with educational institutions where military instructors would be confined to the teaching of military matters? This would be better than a system in which the military group controls everything, including the indoctrination of military "ideals"—the ways to hate and kill.

MILITARY COERCION IN DIPLOMACY

Why the urgency for military training? Maybe the answer is given in the following statement made by General Marshall recently in his widely publicized report:

"The timing of our decision on the question of universal military training is urgent. The officials of the State Department have been strongly of the opinion that a decision in this matter prior to the final peace negotiations would greatly strengthen the hand of the United States in securing acceptance of a genuine organization to handle international differences."

Strengthen our hand against whom? Against vanquished Germany and Japan? Against Britain? It must be that we mean against Russia. It must be that we have turned to the philosophy of force instead of reason and that military demonstration instead of the language of reason and justice or self-denial is to be foremost.

This is the only solution that Hitler found for Germany's troubles. He distrusted the other nations. Now we are beginning to distrust other nations, too, and build a military force to speak for us in the world. Militarism has begun to infiltrate rapidly into our democratic system. We talk of one-man control of our armed forces. We render lip service to the United Nations Charter as we begin to suspect one of its principal members.

This writer believes in national defense and does not accept pacifism. But he does not believe that we should abandon moral force and emphasize physical force at this time. Rather American policy can afford to try moral force whole-heartedly in the next 5 years, at least, while we retain the ingredients of a huge army, navy, and air force.

Let us not begin to lose faith in moral force and extol physical might. If we do, we shall be admitting that Hitler was right in his concept that there are no noncombatants in war and that jungle law must prevail. Is idealism losing ground in America and especially in high places in our Government? Did Hitler really win the war?

## Wage Increases

REMARKS

OF

## HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, October 31, 1945*

Mrs. DOUGLAS of California. Mr. Speaker, charm does not pay. President Truman tried charm and a reactionary coalition simply sat down and went on strike. Thank goodness the people and the Government of the United States again have a leader who is not afraid to lead—to state issues plainly and to propose a plain solution that appeals to the average man and woman as sensible, fair, and workable.

President Truman has made it very clear that he is going to face facts and not sugar-coat the truth. He will need and must have support on this issue of wages and prices, which affects all of us—not only the wage earner but the welfare of every businessman, farmer, white-collar worker, and teacher.

If our circulation of income can be healthy and made even more healthy up to the 50 percent improvement that Judge Vinson said we must achieve, then we will be on the road to winning the people's peace.

I wish to include some material to show that wages are lagging behind profits, productivity, and the cost of living, and to show that wages can be increased without raising prices, at the same time allowing profits which will be more than ample.

This material is based upon a report prepared in the Office of War Mobilization and Reconversion for the use of the OWMR Advisory Board as reported in the New York Journal of Commerce under date of October 29, 1945. The OWMR Advisory Board includes the following members, representing industry, labor, agriculture, and the general public:

Industry: Eric Johnston, president, United States Chamber of Commerce; George H. Mead, president, the Mead Corporation, Nathaniel Dyke, Jr., consultant, Smaller War Plants Corporation, wholesale building materials trade.

Labor: Philip Murray, president, CIO; William Green, president, A. F. of L.; T. C. Cashen, president, National Railway Switchmen's Union of North America.

Agriculture: Edward A. O'Neal, president, American Farm Bureau Federation; James G. Patton, president, National Farmers Cooperative Union; A. S. Goss, master, the National Grange.

General public: O. Max Gardner, chairman, counselor at law, former Governor of North Carolina; Mrs. Anna Rosenberg.

The material referred to follows:

1. The gross weekly pay of the average worker in manufacturing has increased from $26.64 in January 1941 to $47.12 in April 1945, or 77 percent.

2. When allowance is made for the increase in the cost of living and in personal income taxes during the war period, the value of the average worker's take-home pay in 1941 dollars increased from $26.64 to $31.47 (assuming income-tax exemption for one dependent), or 18 percent.

3. Of the increase which occurred in gross weekly pay during the war period:

Thirty-six percent resulted from increased hours of work, and will be reversed by 1946.

Ten percent resulted from interindustry shifts, which will also be reversed by 1946.

Twenty-one percent resulted from general changes in wage-rates, which are not likely to be reversed.

Thirty-three percent resulted from wartime upgrading, the liberal administration of wage schedules in a tight labor market, and other factors which will be reversed in part.

4. On the assumption that half the increases resulting from liberal administration of wage schedules will be reversed, the gross weekly pay of the average worker in manufacturing will fall to $33.96 in 1946, or 28 percent below the April 1915 level.

5. A money wage of $33.96 in 1946 represents 3 percent less purchasing power than a wage of $26.64 in 1941. When allowance is made for payment of 1946 income taxes, the purchasing power of take-home pay for an average worker with exemptions for one dependent will be $23.95 in 1941 dollars, a reduction of 10 percent from January 1941.

6. Between April 1945 and the spring of 1946 total salaries and wages paid will decline by between thirty and thirty-five billion dollars. Accompanying this reduction will be a fall of total national output of more than $40,000,000,000, and sharp declines in profits before taxes and in farm income.

7. It is estimated that 1946 profits after taxes of manufacturing corporations will be over $6,000,000,000, a figure higher than the wartime peak. This estimate assumes an increase in wage rates sufficient to maintain average hourly earnings in each manufacturing industry at the April 1945 level.

8. Industry's ability to pay higher wages depends upon many factors, favorable and unfavorable, some of which are measurable and others nonmeasurable.

9. In the case of the measurable factors, it is estimated that the cost of increases in average manufacturing wage rates indicated below would be compensated for by the factors indicated:

*Increase in wage rates*

| Factor reducing 1946 costs: | *Percent* |
|---|---|
| Reduction of overtime | 4.5 |
| Elimination of one-half of wartime upgrading | 9.5 |
| Repeal of corporation excess-profits tax | 10 |
| Total | 24 |

## Return Our Veterans to Their Homes

REMARKS

OF

**HON. RAYMOND S. SPRINGER**

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, October 31, 1945*

Mr. SPRINGER. Mr. Speaker, the Army and the Navy continue to bungle the problem of returning our soldiers and sailors home from the fighting fronts, although so many of them have more than the required points for discharge.

I have just received a letter from nine boys, who have been overseas approximately 30 months, and who have engaged in many of the battles on islands in the South Pacific, who are stranded on the island of Tinian. They write as follows:

We send a plea for help from this Godforsaken island. There are nine of us. We received orders to fly back to the United States. All of us have 90 or more points, with an average of 30 months' service overseas. Since we arrived here we have evidently been forgotten. That is, men here with only 70 points are flying home, and just because we are not in their organization we are not permitted to go with them. Just who won this war anyway? We figured we all had a hand in it, but according to officers in this neck of the woods they won it themselves.

Mr. Speaker, those boys are completely disgusted. They have a right to have the feeling that they are the forgotten men of this war. With many of our ships tied up in harbors in this country, and with many of the huge carriers, tank carriers, and other ships available for transporting men back home, taken out of duty in order to hold a big Navy Day celebration in the ports in this country, those boys, together with the untold thousands of others who join with them, are denied the right to be returned to their homes—even though they have the points which entitles them to their discharge. I do not know whether that situation impresses the War Department or the Navy Department, but I am fully and reliably advised that the people of this country are deeply impressed by reason of this bungling on the part of those Departments, and of the high-ranking officers in the field. The people are demanding that these boys be returned to their homes at the very earliest possible date, and they are not in accord with any dilatory methods which are now being practiced by the officers and departments in both the Army and Navy. They are demanding action—and that action which will demobilize the Army as quickly as possible, and which will force the reduction in the strength of the Navy at the earliest possible date. All of these boys, veterans of this war, have their lives before them. They have serious problems confronting them. They must rehabilitate themselves in the arts and trades of civil life; and if their discharges from the service are deferred, as we now observe in so many instances, these boys will be delayed much longer in that highly important state of rehabilitation. Many of them have wives and families, and many of them have businesses, while others desire, and justly so, to resume their education both in the high schools and colleges. All of these boys have their big problem of life to solve when they come home. They cannot delay longer, and it is time the officers in both the Army and Navy recognize the fact that they are dealing with the problems of life, instead of dealing with pawns and the inanimate.

Mr. Speaker, our boys still in the service are disheartened and completely disgusted with the delay in returning them home. While I realize the Army and the Navy continue to contend that they are doing their best to accomplish a great task, yet, I am advised, they can do much better. Take every ship available for transport duty, and every plane available for returning our veterans, and use them incessantly and constantly until this job is done. And, it is certainly deplorable to know that so many of our fleet, all available for that particular duty of returning our boys back home, were taken out of duty and placed in docks, for show purposes, on Navy Day. Many thousands of our boys could have been returned home during the period those ships were standing idle—and the boys were still enduring the days and weeks of service, with nothing to do, upon the foresaken and dismal islands of the South Pacific, and in torn and destroyed Europe. They were worried, disturbed, and disheartened as they witnessed the departure of many ships of our glorious fleet steam out of the harbors, for mere purposes of show and pageant at our home ports, while the sick, the injured, the discouraged GI's, with sufficient points, had to wait until some other day. The greatest pageant of all would have been demonstrated, I am certain, to have witnessed a constant parade of ships, of every class, crossing every ocean, with our boys aboard returning to their homes and to the arts and trades of civil life again.

Mr. Speaker, I call to the attention of the War Department and the Navy Department this situation which now exists, and I urge—with every parent, every wife, every child, and every relative of the boys—that it is now up to them to do their job. The boys have completed their task, and they did it well. They have won the war. Now let them return our boys home at the earliest moment.

## The Federal Government Does Not Owe You a Job

REMARKS

OF

**HON. FRED L. CRAWFORD**

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, October 31, 1945*

Mr. CRAWFORD. Mr. Speaker, having in mind the address President Truman delivered to the Nation last evening, I wish to submit for the RECORD some excerpts taken from the Economic Outlook, issue of October 1945, published by the Congress of Industrial Organizations; and, in addition, to present the contents of a letter dated October 27, 1945, written by C. E. Wilson, president, General Motors Corp., to International Union, UAW-CIO, Detroit, Mich.

Mr. Speaker, Economic Outlook, in discussing the subject The Fight for Full Employment, makes the observation that:

America must provide jobs for all those willing and able to work. Unemployment is our greatest peacetime enemy. It drains our wealth and corrodes our faith and belief in the democratic system.

The economic losses from unemployment are staggering. Every unemployed worker means an average annual loss of $4,000 in wealth produced. Conservative Government experts estimate that unemployment will hit 8,000,000 in 1946. Continued throughout a year, this would mean a loss of some $32,000,000,000 worth of production, or about one-third of the wealth produced in the United States in a relatively prosperous prewar year.

Currently, strikes are crowding all other news off the front pages. The public is being warned of the great social cost of this and that strike. You don't see the same treatment accorded to unemployment. Yet any sober analysis of the facts reveals that the loss in worktime from unemployment dwarfs that caused by strikes. By the end of August, for example, unemployment was already costing the Nation at the rate of 40,000,000 man-days of work a month. On the other hand, 1,450,000 man-days were lost because of strikes and lockouts in August—about one-thirtieth of the loss due to unemployment. Remember, too, strikes to boost purchasing power have long-run value for the Nation's well-being. But unemployment is a total loss.

Bare unemployment figures don't even tell the whole story. The rising tide of insecurity affects all workers. Among the employed, fear of being laid off finds its outlet in reduced efficiency, increased accidents, and, in some instances, unauthorized strikes.

The frustration and personal loss for the unemployed worker, these, too, cannot be measured by mere figures. The deterioration of skills, breakdown in morale, all represent an irredeemable loss to the community, as well as to the worker.

When men are idle, machines are idle. And idle machines accumulate rust and soon depreciate in value. The tremendous capital investment in Government-built defense plants, for example, will depreciate at a rapid rate if the machinery continues to lie idle.

It is with great interest I note the Economic Outlook did not say "The Federal Government must provide jobs for all those willing and able to work." Mr. Speaker, America, as I would interpret that word, means the citizens of the United States primarily located on the mainland. I agree with the Outlook that we, the American people, must provide jobs for ourselves if we are to have those jobs. I would further observe that if we are not now willing to work, that it is high time we brought ourselves to the conclusion that we must not only be willing to work but that we proceed without further hesitation in the producing of the goods and services which are required to meet not only the necessities but many additional demands of our people. That is, if we have any sense of responsibility whatsoever for the commitments which we have already made, not only to our people as such, but to the other peoples of the earth, we must realize there is no time for us to lose in proceeding to carry

out the obligations which we have already assumed.

The successful handling of the funded debt already incurred, evidences of which are held by literally tens of millions of our people who have invested their savings in Treasury issues, and who rely upon that investment for financial strength to sustain them through rainy days in the future, will require the most consecrated effort of all of our people. If a large portion of our people—I am now speaking in numbers—submit their claims against the Treasury and collect dollars back in exchange for Treasury issues previously purchased by them, and thus bring about a high concentration of holdings of Government issues, it is reasonable for us to assume that two forces will be set in motion incident to such a course: (a) Millions of people will cease to become owners of Government securities; and (b) There will, in due course, arise a great public clamor for the burden represented by taxes of servicing the debt as to interest payments and amortization of the principal to be removed from the economic necks of the masses, letting the economic consequences of such a step fall as disastrously as it will on the highly concentrated small number of holders of such Government issues as may be outstanding.

In other words, it is reasonable to assume that the interest burden incident to the debt will approximate $6,000,000,000 per annum, and if only 1 percent of the principal is amortized on the basis of a debt of $300,000,000,000, this will amount to $3,000,000,000 per annum, which added to the $6,000,000,000 of interest charge would give in the neighborhood of $9,000,000,000 which the taxpayers must raise annually for the purposes of servicing the debt. It is reasonable to now assume that in peacetime this one single item of $9,000,000,000 will probably be the largest individual element in the Federal Budget. Therefore, I repeat that the masses will grow tired of carrying such a burden and demand of Congress such action as will relieve them of such a tremendous tax load. If our people bring themselves to where they are willing to work, and if we by the millions will go back into the harness and contribute value for value in the production of goods and in the receiving of payment for the services rendered, we can carry the national income measured in dollars at today's price level far beyond anything yet witnessed. Through such a course, America will provide jobs for its people.

On the other hand, if we get the idea fixed in our mind that the Federal Government is obligated to provide or to guarantee jobs for the people of this country, that simply means that in due course we shall destroy all confidence our people have in the faith and credit, and in the currency issued by this Government; and it also means that we kiss good-by our idea of a balanced budget and proceed with the forces of highly destructive inflation, letting the economic consequences be whatever economic law dictates. The Federal Government owes no citizen a job. It has other functions to perform far more fundamental. We, the people, must make our own jobs.

The letter written by Mr. Wilson, of the General Motors Corp., is, in my opinion, so highly constructive that I submit it for the record and for the use of students of our politico-economic problems:

GENERAL MOTORS CORP.,
*Detroit, Mich., October 27, 1945.*

INTERNATIONAL UNION, UAW-CIO,
*Detroit, Mich.*

GENTLEMEN: General Motors proposes that the UAW-CIO join with it in petitioning the Congress to change the Wages and Hours Act to make the standard workweek 45 hours in place of 40 hours during the postwar reconstruction period. This proposal is made recognizing that the country has a big load to carry in cleaning up the aftermath of the war and that under these conditions we can all have more only if we produce more.

The reason for this proposal to change the law is that the present law putting the penalty of overtime pay of 50 percent on the extra hours over 40 discourages employers and business generally from planning such extra hours of production, thereby tending to reduce the country to a 40-hour week, when the country and the world are demanding more production at lower prices.

With this change in the workweek, we propose that all wage rates be increased approximately 6 percent so that men working 45 hours at the new straight time rates will make as much money as they do now for 45 hours of work. This proposal would increase the earnings of those working less than 45 hours and would also increase the extra compensation for any hours worked over 45, since such hours would be paid for at time-and-a-half based on the new rates.

Your first impression of this proposal probably will be that it is a reactionary idea, and not in the interest of labor. It is not reactionary any more than working longer hours in the war emergency was. We are sure that it is in the best interests of all the people of our country, and particularly in the best interests of all workmen.

If the 40-hour week was sound pre-war and the 48-hour week during the war, the 45-hour week is sound for the immediate period following such a world catastrophe as we have been through. All Americans are expecting an even higher standard of living postwar then we had pre-war. This can be accomplished at this time only by producing more, as we now must carry the huge additional tax burden and other expenses growing out of the war. The simple fact is that we have a big job ahead of us. We cannot get it done on the pre-war basis of work. We must produce far more than we did in the past.

The workmen of other nations will work for more than 45 hours. In many cases they will have only a bare subsistence living while they are doing it, because of the lack of good tools and machinery, like those supplied by employers in our country.

This proposal has much to recommend.

1. It avoids a substantial reduction in weekly earnings.

2. It prevents inflation and preserves the purchasing power of War Bonds, insurance, social security and other savings.

3. It does not upset the balance between agricultural workers, salaried workers and industrial workers.

4. It will produce more goods and services, and the people of our country will have more.

5. It will create more good jobs and the employment of more people. Just as many men and women will be employed in our plants on a 45-hour week as on a 40-hour week. And it will allow the use of our plants for the extra five hours when they would otherwise be idle.

6. It will stimulate business activity and create more jobs, and result in the employment of many more people in all related businesses.

7. If our plants could be scheduled to work on this basis, we would produce nine cars where we would otherwise have produced only eight. It will mean that one man out of nine will have a car who would otherwise go without.

We believe that a 45-hour week is necessary and desirable during the period of postwar reconstruction, for the following reasons:

1. During this period our country will be shipping food, materials, and machinery to other countries all over the world to help them rehabilitate themselves and avoid starvation.

2. We still have the extra expense of bringing our fighting men back home and fitting them into civilian work.

3. We still have high taxes, which necessarily are a charge against industry and all producers.

4. To develop and apply technological improvements and to reorganize industry takes time—years, not months.

It is hoped that at the end of this postwar reconstruction period:

1. Our relations with other countries will be on the basis of a two-way street, where we shall get back goods and services for those we supply.

2. The fighting men will be back at peacetime work, and the aftermath of the war will be over.

3. Government expense and the number of Government employees will be reduced and not be such an excessive burden on all producers.

4. Technological improvements—the better ways of doing all the things that are necessary to deliver products to customers—will have become effective.

We can then have a 40-hour week with more leisure time and more goods and services, and can continue to improve the standard of living of all Americans.

Yours very truly,

C. E. WILSON,
*President.*

## Coal-Mining Industry

REMARKS
OF
## HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, October 31, 1945*

Mr. FLOOD. Mr. Speaker, with respect to the future disposition of the Big Inch and Little Big Inch pipe lines, I would point out that the United Mine Workers of America and its members, and the citizens, and the communities of the anthracite-coal region of Pennsylvania are not, of course, directly affected by the disposal of much of the surplus property, or the manner of their use in the hands of Government or private industry. However, the disposal of such properties as the Big Inch and the Little Big Inch oil pipe lines do hold a very decided interest for these people. I feel that the future of our people, as reflected in the wage scales prevailing in the coal industry—both bituminous and anthracite—is bound up to a great degree with the industry itself

and with any possible governmental operation of, or subsidy to, private enterprise in the marketing of competing fuels, such as oil or natural gas.

Generally, we feel that these pipe lines were wartime projects and, therefore, are expendable, just as any other temporary war investment. They should not be leased or sold to private industry, or be governmentally operated or subsidized. They should be held intact in reserve for any future emergency. To allow oil or natural gas to be unfairly delivered through this medium into the coal markets of this country, and thus improperly compete with the abundant coals now being produced by private industry, would certainly tend to seriously interrupt and impede postwar reconversion and recovery. Such natural resources as oil and gas should, as far as economically feasible, be conserved in place and certainly used wherever possible at point of origin rather than be transported a thousand miles into the heart of the coal fields, whose life exceeds by hundreds of years the life of the known reserves of oil and gas.

The lives of approximately 600,000 coal miners and their families will be affected by the final disposition of these lines. Therefore, I feel that no lease or sale of them should be authorized by Congress or any other governmental agency without adequate notice to all interested parties and full public hearings held thereon.

## The Office of Price Administration

REMARKS

OF

### HON. BARTEL J. JONKMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, October 31, 1945*

Mr. JONKMAN. Mr. Speaker, today I have introduced a bill to abolish OPA. I know that other bills of a similar nature have been introduced heretofore. However, 10 days ago I read a statement by Leo F. Gentner, Acting Regional Administrator of the Office of Price Administration, in which he said that the Office of Price Administration is anxious to get out of business. I wish we could make this unanimous.

The House of Representatives has been very busy picking out the monkey wrenches that OPA throws into our economy to destroy small business. I believe the benefits would far outweigh the burdens if we would abolish this war agency now that the war is over.

I am including in my remarks an editorial which I believe expresses the prevailing sentiment in my district and all over the country, which reads as follows:

THUMBS DOWN ON OPA

When Michigan Tradesman in its August 29 issue said, "Let's have an end to OPA and all its works," we stated the case against this Government agency only mildly, compared with what a committee of the House of Representatives declared October 22 in its bitter indictment of OPA.

The committee is headed by a Democrat, Representative HOWARD SMITH, of Virginia, hence its report cannot be laughed off as a political-party statement. The committee was created to look into abuses by executive agencies, and its report on OPA activities was unanimous.

It charged the agency was stifling production of household goods, boosting prices to consumers, creating unemployment, hampering the production of consumer goods by insisting upon continuing rigid war controls in times of peace, and with having bound itself to "unrealistic" methods, with a resulting loss of output of needed goods.

Let's go into more details. The House committee's report declared that OPA's refusal to grant a "reasonable profit" to establish manufacturers on a long line of household goods has prevented maximum output. What's even worse, the report asserted that new producers are being granted the right by OPA to turn out and sell similar goods of inferior quality at higher prices. The report cited numerous examples of OPA rulings which forced consumers to pay higher prices while established companies were prevented from returning to peacetime output.

Here's a typical instance: An established producer of electric irons applied for a price ceiling to permit retail sale of his irons at less than $3. OPA refused to approve this price. But it permitted a newcomer in the field to "price an inferior and inherently dangerous electric iron to retail at $5.50."

And OPA is one of those Government agencies which likes to boast that it favors free enterprise and that the ultimate consumer's interest lies next to its heart always.

The House committee tells us that OPA still adheres to the same "unrealistic" and "outdated" decrees which kept business under Federal control throughout the war, and that this stiff-necked adherence has retarded reconversion, restricted opportunity for full employment, and at least in some instances "actually caused prices of cost-of-living commodities to rise."

There's more to come. The House Committee declared that OPA's denial of reasonable profits to business on low-priced products is largely responsible for the return to shelves of only high-priced goods in numerous lines. It charged that shortage of such vital consumer items as shirts, underwear, and sheets—and even stoves—is due partly to OPA's refusal to set ceiling prices to cover costs plus a reasonable return. It charged further that OPA's attempt to hold prices at 1942 levels, despite greatly increased material and labor costs, throttled production and worked hardship on the whole Nation.

What to do? The House report propcsed that OPA's present complex methods of fixing prices should be replaced by a simple rule that producers may charge a price reflecting current production costs plus a reasonable profit; that wholesale and retail merchants should be permitted to pass on price increases to their customers, when the new prices reflect only reasonable profit margins.

The report suggested that producers should file their price schedules on simple forms, with regional or district OPA offices, and that these prices should be effective unless objected to by such offices. Price control, said the report, should be abandoned on any products where supply now is sufficient to meet production demands.

On top of all this, the House committee paid its compliments to Price Administrator Chester Bowles. It asserted he had exceeded the authority granted to him by Congress, by attempting to dictate to manufacturers not only prices but the quantities of various lines of consumer goods they may produce. This, added the report, is tantamount to trying "to revamp the economic structure of the Nation" through Executive decree. Which is what we have been saying right along in this magazine of business.

We believe the majority of Congressmen are in accord with the ideas of the men who formulated the report on OPA which we have just been giving you in condensed form. Why can't the majority be frank and courageous, and put an end to this Government agency which has no justifiable reason for continued existence and which can exert only a retarding effect upon business, employment, and our economic progress?

## The Future of Philippine-American Cooperation

EXTENSION OF REMARKS

OF

### HON. CARLOS P. ROMULO

RESIDENT COMMISSIONER FROM THE PHILIPPINE ISLANDS

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, October 31, 1945*

Mr. ROMULO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include two important documents: First, the speech delivered by President Sergio Osmeña, of the Philippines, at the opening session of the New York Herald Tribune Forum in the Waldorf-Astoria Hotel in New York, October 29, 1945; and second, an address delivered on the same occasion by Gen. Jonathan M. Wainwright, hero of Bataan and Corregidor. At this juncture of Filipino-American relationship, I wish to commend to the attention of the Members of this Congress these two thoughtful adddresses which point to the road that should be followed by our two peoples for our mutual best interests.

President Osmeña says:

This is a period when your people must decide whether or not the Filipino-American brotherhood that existed before the war and was sealed in blood during the war will continue now that the war is ended, and even after independence.

As if in reply to that statement, General Wainwright says:

The ties which bind us to the Philippines, based on long years of friendly cooperation, have been reforged in the fires of a bloody war. We stood shoulder to shoulder. We believed, and we still believe, in the same principles of right and decency. They have been our comrades, and we will not let them down.

We must make good all our pledges to them, and continue to help them when they need us.

May I commend these two addresses to the consideration of the distinguished Members of this Congress who will soon be called upon to make vital decisions about the future course of the relation between our two countries.

The following is President Osmeña's address:

I am delighted to be able to participate in the Herald Tribune forum, which has done so much to help inform and crystallize American public opinion on the vital problems confronting your country. With your indulgence, I propose to discuss briefly the future of Philippine-American cooperation—a subject which has a direct bearing on the whole problem of responsibility of victory.

Thirty-eight years ago this month, in the year 1907, there convened in Manila the first popularly elected legislative assembly of the Philippines.

That assembly faced many problems. Our country was emerging out of centuries of Spanish rule, and everywhere we had to cope with the tasks of education, economic development, political growth. One of the

most pressing questions at that time—strange though it may seem to us now—was to what extent were we Filipinos willing to cooperate with the United States.

Remember, if you will, the background of our history. For three and a half centuries we had been under the rule of Spain. Spain had brought us many good things—our Christian religion, our western orientation, our familiarity with European governmental systems—but it had not brought us liberty. We had to get that for ourselves. We had to rebel against Spain. By the time Dewey's squadron sailed into Manila Bay for the battle that was to end Spanish rule in the Philippines, the Filipino revolutionists had overthrown Spanish control of the whole country, with the exception of Manila itself.

Our leaders had assumed that after the American victory Philippine independence would be recognized at once by the United States. But your country preferred to establish its sovereignty over the Philippines, and gave us only a promise of future freedom. Since there had never been in all history a case of a powerful sovereign voluntarily assisting a weak colonial people toward self-government and liberty, many Filipinos did not believe your promise—and there followed the bloody years of war between Americans and Filipinos.

After the conflict, the American policy of increasing self-government for the Filipino people began to unfold. It was a new and revolutionary policy. It was an experiment, a common adventure, indeed, a promise to all the submerged millions of this world.

When the Philippine Assembly first met in 1907, there were still some Filipinos who did not fully trust the American intentions in our country. I had the honor to be elected Speaker of that Assembly and the burden of decision on the question of whether or not to cooperate with the American Government in the Philippines fell largely upon me. I helped make the decision, and the decision was to cooperate.

The first resolution of the Philippine Assembly was addressed to President Theodore Roosevelt, thanking the American people for permitting us to establish the assembly and thereby to participate directly in making the laws by which we were governed. And the first law that we passed was to appropriate a million pesos for the construction of—not armaments—but schools, where the people could learn the English language and American democracy.

All of us in the Philippines know now that this decision to work with you, and grow with you, and fight by your side, was a wise decision. The record is there, for the whole world to see—and it is a record of which both your people and mine may well be proud.

There is another—and equally important—fact to remember about this record. It is the fact that, although the Philippines was under American sovereignty when Japan invaded the Philippines, we Filipinos fought in defense of the American flag. In other areas, under similar circumstances, the people chose not to defend the sovereign power whose flag flew over their country. As you know, in some places they actually welcomed the Japanese. We did not do that. We chose not to do that. Our struggle by your side was a deliberate decision made by the people of the Philippines. We decided to defend your sovereignty—not as slaves fighting for their masters, but as a free people making a free decision to join in defense of the free way of life which your country represents.

Now, we in the Philippines, on the eve of our independence, face the same issue that we faced in 1907, when our first Philippine Assembly convened—the same issue that we faced in December 1941, when the enemy attacked your sovereignty in the Philippines. We must decide whether, after independence, Philippine-American cooperation should continue—and how close it should be.

My own position on this matter is well known. I see no reason why the cutting of our political ties, when independence comes, need make any change in the close relationship between our two nations. My predecessor, President Quezon, and I have assured our people that Philippine-American friendship is a two-way passage. We have offered our most sincere cooperation to your Government. We have gladly consented to the building of bases on our soil for the protection of the Philippines and the United States, even after our country is independent. Now, as in the past, we are willing to assume our full responsibilities to the United States. I hold to that policy, taking it for granted that the United States, for its part, will discharge its full responsibilities to the Philippines.

For you have assumed these responsibilities and made definite commitments to the Philippines. You did so—not only because you are the kind of liberty-loving people that you are—but also because you will receive something in return.

You made a commitment to the Philippines when your late and very great President, Franklin D. Roosevelt, told the Filipino people in the earliest days of the war that "your freedom will be redeemed and your independence established and protected," and that we would be "assisted in the full repair of the ravages caused by the war." President Roosevelt's worthy successor, Harry S. Truman, reaffirmed the promise when he said: "The Philippine people, whose heroic and loyal stand in this war has won the affection and admiration of the American people, will be fully assisted by the United States in the great problems of rehabilitation and reconstruction which lie ahead."

You made a commitment to the Philippines when, in 1909, the Congress of the United States decided to establish a free-trade relationship between our two countries. Our Philippine Assembly adopted a resolution petitioning you not to do so, expressing the fear that free trade "would in the future become highly prejudicial to the economic interests of the Filipino people" because it would orient our entire economy in your direction. But you decided to establish free trade, in spite of our protest. We have made the best of this, and the best has been very good indeed. We had achieved, before the war, the highest standard of living of any nation in the Orient. Our economy, before the war, was growing, and our country was prospering. The truth today is that unless some such relationship is restored and maintained for a reasonable time, we shall not be able to rehabilitate our country.

You made a commitment to the Philippines when you undertook to protect our independence and when we agreed on the establishment of American air and naval bases for mutual security in the Philippines. That commitment involves—for your own safety as well as for ours—something more than the mere building and maintenance of bases. It involves a network of roads and communications to make those bases worth while, and it involves the assurance of a peaceful, prospering hinterland to make those bases firm.

President Truman has always borne these commitments in mind. Only a few days ago he made public a series of directives to various United States agencies and officials covering many problems of the Philippines. Most of the specific points he made arose out of the conversations which I have had with the President and other high officials of your Government.

I want to make it clear, however, that neither President Truman nor I consider the concrete steps taken last week to be anything like a complete program for the solution of our problems. They do not cover many of the over-all questions of full rehabilitation and reconstruction in the Philippines. I believe that American responsibility to the Philippines will not have been fulfilled until these problems are settled.

When I speak of the pressing need for America to carry out her responsibility to the Philippines, I am thinking of very specific matters.

We are asking for 20 years of quota-limited free trade with the United States on the basis of the 1940 level and not a strangulating graduated tax on such trade. We are asking for fair treatment on war damages, providing just compensation to those who suffered when the war came to Philippine soil, protected by American sovereignty. We are asking the United States to help us pick up again from where we were when the Japanese attacked American sovereignty in the Philippines.

The past half century of gigantic progress in the Philippines, brutally interrupted though it was by the war, is one of the brightest pages of human history. Your inspiration, your guidance, your help, has been tremendous, and the United States of America will always be respected for its role in the Philippines. But do not forget that Filipinos, too, had something to do with all of this. Our progress was achieved by us largely through our efforts and entirely with our money. Check back over the appropriations voted by your Congress through all these years, and you will find no item for the operation of our government, the building and maintenance of our school system, the construction of our roads and public works, the development of our public health program. The costs were not borne by you. They were borne by us.

We do not ask for your charity, any more than we have asked for it in the past. What we do ask for, as we have in the past, is your help, your understanding, your willingness to fulfill the obligations which you yourselves have assumed.

I know how warm and friendly is the American sentiment toward the Filipino people. Every person I have talked to in this country—whether public official or private citizen—has revealed his heartfelt sympathy for our present distress and his sincere desire to help us get back on our feet. There is a very special American feeling for us, just as there is a very special Filipino feeling for you. Nowhere in the world is there a relationship between two peoples that resembles the relationship between the American people and the Filipino people.

But today we must make up our minds—on the basis of this relationship—about the future strength of the ties that bind us together. President Truman, in his recent directives, has shown to the world that he gives a very special priority to the problems of relief, reconstruction, and rehabilitation in the Philippines. He has, for himself, made the decision, and it is a good decision.

But our trade relations, our war damage claims, our over-all rehabilitation needs, are not for him alone to decide. These questions come before the Congress of the United States, and they come before the intelligence and the conscience of the American people. This is a period when your people must decide whether or not the Filipino-American brotherhood that existed before the war and was sealed in blood during the war will continue now that the war is ended, and even after independence. We of the Philippines cannot make that decision for you. We can only tell you that, for our part, we want to continue our close cooperation with you. Beyond that, the decision is yours to make.

General Wainwright's address follows:

By some process which I do not clearly understand, a military man who achieves notice—perhaps I should say notoriety—in war time is sometimes looked upon as a sort of oracle or soothsayer, capable of uttering

words of wisdom on almost any subject and gifted with powers of prophecy.

If he is not careful, he finds himself making ponderous observations on religion, sociology, art, economics. I almost said politics. Sometimes he talks too much.

I am going to guard against any impulse to prophesy in this brief address, and I am going to try not to talk like an oracle. But I do want to raise my voice, with what earnestness and eloquence I can command, on behalf of a very fine and loyal and brave people—the Filipinos—and to say something about our common destiny in the Orient.

It is not necessary to remind you how Philippine troops—Scouts, Constabulary, and Philippine Army—teamed with our own forces to check the Japanese invader on Luzon. Filipino fighting men helped us delay the enemy's southward sweep across the Philippine Archipelago for 5 months, from December 8 to May 6. The bulk of them were hurriedly trained; their equipment was inadequate. But they stood shoulder to shoulder with us and the delaying action which they made possible threw the enemy's time table for Pacific conquest painfully off schedule.

I do not minimize the part played by our own United States regulars in that campaign. I am fully aware that the Filipinos were fighting on their own soil, for their homeland. But in helping themselves they were helping us, and without their courage and loyalty our efforts to withstand the invader must have collapsed weeks earlier.

When I first went to the Philippines in 1908 the natives spoke little or no English and it was necessary for us to learn Spanish in order to deal with them. There were but few schools and most of the native population was illiterate.

There were almost no roads, only mud tracks and oxcart trails; and only one railway line, running north from Manila.

When I returned in 1940 the scene had changed greatly. English was spoken in practically every town, and every community had its schools. There was an excellent highway system with many roads as good as those here in New York State. Railway lines connected many of the principal cities and towns.

Where once you had to swim your horse or splash across a stream, soundly built bridges made safe and easy passage. There was a potable water supply all through the islands, where once we had to boil all our drinking water to avoid amoebic dysentery. There were telegraph and telephone lines connecting all parts of the Philippine Islands. Agriculture had developed tremendously; there was extensive production of rice, coconuts, copra, hemp, sugar, and tobacco.

This remarkable development, which impressed me so strongly when I returned there, took place under American occupation. American engineering did part of the job; American capital and cooperation did some more. But the Filipinos showed a capacity for improvement, a willingness to learn and grow, without which our cooperation would have accomplished little. They are 100 percent loyal to the United States. They appreciate what we have done for them. But they are not servile, not dependent upon us.

In granting complete independence to the Philippine nation, we cannot say merely, "Good luck and good-by." We have confidence in their ability to stand on their own feet, and we are hopeful for their continued friendship. But we cannot cut them loose on a sink-or-swim basis.

Our interest in the Philippines is not to be measured by geography nor weighed by the air and naval bases the Philippine government is willing to grant us, or even by the continuing consultations of our military and naval leaders.

The ties which bind us to the Philippines, based on long years of friendly cooperation, have been reforged in the fires of a bloody war. We stood shoulder to shoulder. We believed, and we still believe, in the same principles of right and decency. They have been our comrades, and we will not let them down.

Our future relationship depends not only upon the policies which our Government may formulate but on the warm and friedly understanding between the American and Philippine peoples.

We must make good all our pledges to them, and continue to help them when they need us.

## The Trouble With UNRRA

EXTENSION OF REMARKS
OF
## HON. CLARE BOOTHE LUCE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, October 31, 1945*

Mrs. LUCE. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the current issue of Life magazine:

THE TROUBLE WITH UNRRA

As we Americans have been told so often, millions of people face what may become the worst winter in the history of human suffering. The instrument we think will save them is UNRRA, but it won't. In fact, it is so far from adequate that we had best junk it and start anew.

The United Nations Relief and Rehabilitation Administration was, in its origin, the most ambitious humanitarian undertaking ever conceived. Its course has been paved with good intentions; also with dollars. No thoughtful American will begrudge the dollars. Congress, now debating whether to extend UNRRA's life in 1946 at a cost of $1,350,000,000, has at least the simple duty of appropriating $550,000,000 to fulfill U. S. commitments for 1945. UNRRA's bookkeeping, about which the Russians have grumbled, is not what is wrong with it. UNRRA's administrative bungling, bad as it is, is not what is wrong with it. Herbert Lehman, however irretrievably destroyed may be his reputation for efficiency, is not what is wrong with it. Even if UNRRA were the best-managed outfit in the world, which it isn't, it should still be dissolved. It should be dissolved not to limit relief but to speed it up, make it effective and introduce a little realism into the present muddle.

NOT BY SOUP ALONE

We usually speak rather glibly of Europe and the Orient as needing relief. But as a matter of geographical fact there are several Europes and not just one Orient. There is northwest Europe—France, Belgium, the Netherlands, Denmark, Norway. When Americans hear of cold and starving Europe, this is the part of the globe that comes to mind.

Yet UNRRA is specifically barred from these countries. It has been barred except for a few spot activities, since its very first meeting in Atlantic City, November 1943. These countries took the position that they had money, could pay for their own relief and wanted no outside agencies dispensing charity, and possibly political ideas, within their borders. The blunt fact is that no agency—American, Anglo-American, international, private or public—is meeting the urgent needs of northwest Europe today.

Generally, these needs fall into two classes: (a) soup-kitchen relief, food, clothing, medicines, emergency shelter; (b) reconstruction, getting the economy rolling once more so these intelligent, enterprising people can again take care of themselves.

As to soup-kitchen relief, the only possible answer at this late date is for the British and American armies to resume it, insofar as the governments of these lands will permit and assist. The United States Army was prepared for this wake of war activity and continued it up until recently. Only the Army has the transportation, the personnel, and experience needed to do this job in the desperately short time remaining.

The second job, reconstruction, requires an entirely new and different approach. It was not foreseen, though it should have been, that the worst scourge of the postwar era would not be hunger but unemployment. The hands and wheels of northwest Europe are mostly idle. The complex machine of an industrial civilization is stuck on dead center.

To some it may seem that this is not America's fault and not America's business. Yet only America, at this time, has the technological know-how, the machines, the repair parts, the financing, even the drive and push necessary to restart the European economic machine. For example, the present bottleneck for much French production is coal. To send American coal (however necessary for this winter's emergency) is no economic answer. But perhaps American machines of the right sort in French mines are the answer. To find out, we need a quick-acting, economic agency competent to assess and meet such needs.

The agencies we have had, such as Foreign Economic Administration, are dissolved or dissolving beyond recall. But why could their functions not be continued in a new Board for European Reconstruction, under the Assistant Secretary of State for Economic Affairs? Let Mr. Clayton assemble a board of the caliber and velocity of the WPB. Its members should understand, as does Mr. Clayton, that the United States cannot long be prosperous and happy in a depressed and unhappy world. In their fumbling with various kinds of socialism, Europeans hope that internal social change will restart the industrial wheels. But the truth is that much of western Europe's trouble is external; its century-long economic integration with the Western World was shattered by the war and occupation. The United States, as the leading western power, must show some initiative in repairing this integration.

UNRRA cannot do this job. Even if northwest Europe would let it in, it is specifically enjoined from long-range reconstruction by a resolution adopted at its first meeting and underlined afterward by the United States Congress. The second "R" in UNRRA—Renabilitation—has been a fraud from that day on. Yet UNRRA is a barrier to somebody else's doing the job simply because so many people misapprehend its scope.

As for the Orient, UNRRA has made large plans. China can absorb a limitless amount of soup-kitchen relief; and some sort of international organization is required to coordinate and supplement what the various nations and the many private organizations do for China on this level. Perhaps UNRRA's Chinese set-up for this purpose should be retained. If so, its limitations should be made vividly plain. For soup-kitchen relief will not answer China's bigger need, which (as in Europe) is for the tools and technology of reconstruction. Such needs involve higher policy decisions than UNRRA can make.

WHERE UNRRA IS ACTIVE

Of $530,500,000 worth of relief goods actually delivered by UNRRA through Sept. 30, $503,900,000 went to the Balkans and eastern Europe. This is a part of the world which, except for Greece (where the British policy has governed UNRRA's distributions), is falling under the Russan sphere of influence. Since the United States puts up 72 percent of UNRRA's cash, and Britain 17 percent, a

cynic might assert that UNRRA has become an Anglo-American Administration for the Relief of Russian Europe. The bulk of our money is going into a region from which, because of Russian restraints, we cannot even receive free and fair reports on how the work is progressing.

Certainly this relief work should be continued this winter. The hunger of a Pole or an Albanian is just as real as a Belgian's or Norwegian's. Italy, too, must be helped, even though it is confusing to hear Mr. Molotov demanding reparations from Italy at a moment when we are asked to pour in the essentials of living. Some of UNRRA's machinery in this central and eastern European area should undoubtedly be retained. But its name should be changed to something more accurate and its central administrative organization should be simplified—less harness and more horse.

WHAT TO DO INSTEAD

UNRRA is ineffective in northwest Europe. It lacks constitutional authority to deal with the big problems of reconstruction. It cannot make high policy decisions that cry to be made. And meanwhile the unfortunate delusions which have accumulated around UNRRA are lulling Americans into the comfortable but wrong belief that a mere $1,350,000,000 appropriation from Congress can answer the world's pleas for help.

Let Congress vote the funds which will enable UNRRA to finish its current programs and then let UNRRA wind up its affairs. It should be supplemented immediately by effective soup-kitchen relief and replaced before next spring by a clear program and machinery in Washington for overseas reconstruction.

Some of the high policy decisions which UNRRA cannot make are, nevertheless, international decisions, not for the United States to make alone. But these decisions could well be centered in the Economic and Social Council of the United Nations Organization. To abandon UNRRA is not necessarily to abandon internationalism. Through UNO the nations can start to collaborate more effectively against unemployment, undernourishment, trade dislocations, and similar problems. Their solution is our best hope of drawing the world's peoples closer together.

## The Rural Industrialization Bill

EXTENSION OF REMARKS
OF
### HON. BROOKS HAYS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, October 31, 1945*

Mr. HAYS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Fort Smith Southwest American commenting upon the bills introduced by Senator BAILEY and myself:

The South must develop new industry at the farmers' doorstep to meet its employment problems, BROOKS HAYS, Arkansas Congressman, said in a speech to the House.

Representative HAYS and Senator BAILEY, of North Carolina, are coauthors of a bill to stimulate rural industry through a Federal appropriation with the Secretaries of Agriculture, Commerce and Interior as its directors.

The Arkansas Congressman pointed out that the South must step up its industrial employment if it is to take care of the people who are coming back from the military service and war plants, and provide work for people who soon will not be needed in the cottonfields.

His effort is in line with the industry-building program now being carried on in Arkansas and, less intensively, in some other Southern States.

Southern States contributed their full share to the military forces. They contributed more than their share, on a population basis, to the migrant war-labor force, since there was less war enterprise at home to provide jobs. Industry is the chief hope for providing them jobs in peace, and it must be chiefly industry based on the agricultural resources of the area.

An important change in employment in cotton production is virtually certain. Mechanical cotton pickers have been developed and proved in tests which will sharply reduce the demand for hand cotton pickers. Planting already is done largely by tractors and mechanical planters. Chopping is being done more and more by tractor-drawn rotary hoes. Cultivation is now being done on an experimental basis with flame throwers which consume the grass and weeds but not the cotton.

Sprays are being used to drop the leaves from the plants before the mechanical pickers move in to gather up the cotton fiber. The impact of mechanical genius on the cotton industry will make it possible for American farmers to compete with the rest of the world. But it will also create an employment problem we must face.

The Hays-Bailey bill looks like an intelligent approach.

It is obvious that the raw materials of the South have been too much shipped out of the South for manufacture elsewhere. The producer of raw material, whether it is farm product, lumber, or minerals, gets a small return. The manufacturer who converts raw material into finished product adds the greatest value and therefore has the greatest amount to distribute to labor for its production and to owners for dividends. We have been too long content to be the "hewers of wood and drawers of water," and let other areas take the profits.

The purpose of the bill sponsored by Representative HAYS and Senator BAILEY is to create a program of small business development which would back up the efforts of such local and State agencies as the Arkansas Resources and Development Commission and the Arkansas Economic Council-State Chamber of Commerce.

## Columbus Day Address

EXTENSION OF REMARKS
OF
### HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, October 31, 1945*

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by Charles G. Notari, Esq., national president of the Sons of Columbus of America, at Columbus Day banquet in the ballroom of the William Penn Hotel on Sunday evening, October 14, 1945:

This is Columbus Day. We meet here today to commemorate a great figure of the fifteenth century who, 453 years ago, set foot upon a new land—a land destined to become a haven of refuge for all the oppressed people of the Old World, a land of freedom and opportunity, a land of tremendous influence and leadership.

On October 12, 1492, Christopher Columbus at last realized his dream—after many years of toil and obstacles requiring the highest courage and unswerving faith. His reading of Marco Polo's travels, and information he obtained from Paolo Toscanelli convinced him that he could find the east by sailing west, but he erroneously underestimated the size of the earth. His error, however, proved a fortunate one, and had he known the actual distance he probably would not have ventured on his undertaking. His purpose was twofold. One was to find Asia, for he carried with him letter to the Great Khan, the Emperor of Asia. He also hoped to find new lands as he was made admiral and governor of the new territories to be discovered. It was most fortunate that he discovered new land.

But for all the credit that is due Columbus, it was not destined that the land he discovered be named after his name. That great honor went to Amerigo Vespucci, a Florentine who traveled in the new land and described it in his writings. These writings came to the attention of Martin Waldseemuller, a German geographer who first called the new land America—the land of Amerigo.

America has tried to make amends for this error. The Central Government is the District of Columbia. There are cities, streets, and squares named in honor of Columbus. The musical world has brought out the songs, Columbia the Gem of the Ocean; Hail, Columbia; and others. The Federal Government finally declared Columbus Day a national holiday.

The city of Pittsburgh, the historic gateway to the West, the workshop of the world, the home of the greatest number of nationalities who have come from the Old World, and who have sought and found security and freedom, has done little to honor the memory of Columbus. The city of Pittsburgh with all its traditions and history should do something more than merely naming two streets, Columbus Avenue and Columbo Street.

The Sons of Columbus of America, organized in the city of Pittsburgh, early dedicated themselves to perpetuating the memory of Columbus. For years they have carried on a campaign to raise funds for the erection of a monument to Christoper Columbus. During the convention we have just concluded, we have adopted a resolution to sponsor a Columbus Plaza in the city of Pittsburgh within the next 3 years. We realize that we alone cannot undertake this work. We need the help of the community. We call upon the city of Pittsburgh, the State of Pennsylvania, and the Federal Government to aid us in this noble undertaking.

## Norwegian Journalists Tour the United States

EXTENSION OF REMARKS
OF
### HON. HAROLD C. HAGEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, October 31, 1945*

Mr. HAGEN. Mr. Speaker, five distinguished journalists from Norway recently made a tour of America to learn first-hand what part we played in the liberation of their country from the Nazis.

I refer to five newspapermen who have worked for the past few years underground in a courageous effort to defeat the foe and bring hope to the people of Norway. To have been caught would have meant death

On many occasions during the war I spoke to the underground people in Norway by short-wave radio, and it was the job of these brave Norwegian journalists to pass the news and messages of hope along to the people. I also talked to many Norwegian newspapermen on my recent trip to Norway.

Because I feel that many Americans will want to know more about the visit of these Norwegians, I am inserting an announcement issued by the overseas branch of the Office of War Information and a copy of the tour schedule:

NEW YORK, September 5.—Five Norwegian journalists, who worked underground in their homeland during the enemy occupation, have arrived here for a 7-week tour of the United States as guests of the United States Government. The trip was originally arranged some months ago by Overseas Branch of OWI. The purpose of their visit is to catch up on a story they missed while working for liberation—what happened in the United States during the war years.

The visitors, whose itinerary will take them to places within the United States where they will find the story they seek, are Olav Brunvand, of the leading Norwegian labor newspaper Bergens Arveiderblad; M. C. Kirkeboe, an editor of the Norwegian Christian Press Agency serving 80 newspapers; Miss Jorunn Johnsen, of Norway's largest newspaper Aftenposten; Oskar Hasselknippe, of the new Norwegian newspaper Verdensgang; and Per Thomsen, of the newspaper Stavanger Aftenbland.

The journalists will stay in New York City for 6 days visiting such places as Columbia Presbyterian Medical Center, Radio City, the Metropolitan Museum, and new Idlewild Airport. From there they will go to Detroit, center of the Nation's automobile industry, touring factories and viewing at first-hand reconversion from war production to manufacture of civilian goods. After 3 days in and near Detroit they will proceed to Chicago, to see the city's printing plants and the famous stockyards.

After a 3-day stay in Chicago the visitors will spend 2 days in Minneapolis, and will meet many Americans of Norwegian descent. They will stay 2 days in Fargo, N. Dak., in the region settled by many Scandinavians. This will be followed by a 2-day visit to Yellowstone National Park in Wyoming.

From Yellowstone the visitors will go to Seattle for a 5-day stay. Then they will journey down the West coast to San Francisco where they will visit the Kaiser shipyards and talk with Henry Kaiser. After 2 days in San Francisco they will spend a day in Los Angeles and Hollywood.

The rest of the trip will take the journalists on a 2-day visit to Wichita, Kans., large war-production city which is reconverting to peacetime production, especially the manufacture of small private planes. They will fly over the Grand Canyon in Colorado and then on to New Orleans. They are scheduled for a visit to Knoxville, Tenn., and an extensive tour of the Tennessee Valley Authority. Later they will stop in Washington, meet President Truman, Members of Congress, and other national figures, and view the workings of Government at first hand.

The journalists will spend the final week of their trip visiting Wilmington, Del., Baltimore, Philadelphia, Boston, and Hartford. Before returning to Norway they will probably spend several days in New York City.

The biographies of the visiting journalists follow:

Olav Brunvand, 33, is employed by the leading labor newspaper Bergens Arbeiderblad in Bergen—Norway's second largest city. During the occupation the number of daily underground newspapers in Oslo exceeded the number of daily newspapers in peacetime—and the same was to a smaller degree the case in Bergen. Olav Brunvand is a recognized journalist for many years in the labor press. He was one of the first to start the underground press service in Bergen as well as in other cities. The underground press in Norway was always well informed and up to date. After 1 year's activity he was arrested and spent 4 years in the forced-labor groups in Germany. His stories will be syndicated to all labor papers in Norway. (NB. Norway had a labor government at the time of the occupation, and the government carried on in London during the occupation, and in Norway after the liberation, until it finally "placed its seats at the King's disposal" and an interim government, consisting of members from all parties, but mainly laborites, took over. The interim government will now function until after the elections in October this year.)

Mr. M. C. Kirkeboe, 43, is editor in the nonpolitical Norwegian Christian Press Agency, serving 80 newspapers. Mr. Kirkeboe was a coworker of Bishop Berggrav, who was the leader of the unshakable Norwegian church front. Mr. Kirkeboe has been a very active member of the church front throughout the war.

Miss Jorunn Johnsen, 40, is employed by the conservative newspaper in Oslo, Aftenposten, which is Norway's largest. Even before the war she was a recognized journalist, having as her specialty social-welfare activities and woman's affairs. Today she is considered as Norway's foremost woman journalist.

Woman's activities played a very important role in the Norwegian home-front's resistance, and Miss Johnsen was highly active on this front. As a reward she got a stay of 14 months in the notorious concentration camp Grini, near Oslo. She is especially interested in women's organizations and social-welfare work in the United States.

Oskar Hasselknippe, 34, is employed by the new nonpolitical newspaper Verdens Gang in Oslo. Throughout the war he was very active in the Norwegian home front. The home front military set-up was extremely well organized. A spokesman for General Eisenhower said after liberation that it was the best he had seen. Mr. Hasselknippe made an outstanding record in this organization, and at the time of liberation he was an officer in command of a unit of 2,000 men. The connection between the Norwegian Government in London and home-front leadership was very close during the whole occupation—a fact that has speeded the reconversion. During the occupation Hasselknippe made journeys for conferences both to Sweden and England.

Per Thomsen, 40, is employed by the newspaper Stavanger Aftenblad. Equally well known as a journalist and as a novelist, he is recognized as one of the leading writers of Norway. He was a member of the Norwegian home-front leadership. From the spring of 1944, Per Thomsen worked in the leadership for southwestern Norway. He was imprisoned as a hostage in October the same year, and remained in prison until the liberation.

*Itinerary for Norwegian journalists*

| Date | City | Hotel |
|---|---|---|
| Sept. 11-13 | Detroit, Mich | Book-Cadillac. |
| Sept. 14-17 | Chicago, Ill | Drake. |
| Sept. 18-20 | Minneapolis, Minn | Radesson. |
| Sept. 21-22 | Fargo, N. Dak | Gardner. |
| Sept. 24-25 | Yellowstone National Park, Wyo. | Yellowstone. |
| Sept. 27-30 | Seattle, Wash | Olympic. |
| Oct. 1-4 | San Francisco, Calif | St. Francis. |
| Oct. 6-8 | Los Angeles, Calif | Biltmore. |
| Oct. 10-12 | Wichita, Kans | Tassen. |
| Oct. 13-14 | New Orleans, La | Roosevelt. |
| Oct. 15-18 | Knoxville, Tenn | Andrew Johnson. |
| Oct. 19-24 | Washington, D. C | Statler. |
| Oct. 25-26 | Wilmington, Del., Baltimore, Md., Philadelphia, Pa. | |

## President Truman Made an Honorary Member of the Alumni Association of the University of Missouri

EXTENSION OF REMARKS
OF
## HON. MAX SCHWABE
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, October 31, 1945*

Mr. SCHWABE of Missouri. Mr. Speaker, I had the honor of being one of a group of members of the Alumni Association of the University of Missouri who presented President Harry S. Truman with a certificate of honorary membership in the University of Missouri Alumni Association this morning, October 31, 1945, in recognition of his outstanding service to the University of Missouri, in his devotion to the progress of education generally during his public service as a Senator, Vice President, and President of the United States.

I include, as follows, the presentation speech by Mr. Clark Nichols, president of the Alumni Association of the University of Missouri, in Washington, D. C., the certificate, and the citation accompanying it:

PRESENTATION SPEECH BY MR. CLARK NICHOLS

Mr. President, sometime in January 1945 the Washington, D. C. group of the University of Missouri alumni conceived the idea of presenting Vice President Harry S. Truman with a certificate of honorary membership in the University of Missouri Alumni Association. This took some doing on the part of the university and alumni authorities at Columbia. By the time the necessary formalities were enthusiastically accomplished we looked around for Vice President Harry S. Truman, and he wasn't there, any more. Believing in the motto of the Northland Mounted Patrol, "We always get our man," we started to find our man. We finally located him in the White House in Washington, D. C. We don't want to deprecate the deeds of the mounties, but we wonder if they ever tried to get their man in the White House in the manner and time they would like or had planned. We did not despair. And now after 9 months' battle against the demands of the problems of the struggling and sometimes bewildered America and the near chaos of the entire world we have our little moment. Our reasons for conferring, what we please to call an honor, are expressed in the following citation:

"THE ALUMNI ASSOCIATION OF THE UNIVERSITY OF MISSOURI

*"To Whom It May Concern, Greeting:*

"HARRY S. TRUMAN

"In recognition of his outstanding service to the University of Missouri—a service which represents a singular devotion to the progress of an educational ideal and which has been rendered freely and unselfishly—is hereby awarded honorary membership in the Alumni Association of the University. This certificate carries with it the gratitude of all men and women who take pride in the university of the past and present and who hold great faith in its future.

It is with a deep sense of appreciation that this membership is conferred the 31st day of October in the year 1945 A. D.

"By order of the board of directors:

"OAK HUNTER,
*"President, Alumni Association.*
"ALLEN L. OLIVER,
*"Chairman, Awards Committee.*
"ROBERT E. LEE HILL,
*"Chairman, Public Relations Committee."*

To the PRESIDENT OF THE UNITED STATES, HARRY S. TRUMAN:

The alumni of the University of Missouri take pride in the achievements of the native sons of Missouri, both alumni and nonalumni, and watch with interest and approval the men of vision and ability who bring honor and distinction to themselves and to the State. One of these men is Harry S. Truman, farmer, soldier, judge, Senator, and an individual devoted to the welfare of Missouri and the progress of the university as an integral part of the State's well-being.

We could well expect continued remembrance and loyal service from an alumnus who carries the memory of college days and who associates with The Columns a past of many friends and happy experiences. When a nonalumnus continuously supports the State's leading educational institution and urges others to support it, aiding always the progress and advancement of the school, the alumni are deeply grateful. It is, therefore, our privilege to bestow honorary membership in the Alumni Association of the University of Missouri upon Harry S. Truman, the first Missourian to become President of the United States.

President Truman was born in 1884 in Lamar, Mo., the son of John A. and Martha Ellen Truman. After serving his country in field artillery in the First World War, he attended the Kansas City School of Law, served as judge and then as presiding judge of the Jackson County court. President Truman served two terms as Senator from the State of Missouri, building a fine record of public service and winning friendship and respect from the people of the Nation as well as his native State.

Upon assuming the Presidency of the United States, Harry Truman assumed a responsibility of unprecedented proportions and seriousness. As he confronts this task the eyes of the world are turned upon him. Many pray for his success.

The alumni of the university hereby express their confidence in their fellow-Missourian and extend their wholehearted support to that man who in past years has with diligence and vision supported the University of Missouri We express our belief in his ability to guide the Nation through the difficult days ahead.

We welcome as an honorary member of the Alumni Association of the University of Missouri, Harry S. Truman, President of the United States of America.

## Labor Policy Based on Collective Bargaining

EXTENSION OF REMARKS

OF

### HON. CHARLES A. WOLVERTON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, October 31, 1945*

Mr. WOLVERTON of New Jersey. Mr. Speaker, President Truman last evening delivered a speech on labor policy that should be read and reread by all interested parties. It is entitled to serious consideration because it recommended the application of the American principle of collective bargaining as a means of settling wage controversies. It recognized difficulties, but gave expression to the optimism that is characteristic of our people, namely, that no difficulty is unsurmountable if approached in a proper spirit. If labor and management sit down together and discuss questions at issue between them in the spirit of give and take, as advised by the President, it will mean much in making our future prosperity certain and sure.

The postwar reconversion period with its attendant problems present a situation that can easily result in either deflation or inflation. Either one, as the President pointed out, can result disastrously to our national welfare. To escape these dangers will require both management and labor to act jointly for the common good. The responsibility of each is great. By their ability to see the right and act accordingly, they can add not only to our welfare but also to our prestige as a Nation.

The President has pointed a way to settle, in a truly American way, the vexing problems of wages and living conditions that now exist. In clear and unmistakable language he has made it plain that it is a joint responsibility of capital and labor.

If we are to have a prosperous country and our American standard of living maintained there must be full employment at good wages. And, furthermore, in no other way can our national income be maintained at the high level necessary to carry our enormous debt. To effectuate these objectives each must recognize their responsibility, and, this includes Congress. Congress must be ready and willing at all times to do its part. Our welfare as a people, and, our influence as a Nation, in these difficult times, requires that none shall fail.

My support was given to all measures that were necessary to a successful prosecution of the war. My continued support will be given to all measures that are necessary to make the reconversion period equally successful.

## No Precipitate Action on Atomic Bomb

EXTENSION OF REMARKS

OF

### HON. WILLIAM A. ROWAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, October 31, 1945*

Mr. ROWAN. Mr. Speaker, Prof. H. I. Schlesinger, of the department of chemistry of the University of Chicago, delivered an address before the American Chemical Society, on October 19, 1945, in which he gave some unusually interesting views on the atomic bomb. Professor Schlesinger has made a very comprehensive study of the future of the atomic bomb and his address aroused unusual interest.

Under leave to extend my remarks, I include in the RECORD, Professor Schlesinger's address:

This evening should rightfully have been reserved for its major purpose of doing honor to our retiring chairman and to the winner of the American Chemical Society award. You may be assured that I would not have offered to appear before you tonight if I were not convinced that what I have to say deals with a crisis in our national life as great as, if not greater than, any other our people have ever had to face. I appear before you not as a scientist speaking to other scientists but as an American citizen fearful that our Nation is entering upon an exceedingly hazardous path—a path which imperils not only our safety against attack by foreign enemies but which imperils to an equal extent the freedoms for which we have repeatedly fought and bled since the days of the American Revolution. Only in one respect do I speak as a member of our chemical society to his colleagues. I know that as scientists we are better prepared than laymen to appreciate these perils; I am convinced that it is our duty as scientists to use our influence, our energy, and our patriotism to make sure that our country does not enter perilous waters before having a clear chart of the hidden reefs they may conceal.

As we all know, the successful development of an atomic bomb has completely altered all previous concepts of what is needed for national defense; we all realize that the discovery of means for releasing atomic energy raises social and economic questions, the full implications of which no one can at present forecast. It is self-evident that the direction of this powerful tool and dangerous weapon cannot be left to mere chance, and that our country must embark upon a policy of greater governmental controls than any to which even the war years have accustomed us. But before we embark on any course we must make sure by full and open discussion that the restrictions we shall voluntarily accept actually do contribute to our safety and do not infringe unnecessarily upon the rights of freemen.

To achieve national safety and to exercise control over the economic and social consequences of the new scientific discoveries, the May-Johnson bill (S. 1463) has been introduced in Congress. This bill, in my opinion and that of others more qualified than I to judge, completely defeats its major purpose. Not only does it fail to assure our national safety, it actually increases our hazard; not only does it fail to usher us into the new social and economic era with as little impairment of American ideals as possible, actually it undermines the very foundations upon which our national life is built.

Unfortunately I cannot, without encroaching on the original purpose of the meeting, enter upon a detailed discussion of the features of the bill which have led to the opinions I have just expressed; all I can do is to call to your attention some of its dangerous features.

The bill seeks to achieve national safety by throwing around the whole field of atomic energy and all related subjects an impenetrable fog of secrecy. To achieve this secrecy and to maintain our leadership in the field it establishes a commission and administrators in whom is vested complete control over research in this and related fields, as well as control, not only of publication but of discussion of these topics. It imposes severe penalties for disclosure whether intentional or inadvertent of any matters related to atomic energy without the administrators' consent. Finally it authorizes the commission or its administrators to establish its own security division which, since it is responsible only to the administrator, is an excellent imitation of a small gestapo.

Let us first inquire into the effects of those provisions on the national safety. We, as scientists and technologists, are fully aware that no new scientific discovery springs perfected and complete from the brains of men. It is obvious to us that any advantages our country may have gained by being the first to make practical use of atomic energy will inevitably be lost if we do not continue research, invention and technological improvement. As scientists we also know that the greatest enemy of scientific and technological advance is arbitrary secrecy and centralized control—these advances require the cross fertilization resulting from discussion, and the genius of the individual working under the guidance of his own intuiton and talent. Nor

is this all. Progress will cease unless young minds can be trained to participate in the work so that their fresh ideas will continue to keep the field fertile.

This bill not only imposes arbitrary, unchecked, irresponsible control on science and industry but threatens scientists and technologists with severe penalties for infractions of regulations the administrator may set up without a check by any other governmental authority. So far as I can see these regulations need not even be published. For such an infraction the administrator may order an employer, holding a contract with the commission, to discharge any man in his employ without recourse or redress, and may prevent any other contractor from employing the man. For an unintentional violation it may impose a fine of $500 or 30 days imprisonment or both; for intentional violation or merely for gross negligence a fine of $100,000 and 10 years imprisonment. Nor does the bill specify who is to determine whether infraction was intentional or inadvertent, or whether the negligence is great or minor.

Will scientists, technologists, and industry be willing to assume the risks involved by infractions of regulations made by an authority over which no one has control? Will teachers be able to train a new generation to carry on the work started by our generation? Will students enter into a terrain so widely sown with hidden mines of disgrace and punishment? The answer is clear.

But there is another even greater danger. By surrounding the whole field with a smoke screen of secrecy, the bill's method of approach implies that we, the American people, possess knowledge which will prevent other nations from achieving what we have achieved. By so doing the bill implies that all we have to do to be safe is to keep from others the knowledge we have, or the new knowledge which we may acquire in the future. It assumes that others cannot do what we have done or discover the things we may still discover. The Smyth report makes absolutely clear that this is not true. The bill achieves only two ends—both bad. It will force other nations to accelerate their own research in what may be new directions and to keep their discoveries secret; it will give our people a false sense of security that will discourage sustained effort. The ultimate result will be that, as in 1914 and in 1940, we shall be once more unprepared, and that by this very unpreparedness we shall bring on the cataclysm which will engulf us all.

Equally dangerous are other implications of the bill. To achieve its purposes the bill establishes a commission of nine members, normally to be appointed for 9-year terms by the President with the consent of the Senate. But its members are not responsible to the President or to the Senate or to any other authority because they can be removed by the President only for failure to carry out their duties, and not for the nature of the policies they adopt. The commission is required to meet only four times a year—in the intervals between meetings its powers are exercised by an administrator and a deputy administrator, appointed by the commission for a term entirely in the hands of the commission.

The powers which the commission thus delegates to a single individual and his deputy are greater than have ever been put into the hands of any American; they transcend the control of the President, of the Congress, of the courts, of the American people. The administrators will have absolute control over the sources of atomic energy, over production of materials which are related to utilization of atomic energy, over research bearing on atomic energy, even over discussion of atomic energy. The commission, through its administrators, may condemn any property, tangible or intangible, related to atomic energy. And so far as I can understand the bill, it lies in the sole discretion of those 11 men, who are responsible to no higher authority, to determine what is related to atomic energy and what is unrelated. No one knows today what existing patents the administrator may later force the present owner to sell to the commission under the guise that it is important to atomic energy. No one can predict today that the few elements now known to be useful in releasing atomic energy are the only ones through which that purpose can be achieved. No one knows today what research will be related to atomic energy or for what kinds of investigations the materials and knowledge controlled by these 11 men may be used.

Under the cry of emergency this bill seeks to control discussion, research, and technological advance in a field of science; under the cry of emergency this bill permits the condemnation of property and the penalizing of individuals without the normal safeguards or means of redress; under the cry of emergency this bill was prepared hastily and an obvious effort is being made to force it through the House without adequate hearings. The bill makes very special provisions to allow an Army or a Navy officer to act as administrator and as deputy. It creates a dictatorship in an area of science and industry which will some day pervade all science and all industry, and it provides that this dictatorship may be a military one. Again the excuse is the cry of emergency. But this cry is nothing new; it is always invoked when the freedom of peoples is to be overridden, it is raised whenever individuals or groups seek to increase their power over their fellow men.

We all realize that some secrecy and much regulation will be needed, we know that some bill is necessary. But is it necessary to act hysterically, is it necessary to give up so much of what America has stood for in the past? I am sure that wiser measures can be devised if thought and free discussion are allowed to precede action. I do not ask you to accept my judgment of the bill; I do not ask that you enroll in the ranks of the opposition. But I am convinced that it is your duty to wire and to write at once to your Congressmen and especially to our Senators demanding that precipitate action be avoided and that there be open hearings and wide publicity of the views of all sides.

## Aluminum Dilemma

EXTENSION OF REMARKS

OF

### HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, October 30, 1945*

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial appearing in the Washington Post of October 29, 1945:

ALUMINUM DILEMMA

Within the past 3 weeks a congressional committee, the Department of Justice and the recently dissolved Surplus Property Board have reported on the problems connected with disposal of surplus aluminum plants. All of these reports show that the industry is under the unchallenged domination of the aluminum trust (Alcoa) and that it will continue to be monopolized unless the Government takes drastic steps to subsidize competitors of the trust or itself goes into the business of producing aluminum on a big scale.

Under the law governing disposal of surplus property, Administrator Symington is ordered to develop disposal policies calculated to discourage monopoly, foster free competitive enterprise and assure effective use of surplus property for national defense. That mandate limits his choice of disposal methods, but it does not preclude consideration of alternatives that might necessitate revision of existing legislation.

The aluminum industry expanded sevenfold during the war. More than half the alumina and aluminum producing capacity of the country is now owned by the Government, but as all these producing facilities, with a minor exception, have been leased and operated by Alcoa, the latter's control of producing capacity remains virtually unimpaired. What's more, Alcoa's own expanded plant facilities are more than sufficient to satisfy all the requirements of a greatly increased postwar demand for aluminum. Any independent entering the field would be gravely handicapped by Alcoa's control of practically all the high-grade domestic bauxite.

Alcoa also has access to the cheapest sources of power. Its own plants are so placed as to make for an integrated system of production and fabrication, and well located in respect to markets. On the other hand, Government plants are in many cases too large to fit into an integrated system that independents might desire to develop, and they are scattered over a wide area. To try to promote competition under such conditions would be a quixotic as well as a costly venture, with the outcome admittedly in doubt.

The Surplus Property Administrator is prepared to offer certain plants for sale on terms equivalent to heavy subsidization. He also suggests leasing, with a sharing of profits between the Government and the lessee, the Government possibly to stand losses for an initial period and to review and approve the prices at which the metal would be sold, the salaries paid and extraordinary expenses. In addition, he recommends that the Government supply bauxite to operators from its own stock piles and investigate the possibilities of obtaining foreign ores. The Government would also have to finance the expense of relocating plants to put them in position to compete.

We agree with the Department of Justice that public funds and assistance of this kind provide no adequate solution for the problem of monopoly insofar as aluminum is concerned. "Competition will never become healthy enough to stand on its own legs if it is dependent on so much nursing and propping by the Government." The Department accordingly favors breaking Alcoa into a few independent companies with integrated systems. Under such conditions, it argues, an independent producer, such as Reynolds, would have a better chance of prospering and the way would be open for the entry of newcomers. That still leaves the problem of badly located and oversize plants to be dealt with, but the Department thinks their integration would present fewer difficulties.

There is, however, an alternative to subsidized competition or forced dissolution of Alcoa that deserves consideration. That alternative would be to preserve the efficient organization set up by Alcoa but to subject the trust to regulation as a public utility. Because of the importance of aluminum to the national defense and the civilian economy the industry is "affected with a public interest." The Government might retain certain plants not adapted to profitable commercial utilization, scrap others and establish a measure of protective control over the privately operated Alcoa plants. Such a way out of the dilemma would establish a precedent that might have far-reaching consequences; but in dealing with an entrenched monopoly of the impregnability of Alcoa, strong measures of some sort are unavoidable.

## Poles Found Cowed by Fear Into Submission to Regime

EXTENSION OF REMARKS
OF
**HON. THOMAS S. GORDON**
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, October 31, 1945*

Mr. GORDON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article that appeared in New York Times of October 22, 1945, by Gladwin Hill, entitled "Poles Found Cowed by Fear Into Submission to Regime":

POLES FOUND COWED BY FEAR INTO SUBMISSION TO REGIME—60,000 TO 80,000 PRISONERS REPORTED HELD—OSWIECIM CAMP REOPENED—SECRET POLICE WATCH HOMES—NEWSMEN NOTE HOSTILITY

(By Gladwin Hill)

WARSAW, POLAND, October 12.—This is written in Warsaw, but it will not be committed to print until this correspondent is safely cut of Poland.

Foreign correspondents at present are being allowed to circulate in Poland under the Potsdam Agreement, and none so far has been harmed, but a definite hostility toward foreign reporting of unquestionable facts already has been displayed.

There also exists throughout the war-torn country today a condition approaching a subtle reign of terror in which there is no assurance of what may happen to critics of the present regime.

There are, however, too many indications of what may happen. The official line advanced by some Government officers is that there are no more than 1,000 political prisoners in Poland today. However, other Government officials have acknowledged to me that there were between 60,000 and 80,000, with the stipulation that the bulk of them is "volksdeutsch"—Polish Germans or Germanized Poles.

The belief is widespread in Warsaw that there are 10,000 at Cracow alone and some responsible observers think the total may be nearer 100,000.

The former German concentration camp at Oswiecim, whose name to any Pole is synonymous with horror, is operating again under Polish auspices and its wire fences have been charged with electricity.

The round-up of persons whose only evident offense was suspected opposition to the current Communist-dominated regime was in any case extensive enough to have netted in recent days a number of individuals with claims on American citizenship, most of whom are still locked up under no specific charges and without trial.

One institution in Warsaw and other cities these days is the Well, a Gestapo-like operation in which the police keep guard for days on end if necessary of a block, a building or part of a building, seizing indiscriminately anyone who visits the place. This might be excused as an ordinary manhunt except that it happens curiously often, involves the detention of innocent people and has spread such fear that I know of innocent people who have stayed away from home nights on end because they had been told that the Well was working in their neighborhood.

I will give other examples of incidents that have contributed to what I have been forced to describe—only after considerable thought and with considerable regret—describe as a near reign of terror in a country whose regime takes pride in being "democratic" and that under the Yalta and Potsdam agreements supposedly is heading for "free democratic elections."

On September 16 the Polish Peasants party, principal opposition threat to the present regime, held a rally at Cracow. One of its prominent regional leaders was a man named Rjeszow Kojder. The day after the rally I was informed authoritatively that four uniformed men had appeared at M. Kojder's home and had taken him away.

Three days later he was found shot to death.

I have just returned from a 10-day automobile trip across Poland under Government auspices. The interpreter on the trip was a young Pole named Alexander Mierzejewski, director of the Government-controlled Polish radio's foreign broadcasting service. M. Mierzejewski, former Oxford student, fought in the Warsaw underground and was tortured in a concentration camp and, as attested by his radio position and his own statement, is a Leftist.

Nevertheless, in the course of the trip it became uncomfortably evident that his friendliness and candor with myself and two other correspondents irritated extremely other high government officials on the trip. On his return to Warsaw M. Mierzejewski received a 24-day leave in Poland. It seemed that a sudden need had been found for his services as an interpreter with the Polish mission in Washington.

This may have been true but, with Polish-English interpreters plentiful, it seems like a curious assignment for an important executive of the Government radio service, on a 24-hour notice, curious enough to have excited comment throughout the Polish Foreign Office.

PROTESTING OFFICIAL DROPPED

On a recent anniversary of the Warsaw uprising the Polish radio had broadcast a prepared script from on-high full of digs at the former Warsaw resistance movement so unpopular in Moscow. The announcer protested and a woman program director, a former underground campaigner, said that she could not, in all conscience, ask him to read it. A program of phonograph records was substituted.

A few days later the woman was called to account for the substitution and then discharged—on the accusation that there had been a discrepancy of $10 in her accounts.

A responsible official told me that an employee of the Polish Foreign Office had been discharged simply because he had lunched too often with foreigners.

One of the generals in the Warsaw uprising who died a few days ago was buried as a plain civilian without due military honors because his relatives feared reprisals.

Any of these incidents may be verbally justified by the Government and some may actually be justified. Nevertheless the fact is that they and thousands of incidents like them that do not occur under an American-idea democracy have engendered a reign of fear—a situation in which the people dare sing the songs of the old Warsaw underground only behind closed doors; in which the "Deutsche Blick"—glance over a shoulder before one says anything—is becoming a universal habit; in which the press uniformly abstains from criticism of the Government and opposition is found only in the illegal underground press, and in which in city after city across Poland I encountered ordinary people afraid to say to what political party they belonged.

There are two principal organizations of a police character in Poland. There is the army nucleus, composed of the Polish forces that fought with the Russians and admittedly largely directed by Russian officers. Then there is the militia, the national police, nominally a civilian organization, but uniformed almost indistinguishably from the army. Ths admittedly also has been subject to strong Russian influence.

The prewar Polish police force was largely discredited by its collaboration with the occupying Germans and with the liberation of Poland a new force had to be built. At first the Government acknowledged the training by Russian police experts, now the Government claims that there is no Russian participation.

Behind the facades of these two organizations are numerous subsections, some of them secret. And it is the general impression among the Poles that the secret police are ubiquitous—the NKVD tag for the Russian secret police is a term you do not have to explain to any one in Poland today—and are responsible for many arrests.

What is the purpose of this reign of fear? There are two obvious possible answers. One is that the police measures were taken to preserve order. If this be the aim the measures are failing notably.

In Polish cities, with shooting a nightly occurrence, even government officials are timid about traveling across the country by night.

The conditions are openly admitted in the newly announced installation of units headed by Russian generals in each of the country's dozen regional divisions for the stated purpose of stopping marauding.

GOVERNMENT EXCUSES METHODS

The other obvious answer is that the present provisional regime is going to these extremes to suppress opposition and perpetuate itself. The official attitude is that sweeping measures were necessary against the reactionary and Fascist elements at large in Poland who jeopardize national unity—an argument curiously exactly as old as authoritarianism itself.

Many foreign observers in Poland feel that this is regrettable because, aside from the current regime's strong Red tinge and aside from its obvious political maneuverings to perpetuate itself, which is perhaps expectable on the part of any regime, it is making a manful effort to pull Poland out of her almost unprecedented economic desolation.

## The Father of Two Servicemen Speaks Out on Demobilization Delays

EXTENSION OF REMARKS
OF
**HON. WILLIAM A. ROWAN**
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, October 31, 1945*

Mr. ROWAN. Mr. Speaker, most Members of Congress have their desks piled high with letters from mothers, wives, sweethearts, and sisters of servicemen; rarely, however, do fathers write. Therefore I read with a great deal of interest a letter which came to my desk very recently from Mr. Morgan L. Fitch, 7915 Exchange Avenue, Chicago, in which Mr. Fitch does not mince matters in a portrayal of a father's sentiments toward the continued service of his two boys in the armed forces of the United States. Mr. Fitch, among other things, characterizes the continued service of boys in the fighting forces as "an outright larceny of the very lives, spirits, and souls of the men of our country and the young men who have already given more than their share to the horrible business of war."

Under leave to extend my remarks, I respectfully include the letter of Mr. Fitch in the RECORD:

CHARLES RINGER CO.,
*Chicago, October 23, 1945.*

Congressman WILLIAM A. ROWAN,
*House of Representatives,*
*Washington, D. C.*

DEAR BILL: I have restrained myself from writing this letter as long as I possibly can. I know something of the tedious delay involved in all military operation. I can appreciate, too, the reluctance of men of military rank to lose their commands. I understand the hesitancy of Congress to interfere in military operation even in peacetime.

But this business of holding American boys against their will in military service for protracted periods after war is over has gone beyond all reason. It is fast becoming a major social crime—an outright larceny of the very lives, spirits, and souls of the young men of our country, of young men who have already given far more than their share to the horrible business of war. And it is making anarchists of their fathers and mothers who are writhing in the futility of their own inability to do anything about the situation.

We must look to Congress for relief. We are entitled to look to Congress. That body has no job so important, so vital to human decency, to the national welfare as the immediate demobilization of the Army and Navy.

I know that the labor situation is critical. I know that the atom bomb presents a great problem. I know that international relations are important. But all of them collectively pale into insignificance compared to the magnitude of the crisis being created by the mass thievery of the vital years of young men's lives in the interest of vanity, confusion, and neglect.

My own two sons have been in service, one in the Navy, one in the Army, for almost 3 years. They enlisted voluntarily, although they would, of course, have been picked up soon after in the draft. They were throbbing with idealism, an earnest, eager desire to do their part. One of them fought all over the South Pacific on an escort carrier, finally missing death only by a miracle when a suicide bomber went through his ship. The other fought through the mud and blood, the sorrow and suffering of infantry war in the vanguard of the Third Army across France, Belgium, and Germany.

They are still in uniform, doing—as far as I can determine—nothing except destroying their own lives.

There is no answer to be found in the statement that we haven't got ships, that we must police foreign countries, that we must "win the peace." The answer is to get the ships. We got them to ship them over. The answer is to let the foreign nations police themselves. They must do so eventually. The answer is that by our present program we are "losing the peace" anyway.

I ask you, please, not so much as a Congressman, but as one father to another, as one citizen to another, to lend your hand to the relief of the distress of millions of parents and get these boys home—not just my boys, but the boys of America.

Sincerely yours,

MORGAN.

## The Zionist Problem

EXTENSION OF REMARKS
OF
### HON. HERMAN P. KOPPLEMANN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, October 31, 1945*

Mr. KOPPLEMANN. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I include an excerpt from Barnet Nover's column in the Washington Post of October 27 with relation to the Zionist problem and the underlying reason for Arab opposition to the establishment of a Jewish homeland in Palestine:

Recently there was made public the text of an exchange of letters between the late President Roosevelt and his "great and good friend," ibn-Saud.

In this exchange ibn-Saud spoke bitterly of the Zionist experiment in Palestine. His letter was a curious melange of crooked history and dour threats. The one thing he was careful to avoid discussing, however, was whether the mandate in Palestine has been of advantage or disadvantage to the Arabs.

Ibn-Saud happens to be one of the few absolutist rulers left in the world. Within his realm there isn't the shadow of a suspicion of the "four freedoms." Indeed, in Saudi Arabia, no Christian, Jew, or dissident Mohammedan is allowed to take residence. But that system of exclusion has not led to any great improvement in the lot of the nomadic tribes who inhabit the vast region. They still live lives that, for the most part, are the same as that lived by their ancestors a millennium ago.

It is clear that what ibn-Saud is afraid of is that the example of what is happening in Palestine, where western science and technology have transformed a desert into an oasis, will undermine the foundations of his rule.

In this respect ibn-Saud reflects the views of the rest of the top crust of Arab spokesmen. The banner they raise is the banner of self-determination. But what they seek is the perpetuation of their feudal control.

## How About Government by the People in Settling the Conscription Issue?

EXTENSION OF REMARKS
OF
### HON. HOWARD H. BUFFETT
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, October 31, 1945*

Mr. BUFFETT. Mr. Speaker, is it the intention of the administration to force a decision on military conscription without allowing the people a fair chance to participate in this momentous verdict? Military conscription would result in the most far-reaching surrender of individual liberty in the history of America.

Is is too much to ask that the humble people of America have a part in this decision? It was their sons who died, and it was their work that turned out the weapons of victory.

Mr. Speaker, it is very easy on the argument over compulsory training to substitute "authority" for "truth." The following excerpt from Barron's seems to explode one or two of the favorite arguments for conscription and uses the Army's own figures in so doing:

CONSCRIPTION

Questionable assumptions lie behind President Truman's recommendation for conscription, or universal training as he prefers to call it. The recommendation, and the arguments for it, follow closely the line laid down by Army Chief of Staff General Marshall in his recent biennial report.

There the general says that "even with our overwhelming concentration of air power and fire power, this war has been the most costly of any in which the Nation has been engaged." He then proceeds to make a tabular comparison of battle deaths in all our wars, showing also the average per month during each war, but making no mention of the differences in population. He compares on the same basis the battle deaths in the Revolutionary War, when our population was less than 4,000,000, with those in the war just ended. If his figures are taken in relation to population, on the other hand, the Civil War was by far the most costly, with 184,000 battle deaths out of a population of 31,500,000, as against 265,000 in this last war out of a population of more than 131,000,000.

Let us examine also the general's argument tying together "the enormous cost of this conflict" and the fact that "we were so completely unprepared." The deaths and defeats which may be ascribed directly to our lack of preparation are solely those incurred in the Japanese war, since we carefully avoided fighting the Germans until we were ready to do so. General Marshall's own figures show that Army battle deaths in the Japanese war were almost exactly one-quarter of those in the European conflict, about 40,000 against 160,000. We lost more men in the war for which we had time to prepare than in the one which was forced on us.

PREPAREDNESS

Of course, it is still true that we would have lost fewer men and much less territory if we had been completely ready for the Japs. But no one, not General Marshall, nor President Truman, talks of always being completely ready. What the President recommends is a general Reserve composed of all male citizens, who are to receive military training. It would still be necessary at the start of a war to induct them into the armed forces and to supply them with clothes and weapons. They would not have helped us one bit when the Japanese attacked us in December 1941.

The President says that "in any future war the heart of the United States would be the enemy's first target." Undoubtedly true, but how would the existence of a trained civilian Reserve help defend us against such an attack? It wouldn't. The Reserve might speed up the process of assembling an army for defense against the invasion which would follow the robot-atom attack. But whether that army would be a very effective one is a question about which there is grave doubt. The lesson of this last war is that the professional military powers lost to the amateurs. This was partly because the amateurs did not suffer the psychological handicap of owning a lot of obsolescent equipment, since they had little or no equipment. They were forced to start with everything that was newest and most powerful.

It is also questionable how long-lasting would be the value of civilian reservist training. In the majority of cases the military skills so learned would soon be out of date even if remembered. How many men of 25 can still use the algebra they learned at school?

## Hutchins' Great Gamble—Chancelor Hutchins Says "Yes"

EXTENSION OF REMARKS
OF
### HON. WILLIAM A. ROWAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, October 31, 1945*

Mr. ROWAN. Mr. Speaker, the story of the important part played by the University of Chicago in the atomic bomb development, and particularly the momentous decision of Chancelor Robert

M. Hutchins, is told in an article written by Lloyd Lewis and published in the Chicago Sun on October 28. I herewith insert in the RECORD a copy of Mr. Lloyd Lewis' very informative article:

HUTCHINS' GREAT GAMBLE

(By Lloyd Lewis)

Ever since the atom bomb went off I have been vainly watching the national magazines and such out-of-town newspapers as I could see and listening on the radio for some adequate recognition of the University of Chicago's leadership in the production of that awesome event.

In local newspapers the Midway's work in producing the bomb has been hailed, but a strange silence has reigned elsewhere. The magazines and syndicates have curiously slighted if not eliminated the university. They have dug into the tomb to bring out all the obscure or famous scientists of the past whose experiments laid the groundwork for atom breaking. They have gone into detail about what other universities did, about what the United States Army did, what the humble workers in plants did—and the radio orators, the statesmen have all taken the same line. But nobody outside Chicago has faced the simple fact that if Chancelor Robert M. Hutchins hadn't said "Yes" to Washington on a certain day in 1943, there would as yet have been no bomb.

There came a day in 1943 when nobody else was able or willing to take the gamble of running a large pilot plant to make atomic bombs. Prior to that Professor Einstein had sent a committee to President Roosevelt urging him to see if the atom couldn't be broken in time to be of use in the war. Roosevelt had put scientists on the job. At Columbia, California, and the University of Chicago secret experiments were made. At the Midway the scientists, working at Stagg Field and at Palos Park, reported that the thing was near enough to warrant a large-scale, all-out effort. Columbia and California reported the same.

INDUSTRY DID A SIDE-STEP

The problem then confronting the War Department, to whom President Roosevelt had given the decision, was to find somebody who could manage a pilot plant to see whether the bomb could be manufactured on a large scale. It would be a colossal industrial scale. It would be dangerous very likely, to life and limb, and dangerous to the prestige of the manufacturer should, as was very possible, the whole thing fail.

Whoever undertook the job would be responsible for the expenditure of millions of dollars.

For one reason or another the big industrialists side-stepped. No other university came forward. It was perfectly plain that if a university assumed the task, spent the money, called in the top scientists of the world, hid them in their secret laboratories for years, and then came up with nothing, it would be laughed at for a generation, probably for always.

A GOVERNMENT INVITATION

This, then, was the situation on that certain day in 1943 when the War Department came to Hutchins and asked him if he would take the great gamble.

And it would be, Hutchins, of course, knew, a greater gamble for him than for any other university president, since he was already regarded by the conservative scholars of the land as a reckless innovator. They had blasted at him for years because of his experiments in education, his booting of football off the Midway, his award of the A. B. degree to 18-year-olds, his scorn of manual training, his enmity to science, his withering comments upon the waste of students' time in the conventional colleges. Also, a large sector of his own faculty had been at odds with him on policy and could be depended upon to press for his removal if his adventure with the bomb turned into a fiasco. It would be merely proof on a grand scale of their claim that he was impractical.

The young university president must have turned all this over and over as he listened to the War Department invitation. Should he commit the university to a stupendous industrial effort when it was not an engineering institution at all and was, instead, devoted to the humanities?

He couldn't ask his trustees for advice. The thing was too secret. He couldn't ask anybody. We were at war. He had opposed the war before Pearl Harbor, been pilloried, in fact, as an isolationist, an "American Firster," although he had never belonged to that organization nor shared many of its credos.

"HUTCHINS' BIGGEST FLOP"

There was drama in the air that day when he made up his mind whether to say "Yes" or "No" to a question that might end the war, might, indeed, end the world altogether, or produce limitless benefits to man. Time and events had brought him to a crisis. He stood, in effect, between two worlds, the one that had been and the one that could be. The warriors and the industrialists had put it up to the educator, and the educator gulped and then said "Yes."

From that moment the atom bomb was in production. The pilot plant went up. The scientists, under assumed names, vanished, as did the workers, into great areas of silence. Industry threw itself into the work. Columbia, California, other universities. Scientists from many institutions labored at it. Countless hands were in it, but the University of Chicago's responsibility was so well recognized on several other campuses across the Nation that professors were laughing there, only a few weeks before the bomb actually blew, at "Hutchins' biggest flop."

NAGASAKI SUPERMEN?

The War Department eventually let Hutchins tell a select few of his trustees what he had committed the university to. But it was not till the bomb went off that even they knew how the gamble was going.

So that is the story which hasn't to date been told the world outside the range of Chicago's press. Why, I do not know. If Hutchins hadn't said "Yes," we might still be at war and nobody might be planning as men now are to melt the polar ice cap and turn it into a habitable region. And we might never have heard, as I am assured we will by next April, that it is entirely feasible to heat and light the world with atomic energy and that one ton of uranium will heat and light the United States for 2 years.

And we might not be hearing, as I have, that the scientists think it entirely possible that the atomic energy loosed in the bomb blurst may affect the genetic powers of persons in the vicinity, producing perhaps supermen in the region of Nagasaki—maybe, indeed, producing a whole lot of men with the courage of Bob Hutchins.

---

## Renunciation of Anti-Semitism by Robert Ley

EXTENSION OF REMARKS

OF

## HON. HERMAN P. KOPPLEMANN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, October 31, 1945*

Mr. KOPPLEMANN. Mr. Speaker, under leave to extend my remarks, I include in the Appendix of the CONGRESSIONAL RECORD Robert Ley's amazing renunciation of anti-Semitism and the Washington Post editorial commenting on it. The astounding mea culpa confession of this architect of nazism in its vilest form, his call to his people to cleanse their mental and spiritual house, gave hope to the world that there is decency in the basest of human beings which is bound to find expression. It is unfortunate that the man did not have the courage to present himself at the bar of world justice and back up his dying message by repeated exhortation to the Germans that murderous intolerance bent on wiping out minority groups has always proven the downfall of a people and always will, because it violates man's better instincts nourished by the teachings of true religion and devotion to God's word. It would be well for Americans who harbor in their hearts intolerance for minorities in this country to pay solemn heed to Ley's dying message.

The article and editorial follow:

ANTI-SEMITISM NAZI'S MISTAKE, LEY ADMITS IN LAST TESTAMENT

Do I have a right to appeal to the German people after its singular catastrophe? I have been one of the responsible men, I was with Hitler in the good old days, during the fulfillment of our plans and hopes, and I want to be with him now in the black days.

I have learned to see in everything the hand of Providence. God led me in whatever I did. He led me up and now lets me fall. I am torturing myself to find the reason for the downfall, and this is the result of my contemplations:

We have forsaken God, and therefore we were forsaken by God.

We put our human volition in the place of His godly grace. In anti-Semitism we violated a basic commandment of His creation.

DISTORTED BY ANTI-SEMITISM

Anti-Semitism distorted our outlook, and we made grave errors. It is hard to admit mistakes, but the whole existence of our people is in question; we Nazis must have the courage to rid ourselves of anti-Semitism. We have to declare to the youth that it was a mistake.

The youth will not believe our opponents. Men may fail, parties and systems disappear, but the people must remain and live.

In order to succeed, we have to go all the way to tolerate the new. This is not enough. We have to eradicate distrust. We have to meet the Jews with open hearts and on a clear basis. We have to clean up our mutual relationship. A complete reconciliation has to be found, and a new modus vivendi. This doctrinal (Weltans-Chaulich) clarification has the priority over any economic or cultural reconstruction. We have to have the courage to do this.

For the lack of any other ideal, youth will stick to national socialism. The deported Jews will not be able to return carefree, they will find themselves opposed by a phalanx of defense and hate, the occupation troops will leave some day, new political constellations might give Germany new chances. Nothing is more unstable than peace agreements. Then anti-Semitism would flame up anew and rage much worse than ever before.

TRIALS WON'T SOLVE PROBLEM

It is unwise to believe it possible to exterminate anti-Semitism with histronic trials no difference how skillfully they are conducted. On the contrary, one will achieve the opposite, one will steer world opinion to a problem which can only maintain itself in dark, unless one has courage to solve Jewish problem by public discussions and enlightenment. One cannot stop the excited sea at once, but has to let her calm down gradually. Otherwise terrible repercussions will result.

German anti-Semites have taken the first step. They have to take the second step, too. Jewry has to reconcile herself with Germany and vice versa, for the sake of world peace and of world welfare, not an armistice, but a peace built on logic, knowledge, clear rights and obligations is necessary. The Jew should make a friend out of Germany and Germany a friend out of the Jew. If humanity is not able to control again the stirred-up emotions, she will perish through them.

The emotions have to be subdued at the starting point, from Germany. They have to be calmed down. Here the outspoken anti-Semites have become the first fighters for the new and yet old idea. They have to find the courage to conquer themselves, they have to show their people the way. God has taught me that in my cell in Nuernberg, and now my plan:

A. First, the creation of a board of Jews and anti-Semites, honestly prepared to travel this road and to find the conditions under which Jews and Germans can live together.

B. Executive committee, again Jews and Germans together, to execute the agreed-upon arrangements.

C. An organization for reeducation and propaganda to disseminate these ideas down to the smallest village.

For the moment I have no more to say. Otherwise my plan will become obscure. Doubtless there is still plenty to be talked over.

German people: Many of you might think me mad or a traitor. They do not realize that I am not admitting a mistake, but that I am merely coming to a logical conclusion. They cannot perceive that one must have been an anti-Semitic (sic) to come to this further step of knowledge. This is why only you, my German people, may dare to invite the Jews to make their future home with you. Is it not strange that nearly all Jews all over the world understand German? Hate and love lie close together.

JEWS COULD HELP REBUILD

Who will help you rebuild, my German people? It is a question of confidence. The prerequisite is and remains the solution to the Jewish problem in Germany. German people: Be a good family father, make an honest balance. You have been totally defeated, yet you possess a marvelous logic, idea, and are a great people. God shows you the way. Learn from your downfall. Reconcile yourself with the Jew. Invite him to make his home with you.

Is the Jew prepared to go along? If he is intelligent—yes. If not, then I cannot change that. At least I have done my duty by showing humanity the road. God showed me. If the Jews refuse my plan, then the depleted world catastrophe will take its inevitable course.

Should Germany solve the Jewish problem, and grow healthy through it, the whole world would benefit from it. This most burning problem of the whole world would be solved once and for all. Zionism in its present form is not a permanent solution. Germany is ripe to solve the Jewish problem.

LEY SAYS PLAN IS BOLD

I know my plan is bold, almost audacious. If one should ask me what the Fuehrer would have said, my answer would be: "This singular genius, a commander in chief like Hannibal, would not want Germany to perish as Carthage perished."

All I can say is that I dared it, I put it now into the hands of God, from whom I believe I have received the inspiration and revelation.

Only a few weeks ago, I did not dare to touch the subject of anti-Semitism. Today it is entirely clear to me. I am possessed with this idea, now God has to help me to bring my thoughts to the appropriate place. I have confidence in Him. He will find the right way.

[From the Washington Post]

THE REAL SURRENDER

Doenitz surrendered Germany's arms. Robert Ley has surrendered something more vital and more significant—the ideology which led the German people to aggression and to disaster. Arms can be wrested from a beaten people; ideas are less easy to take away. Yet the ideas which dominated the Germans, which diverted them from the cultural growth of their fellow men and turned them back to the discarded savageries of a primitive past—these, and not the German people, are our mortal enemies. And it is these that must be uprooted, extinguished, taken away from the life of Germany, before that nation can once more resume its proper partnership in the society of mankind.

Robert Ley has left as a legacy to his people the renunciation of Nazi ideology. His conversion is not to be dismissed because it came within the shadow of death; it was motivated by no hope of earthly salvation. There is a ring of conviction, of the fanaticism characteristic of the Nazi mind, in the remorse expressed by this unhappy culprit just before he put an end to his own misguided life. It does not follow, of course, that he spoke for his people, simply because he spoke to them. The signs of genuine remorse are pitifully scarce among the Germans. And it remains to be seen whether his legacy will be accepted by them. But it is nonetheless significant in spite of this uncertainty. Ley was a leader—and moreover an intellectual leader of considerable stature. His recantation may be at once portentous and of great influence. It carries the impact of a revelation. And it points the inescapable and only way toward the spiritual regeneration of his countrymen.

Robert Ley has rediscovered the Christianity which is not a theological dogma but a way of life. He has rediscovered the meaning of conscience. "We have forsaken God," he wrote, "and therefore we were forsaken by God. We put our human volition in the place of His godly grace. In anti-Semitism we violated a basic commandment of His creation."

Here is a negation of the whole arrogant doctrine of supremacy which was the nexus of the Nazi cult. Anti-Semitism was merely one of the earliest and ugliest manifestations of the disease which warped and subverted the German mind. Its terrible consequences there afford a tragic lesson for all peoples among whom the virus may exist.

It was this same Robert Ley who wrote but a few years ago: "Only what Adolf Hitler, our Fuehrer, commands, allows, or does not allow is our conscience. We have no understanding for him who hides behind an anonymous conscience, behind God, whom everybody conceives according to his own wishes." And now Robert Ley has learned that the individual human spirit is, after all, supreme; that there can be no denial of individual responsibility. It was the surrender of self to the dictates of an earthly leader that was the undoing of the German people. It is the reassertion of the sovereign dignity and worth of the individual human conscience which alone will restore Germans to fellowship among men.

Ley said a shrewd thing in his testament: "It is unwise to believe it possible to exterminate anti-Semitism with histrionic trials, no matter how skillfully they are conducted. On the contrary, one will achieve the opposite * * * unless one has courage to solve the Jewish problem by public discussions and enlightenment." There is a lesson and a legacy in this for the conquerors. The Germans can be helped; but in the end they must work out their own regeneration. Ley's testament should be blazoned on all the lintels of their doorposts. Its words are words which have welled up from one of their own, from among themselves. They must not merely learn it, but must come to understand it, and to accept it, and to live by it. This will be their real surrender. And only when they are thus disarmed and re-created will our own victory be real.

## Labor Difficulties of the Motor Express Industry in Mississippi

EXTENSION OF REMARKS

OF

### HON. WILLIAM M. COLMER

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, October 31, 1945*

Mr. COLMER. Mr. Speaker, under leave to extend my remarks, I enclose herewith a letter from Mr. M. W. West, Laurel, Miss., a returned veteran of my congressional district. This man is both a veteran and a small businessman, both of whom are the subjects of much lip service here on the floor. I think his letter will prove most interesting to those who really want to help the small businessman and the returned serviceman.

His letter follows:

WEST BROS. MOTOR EXPRESS,
*Laurel, Miss., October 5, 1945.*

Hon. BILL COLMER,
*House of Representatives,*
*Washington, D. C.*

DEAR SIR: When I was drafted for the Army I was told that I was being drafted to save the world from dictatorship. However, on being discharged last week after 18 months under fire in Europe, I go to New Orleans to rest for 2 weeks and the first sight that reached my eyes when I stepped out of my car in front of my New Orleans office was a picket with a sign stating that West Bros. Motor Express was unfair to the teamster union.

I immediately went to work talking to my men and was informed by them that they were not interested in paying anyone for the privilege of working, and that the War Labor Board had held a strike vote for the entire system and that the vote had been 97 percent against striking. As 90 percent of our employees live in Mississippi, I asked all of them what they thought of West Bros. Motor Express signing a contract with a union and was informed by 100 percent of them that if I signed a contract with any union that they would not work for us as they did not want to pay for the privilege of working.

I next contacted the business agent of the local union in New Orleans and was informed by him that unless I signed a contract with him that I could forget about operating in New Orleans. This contract called for all of my employees to belong to his union or else discharge them. The contract he wanted me to sign has broke every truck line that has signed it owing to the fact that our rates are lower than they were in 1942 and as we cannot carry more than 20,000 pounds in Mississippi and are at present 6 percent higher than the railroad.

Before each battle I went into, I was given a pep talk to the effect that we were fighting to save the world from dictatorship, and after doing this for 18 months and during this time seeing a large number of my best friends killed, a great number of them wounded and crippled for life, I am brought back home disarmed and then told by the War Labor Board and several lawyers that unless I sign a contract forcing all of my employees against their will to pay a party who cannot even speak good English for the privilege of working, who hire men to follow my trucks and tell the shippers that if

they ship by my trucks that he will see that they are caused plenty of trouble, it seems that I have been fighting in vain.

I cannot believe that while I was dodging bullets and living in mud, seeing my buddies killed, that the lawmakers surrendered this country to a bunch of racketeers with a penitentiary record and gave them a Federal license to levy a tribute on all who wanted to work.

I would appreciate your advising me how it is possible to operate my business without having to sign a contract against my employees' will forcing them to pay tribute for the privelege as it was my intention to provide jobs for over 50 of my buddies who went through hell with me and I believe that you will agree with me that they have paid a high enough price at present without me signing a contract forcing them to pay tribute.

I am not asking for sympathy or any help, only for the chance to make a living and provide a job for anyone who might want it without paying tribute.

If you wish to check my service record it is Sgt. Macon W. West, ASN 34279399, Seventy-ninth Division, Three Hundred and Fifteenth Infantry, Company H.

I would appreciate an early reply as to how to conduct this business. Do not think that I am against my employees belonging to any union they wish but I want them to be able to work if they want to without belonging to any union.

Respectively yours,

M. W. WEST.

## The Chickens Come Home to Roost

EXTENSION OF REMARKS
OF
### HON. NOAH M. MASON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, October 31, 1945*

Mr. MASON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Chicago Daily Tribune of October 26, 1945:

THE CHICKENS COME HOME TO ROOST

General Motors Corp. concedes fatalistically that its 325,000 employees are almost certain to be led out on strike by the CIO United Automobile Workers. The company's statement is that "in such strike votes the vote is usually overwhelmingly in favor of the strike," although most workers don't want to strike and hope that the mere threat of a walkout will bring the employer to terms.

General Motors prophesies that the strike may be of long duration, and its only request is that its employees refrain from violence and cause no damage to plants and equipment with which the workers must earn their living when the strike is finally brought to an end.

The labor dispute which is coming to a head in the Nation's largest automotive enterprise is not an isolated instance of friction between capital and labor. The Nation is torn by labor strife. It would be hard to find a major industry which is not facing trouble.

While all of this is happening the Truman administration is sunk in hopeless apathy. President Truman's abilities are being subjected to stresses which would tax the capacities of a far more resourceful and competent man. So far he has manifested little ability to cope with them. If his administration proves a failure he cannot be held altogether, or even primarily, to blame. He is the inheritor of a veritable Pandora's box of troubles, both on the domestic front and in the field of international affairs. The late President Roosevelt, who was the author of the difficulties, would be no better equipped to avoid the inevitable smash which was being stored up by the policies he created.

It was Mr. Roosevelt who, by establishing lopsided favoritism in the regulation of labor disputes, built up a hierarchy of union leaders who have grown too big for the country. It was Mr. Roosevelt who, by encouraging such leadership to press their demands ever more relentlessly, misled millions of workingmen into the belief that they were entitled to "rights" which are now approaching such dimensions that the national economy cannot sustain them. It was Mr. Roosevelt whose bland promises, made in the expectation of votes, encouraged the notion that the employer is always wrong. It was the Roosevelt price regulations which now leave producers with the option of operating at a loss if they assent to wage increases which Mr. Roosevelt was willing to require employers to shell out.

If these problems are too big for Mr. Truman, what can one say of his heritage from Mr. Roosevelt in foreign relations? Mr. Roosevelt was not only willing to put the affairs of the United States in an unholy mess, but he insured that the world would enter a period of anarchy and trouble without precedent in history. His decisions at Yalta, which Mr. Truman felt bound to follow at Potsdam, have reduced Europe to misery. Unworkable economic dispositions, starvation, enslavement, and political tyranny are his legacy to hundreds of millions of Europeans.

Mr. Roosevelt made one concession after another to Russia, and not one of the resulting injustices can be recalled. He stored up more trouble for his successor by encouraging every nation in the world to believe that America's wealth and resources were inexhaustible, and that they were to be had for the asking. He is responsible for the belief prevalent in Britain that it is somehow our obligation to carry the empire indefinitely on a remittance basis. The presence of the Keynes mission in Washington today to press its request for $6,000,000,000 is attributable to Mr. Roosevelt.

In all these actions it is easier to perceive expediency, vanity, and the personal ambition of attaining a place in history than it is to discover wisdom or a regard for morality. Europeans are the victims of some of these decisions, colonial peoples of others. But Americans are the victims of all of them. The strife and class conflict at home are but part of the legacy. The hate and resentment of millions of foreigners who have suffered as a consequence of Mr. Roosevelt's intervention await their fulfillment on some future day of reprisal. The chickens hatched during 12 years are coming home to roost.

## Should Price Control Be Retained?

EXTENSION OF REMARKS
OF
### HON. HOWARD H. BUFFETT
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, October 31, 1945*

Mr. BUFFETT. Mr. Speaker, the well-being of the people of America depends upon the intelligence and integrity of the administration in not hamstringing economic recovery.

On scientific problems in engineering, physics, and chemistry, Government heeds the studies of competent students and research experts. The atomic bomb was the work of such scientists, carefully discovering and implementing the natural laws involved.

Our economic welfare is governed by similar natural laws, but will the administration listen to those whose economic studies have qualified them to speak with authority? Most enlightening is the recent study by Harold G. Moulton and Karl T. Schlotterbeck entitled "Should Price Control Be Retained?" published by the Brookings Institution last month:

Will the administration have the courage to be guided by the findings of these eminent scientists?

Or will the President, instead, be persuaded by his White House advisers to follow the primrose path so eloquently described by Dr. R. S. Tucker:

"When a private businessman makes a mistake he either finds it out pretty quickly and corrects it, or else the sheriff and the receiver in bankruptcy corrects it for him. But when a governmental planner makes a mistake all he has to do is to persuade the voters that his critics are scoundrels, and then he can go on repeating his mistakes for another term of years, and paying for them with other people's money; and if he uses that money to lengthen his term or to increase his power, can he be blamed for it? That is what dictators and tyrants have done regularly since the dawn of history."

The following paragraphs constitute the summary of the Brookings report on prices:

The inflation outlook as a whole appears to involve some restraining factors and some danger tendencies.

The favorable elements in the situation are as follows:

1. Agricultural production and supply are, or shortly will be, so large in all except a few lines that extensive price declines will occur, unless prices are artificially supported at present levels. A fall to the present legal support level at 90 percent of parity would mean a drop of approximately 20 percent.

2. Mineral raw materials, with few exceptions, will be abundant. Supplies on hand plus potential production are adequate to meet any prospective demands.

With large supplies of raw materials available, the danger of inventory speculation is slight. All that is required is to make public at frequent intervals full information as to the supply situation. The Government is also in a position to check any speculative tendency by releasing some of its own accumulated supplies.

With abundant food supplies in prospect, there would seem to be little reason for food profiteering. Again, the Government is in a position to check speculative buying by releasing Government supplies. The supply and price situation in foodstuffs is, of course, of primary importance from the standpoint of the cost of living.

3. Industrial capacity in general is large enough to permit production schedules very much above the levels of 1940–41. Supplies of a wide range of semifinished and finished products can thus be increased very rapidly. In most lines there would appear to be no occasion for consumer scrambling for short supplies.

The principal danger spots are as follows:

1. There are acute shortages in the durable goods field which might encourage profiteering. This situation, however, is safeguarded by the fact that as much as 80 percent of the production is in the hands of some 20 companies, which are subject to strong competition and which have long had low-price policies.

2. There is a powerful movement for higher wage rates. If wage rates generally are increased with a view to maintaining wartime purchasing power after work schedules have been reduced, costs would be increased pretty

much all along the line in the field of industrial production. Or if they are increased in special lines, a whole series of readjustments in the interrelated cost and price structure will become necessary. The major inflationary danger at the present time lies in the possibility of rapid wage advances.

In summary, this analysis has established the following points:

1. The rapid advance in prices in 1919–20 was rooted in the fear of shortages of raw materials and foodstuffs, which led to speculative buying and inventory accumulation on a vast scale. In the acute stage, we had the familiar spiral of rising prices, rising costs, and again rising prices. Consumer goods prices rose less than the prices of producer goods, and we eventually had a consumers' strike against the high cost of living.

2. Today we are faced with surpluses rather than shortages of most raw materials and food prodcts. With the information as to supplies now available, businessmen have little reason to engage in speculative buying of raw material inventories. Moreover, the Government is in a position to check inventory speculation, whether in foodstuffs or raw materials, by releasing supplies now controlled by the services and the Surplus Property Board.

3. The acute shortages are confined chiefly to the field of durable consumer goods, where 80 percent of the production is accounted for by 20 companies which have consistently exemplified the principle of mass production, low unit costs, and low prices to consumers.

4. War experience in this and other countries has demonstrated that the control of wage rates, the most important element in costs, is indispensable to price stabilization. In the light of the newly announced policy of relaxing wage controls and increasing wage rates in order to sustain purchasing power, firm control over costs, and hence over prices, has been surrendered.

5. The transition from war to peace affects the cost-price situation quite differently in the various divisions of industry. Accordingly, the whole price structure has to be revised. Moreover, since rising costs in any particular industry will affect costs in related industries, continuous review and readjustment of prices is necessary to meet the needs of a rapidly changing situation. The time required for any administrative agency to make wise and equitable price readjustments is so great that the expansion of production and employment would be seriously impeded.

6. Without effective control over wage costs, all that the OPA can hope to accomplish is to retard price advances by delays in granting price relief or by applying "the squeeze" somewhere along the line.

7. The announced policy of requiring distributors to absorb increased costs at the manufacturing level greatly magnifies the problem of price control at the retail end. War experience indicates that rationing is essential to the control of retail prices in lines where there are acute shortages. But it is apparently recognized that a rationing system for durable-consumer goods in peacetime would not be tolerated.

8. The principal argument advanced for the continuation of price control is that it is necessary to prevent the excess purchasing power from pulling up prices where shortages exist. We have shown that if the price stabilization program were successful, the excess purchasing power would not have disappeared; hence it would be necessary to continue the price control indefinitely. Similarly, we have shown that if prices are adjusted upward because of wage or other cost increases, there is no foreseeable stopping place; price control would have to be retained as long as inflationary pressures from the cost side existed.

In the light of this analysis we reach the conclusion that, beyond the setting of initial prices for products whose manufacture was suspended during the war, the continuation of price control is impracticable. Without wage stabilization and without rationing, the OPA is not in any case in a position to hold the price line. And the process of continuously reviewing and readjusting a multitude of prices to meet the needs of a rapidly changing situation would be so time-consuming that the expansion of production and employment would inevitably be retarded.

If the President and the administration are truly trying to stop inflation, and not merely "conceal inflation" a courageous stand against spiraling costs must come about immediately.

## Protect Labor's Power

EXTENSION OF REMARKS
OF
### HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, October 31, 1945*

Mr. GATHINGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Memphis Press-Scimitar:

PROTECT LABOR'S POWER

In days when labor was organized weakly and ineffectively, if at all, the Scripps-Howard newspapers championed the principle that labor should be organized strongly and effectively.

We believed then that workers, for the country's good as well as for their own, should have power to deal on equal terms with powerful employers. We believe that just as firmly now.

Another principle in which we have always believed, and which we have consistently championed, is that organized power in any hands needs checks and balances against its abuse.

A sound and deep instinct in the American people has impelled them, time after time, to demand that concentrated power be controlled and required to live up to its public responsibilities. This has been the case with the railroads, with the banks, with the stock exchanges, with the utilities, with other great forces in our national life.

It will be so, we think, with organized labor.

No one should be surprised—and we are not—to see organized labor abuse the power which, with Government's help, it has now attained.

The recent demonstrations that headstrong union officers or undisciplined union members can deprive the Nation of coal or oil, shut off telephones from coast to coast, paralyze essential services in great cities, obstruct the industrial reconversion on which so many hopes depend—these are alarming. They are not surprising. For the tendency to abuse unrestrained power is one of the commonest of human failings.

Nor are we surprised to find labor leaders desperately resisting proposals for legal restraints on organized labor's power. They are pursuing a normal, human course. It is presumably too much to expect of them clearer vision than was displayed in previous times by railroad presidents, bankers, stock-exchange officials, and utility magnates. All of these desperately resisted legal restraints on their power, though few of them would now go back, if they could, to conditions under which liberty was perverted into license.

But it is reasonable to expect Congress to legislate in the public interest where labor is concerned, as it has legislated where other powerful forces were concerned.

No organized group should be free, any more than an individual is free, from obligation to fulfill a contract entered into in good faith, or from penalty for violating such a contract.

No organized group should be free, any more than an individual is free, to make reckless use of a dangerous weapon—and in our complex economy the right to strike is a deadly, dangerous weapon—without regard for the safety of innocent bystanders.

No organized group should be free to employ antitrust law immunities, granted for protection of its legitimate activities, as a cloak for predatory and antisocial practices.

No organized group whose activities deeply affect the public interest should be free to conduct its own affairs by undemocratic methods.

Seeing no evidence that organized labor will restrain its own tendency to abuse of power, we believe that restraints will be imposed by legislation. We hope the legislation will be wise, so that labor's power may be preserved for proper use.

## No Starvation Wages

EXTENSION OF REMARKS
OF
### HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Friday, October 19, 1945*

Mr. HOFFMAN. Mr. Speaker, there is now pending before the Committee on Labor, of which it is my privilege to be a member, proposed legislation to require everyone hiring another to pay a minimum wage of at least 65 cents an hour, to be increased later to 75 cents an hour.

It is only natural that those who hire others want to do so as cheaply as possible, just as those who work for others wish to get as much as they can for their services. There are a few employers who would pay even less than what might be called a decent wage, just as there are employees who would force an employer to comply with their demands, even though they knew it would break him financially.

Every sensible employer knows that an employee should be paid enough so that he has sufficient to eat, to clothe himself, have adequate shelter and fuel, something for a rainy day and for the education of his children. Every employee knows an employer must have a profit or he cannot provide jobs. There are few, if any, employers who either attempt or desire to operate a "sweat shop," though if we listen to the professional breeders of discontent we might think otherwise.

Practically all the people in this country, whether they be workers or hirers of workers, employees or employers, have a laudable desire to acquire more than they have. That is as it should be. Without ambition, we would have stagnation; then, deterioration, until we would all descend to a hand-to-mouth existence.

Under our system of government, the barefoot boy, with little more than his cheek of tan, has had and now has opportunity to reach the White House. Lincoln was the greatest, Truman is the latest, to prove conclusively that this—yes, this land in which you and live

now—today—is the land of opportunity; all the preachments of the calamity howlers; all the detractors of our Constitution, of our system of government; all the creators of abuse against businessmen, industrialists, those who have property, to the contrary notwithstanding. Henry Ford and others have demonstrated that here it is possible to acquire millions, do it honestly, pay a fair wage, give the public more for its dollar.

Not only practical thinking, but kindliness and consideration for the welfare of others, inspires our desire to see that the less fortunate, the less energetic, those less qualified to protect themselves, do not suffer; impels us to strive for a minimum wage adequate to their need. Unfortunately for the attainment of an equal degree of so-called prosperity, while our Constitution endeavors to endow each with equality of opportunity, we do not all come into this world equal in either ability, willingness to strive, to sacrifice, or with the same objectives.

Few find any fault with the theory of a minimum wage. It is only when the attempt to put it into practice is made that difficulty arises. A minimum wage law compels everyone, with a very few exceptions, who hires another to pay the fixed minimum wage, regardless of the ability of the one hired to perform an amount of work equal in value to the wage. Many people, because of physical or mental defects, cannot earn a minimum wage, and, if less cannot be paid, they will be denied employment and so will add to the public burden.

Secretary of Labor Schwellenbach, appearing before the committee this week in support of a minimum wage of 65 cents per hour, answering my questions, stated quite frankly that the purposes of the legislation was to enable every American worker to enjoy an American standard of living. My definition of the American standard of living, he said, was broader than his. Under my definition, it means not only sufficient food, clothing, and shelter to enable a man to live in comfort, but to marry, obtain a home, rear a family, educate his children and provide for old-age security.

The Secretary admitted that all workers were not capable of doing work of equal value; that some could earn far more than the minimum wage, while others could not earn that amount. Employers can, in the long run, pay only for what is produced. The Secretary agreed to the proposition that, if the hirer of workers was required by law to pay not less than a certain sum per hour, the worker hired should be required to render a service which was productively worth that amount. If the employer must pay 65 cents per hour, every individual who receives that 65 cents per hour should be required to contribute 65 cents worth of productivity—work, just as, when we go to the market and pay 50 cents for meat, flour, or any other commodity, we should get 50 cents worth of meat, flour, or any other commodity. But the Secretary saw no way of putting such a requirement into effect. He thought employers should be required to pay a minimum wage, but that employees could not be required to make adequate return; that is, render a service productively worth the minimum wage.

It is axiomatic that the over-all wage any employer can pay—from the man who hires but one to the corporation which employs thousands—is limited by the price of what is sold. Because of that fact and because of the varying degrees of skill and desire to produce which exist among workers, the question of whether a minimum wage, applying to all, and the amount thereof, should be set by the Government, without any attempt to fix the volume of work given in return, is one difficult of solution.

## David Lawrence, Long-Time Observer of the Washington Scene, Gives Thought-Provoking Report

EXTENSION OF REMARKS

OF

### HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, October 31, 1945*

Mr. RANDOLPH. Mr. Speaker, among Capital newsmen, David Lawrence writes with a fine background of experience. We may not agree with his findings on all occasions, but, being human, I feel the Congress Members will appreciate his following column from today's Washington Evening Star:

WRITER HAILS CONGRESS AFTER 35-YEAR STUDY—SAYS NATION HAS ABIDING FAITH IN REPRESENTATIVE SYSTEM

(By David Lawrence)

Thirty-five years ago today this correspondent came to the National Capital to write about public affairs. Being 21 years of age and just out of college, it was natural, perhaps, that a bit of cynicism about government should at first have crept into his mind.

Today, in recollection over the years, the one thing that stands out more clearly than any other is an abiding faith in the representative system of government. The American people like to criticize their institutions and even go so far at times as to satirize their public men, but a close observation of the trends of opinion and of the ups and downs of legislative controversies over the 35 years leads to the conclusion that the Government is responsive to public desires. Congress is in reality far more representative of the public wish than is generally believed even by the people themselves.

On many an occasion it has seemed to the writer that the collective thinking of Congress has been wrong, that its delays or postponements have disregarded the public need or demand. Allowing for some instances in which all the facts have not been available to Congress at the time or public thought has failed to crystallize clearly, it is this correspondent's belief that the votes in Congress have turned out only on rare occasions to be at variance with the currents of public opinion outside of Washington.

FEEL BACK-HOME ATTITUDE

There always will be a question as to whether Congress should guide or be guided by public opinion. But however commendable it may be to encourage legislators to take the leadership in public thought—in educating their constituents—it has been my impression that Senators and Representatives do earnestly endeavor to interpet the desires of the people. To the extent that these interpretations constitute sometimes an anticipation of the citizen's wishes ,it is often true that Senators and Representatives feel an instinctive reaction. Tney frequently feel the back-home attitude on particular measures before the people express themselves.

Representative government is, of course, a cumbersome thing. Many improvements in forms and procedures remain to be made as population grows and the responsibility of government increases. But despite the criticisms of government frequently heard, despite the denunciation of governmental bureaucrats and their occasional abuses of power, it is a fact that the citizens demand of government far more than government is able to give them in the way of service.

Public officials, it has seemed to me, are in the main honest. The unsung public servants are in the administrative categories. Their fidelity to the public interest as well as their incorruptibility is unrivaled anywhere in the world.

Like all institutions, government has its weak spots. Ambitious and unscrupulous men sometimes acquire authority and exercise it for purposes of personal prestige or to the detriment of the governmental process. But these are the exception rather than the rule. The periods of abuse of power are relatively short. The cycle of good administration inevitably emerges out of ineptitude or mistaken zeal.

HEALTHY AIR OF INQUIRY

The most important factor in the operation of our representative system is the power of Congress to enter any hidden place and expose to the healthy air of inquiry such facts as are pertinent to the public interest. The investigating committees have at times overreached themselves, but a corrective public opinion has usually put a stop to such abuse. On the whole—irritating though it may be—the constitutional immunity of Members of Congress to lawsuit for what they say on the floor of the Senate or House or in committee has been an advantage rather than a disadvantage to representative government.

Looking back over the years, this writer's respect for men in public office has increased rather than diminished, and above all there has grown up in my mind an unequivocal conviction that the freedom of the press is the real safeguard to representative government. Minority views sometimes become majority views in the court of public opinion. Irresponsibility of utterance is to be deplored, but even irresponsibility often becomes the forerunner of responsibility. The evolution of press criticism has been toward greater and greater responsibility, and, in the last analysis, an informed opinion is the best assurance of the continuance of representative government.

This is an anniversary on which the writer may appear to some as optimistic about the quality of representative government in America, but the optimism is born of a repeated experience which has proved that legislative proposals and laws have rarely been as bad as their critics said they were and often better than their sponsors ever ventured to claim.

## Navy Day Address of Hon. Robert Hale, of Maine

EXTENSION OF REMARKS

OF

### HON. MARGARET CHASE SMITH

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, October 31, 1945*

Mrs. SMITH of Maine. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address

of Hon. ROBERT HALE, Member of Congress, at the Navy Day banquet held at Portland, Maine, October 27, 1945:

It is a satisfaction to be able to be here with you on Navy Day. I want to take this occasion to express my gratitude for the kindness of Secretary Forrestal who is a very good friend to the members of the Maine delegation. He took pains to get us the cruiser *Portland* and the other ships now anchored in our harbor for Navy Day, and he also sent us down here in his personal plane—no small favor when time is valuable and space in commercial transport, air or rail, is at a premium.

Washington's mind is today very much on questions of national security and national defense. It was only 2 weeks ago yesterday that Admiral Nimitz came before the Congress reminding us that the Japanese army and the Japanese air force were more powerful on August 14 last than on December 7, 1941. Japan surrendered because our Navy had carried the war to their four islands, had sunk practically all the Japanese Navy and most of the Japanese merchant marine, had blockaded their home islands, and brought planes, which with or without the fantastic new bomb, assured the destruction of all their cities.

Then only last Tuesday, President Truman was before a joint session of our two bodies, advocating compulsory military training. I expect to discuss this subject at some length in the near future, but I want to say here and now that I am very much in sympathy with the President's recommendations.

No informed person can overlook the fact that we were within a hair's breadth of defeat in this war, and within only about two hairs' breadths of defeat in the last. I am not willing to take any avoidable chance of defeat in another war, and I believe that compulsory military training would help to safeguard our position. We shall not have much time to prepare the next time. I have some very good personal friends in the Office of Scientific Research and Development. What they predict in the way of new weapons is almost too lurid to discuss. The only defense to these weapons is to land in the hostile country and take possession of it.

I appeal to you. Let us not in the hour of victory be soft with ourselves. We all want the boys home, but let us remember that our opinions are respected in Europe and in Asia very much in the proportion of our armed forces on those continents. Our job now is not so much to rush back to a fancied "normalcy," as to perpetuate peace for our posterity and to keep America free. We shall do this only by being very realistic and very resolute.

## Statement of Secretary Vinson

EXTENSION OF REMARKS
OF
**HON. WRIGHT PATMAN**
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, October 31, 1945*

Mr. PATMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement of Secretary Vinson before the House Committee on Expenditures in the Executive Departments on the full employment bill, Wednesday, October 31, 1945:

The war has taught us many things about our economy.

It showed that when the people of the United States set their minds on doing a big job that job will be done, and the whole resources of this great country will be mobilized for its accomplishment. Winning the war was, obviously, all important. So we did our best to call into service every human and material resource which the country had at its command and put it to use either directly for the war effort or for the maintenance of the civilian economy.

The war also revealed the tremendous productivity inherent in our economy. Our gross national product increased from $89,600,000,000 in 1939 to $199,000,000,000 in 1944. Some of this, of course, represented an increase in prices; but the product of the country, expressed in real terms, increased by about 75 percent.

We learned other important facts about our economy too, in winning the war. We discovered that as a consequence of our all-out effort, unemployment disappeared. There were more employment opportunities than people seeking work. The job sought the man, rather than the man the job.

We discovered that as a result of the effective use of our resources during the wartime period, the real standard of living of the civilian population was higher in 1944 than it had been before the war, despite the fact that nearly one-half of our production was for war purposes.

The No. 1 problem which confronts the people of the United States here at home right now is how to apply the economic lessons of the war to the peace. Now at first glance, it might appear that there would be hopeless disagreement in this country on how this can be done. But a more careful study will convince thoughtful men that there are important fundamentals upon which all can agree.

In fact, there are two fundamentals upon which the American people already are agreed. The first is that our economic problems must be solved within our system of free enterprise. The second is that the most important of these problems is to maintain full employment.

Mass unemployment is the source of most of our social and economic evils; it is the greatest menace to economic security in this country. We cannot periodically condemn 10,000,000 unemployed to bear this burden. We cannot declare these men and women industrial surplus and dispose of them in that way. That is not the American way of doing things.

I do not subscribe to the pessimistic view that unemployment is inevitable and that any effort to prevent it is a threat to free enterprise. Our people want to keep the economic system under which this country achieved leadership. They know it offers the best hope of continued economic progress and higher standards of living. They will never abandon this system so long as they can cherish this hope. The only threat to free enterprise in this country can come from mass unemployment. Our task is to remove this threat by meeting the problem.

And, let me make this clear: Unemployment is not the fault of business. Businessmen do not want to stop production or to lay off men. They know that profits come from production. So long as they can find markets they are prepared to employ labor and to produce goods. It is only when the demand falls off, when goods cannot be sold, that they close down or reduce their force. Give American business the markets, the demand for the output, and we will witness a new miracle of production that will surpass everything we have seen before. Unemployment is not the fault of business. On the contrary, business like labor is the victim of depression.

It is equally clear that unemployment is not the responsibility of business. When demand falls off, businessmen have no alternative; they must cut production. If they persist in producing goods for which there are no markets, they will incur losses that may force bankruptcy. In general, when businessmen produce efficiently, when they sell at fair prices, and when they pay good wages, they have done all they can do and they are entitled to profits from production. Business cannot assume the responsibility on unemployment.

Now the fact is that somewhere there must be a responsibility on unemployment. There can be no vacuum, no void of responsibility on the most important domestic problem confronting the American people. When we face the issue we must admit that all of us have a responsibility to see that our economic system works, to see that there are opportunities for jobs for men and women willing and able to work. This is a responsibility of all the people, and we must look to the Government, acting for all the people, to meet this responsibility.

There is nothing revolutionary in recognizing this responsibility. In every deep depression the Government has found it necessary to deal with unemployment. In 1921, during the crisis of that year, President Harding called the Conference on Unemployment, which met under the chairmanship of Herbert Hoover. In 1931, in the midst of an even greater crisis, Congress passed the Employment Stabilization Act, establishing a board composed of the Secretary of the Treasury, the Secretary of Commerce, the Secretary of Agriculture, and the Secretary of Labor. The whole experience of the 1930's is concrete evidence that the Government must deal with the problem and that it cannot abdicate this responsibility.

During depression we are conscious of the need for Government action, but as soon as we have prosperity we seem to forget it. In 1928, in the midst of the great boom, Senator Wesley Jones, of Washington, introduced a bill for a reserve of public works to be constructed during depression. The bill was killed, according to the Senate committee report on S. 381, because it was deemed unwise to mention depression before a Presidential campaign. That same year Senator WAGNER introduced the employment stabilization bill. It was a bill to provide for the advanced planning and regulated construction of public works, for the stabilization of industry, and for aiding in the prevention of unemployment. This bill, which could have been so helpful when the crash came in 1929, lay dormant for three vital years. It was only in the midst of the deepest depression of our history, when it was too late to take measures that might have prevented the catastrophe, that we realized what should have been done. When the bill was finally passed in 1931, it was in emasculated form.

The Employment Stabilization Act did not provide for a comprehensive program on unemployment. It was not concerned with many types of measures that can be taken to prevent a great depression. It dealt exclusively with the planning and timing of public works as a means of providing employment during depression. It was enacted during a great crisis when public works could do no more than alleviate the mass unemployment that already existed. This could be done under the act, and this was done as far as possible.

As a matter of fact, John Garner put a bill through in 1932 authorizing expenditure of $2,200,000,000 for public works. This bill followed the principles established in the Employment Stabilization Act. The money was to be used only for the construction of public works previously approved by Congress or the Executive, except for $70,000,000 for post offices in the smaller communities. The bill was vetoed by President Hoover. In 1933 Congress passed another bill authorizing $3,300,000,000 for public works. The construction so authorized was undertaken through the PWA.

The Employment Stabilization Act never contemplated the submission of a National Budget with recommendations to deal with

prospective depressions. It only provided for plans to arrange the construction of public works in a manner which would assist in the stabilization of employment. The timing of public works is a useful part of a program for dealing with prospective unemployment. But by itself, it is entirely inadequate. Under any circumstances, it would not be possible to do anything now under this act, for these functions, which had been consolidated with those of the National Resources Planning Board, were abolished by Congress in 1943.

The full employment bill is a logical development of the act of 1931. It recognizes the continuing responsibility of Government to see that there are enough job opportunities. It provides for a National Budget that will show the amount of production necessary to maintain full employment, and it requires estimates to be made of the prospective demand for this production. Such a National Budget will be transmitted by the President to Congress each year and will be considered by a joint congressional committee which will report to the Senate and the House of Representatives its findings and recommendations with respect to the National Budget.

This procedure seems to me the commonsense and dollar-wise way to deal with the problem of unemployment—through prevention rather than through relief. The first step is to get the facts and place them before those who have the responsibility for dealing with the problem.

The argument has been made that if the National Budget calls attention to a prospective deficiency or excess of demand, depression or prosperity will start at once. The evidence does not bear out this view. We don't get prosperity or depression merely by predicting it. If we could, we would never have had the crisis of 1929 to 1933. Businessmen were assured time and time again that prosperity was just around the corner. Businessmen act on the prospects for demand for their products from their customers. When demand falls off they stop production. A National Budget that recognizes a prospective deficiency in opportunities for employment and carries recommendations for dealing with the problem can give increased confidence to businessmen to continue with their investment, their production, and their employment.

In spite of the oft-repeated statement that the Government cannot make accurate estimates of the type required by this bill, I want to go on record as stating that the Government is in a position to make reasonably good estimates. In dealing with the tax and savings program during the war we had to make estimates of prospective income and expenditure. From these estimates we developed a program to reduce and limit over-all expediture to the available supply of consumer goods. Nobody claims that the statistical data we now have are perfect. They can and will be improved under this bill. Estimates on the National Budget will be made after consultation with business on the basis of data provided by business.

I have seen some doubt cast as to the competence of the Government to prepare a national budget on the grounds that the Government has not done very well in estimating its expenditures and receipts. I should like to comment briefly on the receipts side of this criticism, since the estimate of receipts is a statutory responsibility of the Treasury Department. In the 6 years before the war, from 1935 to 1940, the average error between estimated and actual tax receipts averaged about 6 percent. In 4 of these 6 years, the error was 5 percent or less. Now this is not a bad record, because it is more difficult to estimate tax receipts than it is to forecast business conditions. We estimate tax receipts by starting with an estimate of business conditions. An error of 6 percent in tax receipts is probably comparable to an error of 3 percent on national income.

It is the estimate of national income and its components that is significant for purposes of the proposed National Budget. An error of 3 percent would represent a difference of not more than 1,500,000 jobs from the number actually employed. In dealing with the problem of preventing mass unemployment, an error of 3 percent could not impair the usefulness of the National Budget. In practice, the problem will not be the elimination of minor errors of estimate; the real problem will be to see whether a deficiency in demand is developing in the construction, equipment, and durable goods industries which generally precedes a great depression. The National Budget will be submitted annually, but quarterly reports will be made to Congress taking account of changing conditions.

The National Budget will compel the attention of Congress and the executive departments to the problem of employment. But it would be a serious mistake to assume that the submission of a budget can of itself prevent mass unemployment. The responsibility of the Government does not end there. The important thing is to take the positive steps that will facilitate and encourage an expansion of consumption and private investment whenever this becomes necessary to prevent a great depression.

There is no reason for assuming that the remedy that will be recommended, when a deficiency in employment opportunities appears, will be Government spending. There will be times when changes in our tax policy will be needed to help maintain employment and production. There will be times when changes in credit policy will be needed. There may be times, of course, when because of a decline in private construction, the proper remedy will be an expansion of public construction. We should be ready to proceed promptly with the construction of necessary and useful public works whenever there is a falling off in private construction.

This bill is not a spending bill. It does not authorize any expenditure. Whatever legislation may be recommended in the National Budget in connection with the maintenance of employment will go to Congress and will be subject to the same procedures as now. In fact there will be the additional opportunity of having the joint congressional committee on the National Budget give to the Congress its report on the policies that should guide Congress in dealing with legislation relating to the National Budget.

In addition to the specific criticisms of the bill which I have discussed, there are certain broad objections offered by some—and apparently believed by many more. I call these objections the Union League Club objections because they find their most enthusiastic supporters in the stuffy environs of the most exclusive clubs. But they deserve to be held up to critical and public analysis where their merits can be evaluated.

The most pervading of these Union League Club arguments is the defeatist attitude with respect to our economic system. Mr. William L. Kleitz, vice president of the Guaranty Trust Co. of New York City, for example, told the Senate Banking and Currency Committee that depressions are inevitable under the free-enterprise system. Such depressions, of course, will be only minor inconveniences to Mr. Kleitz. I should like to put myself on record as dissenting from the view that the free-enterprise system makes such periods of unemployment necessary for those less able to bear them. I have greater faith in the vigor of the free-enterprise system than that, and I know that you gentlemen have also.

It is a false dilemma which gives us the choice between full employment and a free society; and those who tell us that depressions are the price we pay for freedom, are doing no favor to the cause of freedom. The system of private enterprise has enabled the United States to outproduce every other country in the world, and to win this most destructive of all wars with a minimum loss of American lives and a maximum reliance on the products of industry. I am sure that the system of free enterprise will also enable us to win the peace, if its friends will stop insisting that it must produce depressions to realize its natural destiny.

The second of these Union League Club arguments is that a full-employment policy is expensive and that relief is cheaper. For example, Mr. Rufus Tucker, the chief economist of the General Motors Corp., told the Senate Banking and Currency Committee that the taxpayers "may (he said only 'may') have a moral obligation to keep any citizen from starvation," but that this obligation can often be fulfilled more cheaply in other ways than by providing jobs. I am sure that you will agree with me that this is an excessively narrow view of the problem. Ignoring altogether its callous disregard of the feelings of the unemployed, it errs even on the side of expense, for it treats only the symptoms of unemployment and makes no attempt to effect a cure. It is like the view taken by a doctor who prescribed that a poor patient should wear a truss all through his life because the doctor feels that an operation would be unduly expensive or bothersome.

Lastly, some of the club intellectuals believe that a pool of unemployed helps to keep labor in its place, and is conducive to the profitable operation of the enterprises with which they are connected. Naturally, these persons seldom express their opinions for the records.

In addition to the three broad currents of opposition to the full-employment bill which I have just mentioned, there are other persons whose opposition is based on the honest belief that the adoption of some policy or policies which they particularly advocate will result in the attainment of the objective of continuing full employment. To the extent that these people are right, there is room for the consideration and adoption of their policies within the broad framework of the full-employment bill.

Finally, I want to emphasize again that this bill is in complete accord with our system of free enterprise. It does not authorize the Government to operate any plants or factories or productive facilities. It does not authorize the use of any compulsory measures in determining where people are to be employed. Every businessman remains free to run his business as he always has. The Government's sole function is to exercise the necessary foresight in dealing with prospective developments that affect employment and to take such measures as are authorized by law to prevent a deficiency or excess in demand. The whole spirit of this legislation is not to coerce industry but to provide an environment in which industry can realize its enormous potentialities for production and employment.

The full employment bill makes no assumption with respect to the general character of our economic problems at any particular time. The bill specifically provides that the National Budget shall make recommendations for the control of inflation whenever this shall be necessary as well as recommendations for achieving and maintaining full employment. There is nothing inflationary in this bill.

Some opponents of this bill have leveled most of their attack on an alleged promise to provide every man and woman with a job. The bill does not do this. It merely recognizes the Government's responsibility to see that there are enough opportunities for productive work to employ all men and women willing and able to work. The chance to earn a living is so fundamental a human right that it cannot be denied by quibbling or by the equivocal use of words. In a

modern industrial society the opportunity to work is the very basis of the inalienable and God-given rights of life, liberty, and the pursuit of happiness.

There is no class of sectional interest in this bill. It is truly a national bill to promote the general welfare by protecting the national economy. Of course, it is in the interest of labor to have an adequate demand for our production so that there will be sufficient jobs for all men and women willing and able to work. But it is no less in the interest of agriculture and industry. The farmers of this country know that unemployment in American industry means low prices and the accumulation of surplus crops. They know that a sound postwar farm program must start with plenty of jobs and good wages in industry so that our workers can consume the foods and materials which our farmers can produce in abundance and businessmen know what depression means to them—reduced output, losses and even failures. The maintenance of production and the profits of business depends upon an adequate demand for output. Such a demand requires the prevention of mass unemployment.

Some people seem to think we cannot afford full employment. There is a confusion of thought here. It is unemployment that we cannot afford. The unemployment of the 1930's cost us in lost income far more than the war; and this cost was not distributed among all the people on an equitable basis. It was concentrated in large part on the unemployed worker and the depressed farmers. We cannot afford another depression like that.

If we put our full resources to work, we can increase our production of consumer goods by 50 percent above the 1940 level and our production of capital goods, including construction, by more than 100 percent above the 1940 level. This chart, based on a Commerce Department study when Jesse Jones was Secretary, shows in more detail what full employment means to business. My own review of the facts, when I was Director of War Mobilization and Reconversion, has convinced me that we can and must increase consumption by 50 percent and expand construction and investment by 100 percent above prewar levels. We cannot let one-fourth of our resources go to waste. As Secretary of the Treasury, I say that it will be much harder to balance our budget and to service our national debt if we drift into another great depression.

There is no doubt in my mind that we can prevent mass unemployment if we decide to deal intelligently with this problem. I have said it before and I shall say it again: "Depressions, like wars, are not acts of God. Man makes them. If we make them, we can unmake them. We must create, in peace, a new prosperity and a greater opportunity for jobs than has existed before."

We shall not solve the problem of unemployment by ignoring it. We must not repeat the error of 1921 and 1931 of trying to deal with this problem when it is too late. This is a bill that should be enacted promptly. In my opinion, it is an urgent bill, not because we need it to deal with mass unemployment now, but because we need it now to deal with the threat of depression when it does come.

I want to read one paragraph on this point: "When business again declines men will be laid off and the problem of unemployment may again become serious. It will then be too late for any measures except relief for the unemployed unless we now address ourselves to the task of preventing, or at least reducing, these extreme fluctuations of business activity. Prevention as contrasted with relief is possible only through foresight."

This is a statement as timely now as when it was made by the committee headed by Owen D. Young and appointed by Herbert Hoover as chairman of the President's Conference on Unemployment in 1921.

In my opinion the full employment bill enables us—yes, requires us—to deal with the problem of unemployment while there is still time, before it is too late.

I speak for the President of the United States when I tell you that he regards full-employment legislation as the basic framework upon which a large share of our efforts to solve the central problem of full production and full employment must rest. He is most anxious that the legislation be enacted at the earliest possible moment.

## Demobilization of the Armed Forces

EXTENSION OF REMARKS

OF

### HON. A. L. MILLER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, October 31, 1945*

Mr. MILLER of Nebraska. Mr. Speaker, the War Department records show that during the period of May 12, 1945 through October 19, 1945, 1,919,000 men were released from the Army and returned to civilian life. During this 5-month period, some 250,000 men were taken into the Amy by selective service. The records further show that from September 2, 1945 through October 19, 1945, there were released 1,326,000 individuals. This very definitely shows that between a period of May 12 and September 2, pressure by the citizens of this country and Members of Congress did cause the Army to speed up their demobilization plans.

The armed forces are now receiving something like 50,000 men a month under voluntary methods. Even though demobilization has been speeded up, we may well have more than 5,000,000 men under arms, most of them in this country, at Christmas time. Many of these men are fathers with several children at home. They are in this country not usefully employed.

It seems to me, Mr. Speaker, that every man in the Army who is not usefully employed should be given an indefinite furlough at home and left there until the armed forces are ready to complete his discharge. It would solve many of the difficult problems now facing demobilization.

On October 15 there were 1,985,000 men with sufficient points which entitle them to a discharge from the Army. Four hundred thousand of these man had more than 85 points. There were 200,000 of these 85-point men in the United States. It does not speak well for some parts of the demobilization machinery.

Mr. Speaker, shortly 30 legislative days will have elapsed since I introduced a measure which would speed up demobilization. This bill is before the Military Affairs Committee. I propose to place a petition upon the Clerk's desk at the proper time, in an effort to get this bill before the House for amendments and consideration.

GIBBON, NEBR., *October 29, 1945.*

Congressman A. L. MILLER,
*House of Representatives,*
*Washington, D. C.*

HONORABLE SIR: I feel pressed to express my deep concern in the matter of demobilization.

My son-in-law is in the Navy. He is stationed on Ward Island, Corpus Christi, Tex. Since VJ-day this school has been so unorganized and without purpose. Class instruction for these radio technicians has become nil.

These young men are losing faith in our democracy and in the officers over them. The waste is so alarming—first, the waste of the purpose of life; second, the economic waste.

A man who has a wife and wishes to be on his way with a life plan and purpose should be honorably discharged now.

Very sincerely.

## A Soldier's Letter To His Son

EXTENSION OF REMARKS

OF

### HON. E. E. COX

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, October 31, 1945*

Mr. COX. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter that Capt. T. C. McKibben, a brilliant young soldier friend of mine and who lived in the district I represent, wrote his little son just before meeting his death in France in 1944.

The letter deserves a place in the CONGRESSIONAL RECORD:

SOMEWHERE IN ENGLAND,
A. P. O. No. 15,186,
*June 8, 1944.*

DEAR CURLY HEADED LITTLE BOY: Today I received four letters from your mother. One of the letters she wrote for you, saying you would like a letter all your own from your daddy. So, though you are not yet 2, and there are many things you don't understand, daddy is writing this letter all to you.

Maybe this is a rather serious tone for a letter to a gay young fellow like you, but you will not always be so young or so carefree. As the years roll by they will continuously heap more cares and responsibilities upon your shoulders. You will learn that the serious and trying times come more frequently than the glad and carefree times. So let us think now a little seriously about the years that lie ahead for you, young man—There is a terrible war going on now. We are fighting it so our sons will not have to fight another one at some later date, but that is what the men who fought the First World War were told. At any rate, son, I hope war is one of the trying things you will be fortunate enough to miss. Though your daddy is in no serious danger at the moment, no one knows now what the near future holds. Regardless of what happens you may be sure your daddy will be doing everything humanly possible to get safely back to you and mother.

However, there is, of course, the possibility you will have to face the world in the years to come without a daddy. So let's face that possibility bravely and try to imagine what those first few years will be like. First let's see what is still left on the bright side. Perhaps the greatest asset you will start life with

is a wonderful, brave, and true mother. She will stand by you, care for you, and work for you to the last ounce of her strength and if need be, fight for you to the last drop of her blood, while you are yet too young to care for yourself. She will have the fortitude and strength of character to be both a mother and a father to you. She will be able to face all the sorrow and all trials of future years as she has in the past and still be able to smile at the world. She will do everything possible to see that you are properly cared for, well trained and educated. You see—before you were even on your way to this world we both saw this possibility and considered it seriously—and she said, "If worse comes to worse, I can still carry on." So I know she can.

And what else do you have. Why—you will still have you. Though now you are not more than a little curly headed fellow with a very bright smile you have a near perfect little body that is growing stronger every day, until one day you will be a healthy young man. Continue to develop that bright smile and sunny personality and it will in later years do more for you than anything else can.

Learn to curb your desires, develop a sense of honor and a character which no man can purchase. Be a well-rounded man by developing all your talents. Learn at least something of music, dancing, athletics, and learn to enjoy all wholesome fun. Develop a sense of humor—be able to laugh at the world when it would "irk" you unnecessarily. Develop a strong clean mind and body.

Learn to read a lot but don't be a book worm. Learn to speak fluently and write well. Someone has said "Reading makes a ready man and writing an exact man."

Don't believe all men evil, but don't be dismayed when those you have believed in prove false. Remember that mankind can at once be God's noblest creature and the world's vilest animal.

At last and most important of all the thoughts I would like you to retain is a consideration of the necessity of Godliness to a fine life. Early in life I hope you will learn to look to God for guidance in all things. Christian life is the happiest, fullest life you can have. A Christian has a soul that is not imprisoned in the confines of this small world. The trials of this world become less important, since to him they become only incidents along a route he is passing to the attainment of a greater life than this world can offer and death becomes the beginning and not the end.

If you should have to make it without a daddy it may be a little harder for you and mother. You may have a little less and your opportunities be a little fewer, but with courage, you will triumph and in your lives there will be a lot of sunshine and happiness, too.

Perhaps you think I expect a lot from you, little fellow. Well, I do. And if you can do all this and "A lot more you'll be a man, my son."

But things are never as bright as we might hope, nor as dark as we may fear so we shall be looking forward to the bright day when your daddy will be returning home to his little curly headed boy and his mother and the joyous time we will have in watching you grow into a man and watching the bright little smile of yours light the darkest days like the morning sun.

And whatever may come to pass, remember always, that somewhere you've got a daddy to whom you will be the most wonderful curly headed little boy ever to come into this world.

It is about your bedtime now, little fellow. Goodnight and sweet dreams and awaken again tomorrow to turn on again that bright little smile. And on all of your tomorrows remember to be sweet to mother and take care of her until your daddy comes home.

From your loving daddy,

TOM.

## Congress Rolls Out "Pork Barrel"

EXTENSION OF REMARKS

OF

### HON. ROBERT F. JONES

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, October 31, 1945*

Mr. JONES. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Walker S. Buel, from the Cleveland Plain Dealer of October 27, 1945:

CONGRESS ROLLS OUT "PORK BARREL"—AND THEN ENDORSES GREATEST RETRENCHMENT BILL IN ALL HISTORY

(By Walker S. Buel)

WASHINGTON, October 26.—Under the ordinary circumstances of human existence, it is accepted as an impossibility to eat your cake and have it, too. But the ordinary circumstances of human existence do not apply to Congress, which this week gave a masterly demonstration that the trick can be done without mirrors.

The commodity was political "pork," not cake. On one day the House of Representatives voted enthusiastically for one of the first omnibus postwar spending measures, denounced by the chairman of the Appropriations Committee at a "fat pork" bill. It provided $700,000,000 for a 10-year program for airport construction in thousands of communities all over the Nation.

ASTRONOMICAL FIGURES

The very next day the House indulged in oratorical ecstasy over economy as it passed the greatest retrenchment bill in history, recapturing for the Federal Treasury $52,453,535,278 in appropriations and contract authorizations originally voted for war purposes.

The amount was described by appropriations chairman, CLARENCE CANNON, Democrat, of Missouri, as "a sum so stupendous as to be incomprehensible to the finite mind of man." CANNON declared of the bill that "a hundred years from now it will be looked back upon as one of the landmarks in fiscal legislation," and that its magnitude "is unprecedented in any bill in any legislative body in any country in any period of the world's history."

Representative LOUIS LUDLOW, of Indiana, a high-ranking Democratic appropriations member, calling the rescinding measure historic, undertook to reduce its total to understandable terms in this fashion:

"One way of looking at it is that it is the equivalent of $26,868,348 for every year since the birth of Christ and $73,886 for every day since Christ was born."

EXCEEDS WAR COST

It was further pointed out that the amount recaptured for the Government was nearly $5,000,000,000 more than the entire cost of World War I, and more than twice the total amount appropriated to run the Government during 43 years of national existence, from 1873 to 1916.

Appropriations Chairman CANNON as a prelude to presentation of the retrenchment bill, paid tribute to the Members, who, on the preceding day, voted against the airport construction "pork" bill. The vote on that bill was 279 to 82. Only three Ohioans, all Republicans, were among those voting against it—Representatives CLIFF CLEVENGER, of Bryan; ROBERT F. JONES, of Lima, and FREDERICK C. SMITH, of Marion.

Chairman CANNON, expressing a hope no one would overlook the list of 82 who opposed the airport bill, said:

"It is a notable list of notable men. They not only preach economy, but, extraordinary as it may seem, they actually vote for economy. Mr. Speaker, that list of names ought to be printed in every newspaper in the country. I do not know just how interested in economy the newspapers are, but there have been so few votes for economy lately that it ought to be in the same class with the story of 'man bites dog.' We have had all kinds of blocs here—the farm bloc, the labor bloc, the railroad bloc; now at last we have an economy bloc. You will recognize a brother of the bloc when he gives the password. The password is the word 'no,' spoken clearly and distinctly when the Member's name is called on a vote to appropriate borrowed money for something we can get along without."

TO SAVE THE COUNTRY

Representative JOHN TABER, of New York, ranking Republican on the Appropriations Committee, interposed to remark:

"Mr. Speaker, a hasty count of those 82 immortals who voted 'no' yesterday upon a bill to spend $650,000,000 to $700,000,000 that we do not have, have not got, and create inflation, reveals 12 members of the Democratic Party and 70 members of the Republican Party voting to save the country."

The retrenchment bill was passed without a record vote. But Representative TABER said even so huge a cut left a balance of similar funds of $94,000,000,000. The Budget Bureau estimates the expenditures for this fiscal year from these sources will be $50,000,000,000, he said, adding:

"This means there is still $44,000,000,000 of velvet kicking around that we need to dig up and recover for the Treasury."

## Air Lines Public Relations Faces the Future

EXTENSION OF REMARKS

OF

OF NEW JERSEY

### HON. FRANK L. SUNDSTROM

IN THE HOUSE OF REPRESENTATIVES

*Thursday, November 1, 1945*

Mr. SUNDSTROM. Mr. Speaker, under leave granted me to extend my remarks, I present for insertion in the CONGRESSIONAL RECORD an article entitled "Air Lines Public Relations Faces the Future," by Thomas J. Deegan:

AIR LINES PUBLIC RELATIONS FACES THE FUTURE

(By Thomas J. Deegan, director of public information, American Air Lines, Inc.)

Someone once said, "Man's darkest continent is the human mind," and while it is not certain that it was spoken by an air-lines public relations executive, it should have been. For we are uniquely equipped to discourse on the subject, being in the challenging position of using all the proved techniques of our profession plus a whole set of new ones. We are asking man to leave the ground and move through air, the only singular quantity of the universe.

And man doesn't leave the ground too readily. He thinks air transportation is a "great thing," but "you fly." It is his resistance to change, to do something his father and grandfather before him did not do, that perplexes man. That's where we enter the dark continent of the human mind. That's why our job in public relations has no precedent. It is new and vast.

The nearest parallel to presenting air transportation to the public is the experience of the automotive industry a quarter century ago when it was selling a motor-driven vehicle to replace the horse and buggy. The

trials and tribulations of that step in civilization's progress is history; eventually it won universal acceptance. But while the increased speed of movement of the automobile was revolutionary at the time, the motorist still stayed on the surface of the earth—the same surface over which man had sailed boats, led oxcarts, driven covered wagons, and ridden trains since the beginning of time.

Air transportation is asking man for the first time in natural history to leave that surface, to move into the only singular medium of the universe—air. Air connects all things. It envelopes the globe. Yet, man does not leap at the opportunity of leaving the surface of the earth and taking to the air. That is the job set up for us by the brave pioneers who have made possible this latest and greatest step in the progress of civilization.

Take a cross section of the best definitions of public relations, then add in one part information (to dispel public ignorance of a new vehicle and a new medium); one part psychology (to penetrate the dark continent); one part geography (to help fix places and their relation to each other in the public mind; and one part wordliness, in its most literal sense (to make man realize that with air there are no boundaries on eath; that Crooked Limb, Mont., is on a direct line—by air—with Jhaagnoor, India, and only hours apart). Mix them all together, they spell air-lines public relations.

Like all craftsmen in our business, we break down the phases of public relations into its component parts—publicity, promotion, press relations—and we add a few indigenous to our subject—community relations, air-age education, and passenger relations. And because air transportation in the United States is conducted under what is called regulated competition in accordance with the Civil Aeronautics Act we have a grave responsibility to the public through Government. Hence, our over-all guiding factor must at all times be public service. With the job thus categorized we break it down in the following manner:

1. TECHNOLOGICAL

The growth of our industry has evoked a great deal of interest on the part of the public regarding the technical phases of our operations. A sample of this occurred recently when one of our pilots developed a slide-rule technique for bringing in planes by instrument when they were stacked in heavy weather over an airport. Although this story might have been considered too technical for public interest 5 years ago, it made the first page across the country just recently.

2. OPERATIONAL

Due to censorship, we are still unable to tell the whole story of our overseas operations, though at the proper time this will make the most absorbing material in the history of the industry. In publicity, we are not particularly interested in new speed records on the theory that passengers will wonder if we do not attain the maximum speed on every flight between two given points. However, load factors, new cargo records, and material of similar nature make good copy.

3. FINANCIAL

This part of our publicity is pretty obvious. The transactions of a large corporation are always newsworthy.

4. FOOD

Stories and features regarding our meal service prove interesting to the food editors of the major newspapers. This type of story helps to sell air travel because food is always identified with the home and when we talk about the eating habits of air travelers, we are automatically identifying ourselves in the minds of the readers as something which is a part of everyday life; not something which builds up resistance to change.

5. HOME FURNISHINGS

Sounds obscure on the face of it but don't sell it short. The interior of our flagships is akin to the interior of an attractive living room. New designs and color combinations are interesting to the public and again, by the psychological strategem we are removing resistance to change.

6. WOMEN'S PAGE

Stories geared to attracting the attention of women exist in abundance among the air lines. In American Airlines, for example, half of the engineering department which is planning the future of aviation, is composed of skilled women—some engineers, some scientists, and some other technically trained members of the distaff side. It is a story within a story and is only one facet of women's page possibilities. Add to it, stewardesses and dietitians, female administrative executives, plus the use of air transportation in fashion, and you have a well of publicity material.

7. EDUCATION

The story of air-age education contains countless possibilities featuring the air globe and its new concept of geography. In American Airlines the air-age department operates as a separate and distinct unit and is headed by a renowned educator.

8. SCIENCE

Newspaper survey statistics prove that science news has gained steadily in readership during the past 10 years. The story of our meteorology department alone makes a fascinating tale if adroitly presented in its myriad phrases. This type of story not only has excellent publicity possibilities but implicitly speaks for American Airlines attention to the safety factor.

9. SPORTS

Here we are stymied again by wartime regulations against air travel that is not essential. However, in our postwar operations, it is well to keep in mind that the traveling habits of well-known sports figures and big league teams are followed avidly by millions of hero worshipers. "If Joe DiMaggio flies, it must be O. K.," becomes their theme.

10. REAL ESTATE

Although the real estate section's audience is limited, the interest of that audience is intense. Let's, therefore, cash in on it. Stories of airport development, expansions of property, pending improvements, and even homes purchased by our personnel, are typical of the kind of realty news through which we can benefit.

11. HUMAN INTEREST

Human interest stories abound and might well be considered the most valuable of all. The story of Nubbins Hoffman, invalid boy who was given an early Christmas last November, constituted probably the biggest publicity story of the year and the Union Pacific Railroad, who employed his father and guided the exploitation of the story, was the direct beneficiary. We occasionally run into stories which can be similarly developed to our direct benefit. An example of this occurred most recently when Eric Johnston, president of the United States Chamber of Commerce, was flying to Smith College for a dinner. In leaving Washington, Mr. Johnston forgot his prepared speech. Through the efforts of American's personnel, the speech was procured from Mr. Johnston's apartment and flown to him. The story made the front page. A child being rushed to some distant city for an emergency operation or a serviceman being flown home to be married are on tap every day. In such stories alertness by our own personnel, who actually witness a given incident, determines success or failure.

An air line, as one can well imagine, has its share of postwar planning problems. American Airlines, moreover, has always made a particular point of improving its pasenger service, finding out what was needed, what would be helpful—and then aiming to do it better than it had ever been done before. We'd heard talk, too, of week-end trips to Afghanistan right after victory—plus tales of 18-motor planes and flying wings and what not. Tall talk, of course, but it makes an air line wonder about public expectations in air travel. What could be more natural, then, than that an air line should look directly to the public to find out what the public really wants in postwar air transportation? And so we did—with the aid of a questionnaire booklet, You and Postwar Air Transportation, prepared by our advertising department which is separate and distinct from the department of public information. By mail, at luncheon and dinner meetings, on board flagships and in response to requests resulting from national advertising, American Airlines distributed thousands of these booklets seeking thoughtful answers to many questions about postwar air transportation. A grand total of 1,378,434 question answers came in—ample to let us know what air travelers want after the war.

Thus, sketchily, we view the problem of guiding and planning air-lines publicity, promotion, and press relations. A new book has just begun to be written. It will be long, exciting, and productive, and it will be called Airlines Public Relations Faces the Future.

## Future of the GI Bill of Rights

EXTENSION OF REMARKS
OF
## HON. HUGH BUTLER
OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

*Thursday, November 1 (legislative day of Monday, October 29), 1945*

Mr. BUTLER. Mr. President, the Congress now has under consideration the rewriting of the GI bill of rights. There was published in the November issue of the magazine Washington News Digest, a very interesting article by the national commander of the American Legion, Edward N. Scheiberling, entitled "Future of the GI Bill of Rights." I ask unanimous consent that it may be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FUTURE OF THE GI BILL OF RIGHTS

(By Edward N. Scheiberling, national commander, the American Legion)

If I were to make a prediction of things to come, it would be that the GI bill of rights will be so effectively amended by Congress in the near future that it will unlock the floodgates to billions of dollars in home, farm, and business loan credits for World War II veterans.

Under the revised law it will be very much easier for any veteran with a good reputation and steady income to buy a home or a farm or a business without having to dig into his own pocket for a down payment. In fact if he bears a good name and has a job he won't need a nickel in his jeans to swing the deal.

Insurance companies have $57,000,000,000 and banks have more than $100,000,000,000 in deposits, much of which they are willing to place in veterans' GI loans. During the past year loans already made under the GI bill—some 19,000 of them—demonstrated

that World War II veterans were the best credit risks in the country.

Since these financial institutions have all this money and are willing to lend it to veterans, the American Legion, as the father of the GI bill, enlisted their best brains to aid in amending the loan provisions of the bill.

EXPERTS MOBILIZED BY LEGION

The Legion assembled 32 of the greatest financial experts in Washington, D. C. It told them, in effect: "You are the fellows who will have to put up the money for the GI loans. How do you think the bill should be amended to make it more effective?"

The experts formed a special committee which sat down with the Legion and wrote a proposed new amendment to title III of of the GI bill which deals with the loan provisions.

That new amendment provides for placing the authority and responsibility for making loans almost entirely in the hands of the lenders and not in the Veterans' Administration. At the same time it protects the veteran against exorbitant interest rates and inflated values. That is the loan amendment for which the Legion is now fighting in Congress.

SIMPLIFIED PROCEDURE PROPOSED

If Congress enacts the loan amendment as written by the financial experts under Legion auspices, the entire procedure of securing GI loans will be simplified.

1. The Veterans' Administration will be required to issue a certificate of eligibility for a loan to the veteran when he leaves the service, or as soon thereafter as is practicable.

2. A veteran wishing to borrow money will apply to any lending agency he may select, but not until 30 days after his discharge.

3. The lending agency will make the loan or refuse it on the basis of its own judgment and without processing it through Washington.

4. After making the loan the lending agency will notify the Veterans' Administration of its action and certify the loan for Government endorsement. The Veterans' Administration then will be required to guarantee half of any loan, but in no case will the total to be guaranteed be more than $2,000.

The new amendment also will provide for granting of working capital and inventory loans for business, an entirely new feature.

END TO ALL HOCUS-POCUS

To understand just how the proposed new amendment will simplify loan procedure, it is only necessary to take a squint at previous operations.

Formerly the veteran's first step toward securing a loan was to apply to the Veterans' Administratioin for a certificate of eligibility for a loan. This sometimes required weeks.

When the certificate arrived, the veteran had to make out his application for a loan. Because the soundness of every loan was judged in Washington, D. C., hundreds or perhaps thousands of miles away, the veteran had to execute a tremendously long form, answering hundreds of questions. The lender likewise had to fill in an agonizingly long form. These forms were then sent to Washington.

When the Veterans' Administration received these involved applications, it sent home-loan requests to the Federal Housing Administration (FHA), farm loan requests to the Farm Security Administration (FSA), and business loan requests to the Reconstruction Finance Corporation (RFC), for opinions as to soundness. It might take weeks to secure such an opinion.

When the opinion was available, then the Veterans' Administration made its own ruling for or against the requested loan. That took more time.

All of this hocus-pocus is done away with in the proposed new amendment. After all, local lending agencies know their business and are not interested in making unsound loans.

LOAN DISCOUNTS NOW POSSIBLE

Another feature of the proposed new loan amendment will permit banks and all lending agencies to go to the limit with their funds in making GI loans. They may then discount their paper with the Federal Reserve System, obtain more money and make more GI loans. This, of course, applies to banks which belong to the Federal Reserve System, but any bank may buy the paper of any lending agency if it wishes to do so.

The time limit within which veterans may take advantage of the lending provisions and other features of the GI bill also is extended by the amendment to 6 years after discharge, or 5 years after the end of the war, whichever is later, but in no case more than 8 years after the end of the war. Formerly the limits were 2 and 7 years.

HOW TO BUY WITHOUT CASH

Under the revised GI bill the veteran will find it much easier to buy a home, or a farm, or a business without having to dig into his own pocket for the down payment. He must, of course, satisfy the credit and income requirements as to his ability to make regular payments on the loan.

His procedure in buying a home, for instance, will be:

1. He will borrow 80 percent of the purchase price from the FHA.

2. He will secure a second loan for the other 20 percent under the GI bill.

The second loan will provide the down payment on the home.

This same plan will apply to farm loans under FSA and to business loans under the RFC.

WORKING CAPITAL LOANS

In the case of loans to be used for working capital, or the purchase of merchandise with which to do business, the Veterans' Administration under the proposed revision would guarantee up to 15 percent of the total of all such loans made by a lending agency, provided no single loans exceeded $4,000. If only a few loans proved bad, there would be a 100-percent recovery for the lending agency. But if more than 15 percent defaulted, any loss over that would have to be assumed by the lender.

The financial experts who served on the lender's committee at the invitation of the American Legion, and drafted the amendment to title III of the GI bill, includes J. A. Brott, of Washington, D. C., associate counsel for the American Bankers Association; Horace Russel, of Chicago, general counsel for the United States Savings and Loan League; George E. Walton, of New York, associate counsel for the Metropolitan Life Insurance Co.; Oliver Walker, president of Walker-Dunlop, Inc., Washington, D. C., an insurance firm; and R. W. Hudgens, associate administrator for the Farm Security Administration.

The American Legion thinks they did a fine job. It will back their recommendation.

BIGGER CHECKS FOR GI STUDENTS

The American Legion also surveyed the operation of title II of the GI bill, dealing with the educational provisions.

As of August 31, 1945, the Veterans' Administration had approved a current total of 106,379 applications for campus schooling.

The Legion survey showed that most dissatisfaction over the educational features of the bill arose on two points; one was that the monthly subsistence allowance for both single and married GI students was not sufficient; the other complaint was against the requirement that any income which a veteran attending school under the bill might earn at a part-time job, must be deducted from the monthly subsistence check.

Chief changes in title II of the bill, therefore, sought by the Legion, raise the monthly subsistence rate of single students from $50 to $60, and those with dependents from $75 to $85, and eliminate the requirement that part-time campus job earnings must be deducted from the subsistence allowance.

FUTURE IMPORTANCE OF THE BILL

The GI bill of rights will increase in importance to the welfare of America as the years roll by.

Not only will this law become an essential factor in the economic rehabilitation of the millions of our World War II veterans, but it will at the same time, serve as an effective deterrent to the spread of any social unrest in the ranks of our veterans.

The veteran who is a home owner, or a farm owner, or in business for himself, is not going to become a Communist, or a radical of any kind. He will already have sampled too many of the sweet fruits of Americanism to listen to any foreign "isms."

The GI bill is really an Americanism bill.

Therein lies its greatest future value to our Nation.

## Protective Custody

EXTENSION OF REMARKS

OF

### HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Thursday, November 1, 1945*

Mr. WOODRUFF of Michigan. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article by former Congressman Samuel B. Pettengill:

PROTECTIVE CUSTODY

It is an astonishing situation when the United States takes over an industrial plant in which there is no labor dispute, no work stoppage, no lock-out, no strike.

But we live in strange times. The Sun Oil Co. has a gasoline refinery in Toledo, Ohio. The workers have no connection with the CIO. The men were reporting daily for work in full force.

However, CIO members, none of whom were Sun Oil employees, picketed the refinery. They told the nonstriking workers that if they made any motor gasoline they would be prevented by force from entering the plant.

So the Sun Oil workers in the plant did other work. Because of this intimidation, no gasoline was produced. This went on for over 2 weeks. No one wanted his head broken.

Then the United States seized the plant.

It did not seize the lawless goons on the outside who were threatening the plant.

It took the plant and its loyal workers into the protective custody of the United States.

"Protective custody" is an European term. It has the smell of skunk cabbage.

The United States of America, the greatest power on earth, was apparently intimidated by men threatening violence to prevent the production of gasoline. So it seized the plant.

Not only the United States, but the State of Ohio, city and county officials were asked to preserve law and order. None responded.

At Reelfoot Lake, Tenn., President Truman, taking a well-earned rest from a strenuous 6 months, said that strikes were a let-down from the war effort and that "he was not worried about them at all."

It is a let-down. But who is let down?

The *Queen Elizabeth* landed at New York with 15,000 returning soldiers. Stevedores on strike refused to unload the ship. So the soldiers had to. The United Press reports that "17 troop ships of the War Shipping Administration were ordered to sail

without cargo as a strangulation strike of stevedores was drawn tighter around the country's largest port." Over 300 ships were immobilized at that harbor. American soldiers wait in European ports for ships to bring them home, and their fathers and mothers and sweethearts wait on American shores for them; and empty ships go to hungry Europe.

In Detroit four men throw a foreman bodily out of a factory making automobile parts. For this act of violence the men were discharged. And their discharge was upheld by the War Labor Board. Then 4,500 men strike to force the rehiring of the four men. The 4,500 refuse to go back to work despite the pleas of their union officials. Because no parts were made, Ford was forced to close, throwing 50,000 more men out of work. This lasted for 6 weeks. Four men use violence on one foreman, and 54,500 men stop producing needed goods.

In a smaller midwest city strikers refuse to permit plant officials to enter a factory. Nothing is done about it. The city's police department is unionized.

This is not in France just before the German invasion in 1939. This is in the United States of America, "My Country, 'tis of Thee," but sadly enough as I write these lines I do not feel like singing.

Let it be said to the credit of some union officials that they have urged their men not to go out on outlaw strikes. But the vital question of the responsibility of labor to abide by contracts and union discipline (where that exists), the rights of John Public, who pays the freight and perhaps will go cold this winter for lack of coal and fuel oil, and the need of writing equality under law into the Wagner Act remain unsettled.

Meantime high officials busy themselves with restoring law and order in Bulgaria, Rumania, Yugoslavia, and Kamchatka.

SAMUEL B. PETTENGILL.

## Tuberculosis Is Preventable

EXTENSION OF REMARKS

OF

## HON. THEODORE FRANCIS GREEN

OF RHODE ISLAND

IN THE SENATE OF THE UNITED STATES

*Thursday, November 1 (legislative day of Monday, October 29), 1945*

Mr. GREEN. Mr. President, last Sunday the Rhode Island State Sanatorium celebrated its fortieth anniversary, and I had the privilege of making an address on the elimination of tuberculosis. Since the subject matter is of national as well as State interest, I ask for unanimous consent to have the address printed in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, my fellow citizens, it is always good to be back home in Rhode Island, especially for an occasion like this, and you may be sure that I am happy indeed to be here today at Wallum Lake to celebrate with you the fortieth anniversary of the founding of this State sanatorium and to pay tribute to Dr. Harry Lee Barnes, who was its first superintendent and served it well for almost 30 years.

I have long been interested in the welfare of our State institutions and especially in this sanatorium. That interest dates back almost 40 years to a time in 1907 when, as a member of the general assembly from Providence, I first had an opportunity to observe, in an official way, the condition of things at these institutions. Wallum Lake was in its infancy then, and ever since I have followed its development. Then, too, over the years, particularly in these later years, it has been my privilege to have had some part in shaping its growth and development. That is the reason why I left my duties in Washington and came to be with you here today.

The record of the State's interest in this institution prior to 1933 is a dark chapter in our history. In fact, it might well be said that for a long time prior to 1933 the inmates of all our State hospitals were truly the forgotten men and women of the State. Many of you present have first-hand knowledge of the conditions that existed at our State institutions during those dark years, and I shall not recount them now.

In 1933, however, a new spirit of humanity arose in government, due in large measure, I think, to the enlightened leadership of our late President Roosevelt. With it Rhode Island entered upon a new era in the field of social welfare, especially in recognition of its responsibility to the inmates of our State hospitals. It was my privilege to be Governor of Rhode Island during the 4 years which marked the beginning of that era. They were critical years—years of depression—but notwithstanding this fact we almost immediately embarked upon a program of social and physical reconstruction of our State institutions. The program was predicated upon the social philosophy that primarily it is the duty of the State to do all in its power to provide not only for the custody but also for the care, and, if possible, the cure, of those committed to its charge. This had also been Dr. Barnes' philosophy, but he, like his patients, was the forgotten man. It was hard for him to struggle along without proper equipment and without appreciation of his efforts, but he persisted and deserves all the praise we can give him today.

I am glad to say that this sanitorium at Wallum Lake was one of the first to benefit by that program. The needs were indeed urgent. I found both patients and employees here living in ancient, unhealthy, and overcrowded buildings. In some cases people were living in quarters originally provided to take care of less than half their number. Tubercular patients requiring sunshine and fresh air were confined in dark, overcrowded wards and corridors and mingling with other patients without any attempt at segregation. In short, there was an utter lack of proper facilities.

With the help of the Federal Government some 12 building projects were undertaken. Architects were engaged, bids awarded to contractors, and the work was started and completed in a remarkably short period of time. Two of the new projects here at Wallum Lake that we were most proud of were the children's building and the main hospital building designed to provide facilities for nearly 400 patients. This latter structure also included a chapel, an auditorium, an extensive kitchen, as well as quarters for the administrative officers, a nurses' home and several apartment houses for physicians were also built. Then there was the matter of a power plant to provide electricity and such things as a water supply system and a sewage disposal plant. Those took shape and were completed in the due course of time. Other necessary facilities had to be rebuilt or installed such as a laundry and carpenter shop, an ice plant, an incinerator, a warehouse and garage. All this was done in spite of critical opposition to the program as a whole. Due to the generosity of the Federal Government, we were able to construct these projects at a cost to the State of little more than one-half of what they would have cost at any other time.

In addition to the physical improvements brought about as a result of this program, all of which are visible to the eyes of interested citizens, there was an improvement even more important. It consisted of a complete reorganization of the work based upon modern scientific principles, and made possible only by the material facilities provided by the program of which I have been speaking.

During my administration as Governor it was my pleasure to visit Wallun. Lake frequently, especially during the period when the building program was in progress. I regret that during these busy wartime years in the Senate in Washington I have not been able to visit here as often as I would like.

There is still much that should be done here and I foresee that these coming postwar years will bring with them added problems of treatment, space, and facilities. It is my hope that sympathetic Federal and State administrations will give a helping hand. You may be sure that, as in the past, you will have my continued interest and support.

Let me tell you why I speak of greater work to be done and new problems to be solved:

Tuberculosis, properly designated "the white plague," is preventable; yet last year, 1944, 279 Rhode Island citizens died of tuberculosis. Death, by some deep instinct, is most repellent to the human race. So is it not strange that the community looks with complacency upon the death of nearly 300 of its citizens when we know that these deaths are unnecessary?

Leading public-health officials are agreed that tuberculosis can be wholly eradicated within the borders of the continental United States within the next 25 years, and that there are four necessary steps to this end.

The first is early detection and isolation.

Periodically every individual in the community should be given a TE diagnosis by a free chest film. At the present time, the United States Public Health Service is planning a comprehensive program for early detection of tuberculosis. This program is under Dr. Hilleboe of the United States Public Health Service. This case-finding will be achieved by the use of modern portable X-ray equipment in charge of a staff of technicians. I understand that Rhode Island will participate in this program through funds made available to the department of public health by the Federal Government.

The second step is a thorough-going program of public education.

In 1936 Rhode Island had the highest incident of death from this disease of any New England State. It has now been reduced to a point where we are below the national average. Constructive public-health work and education are responsible for this progress. I call your attention to what was done by the public health department of New York City. A specially designed body was built on an automobile truck. People entered one end of the truck body. Inside there was a series of sliding pictures whereby the enormity of this menace was brought home to every observer. The need for greater education at public expense is indicated by the fact that nearly 53,000 men and women die of tuberculosis every year in the United States. The economic loss alone, not to count the human misery, is sufficient to call for a national crusade.

The third step is the removal of sources of infection.

The city slums and in many of our large cities, highly unsanitary factory lofts and antiquated buildings account for a terrific toll. In a Federal pamphlet put out by the Federal Works Administration on postwar urban redevelopment, it is shown that blighted districts in our cities comprise about 20 percent of the metropolitan residential areas. This, however, is but part of the story. These blighted residential areas housing one-third of the population, account for 45 percent of the major crimes; 55 percent of the juvenile delinquency; 50 percent of all arrests; 35 percent of fires; 45 percent of cities' service costs;

and what is especially interesting to us here today 60 percent of tuberculosis victims in the United States and 50 percent of all types of disease.

We can no longer tolerate slums and other blighted areas. The Congress of the United States has done much to develop a public-housing program. I regret to say that even at the present moment, a powerful lobby representing real-estate interests and those engaged in private construction, seek to sabotage a progressive housing program.

The fourth step is: Basic scientific research.

It is surely an indictment of our society when we find that before the war less than one-third of 1 percent of the national income was devoted to scientific research.

We need only to consider the $2,000,000,000 expenditure on the atomic bomb to realize the untold potentialities, if we organize an integrated, thoroughgoing program of scientific research, supported by public funds.

Just as the atomic bomb has opened up vast vistas on the horizon of the future for unlimited power devoted to peace as well as war, there are even greater vistas on the horizon in the social sciences. I include the great science of medicine, and especially the growing science of biochemistry. The discovery of penicillin by the biochemists has already saved many more lives than the atomic bomb has destroyed. As you know, the sulfa group of drugs has, to a large extent, reduced the menace of pneumonia and other pulmonary diseases. These discoveries in the field of biochemistry are all new. There is every reason to believe that with a proper amount of money devoted to scientific research, in a few years' time, we shall find something like penicillin which will at an early stage attack and destroy the tubercular bacilli and with that the terrible menace of the white plague. I am extremely interested in some bills now pending in Congress which propose the establishment of a national research foundation for these purposes.

All of you here today will, I am sure, agree entirely with this fourfold constructive public health program, but always there will be the Jeremiahs to raise outcries of lamentation and criticism. They will ignore the great good to be accomplished and talk or write only about an increase in public expenditure and thereby an increase in taxes. This was their cry when I proposed to erect all these buildings here at Wallum Lake. This will probably be their cry as I now propose to take full adavntage of the work to be carried on here. I want to point out that the great bulk of all money raised by taxation today is expended for constructive objectives.

We are just beginning to realize that public expenditures for health, welfare, and social security belong in the same category as public expenditures for highways. They are creative expenditures. The rejection of some 30 percent of our young men for the armed services, because they were physically unfit, should be an object lesson to our businessmen and to our large taxpayers. It should be clear that if 30 percent of our young men in the very prime of their youth, between the ages of 18 and 35, were unfit for military service, they are unfit to carry on creative production in our rapidly expanding economic system. When we invest public funds for adequate medical care, hospitals, and creative public health work, we invest money in creating a people strong in mind and strong in body. Such people in the modern economic world are even more necessary than new factories and new types of productive machinery.

We are living in an epoch of change in our intellectual, social, and spiritual life. We see evidence in every part of the world that the people do not intend to be pushed around any longer. In countries ruled by outsiders they are seeking political independence. In other countries they are seeking economic independence. They do not intend to suffer patiently the low standard of living, lack of proper food, housing, and constructive health measures necessary for health and well-being. In this world, now on the verge of plenty and abundance through the revelations of modern science, people demand a new place in the sun. Equality is no longer a vague dream. It is a definite hope which people are striving to realize all over the world.

The crusade to eradicate the menace of the white plague under whose banners we meet today, is but one of many crusades looking to the alleviation of suffering, misery, ill health, and substandard living. These are indeed holy crusades. Those of us who are enlisted as was Dr. Barnes, for the duration of our lives in these crusades, must not and cannot falter. I, for one, am confident that tuberculosis will be eradicated in this State and this Nation, and I am happy to be with you today and to join with you as a crusader in this great cause.

## Stop, Look, and Listen

EXTENSION OF REMARKS

OF

### HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Thursday, November 1, 1945*

Mr. WOODRUFF of Michigan. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article by Samuel Crowther:

STOP, LOOK, AND LISTEN

(By Samuel Crowther)

The American people, groggy after two wars and yearning for a true peace, are by well-planned propaganda being brought into a kind of coma in which nothing greatly matters. They may awake into a grisly land quite different from the brave new world they have been promised.

The Roosevelt strategy, which President Truman was supposed to have scrapped, is again being used to create a fake emergency to force the Congress to pass, without question, legislation that will utterly change the nature of both our domestic economy and our foreign relations and snuff out the flickering light of liberty.

And also, under cover of a whipped-up frenzy, certain investigations are being shoved aside. These are investigations that ought to be made before any important legislation is passed. We ought at least to know before we go further everything about Pearl Harbor, about the Tyler Kent affair, about the influence foreign powers are exerting in domestic politics, and about what Russia has been doing in Europe.

The evidence is not clear as to whether the present drama is being managed by the new triumvirate—President Truman, Secretary of State Byrnes, and Secretary of the Treasury Vinson—or whether they are being managed and are only actors in the show. The weight of evidence is that they are being managed and have no clear comprehension of the chain of events which they have set in motion or their consequences.

It would seem that the same cabal that ran the Roosevelt administration is now beginning to run the Truman administration and that the President is out of his depth and does not know it. If such be the case, it is a major tragedy. For certainly the President has the desire to serve the best interests of the people.

Here is the record. The pieces fit together as in a jig-saw puzzle.

1. The collapse of Germany brought to light for a moment the fact that in Europe the United States and Britain were vassals to Russia. They could go only where Russia said they might. Then the curtain went down again. It stayed down while President Truman made his unfortunate pilgrimage to Potsdam. The curtain was lifted a moment to show a naked agreement signed by Messrs. Truman, Stalin, and Attlee. The exact authority or status of this agreement is not clear, but its words not only confirmed the Russian suzerainty of Europe, but also committed the United States to a program which repudiates every principle for which the war was supposed to have been fought and violates every important American ideal and tradition—including the tradition that the United States is a Christian Nation. The agreement is as unmoral and godless as Russia.

It has been explained that the President was willing to let Stalin step into Hitler's shoes and rule Europe because he believed that Soviet brutality held its own cure and that the small nations would recover as they had many times before.

That is sound American doctrine. It was laid down by George Washington. If we had kept to that doctrine, we would not have gone to war.

But we threw away that doctrine and went to war for liberty and democracy. We can now abandon these subject peoples to their fate. Then they might recover.

But we are not just abandoning them. We are offering to agree through the San Francisco Charter to use American lives to keep them subject to Russia and through the Bretton Woods schemes to finance their conqueror.

It seems scarcely possible that the President realizes what he has agreed to.

2. Perhaps in order to divert public opinion from the terrible program laid down at Potsdam, the President, after a perfunctory radio address which explained nothing, gave himself over to pulling our troops out of Europe. That thereby dropped the curtain on Europe. We all want the boys back, but there is as yet no information as to whether our troops are being withdrawn at such a rapid rate to satisfy the American people or to satisfy Stalin. None of the Russian troops, insofar as can be learned, have been withdrawn.

3. Before leaving for Potsdam, it will be recalled, President Truman demanded and received as aids to his bargaining power the passage of the new, sweeping Reciprocal Trade Agreements Act, an act putting the United States into the Bretton Woods money schemes and a confirming vote by the Senate on the United Nations Charter as drafted at San Francisco. We have no information on how the President used his virtually autocratic powers. It is significant that since then Russia has confirmed the Charter and has not protested the President's sudden ending of lend-lease. We have no information whether lend-lease with its shadowy promise of a return payment will be continued in another form without even the shadow of a return.

4. The President, before the collapse of Japan and at a faster pace since, has given himself over to our quick reconversion from a war to a peace economy. This is in line with what the President wants and with what the people want, for everyone is fed up with regimentation and ration books. It was good psychology at once to take gasoline and canned goods off rationing and to promise more meat. Many controls have been taken off and people generally believe that private business is now completely free to do what it likes and to show its worth.

5. That is not true. All the important price controls remain. The free market is the lifeblood of voluntary enterprise and it is callous mockery to talk about business being able to go ahead under controlled

prices. The insiders who seem to be pulling the strings know that. The only freedom as yet granted to business is the freedom to fail without recourse—which is a freedom it already had.

6. The price controls are being retained on the plea that, if they are lifted before production is well under way, we shall have a serious inflation. Once more we are being told that we must be protected from inflation by a benevolent and far-seeing government. Everyone above the grade of idiot ought to know that the people cannot cause inflation. Only government by its misuse of the money power can cause inflation. The bureaucrats, with complete hypocrisy, are trying through controls to protect themselves from being swept out of office by a tidal wave of inflation. They are pretending that, if inflation comes, the people will be to blame.

7. Nearly every Washington release, no matter what it is about, contains a dire prophecy of unemployment. These prophecies pretend to be founded on statistics. The statistics are bunk. No one anywhere can do more than guess at the size of future unemployment. The amount of employment in the future—as in the past—depends upon the number of legitimate customers that we have for our goods. Customers created by the distribution of tax or printed money—no matter how the operation be disguised—are not legitimate. Artificial purchasing power can wreck but cannot build our economy.

8. The apparent but not actual freeing of business, the fervor about preventing inflation and the prophecies of unemployment are all parts of a propaganda show to build up public sentiment behind the Murray full employment bill so that it may be made to appear that anyone who is against that bill is against employment and in favor of unemployment. The Communists, the fellow travelers, and the whole anti-American crew are already taking that line in their slime sheets.

9. The full employment bill has very little to do with unemployment and a great deal to do with driving out the last vestiges of voluntary enterprise in this country and the substituting for it of a state slavery of the Hitler-Stalin type.

The eventuality of this bill is the work ticket. The work ticket is the badge of slavery.

Such is the record. The pieces fit together just a bit too nicely.

And also they fit together into a program which is identical with the program of Sidney Hillman's Political Action Committee—which was supposed no longer to have its headquarters in the White House.

That committee—no matter what some of its leaders and most of its members may think—is controlled at every important policy point by men and women who follow the Soviet party line as dictated from Moscow for use in foreign countries.

That party line has two main rules for American Communists. The first is that no obstacle must be put in the way of Russian imperial aggrandizement. The second is that every legislative measure must be supported which serves to break down money, to regiment the economy, and to prepare the way for chaos while pretending to do something else.

The Potsdam agreement, especially if implemented by the United Nations Charter and the Bretton Woods money dance, clears the way for Russia in Europe.

The "full employment" bill would complete the wreck of the American economy.

The PAC is carrying out the party line to the very letter.

The question which must now be answered is whether our titular officers are running this Nation or whether they are, voluntarily or involuntarily—it makes no difference—marionettes pulled about the stage by a foreign power.

The question can be answered in part if honest American reporters are allowed to roam Europe and honestly report the news.

The question may be answered in another part by Gen. Douglas MacArthur.

He is a thorough American and a great statesman, as well as a great general. He can be depended upon to administer the affairs of Japan and of the Orient as a resolute, God-fearing American. He is our greatest national figure.

If he be hampered, it will be a certain sign that American principles are not ruling America.

In the meanwhile, this would seem to be a good time for all citizens to stop, look, and listen.

For things are not what they seem to be.

## Universal Military Training

EXTENSION OF REMARKS
OF
### HON. BURTON K. WHEELER
OF MONTANA
IN THE SENATE OF THE UNITED STATES

*Thursday, November 1 (legislative day of Monday, October 29), 1945*

Mr. WHEELER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article dealing with the President's message to Congress on the subject of universal military training in peacetime, written by Dorothy Thompson, and published in the Washington Evening Star of October 30, 1945. I call attention to the fact that before the war Miss Thompson was one of the leading interventionists in the United States.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ON THE RECORD

(By Dorothy Thompson)

On Tuesday, President Truman addressed Congress on the necessity of universal military training in peacetime. Wednesday, Secretary of State Byrnes signed the text of the protocol of deposit of the United Nations Charter, which formally brought the World Security Organization into being, calling it a "memorable day for the peace-loving people of all nations."

There is something strangely ironic in this combination of events. On one day it is proposed that the United States train all its male youth for war; on the next, the United Nations of the world solemnly covenant to live together in peace.

The President says: "The sincerity of our intention to support the World Organization will be judged partly by our willingness to maintain the power with which to assist other peace-loving nations to enforce its authority."

To enforce its authority over whom?

The only nations not counted among the "peace lovers" are utterly vanquished and unconditionally surrendered. The victors are about to put on trial as criminals those who resorted to a war of aggression.

At such a moment the "peace lovers" enter an armament race.

The President says: "The United States now has a fighting strength greater than any other time in our history. It is greater than any other nation in the world."

But the President asks for more power. Power for what purpose?

"Until we are sure that our peace machinery is functioning adequately we must relentlessly preserve our superiority on land and sea and in the air." • • • "Research, new materials, and new weapons will never, by themselves, be sufficient to withstand a powerful enemy."

What powerful enemy? What member of the United Nations? Superiority over whom?

The President makes another plea for "realism." So, by all means, let us look at the reality.

The reality is that at Teheran, Yalta, San Francisco, and Potsdam our political leaders gave away the power that America had built up for the cause of justice, liberty, and peace. So today they must ask for more power.

The political leaders of the three great powers rejected the Atlantic Charter, first as its provisions applied to the vanquished, then as its provisions applied to any nation weak enough to be bullied.

The political leaders of the three great powers rejected, at San Francisco, the thesis that great powers must be subject to any law governing their soveregn actions and, in the name of law, established lawlessness for the powerful and servitude for the weak.

The political leaders of the three great powers threw into the wastepaper basket at Potsdam every shred of historical and ethnographical principle and human rights. By extending the frontiers of Poland under a thoroughly unrepresentative government to the Oder and the Neisse, and agreeing to the expropriation and deportation of indigenous populations, they compounded the crimes of Hitler himself—the very crimes of which the Nazi leaders stand accused before the world—and condemned millions of absolutely helpless men, women, and children to terror, migration, and starvation.

By agreeing to divide vast parts of Europe into zones within each of which four armies would have, in effect, unrestricted license to do as they pleased, they made inevitable the division of Europe into two blocs, and the breakdown of the London Conference.

By agreeing, in the name of "reparations" and "industrial disarmament," to a four-way loot in countries already devastated beyond imagination, they initiated in the name of peace a new scorched-earth policy; set adrift the last remnants of order; betrayed the hopes and prayers of all Christendom, and sowed the seeds of anarchy, nihilism, and despair.

All this was done while the United States had the mightiest army, navy, and air force the world had ever seen—and the atomic bomb on the verge of perfection.

Let us, then, face the reality. Universal military training is not for the enforcement of peace. It is asked because there is no peace—in our consciences, our minds, our hearts, our policies, our societies. It is asked in the frantic hope that the great nations, estimating each other's terrifying power and maneuvering against each other over the moans of the real peace lovers—the suffering, sacrificing, believing, hoping, and broken-hearted people of the world—will fear to attack each other, lest the result be mutual annihilation.

This is our peace, for which the youngest and noblest died.

## Business Management and Economics

EXTENSION OF REMARKS
OF
### HON. ROBERT A. TAFT
OF OHIO
IN THE SENATE OF THE UNITED STATES

*Thursday, November 1 (legislative day of Monday, October 29), 1945*

Mr. TAFT. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by me

at a dinner given by the Financial World in New York on October 2, 1945, on the subject of business management and economics.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Ladies and gentlemen, it is a pleasure to me to participate in this project of the Financial World designed to improve business methods and the active interest of stockholders in the business corporations which contribute so largely to progress and prosperity in our economic life. The subject of business management and economics has become infinitely more complicated, but at the same time this more difficult economics has come to dominate politics. And so if we are going to have an intelligent public opinion regarding political policy, certainly it is the duty of every business executive to give his stockholders the broadest education in the methods by which the machinery of free private production operates in the United States.

I have come from Washington today impressed with the confusion and inconsistency of principles, of issues, and of policies in which the thinking of those concerned with Government is now involved. During the war we had one great purpose. Since the accomplishment of that purpose there is no clarification of issues, and no clearly defined policy has emerged. We are all dominated by a vast optimism regarding a prosperous future for the United States. I feel it strongly myself in spite of the difficulties which face us. But there is no agreement on the methods required to reach that result, or even on the most fundamental principles of economic policy. We talk of a planned economy, under the full employment bill, and otherwise, but as far as I can see, while there is plenty of miscellaneous and inconsistent planning, there is no plan. To make a plan we don't need the elaborate statistical set-up of the full employment bill. We just need a putting together of the figures which the Government has, a little common sense, and an ability to count. In the absence of a plan, the tendency that I fear more than any other is the continued strength of the theory that the Government can bring about prosperity merely by spending money. Congress is so flooded by great spending projects, that probably most of its time from now until next June will be spent in giving them consideration.

The basic element of any Government policy to produce or maintain prosperity is a sound fiscal policy, one which decides on the necessary expenditures of the Government and the kind of tax system which is required to raise the money to pay for them. We need a postwar budget now. True, there are many uncertainties, particularly with relation to the immediate postwar period and the aftermath-of-war expenditures from which we cannot at once escape.

We should, however, have first a distinct goal for the Federal expenditure budget to be in effect when normal peacetime conditions are restored. Many private estimates have been made running all the way from sixteen billion a year to twenty-five billion a year or more. But there is no official estimate, not even an official guess. President Truman's message to Congress listed countless spending projects, but never suggested that there might be a problem in raising the money to pay for them. His only reference to taxation was to a reduction of taxation designed to stimulate business without "losing sight of the budgetary situation." It is hard to lose sight of something which we have never yet seen. Temporary tax revisions are being proposed by Mr. Vinson and the committees today, but they seem to be wholly unrelated to the expenses of the Government in 1946. Many private organizations have proposed permanent tax plans, with wholly insufficient knowledge of probable expense; but there has been no indication from the Government what its policy might be. In short, plans for spending proceed along one line, plans for tax reduction proceed along another, and no official attempt to reconcile the two has ever been presented.

We should determine now how heavy a tax can be levied without killing incentive, discouraging business growth, and reducing employment. If that figure can be determined we can and must then limit our expenditures to approximately that amount. A wise fiscal policy can put more men to work than all the public works in sight My own guess is that we can raise about twenty billion a year without crushing initiative and that we can hold our expenses to that figure. But we can only do it if we recognize the necessity of having to do it. The thinking of most people is still carelessly dominated by the thought that there isn't any necessity of trying. They seem to feel that since we had a deficit of fifty billion a year in wartime we can do the same kind of thing in time of peace.

I do not believe we can escape an annual budget of about $20,000,000,000—six billion for interest on the public debt, six billion for the armed forces, $3,000,000,000 for veterans, and five billion for the other departments of government, including agricultural aid, social welfare, and public works. Taxes to raise this amount will be heavy and probably will involve the 40-percent tax on business earnings and a personal income-tax schedule beginning at 20 percent, but with somewhat higher exemptions and somewhat lower rates than at present, and I hope a reduction of the double taxation on business and stockholders.

But today there is no plan. This year Congress has already passed bills providing for $500,000,000 a year of Federal aid to highways, and $200,000,000 a year investment in rural electric cooperatives. The Senate has passed a bill giving seventy-five million a year as aid to the construction of airports. We shall soon consider bills to provide a hundred million a year for aid in the construction of hospitals, and several hundred million a year for aid to common-school and high-school education. Many other spending bills are before Congress, including a hundred million a year for aid to vocational education, five hundred million a year for a national food-allotment plan, the old stamp plan, fifty million a year for a rural telephone administration, fifty million a year to provide free school lunches, fifty million a year for aid to States in eliminating river pollution, fifty million a year for aeronautical experiments, a hundred million a year for additional subsidies for public housing, and many flood-control projects, irrigation proposals, and river projects like the Missouri Valley Authority. Yesterday the Army engineers announced they were ready to start a program costing ultimately $1,500,000,000. There are many additional proposals for aid to public health, in addition to the construction of hospitals amounting, perhaps, to as much as $600,000,000 a year.

President Truman has even recommended in his message that the Federal Government adopt a general policy of grants to State and local governments for all public works. I am willing to give some Federal aid when there is a direct Federal interest as I see it, but I can see no justification for Federal aid to public works of purely local concern, except the same old fallacy that the spending of public money is itself a sufficient justification, on the ground that it in some way creates prosperity.

Then we have the Murray-Wagner-Dingell bill increasing the pay-roll tax to 8 percent and providing universal compulsory health insurance and many other benefits along the lines of the Beveridge plan in England. Last year the advocates of this measure wanted 12 percent of all pay rolls. The reduction of pay-roll tax in the present bill suggests to me that a considerable part of the expense is now to be borne by general government and become a burden on the general taxpayer. I do not agree with the theories of Sir William Beveridge, but at least he is frank in giving a fair estimate of the cost and consequences of his numerous plans. From his English figures, I estimate that the Beveridge plan, if fully applied in this country, would cost about $18,000,000,000 a year. The Murray-Wagner-Dingell bill moves a long way in that direction.

Of course we have almost unlimited proposals for further aid to the veterans. Certainly, some substantial changes will have to be made in the GI bill of rights..

Then we have the huge sums proposed for foreign lending. We have already authorized about $6,000,000,000 for Bretton Woods, $3,500,000,000 for the Export-Import Bank, and $1,350,000,000 for UNRRA. It is suggested now that we loan or grant Great Britain approximately five billion more. Russia would like six billion. Many European and Asiatic countries will follow in their wake, although I think most of them can be taken care of by the Export-Import Bank. UNRRA wants another billion, three hundred and fifty million dollars.

I have always felt that we should make reasonable loans abroad to enable war devastated countries to get their own machinery in working order, but I have never felt that American dollars could cure the troubles of the world or make more than a small contribution to the success of a foreign nation in solving its own problems. But foreign lending on any such scale as is now proposed becomes another general charge against the American taxpayer. Our experience with the World War debts, our experience with lend-lease, teaches us that if the sums loaned are so large as to become truly burdensome they will never be paid. Present plans contemplate the outpouring of American money abroad at the rate of perhaps five billion a year for the next 4 years. That would add $20,000,000,000 to our public debt and I doubt if it can ever be recovered.

We are drifting rapidly, therefore, to a chronic condition of deficit spending. With the huge reserves of purchasing power in this country, with $40,000,000,000 in E bonds outstanding and convertible into cash, with a huge increase in currency and commercial deposits, with a great backlog of pent-up demand, we are headed for the biggest spending spree and inflation this country has ever seen. We must resume immediately some sense of responsibility and planning in our spending and taxing. We must provide for a definite and steady reduction in the Federal Budget to reach a balance in the fiscal year 1948.

Many of the spending projects are entirely worthy. Taken altogether they are impossible. I have felt that perhaps $1,000,000,000 a year might be added to the Budget for improvements in social welfare, and public works other than roads, provided that every other expense is reduced to the minimum. If the Budget is allowed to run as high as $25,000,000,000 a year, I believe it would require such a burdensome system of taxation as to stifle the very prosperity which pays the taxes. It would mean a total tax burden, Federal, State, and local, of about $35,000,000,000, probably more than 25 percent of the Nation's income. But this is merely a guess. I believe that no further expenditure should be authorized until we have an overall plan for taxation and peacetime expenditure.

There is more danger of inflation in the present Government policy outside of direct Government spending. A strong group in the Government is favoring further increase in wage rates, brought forcibly to our attention by the wave of current strikes demanding a 30-percent increase in such rates. The last figures from the Bureau of Labor Statistics

show that since January 1941, adjusted straight time average hourly earnings of factory workers have increased about 40 percent, while the cost of living has increased 30 percent. It is doubtful if, during this period, labor has become substantially more efficient in peacetime industry except a very few. No doubt wage increases are due in some industries. But if wages go up generally, it will undoubtedly bring about a corresponding increase in prices, and start a spiral of inflation.

The President has also recommended a substantial increase in the minimum wage, at least 62½ percent from 40 to 65 cents. Any such large increase in the minimum wage will undoubtedly force a general increase for all those above that level. The same tendency is shown in the demand for an increased unemployment compensation wage to $25 a week after many States last winter fixed a lower rate.

Many of these wage increases may be wholly justified, but the effect of a general increase in wages can only be an increase in prices and a strong boost for inflation. The general tendency of the administration is shown by the recommendation that every Congressman and Senator be raised to $20,000 a year, a hundred percent increase, the normal effect of which would be to encourage increases in every line of salary and wages throughout the United States. Even the Congressmen themselves don't take this particular recommendation seriously.

The administration's only proposal for the prevention of inflation is the strenuous maintenance of price control. Chester Bowles stands like King Canute bidding the tide of inflation to recede. Inflation to him apparently means an increase in the published OPA price for retail stores, regardless of the fact that the whole country is becoming involved in a floodtide of inflation. The stronger this tide becomes, the greater incentive to a spreading black market. The only effect of Mr. Bowles' lonely activity will be to interfere with the operation of legitimate industry and discourage the expansion of production and employment. If costs and wages are allowed to increase and prices are held down, there will be no incentive to increase production at this time, there will be no incentive to new men to venture their money in losing enterprises. The large companies, of course, can stand a loss, but the policy is destructive of existing little business and discouraging to all those new enterprises we need to provide more jobs. The result of decreased production then is more inflation because the supply is less able to meet the demand. The best solution for high prices is a rapid increase in production, and a balancing of the Government's budget. The administration makes the mistake of regarding increased prices and cost of living as inflation when it is merely the evidence of inflation. In 1929 we were told that we were living in a new era, that we had solved the problem of depression and prosperity and the argument was supported by the fact that there had been no increase in commodity prices. But there was inflation just the same, brought about by an undue expansion of private credit. The collapse of that balloon, which also included incidentally a good many unsound foreign loans, brought the greatest depression that we have ever seen in this country. Now we face the same result through an unwise expansion of public credit.

The proponents of the so-called full employment bill endorsed by the President are frankly inflationists. Mr. Wallace, whose book on the subject was published last week, proposes that we maintain in peacetime the same production of goods and services as at the peak of the war activity, approximately $200,000,000,000 annually. Under the terms of that bill as introduced, if the President estimates that production will be less than some conjectural figure required for 60,000,000 jobs, and cannot think of any way to stimulate private activity, he must propose a program of Federal investment and expenditure sufficient to reach the goal. I cannot imagine any more inflationary proposal. Fortunately, the Senate amendments have destroyed the compensatory Government spending theory contained in the original bill.

I do not believe the administration has thought through the cumulative consequences of the combination of the various policies proposed. Fortunately, when these proposals are translated into concrete measures they offend the common sense of the average American if he is not too much dazzled by those particular spending projects which appeal to his personal interest. A majority of Congress is instinctively opposed to inflationary measures of any kind. This week I was interested to see the most eager spenders repudiating the idea they were for deficit spending.

We must change the whole spendthrift policy which is probably necessary in time of war. We must weigh every expenditure in the light of the necessity of raising from our people, millions of plain working men and women, the money to pay for such expenses. We must stop appropriating money and see where we stand. We must exorcise from our thinking the theory that the Government can spend itself into prosperity, or that the creation of purchasing power is a sufficient excuse for spending.

The only way this can become and remain a prosperous country is to speed up the machine of private enterprise. The largest public-works program anyone has imagined is about $5,000,000,000 a year, which will put two and a half million men to work. We wish to employ more than 50,000,000 men. If, by sound fiscal policies, we can keep the private-enterprise machine on a stable basis and increase its operation by 10 percent, we can put more additional men to work than the largest possible public-works program. Public works are necessary and should be expanded when unemployment occurs, but they can never be a panacea for depression. They must be undertaken only if they are justified by their intrinsic worth.

It is important to adopt such a fiscal policy and policies that there will be a proper incentive of private industry to expand; a proper relationship between wages, prices, and the cost of living; a proper relationship between farm prices and industrial prices; and a proper relationship between savings and consumer expenditures. There are many other elements which can be indirectly affected by Government policies dealing with taxation and agriculture, credit, and controls or relaxation of controls. Public spending is only one of many policies, not by any means the most important and not by any means a catch-all solution. The machine won't run any better if you pour in more gasoline while you throw monkey wrenches in the machinery.

There is another objection to unlimited Federal spending. Every time a new method is found to spend Federal money, it requires a great extension of Federal power which is never easily relinquished. If public works cannot supply enough jobs, the next step is for the Government to go into business to compete with private enterprise. This in itself would discourage any further expansion of private enterprise in that field because no one can compete with a billionaire government. If we adopt or weakly acquiesce in the spending theory, the mere fact that a measure provides for pouring out Federal funds thereby becomes a sufficient recommendation for its adoption, and all critical judgment of the merits of the particular plan is discouraged. In other words, the adoption of the spending theory means the indefinite expansion of Federal regimentation over States, local governments, and private business.

And so I urge that we get down to realties, that above everything we insist upon a program and a plan, and oppose every type of additional spending until we can judge just what the proper limit of Federal expenditure will have to be. If we have any such inflation as the drift of present policy indicates, it will be followed by a greater depression than the last, by suffering, hardship, and unemployment, and I fear by the deterioration of our free economy and of free government which has made this country the greatest and most powerful nation in the world, and with the highest standard of living.

---

## OPA

---

REMARKS

OF

## HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

*Thursday, November 1, 1945*

Mr. LARCADE. Mr. Speaker, during the early part of the month of September the manufacturers of pine lumber from the Southern States sent representatives here to contact their Senators and Representatives to have them appeal to the OPA for relief because the ceiling price on pine lumber was below the cost of production, and as a result many of the mills were closing down, and those operating were operating at a loss and, consequently, the production of lumber was being drastically curtailed.

At a meeting of the Senators and Representatives from the Southern States Senator BANKHEAD, of Alabama, was elected chairman of a committee of 10 Senators and Members of the House, and officials of the OPA were called before the committee, and the situation was explained to them.

The OPA officials promised the committee to advise them in the premises at once, and on October 3 a letter was received by Senator BANKHEAD, chairman, and Mr. Frank S. Ketcham, assistant general counsel for the OPA, copy of which was furnished to me by Senator BANKHEAD, and I wish to quote my reply to Senator BANKHEAD, as follows:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
*Washington, D. C., October 4, 1945.*

Hon. JOHN H. BANKHEAD,
*United States Senator,*
*Chairman, Southern Pine Lumber Congressional Committee,*
*Washington, D. C.*

DEAR SENATOR: I have received your letter of the 3rd instant, enclosing copy of letter received from Mr. Frank S. Ketcham, assistant general counsel for the OPA, and for which I thank you very much.

Judging from my past experiences with the OPA, due to the interminable delays and intransigence in the administration of that agency, I doubt that we will be able to obtain any relief for our constituents before the agency is abolished, or unless we appeal "higher up."

Assuring you of my full cooperation in this instance, and with kind regards and best wishes, I am

Very respectfully yours,
HENRY D. LARCADE, Jr.,
*Member of Congress.*

Mr. Speaker, the OPA continues to give the Members of Congress the same old

"run around" that they have been giving us since their beginning, and we have been unable to obtain any satisfaction from the OPA to help our constituents and to give relief to an important industry. We all know that there has been a most acute shortage of lumber all over the United States due to the exigencies of war, and that building of all kinds was completely suspended during the war, and now that the war is over, we feel that the OPA and other governmental agencies should now give some consideration to the civilian population and to the industries who supply the civilians with the things necessary to life and to their welfare.

## Shortage of Lumber

EXTENSION OF REMARKS
OF
**HON. WILLIAM LANGER**
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
*Thursday, November 1 (legislative day of Monday, October 29), 1945*

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter dated October 25, 1945, from the Northwestern Lumbermen's Association, dealing with the shortage of lumber.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

NORTHWESTERN LUMBERMEN'S ASSOCIATION,
*Minneapolis, Minn., October 25, 1945.*

Mr. A. O. SLETVOLD,
*Senator, Chairman, Minnesota Small Business Commission, State Capitol Building, St. Paul, Minn.*

DEAR SENATOR AND MEMBERS OF THE COMMISSION: We have read in the newspaper and in a bulletin issued by the Independent Retail Lumber Dealers' Asscciation directed to your commission of the controversy between the Independent Retail Lumber Dealers' Association and the Office of Frice Administration with reference to paying wholesale and commission lumbermen an 8 percent commission for their services.

May we impose upon your time long enough to state some facts which may be of help to you and the commission in solving some of our industry's problems, and lay before you the complete story and not only one phase of it?

Of the 2,700 retail lumber yards in Minnesota, Iowa, North and South Dakota, the Northwestern Lumbermen's Asscciation has a membership of 2,350 retail lumber yards. This membership comprises independent yards, farmer and farmer cooperative yards, small and large line yards. Of the 2,700 retail yards, 1,037 yards are individually owned, 1,663 yards are small and large line yards. Seventy-six percent of the 2,700 yards are independent yards and small line yards operating 1 to 10 yards.

The big problem confronting the retail lumber industry of the Northwest, the prospective home owner who wants to build a home, and the farmer who needs lumber and other building material for farm buildings is the lack of lumber and building materials. This everybody knows. Building material manufacturers are from 7 to 9 months behind in production; and the lack of lumber is caused by the present strikes, manufacturing equipment, trucks, tires to get the logs to the mills for production, and, we add, in no uncertain terms, the meddling of the Office of Price Administration.

This association has always stood for controls for the prevention of inflation. The present price controls on our industry were sufficient to prevent inflation during the war and will do so in this postwar period, but Mr. Bowles of the OPA hopes to establish an over-all, new OPA program, and is now fighting for this new program in Congress.

The general over-all policy of the OPA as announced is threefold:

1. The establishment of ceiling prices on new dwellings, resulting in control of what materials, items, etc., can go into a home.

2. Control of labor costs and services performed by builders lower than present labor costs, reverting in some cases to 1943 labor rates.

3. Establishment of dollar-and cent ceiling prices on distribution (distribution is now operating under price control) forcing retailers out of business, as retailers will have to absorb all increases in costs permitted producers in hopes of encouraging production.

What does this story tell? It means that the people who want to build homes will be told how much they can pay for their home, what kind of materials must go into their home, when and where they can build a home. With the National Housing Authority working hand-in-hand with the OPA, all home construction will be programmed by the OPA and the NHA, with the owner of the home having little to say about his own home.

What is labor going to say when the OPA "rolls them back" on wage scales, such as OPA has done in their directive imposed upon the prefabricated home manufacturer? Do you think labor is going to stand for "roll back in wages"? No. They will strike and homes will not be built when materials are available.

Do you think the retail lumber industry is going to sell people material for home and farm buildings at a loss, because OPA would force us to absorb all increases in producing costs?

Before the meddling of OPA and NHA the lumber industry as a whole worked hand-in-hand—the manufacturer, the wholesaler, commission man, and retail dealer—and built the homes and farm buildings people needed, any they can do the job again and employ millions of people if the OPA and NHA keep their fingers out of the mess they have and are creating.

What has the retail lumber dealer of the Northwest, regardless of who or where he is, had to do in order to get lumber for the consumer? He has had to buy green timbers and have them remilled in transit at a cost of $15 to $20 per thousand feet in order to get a little lumber, and he has had to absorb this additional cost. He also has had to absorb the extra freight on green lumber, absorb extras allowed mills on special grading paragraphs in OPA orders, plus added costs on less than carload shipments where retail price is based on carload shipments. All this the retailer did in order to get a little lumber, and now the OPA wants the retailer to absorb more and more costs which will definitely discourage the retailer and eventually put him out of business.

Another factor of importance is present retail lumber stocks. A recent survey, made by this association, of lumber inventories showed that all yards, regardless of kind or type, scattered throughout the Northwest are 15 percent of normal stocks of the kind and type of lumber needed to build homes and farm buildings—boards, dimension lumber, siding, flooring, and millwork. If the Commission would make a survey of lumber inventories themselves, with a questionnaire to all Minnesota lumber dealers, we know your eyes would be opened when the figures are laid before you.

The writer was in Washington 3 weeks ago, met with many Senators and Representatives, both Republican and Democrats (not New Dealers), and they are all familiar with what OPA is doing and how OPA is stagnating reconversion, and they told me in no uncertain terms that they are dead against OPA's new 5-year program, as it is called, and will do everything in their power to prevent the program from being established. But all of them, like this association, are for control of some kind to prevent inflation.

I was also advised that the OPA is already lobbying for their perpetuation after July 1, 1946, and our Congressmen don't like it.

So you see, Senator and members of the commission, you have heard only one phase of the problem preventing the building of homes and farm buildings in the presentation made to the Commission by the Independent Retail Lumber Dealers' Association.

We quote from the Independent Lumber Dealers' Association bulletin directed to the Commission, dated October 3, 1945: "It is possible for him to band together with other independent dealers and form a buying organization, hiring representatives to compete with present purchasers for chain systems and large industrials." What are the facts on this subject?

As stated previously in this letter, there are 2,700 retail lumber yards in Minnesota, Iowa, North and South Dakota. Of these 2,700 lumber yards only 276 yards retain a buyer on the West coast. All the rest have had to depend for their lumber supply on manufacturers salesmen, wholesalers, commission men, and wholesale distribution yards. If the big chain yards, as mentioned in this bulletin, were getting the larger share of the lumber, then homes and farm buildings would be built. But they are not because the lumber inventories of 98 percent of the lumber yards of the Northwest are 15 percent of normal.

We are not interested in controversy between certain factions in the lumber industry. What we are interested in is the getting of lumber and building materials for the prospective home builders and the farmers, and if OPA and NHA leave their meddling fingers out of the picture, homes and farm buildings will be built, thousands of people will be employed in the Northwest, and present price controls on distribution will prevent inflation. As John Snyder, Chief of the Office of War Mobilization and Reconversion, says, "The idea was that industry, once freed of regulation, would produce in sufficient quantity to keep prices down by competition."

Enclosed are several copies of a bulletin sent all independent, farmer, and farmer-cooperative yards, line yards, small and large. Please read it. It gives a complete picture of the problem now confronting the lumber and building-material industry, the prospective home owner, and the farmer. When major problems of this nature confront our industry, we place the problem before the entire industry, and this association's policy is based upon their counsel and advice as shown by their vote.

We also go on record with the Commission that the wholesalers and commission men of the lumber industry have been for many years, and will be in the future, a factor in the procurement of lumber for retail dealers. In fact, this association is on record in Washington and with the Wholesale and Commission Lumbermen's Association as not only favoring the wholesale commission, but have been, weeks before your Commission was presented to the problem. If the lumber dealers of the Northwest are desirous of absorbing the 8-percent commission as proposed by the Independent Lumber Dealers' Association, they will say so in answering the questions outlined in the enclosed bulletin. This is a matter for the lumber dealers to decide, not this association.

If your Commission is desirous of discussing the critical lumber and building-material situation with this association, we will be more than nappy to do so. We have not brought our problems to your Commission since, as an association, our problems cover the States of Iowa, North and South Dakota, as well as Minnesota, while you function for Minnesota only, but be assured we will cooperate with your Commission whenever we can be of service.

Sincerely yours,

W. H. BADEAUX.
*Secretary.*

## Maintenance of Individualism and Free Enterprise

EXTENSION OF REMARKS
OF

## HON. KENNETH McKELLAR

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

*Thursday, November 1 (legislative day of Monday, October 29), 1945*

Mr. McKELLAR. Mr. President, on behalf of the senior Senator from Virginia [Mr. GLASS] I ask unanimous consent to have printed in the RECORD an address delivered by Preston Delano, Comptroller of the Currency, before the Robert Morris Associates at the regional meeting of the Buffalo-Rochester-Syracuse Chapters, at Buffalo, N. Y., on October 26, 1945. The address deals with the maintenance of a society of individualism and free enterprise.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is our fortune, or perhaps our misfortune, to live in a turbulent and dangerous time. It has the smell of fire about it. There is a pleasant touch of nostalgia in turning back the clock to the teens of our now maturing twentieth century and comparing the problems which we knew as young men and those which confront us today. We had our economic and social difficulties then, even our wars, but somehow from this distance they seem much more simple, candid, and direct than those which plague us now. They did not strike at foundations. We still had a stable footing. There were distant rumblings but the great majority of thinking people dismissed quite casually the idea that there could be a real threat to our competitive individualistic economy or to our social structure. Socialistic and communistic theories were regarded as the indoor sport of slightly pink individuals who carried no weight. Science was beginning to have doubts about some of its treasured principles, but here again the new doctrines typified by Einstein's relativity were regarded with rather amused tolerance and as significant only in the classroom. The gay and roaring twenties, now dangerously prophetic in retrospect, confirmed our basic idea that after all it was a pretty good world, particularly if you were on the right side of the market.

Now suddenly and ominously we are aware that the rumblings of distant drums are catching up with us. With recent events abroad staring us in the face, we no longer lightly brush aside the talk about a collective or socialistic economy. We begin to realize that the maintenance of a society of individualism and free enterprise is a rather serious business, our serious business if you please. And science, after brooding in her laboratories for a decade, has suddenly emerged with a handful of real and tangible results, capped by the release of atomic energy in the form of the most destructive instrument the world has ever known. What she has to offer both amazes and appalls us. It is a fascinating, bewildering, and hazardous time.

Now all of this has to do with us as citizens but in a narrower sense it is also our concern as bankers. It is the background for any discussion of the banking situation of today. If we look at the balance sheets, statements of condition and of earnings and dividends, yes, the examination reports in my own office, we have some reason for satisfaction which can easily lull us into complacency. The figures look pretty good. But underlying this technical situation are the grave difficulties of the times.

Two questions pose themselves: What can we as bankers do to assist in the restoration of a free economy in a world which has been regimented for war; and second, what can we as bankers do to maintain our traditional financial leadership in that economy?

Paraphrasing the first question, What can bankers do to maintain the individual as the important factor of society, and his initiative as the driving force which turns the wheels? For the last few years the important thing which we could do has been to devote all our energies to the winning of the war. This we have done. If the dictators had prevailed, the struggle for the rights of the individual would have been lost for a long time to come. Now the war has been won and the dictators crushed, but there remains the difficult task of gradually releasing the controls and once again permitting the economic machine to run under its own power. This so-called total war in which practically all the nations of the world have been involved has produced an absolutely unprecedented dislocation in individual liberty of action. The delicate balance which is so essential to a free economy has been completely disrupted, and the world will not automatically settle back into the general prewar pattern. If we really want back a world of free enterprise and initiative, instead of a regimented one, we are going to have to struggle for it. Possibly one answer is that in the daily conduct of our affairs we can keep ever before us the importance of bolstering up personal initiative wherever it may be found and strengthening that desire to be on his own which is a part of every American's heritage. We can direct credit into those channels where it will best serve the purposes of a vigorous free economy. We can become a part of the great drama to preserve the rights of the individual against the encroachments of the socialized or authoritarian state.

I realize that many of the factors, and probably the determining ones, which will ultimately make for the success or failure of the reconversion effort, lie outside the banking field. Yet bankers must be giving thought and exercising leadership in those broader fields which lie outside the confines of their own immediate affairs. To fail to do so in this crisis is to lack vision indeed.

As to the second question, it is possible to be somewhat more explicit. At the present time, it seems likely that the classic pattern of equity financing with risk capital is about to face a severe test, perhaps because the rewards (even before the impact of taxes) do not seem to justify the hazards, or perhaps for other reasons.

It is not the job of banking to furnish means for launching every scheme that occurs to the minds of the would-be entrepreneurs. But it is the job of banking to supply needed credit to ably managed enterprises—new as well as established—which have reasonable prospects of success and show promise of making a contribution to our national well-being.

One valuable device for the discharge of this function is the so-called term loan, which has been used increasingly for over a decade. Another technique—still largely in the potential rather than the kinetic state—is the organization of credit groups. Whether it is entirely fortuitous, or whether there is some casual nexus, these two developments serve to supplement each other to permit fuller utilization of each than otherwise would be possible.

It is unnecessary to describe the basic differences between term loans and the traditional short-term commercial loans. The 60- or 90-day seasonal loan to an old customer is almost foolproof, provided certain well-known checks are made and precautions taken. A 5- or 10-year-term loan presents very different problems, and requires the banker to possess and exercise judgment—almost prophecy—regarding the business cycle, as well as the future of the industry and the particular organization, over that substantial period of time.

Obviously, an application for a term loan calls for much more thorough study of management, performance, and earnings than a seasonal loan to bridge the period between shipment by a manufacturer and receipt of payment. Special methods of analysis are required involving factors quite different from those which are important to the short-term lender, bondholder, or equity investor; for example, a bank considering a term loan sometimes can safely disregard the borrower's net profits from the correct accounting standpoint, with its necessary provision for depreciation and depletion, and can base its conclusions on the "cash throw-off" to be expected over the life of the loan.

To a degree, of course, some of what are today designated as term loans are old wine in new bottles—merely a recognition of short-term loans for what they actually are—a term loan in disguise. As we all know, many short-term loans have been made with full realization that they could not be discharged at the ostensible maturity, but would have to be renewed again and again, with payment several years off. To this extent, the development of the term loan is simply a frank recognition of the facts and is all to the good.

But most term lending is relatively new in substance as well as in name. The term loan is a flexible intrument which can be adapted to numerous situations where neither short-term loans nor bond, preferred stock, or common stock financing could fit the need precisely. To some extent it constitutes the answer of banking to the challenge of Government lending and Government guaranties.

Of necessity, such term lending is a step in a direction which could lead American banking toward permanent financing of industry, a conceivable development which in my opinion, should be approached thoughtfully and with the utmost caution, despite its successful use in European banking for many decades. Up to the present, no noticeable trend in this direction has been observed. But by their very nature some potential term loans involve unavoidable hazards, and are of a size which makes them unsuitable for handling by a single institution.

For these two reasons, may I invite your attention to a possible advantage in coordinating term lending with the formal or informal credit-group procedure in order to utilize the full potentialities of both. The correspondent banking groups or credit pools or credit groups, launched during the past 2 years, can perform important functions in many ways, but particularly in combination with certain types of term loans. The possibilities of these groups are not limited to serving as a semipermanent, large-scale aggregation of participating banks organized for the stimulation of activity by their members.

It seems to me that the credit group can be of special value in connection with loans, generally term loans, which cannot be handled in the traditional manner by reason of

their nature, rather than their magnitude. To speak plainly, there are numerous situations in which the element of risk is such that no one bank would care to hazard a substantial percentage of its capital, but which nevertheless are within the scope of a reasonable definition of "bankable loans." Loans of this type in fact often are the very ones which provide the means for a small business to start on the way to becoming a major enterprise; in other words, these borrowers are the expanding element in our economy. For this very reason, any one of such loans may result in considerable loss, but a hundred of them, prudently made and supervised, represent en masse very profitable business, even after writing off the two, three, or five loans which do not pan out. Not only that, but some of the concerns thus helped along the way probably will be among the bank's biggest and more profitable customers in 10 or 20 years. Finally, and most important, through such advances banks can supply the means which are needed to make possible the continued expansion of our economy—full employment and constantly higher standard of living—which constitutes one of our primary national aims.

Let there be no misunderstanding here. I am not advocating that banks should furnish venture capital in order to preserve our society of free enterprise or to maintain their own position in it. The supplying of venture capital is the proper function of the entrepreneur and of the investment banker. Commercial bank deposits should never be used for that purpose. What is presently under discussion must be understood as restricted to the field of properly bankable loans, which, of course, in the term category will always present, even within bankable limits, varying degrees of risk.

I need hardly describe in any more detail the relationship which I envision between term loans and credit groups. It is often quite justifiable for a bank (as one of a group of 20 or 30) to advance, let us say, $20,000 in connection with each of some 50 loans, whereas it might not be safe and sound banking, in the eyes of either the directors or the supervisory authorities, for each bank to make a single one of such loans in an amount of $500,000, or to retain $200,000 and grant $100,000 participations to each of three correspondent banks. In a word, broad diversification can make this field both safe and profitable, and in this way credit groups can make possible much-needed and sound advances to small but growing organizations.

By performing this function, through group handling of properly planned and devised term loans, American banking can prove once more its adaptability and capacity for growth, create for itself a new and promising field for credit extension, and diminish the necessity either for Government lending or use of the crutch of Government guaranties, with its constant threat of atrophy to banking judgment. Above all, by rendering such service in this and other areas within their competence, bankers can assist in meeting one of the important obligations of our generation. This obligation is the task of holding fast to certain fundamentals, the tried and proven in our present social and economic organization. It is important to hold fast to the sure things against those alluring but dangerous vistas which come to us from the heated imaginings of war and which are always present in the years of ferment which follow the cassation of hostilities.

This young and very imperfect civilization of ours is rich—rich because it has time in its purse. May we spend this time wisely. In all eras of great unrest and change there are certain outposts of the past which must be held lest hard-won truths be lost. Holding these outposts is oftentimes a lonely and unrewarded task but it is an assignment of great honor.

## Over the Top

EXTENSION OF REMARKS
OF
## HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

*Thursday, November 1, 1945*

Mr. JENSEN. Mr. Speaker, under leave to extend my own remarks I include two news items from the Atlantic News-Telegraph of Atlantic, Iowa, and it goes without saying that I am justly proud of the people of Audubon County, my home county, which was one of the first if not the very first county in the Nation to oversubscribe their quota in the E-bond drive. You can always count on the people of Iowa to do their duty.

The news items follow:

AUDUBON CHAIRMAN FLIES TO CHICAGO WITH "OVER THE TOP" REPORT

CHICAGO, October 29.—Holger Lindholm, of Audubon, Iowa, dumped $330,000 in checks and E-bond stubs on a Federal Reserve bank desk at 12:30 p. m., central standard time, today after an airplane trip from Des Moines.

Clarence T. Laibly, assistant cashier of the Federal Reserve bank, said the county was the first to report "over the top" in the five-State midwestern Federal Reserve district.

---

DES MOINES, October 29.—His suitcase crammed with $330,000 cash and E-bond stubs, Holger Lindholm, Victory loan chairman, Audubon County, boarded a plane today for Chicago where he hoped to be the first in the country to report a county over the top in the drive which started today.

Lindholm, a lumber dealer, said 300 solicitors started work last Tuesday to raise Audubon's $280,000 quota of E-bonds and "had to stop with 112 percent of quota because the banks ran short of bonds."

Accompanying Lindholm on his journey to the Federal Reserve bank in Chicago was Elmer Carlson, 1935 world champion corn picker, now in business in Audubon County.

---

AUDUBON HAILED AS ONE OF 12 COUNTY WINNERS IN BOND SALE

DES MOINES, October 30.—Audubon County, Iowa, was hailed today as one of 12 counties in the Nation to reach its E-bond quota on the first day of the Victory loan campaign.

At Chicago, Clarence T. Laibly, assistant cashier of the Chicago Federal Reserve Bank, said Audubon was the first county in the 5-State midwestern Federal Reserve district to go "over the top."

Holger Lindholm, Audubon County campaign chairman, flew to Chicago yesterday with $330,000 or 112 percent of the county's E-bond quota. The goal was reached prior to the official opening of the drive.

The achievement of Audubon and the other 11 counties across the Nation gained these comments from Washington:

"In behalf of the hundreds of thousands of wounded and disabled veterans of this war who will benefit directly from the Victory loan I want to congratulate and commend you for the fine and patriotic record in meeting your bond quota on the opening day of the drive," Gen. Norman T. Kirk, surgeon general of the Army, wired each of the county chairmen.

"This," said Secretary of the Treasury Vinson, "shows that people in widely scattered parts of the country are aware of the importance of the loan and are out early to make and surpass their quotas."

The little west-central county with Audubon, with a population of less than 3,000, as its largest town was first or one of the first counties in Iowa to reach its quota in all seven previous war-bond drives.

## Laboratory for the Study of Tropical and Subtropical Fruits and Vegetables

EXTENSION OF REMARKS
OF
## HON. JOE HENDRICKS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES

*Thursday, November 1, 1945*

Mr. HENDRICKS. Mr. Speaker, sometime ago the Citrus Products Research Council met in Daytona Beach, Fla., and at that time they recommended that there be established in the State of Florida a laboratory for the study of tropical and subtropical fruits, vegetables, and plants. At that time they stated that such a laboratory would contribute to the improvement of the national diet and health, uncover new sources of national wealth and the potential resources of this area and remove a disadvantage under which this section now suffers in competing with other agricultural areas. It was reported that the council sought the aid of the Congressmen and Senators from Florida and the Secretary of Agriculture for such a project. While they have not taken the matter up with me, I immediately took it up with certain officials of the Department of Agriculture and had a conference with all the bureaus concerned in regard to the form in which such a bill should be drawn.

Those agencies conferring on the bill were the Bureau of Agricultural and Industrial Chemistry, the Bureau of Plant Industry, Soils and Agricultural Engineering, the Bureau of Animal Industry, the Bureau of Human Nutrition and Home Economics, the Bureau of Entomology and Plant Quarantine, also the Agricultural Research Administration, and Mr. Elmer Mostow from the Solicitor's Office. While none of these men in the conference committed themselves to the approval of such a bill, and I did not ask them to do so, they did suggest the substance of the bill, and Mr. Mostow assisted me in drafting the bill. That bill I am introducing today, and it covers a far greater range than was suggested by the Citrus Research Council.

I fully believe that now that the war has ended we should turn to the peaceful pursuits. Research in the tropical and subtropical fruits, vegetables, and plants, byproducts thereof, feeds for animals, and the marketing outlets for these various crops has long suffered for lack of funds and lack of scope of authority to do the proper research. I introduced this bill not alone because I thought these people wanted it, but because I have felt for a long time that such research should be done. My record will show that I have always tried to secure more funds for research purposes. I propose to ask the Committee on Agriculture of the House to send this bill to the Department of Agriculture for a report, to ask the

approval of the Secretary of Agriculture and to ask for hearings on the bill.

Such an establishment in the State of Florida with the authority to do the work carried in this bill would mean millions of dollars not only to the people of the State of Florida, but to the entire Nation.

## Address of Hon. Tom C. Clark at Unveiling of Bust of Franklin D. Roosevelt

EXTENSION OF REMARKS

OF

### HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

*Thursday, November 1, 1945*

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following remarks of Hon. Tom C. Clark, Attorney General of the United States, in behalf of the President of the United States and the American people at the unveiling ceremonies of Franklin D. Roosevelt's bust, the war President, at Hyde Park, N. Y., Sunday, October 28, 1945:

Mr. Booras, Mrs. Roosevelt and family, members of the Order of the Ahepa, and friends, I regard it as a high favor and rare privilege to accept, on behalf of the President and people of the United States, this likeness of the late Franklin D. Roosevelt who, in life, personified the hope of liberty to oppressed peoples everywhere.

I need not remind you, who were privileged to know our late beloved President as an active member of the Order of the Ahepa, that the lamp of liberty that he handed down to posterity will shine brightly as long as men of good will stand ready to guard its sacred flame.

It is truly fitting that we assemble here in this quiet place where he sleeps, surrounded by the countryside and river he knew and loved so well, to pay homage to this man of the ages whose name will forever remain synonymous with liberty to freemen everywhere.

You, who have descended from the warriors who fought at Marathon and Salamis and the brave men who held the pass at Thermopylae—the land of Plato, Aristotle, and Bozarris—know what I mean by freemen.

For Greece, whose cultural heritage has so richly endowed our own civilization, has never in the long centuries of her glories bent her knee in servility to a tyrant. Indeed, 5 years ago this very day, those of your blood in the old country gladly chose death and suffering rather than yield their God-given right to live as freemen. There were no quislings in Greece.

It is reassuring to know that you Americans of Greek ancestry have never forgotten your heritage. Thousands of your sons, and daughters, too, donned the uniform of America's armed forces when the evil forces of darkness threatened to engulf her.

To the name of Dilboy has been added those of Americans of Greek ancestry who unselfishly made the supreme sacrifice on the altar of liberty, while you who fought on the home front, manifested your unswerving loyalty and patriotism by your wholehearted support of the war bond drives. Your splendid record in previous war bond drives has caused the Secretary of the Treasury to honor you by permitting your organization to open the final victory drive.

In closing, I am most honored on behalf of the President and our fellow Americans to accept your gracious tribute to the greatest American of our times, and to one of the immortals of the ages.

## In the Nation

EXTENSION OF REMARKS

OF

### HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Thursday, November 1, 1945*

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Arthur Krock, from the New York Times of November 1, 1945:

ARBITRATING THE GOOSE AND THE GOLDEN EGG

(By Arthur Krock)

WASHINGTON, October 31.—The President's broadcast on labor disputes, accompanied by his revised wage adjustment formula, was devoted in great measure to a plea for the spirit of cooperation and mutual understanding between industry and its workers on which he said the success of any plan must depend. But this spirit has been notably absent in recent management-labor exchanges, and today few would venture to predict that the President's invocation, or the general agreement to the unexceptionable axioms he stated, will restore it.

The reception of the speech and the Executive order by persons close to both sides of the growing national controversy suggests the answer Hotspur made to Owen Glendower when the Welsh chieftain proclaimed he could call spirits from the vasty deep. "Why, so can I, and so can any man," replied the young Percy, "but will they come when you do call for them?"

FIRST TEST SOON

The response of labor and management to the President's appeal for a more constructive attitude toward each other, a more common-sense appreciation of each other's problems and rightful expectations, will first be tested in the conference that has been summoned for the early part of November. Already, however, labor is resisting the suggestion that it renew its no-strike pledge of wartime, even though that was broken on numerous occasions, as a material advance toward the halfway mark. And already management is drawing back from a commitment to collective bargaining which would be left to the interpretation of the political power, fearing the construction would be that such bargaining is not real unless demands are always met in substance.

Unless a broader formula than the President's, on which reasonable wage-and-hour negotiations can be reasonably conducted, is the outcome of the conference, and with the formula an enforced determination to abide by it, little hope was expressed here today by experts in industrial relations that Mr. Truman's speech and Executive order can be relied on to bring the issue nearer to peaceful solution. By these his plan was held to be inconsistent, in part, with his axioms and stated objectives, and they turned their eyes on the conference and Congress and the corrective legislation it is considering.

AN UNCOVERED SITUATION

One of the many advisers on whom the President relied for the patchwork of ideas that took form in his speech made two points about it to this correspondent today, one hopeful, the other not. Mr. Truman, he said, was planning as late as last Thursday to confine himself to a statement and an amended Executive order, but he was prevailed on to go to the country with a full-length speech in which he would stress the need of mutual understanding and recite the problems of each industrial group. But Mr. Truman failed to touch the situation of workers in industries that are continuing on the wartime basis of 48 hours a week, who, when they note that 40-hour workers are getting almost as much, will quit or strike and thus cut down the high productivity the President set as a national standard.

This disparity was implicit in certain passages of the broadcast, and Government boards could readily effect it in their findings. The President did say that wartime take-home pay could not as a general practice be expected by labor, now that the war is over. But he did not indicate in any way that those workers on 40-hour base pay should expect or accept reductions to the amount of 8 hours less earnings than those whose industries are proceeding on the 48-hour basis. Mr. Truman sanctioned the 40-hour week as a standard, but he did not explain how this could achieve the production he concedes to be a necessity.

A MIXED PATTERN

"It is pretty hard," said one informed critic, "to give birth to triplets—to preserve the authorities and positions of Chester Bowles, John Snyder, and the CIO at the same time."

Others noted that the President dealt with the excess-profits tax as a reservoir for wages, not as the temporary war measure it is, but as a producer of funds to which the Government was entitled in wartime and therefore labor should be given in peace. Mr. Truman did not include the reserves which wise and successful management has laid by in industry as another reservoir from which to draw wage increases. But labor spokesmen have cited it as such, denying that this project amounts to socialism.

So many minds and pens joined and clashed in the preparation of the broadcast that its inconsistencies and omissions are not surprising. The analysts of such compositions are sure they recognize the plain track of Judge Rosenman, Robert Nathan, and other New Deal economists and literary amanuenses. But they are equally certain that in other passages they came on the footprints of Mr. Snyder, of Chester Bowles, and of Philip Murray. The latter were definitely missing in the place where the President might have fixed a percentage for wage increases and did not. But the tracks of Mr. Snyder and Mr. Bowles, though at times these suggested a scuffle ending in a draw, were heavy throughout the area of composition.

## St. Lawrence Waterway

EXTENSION OF REMARKS

OF

### HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

*Thursday, November 1 (legislative day of Monday, October 29), 1945*

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Fargo (N. Dak.) Forum of September 30, 1945, favorable to the St. Lawrence waterway.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

Thomas W. Wahl, a Duluth man who is a member of the Minnesota-Great Lakes-Tidewater Association, in a recent letter to the Fargo Forum urged citizens of this area lend support to the proposed St. Lawrence seaway, which, if constructed would have the effect of making Duluth an ocean port.

This project has been in the discussion stage for a long time.

Powerful opposition has developed to it, heading up in the port of New York, which does not want to see this development, obviously because it would take away a lot of traffic that now flows through that port.

Most eastern and some midwest railways are opposed and it is easy to understand why. They stand to lose traffic and revenue.

But isn't that one very definite reason why the shippers of the Midwest should be for it?

If the construction of this waterway should result in the diversion of a great amount of traffic from the rails and away from the port of New York it will be for one reason only, and that is it will move that way cheaper. In other words, that will be the most economical way for this traffic to flow.

And who would benefit by that? Obviously it would be the producers and the consumers and the shippers of this vast midcontinental section, far from the ocean and cheap ocean transportation.

If ocean freighters can be brought within 250 miles or less of the boundaries of North Dakota, that would be almost the same as moving North Dakota within 250 miles of an ocean port—and what a sweeping change that would make in the economy of this section of the world.

Farmers of North Dakota always have been under a severe handicap because they have such a long haul to get their products to the consumers in the dense population centers of the rest of the Nation and the world. What a change it would make to the wheat growers of North Dakota if they were but 250 miles from an ocean port.

We believe Mr. Wahl will find strong support behind the deep-sea waterway in North Dakota.

## FEPC

EXTENSION OF REMARKS
OF
### HON. CHARLES M. LaFOLLETTE
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, October 30, 1945*

Mr. LaFOLLETTE. Mr. Speaker, under leave to extend my remarks in the RECORD, I am including a radio address which I made on the subject of the pending legislation for a permanent FEPC over the American Broadcasting System on July 27, 1945:

I am honored and privileged to speak on this program with Mrs. Anna Arnold Hedgeman, the executive secretary of the National Council for a Permanent FEPC. I know of no one who has worked harder or more intelligently for the cause of the permanent legislation. If it were necessary or proper to personalize the principles to which those of us who support this legislation adhere, I know of no person who, by their own intelligence, character, and conduct, more completely personifies both the justification for and the need for this legislation, or more fully exemplifies the truth of the ethical and biological premises upon which those of us who support this legislation base our case.

I am willing to debate both the principles upon which the permanent legislation is founded and the mechanics of the specific legislation now pending in the House, any time, anywhere, with any person, subject only to limitations upon my time arising out of the presently existing personal reasons, or out of the duties imposed upon me as a Member of the National House of Representatives.

Tonight, because of the very limited time available, I can only touch upon fundamentals and treat those only briefly.

The proposed permanent legislation declares it to be a matter of national policy, operating in industries which affect interstate commerce, that the right of an individual to work in any job which he has the ability to attain and the character qualifications to keep shall not be denied to him because of the color of his skin, his creed, his race, or the nation of his origin.

There is nothing basically new in this proposal. Beginning with the Mayflower compact and extending down through the Declaration of Independence, the Constitution of the United States, the Emancipation Proclamation, and the thirteenth, fourteenth, and fifteenth amendments to the Constitution, our Government has been founded and operated upon the theory that men were born free and that they are entitled to live in a society in which they enjoy an equal opportunity in that society with all other members.

This is the democratic principle in which we profess to believe. Therefore, it is by this yardstick that we must measure our accomplishments, if we are to understand the extent to which we have produced democracy in fact, in our country.

At Gettysburg Lincoln stated that we were testing whether a nation, so conceived and so dedicated, could long endure. Although this issue of freedom and equality of man was present in the struggle of which he spoke, nevertheless, Lincoln was largely speaking of the capacity of our Nation to maintain democracy in the governmental or political realm. Gradually, since Lincoln's day, our people have begun to realize that the democratic ethic or principle upon which this Government is founded must also be made to operate and be brought to its complete fulfillment in the economic field, as well as in the political field. Consequently, we have learned that all men, being free, not only possess the right to speak and the right to vote, but they also possess the right to eat. And—just as the right to speak and to vote includes the right to secure and hold political office—so also the right to eat includes the right of all men to attain any position in our economic society which their intellects, their ability, and their skill entitle them to fill and their character habits entitle them to hold.

If, therefore, the ethic and principle upon which our Government is founded requires that these things be made available to all men as part of their natural rights, it follows that it is the obligation of that Government to create a situation in our economic life where each citizen can enjoy this natural right, as a factual and existing social and economic right and not as a theoretical one. From this it follows that any discrimination operating against a man's right to employment which, in its operation, prevents him from obtaining employment, purely because he is a Negro or a Jew or of Mexican or of Latin-American origin, is an antidemocratic and un-American discrimination operating in our economy. As such it must be eliminated by any government such as ours by operation of law, where it is clearly demonstrated, by the existence of such discrimination over a long period of time, that those who control and operate our economic system are incapable of eliminating the discrimination without obtaining the assistance of the Government for that purpose.

Those of us who support the legislation for the establishment of a permanent Fair Employment Practice Commission therefore propose nothing new; we merely propose that our Government shall assist those who operate our economy to eliminate an antidemocratic and un-American condition in our economic life which is inconsistent with the democratic ethic upon which this Government was founded, and to advance which it finds is its greatest justification for its maintenance.

Since this legislation, therefore, is based upon the most fundamental Americanism possible—the ethic and principle upon which this Government was founded; and since it is known to everyone, who understands the democratic ethic and principle, that it, in turn, finds its source in Judaeo-Christian thinking, it is not surprising that we find many leaders, both secular and clerical, who have publicly supported the ethic and principle upon which this proposed legislation is grounded.

Speaking before the War Writers Board on January 11, 1945, Mr. Eric Johnston, president of the National Chamber of Commerce, said this: "The withholding of jobs and business opportunities from some people does not make more jobs and business opportunities for others. Such a policy merely tends to drag down the whole economic level. Perpetual poverty for some merely guarantees stagnation for all."

Mr. James B. Carey, executive secretary of the National CIO—who, for the benefit of those who do not know, is not a Communist—says this: "It is a matter of practical common sense. The unions that are affiliated to the CIO have found that discrimination against any minority of our citizens results in danger to the interest of all."

Rt. Rev. Msgr. John A. Ryan, nationally known Catholic leader, says this: "Discrimination, whether practiced by employers or employees, is definitely immoral * * * as if they committed theft or murder."

G. Bromley Oxnam, bishop of the Methodist Church and president of the Federal Council of Churches of Christ, says this: "The religious forces and, I believe, the democratic forces of the United States, face a fundamental problem here, and that is finding a concrete means to translate our ethical ideas into the realities of economic justices and racial brotherhood."

I have taken these quotations deliberately from leaders of American life who are not members of the minority groups against whom discriminations which presently exist have been practiced. I have done so in order to give the lie to the canard which has been given much too much prominence in recent days—that this legislation is being supported only by Communists, Negroes, and Jews. Of course, such a statement is a lie and a falsehood. This legislation is as American as Plymouth Rock. It is as Christian as the second great commandment, "Thou shalt love thy neighbor as thyself."

When the people of America fully understand that the passage of this legislation is demanded of them, if they are to meet the responsibilities imposed upon them by the principles inherent in the ethics and the Constitution under which they live—and they will understand it—then, its passage is as inevitable as the rising of the tides and the sun, for it is part and parcel of the ineffable laws of the universal God and the powers of evil cannot and will not prevail against it.

## Control of Atomic Energy

EXTENSION OF REMARKS
OF
### HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, November 1, 1945*

Mr. McDONOUGH. Mr. Speaker, there is nothing before this Congress that

remotely approaches the question of what we should do about the control of atomic energy for either military or peacetime purposes nationally or internationally. What are we waiting for?

The future peace and prosperity or the doom of civilization hangs on every moment we wait. I heard a scientist who worked on the atomic bomb say last night that 1 hour after the next bomb was dropped that civilization could be wiped out. Those are not my words, they come from a recognized expert on atomic energy. Science will not wait for log-rolling legislation. This is no question to play politics with. We cannot afford to postpone this question for one moment until we have settled it one way or the other; not days, not hours, but seconds count. A joint committee of the House and Senate should be organized at once. Not two separate committees.

Who is going to assume the responsibility for further delay? I do not believe any Member of Congress wants to answer that one.

What more do we have to know than the fact that atomic energy must be controlled both nationally and internationally, and that without control it is left to the devices of man to destroy civilization or make the world a happier place to live in. Which do you you think will happen?

The abomination of desolation may be closer than we realize.

## Cotton Research

EXTENSION OF REMARKS
OF
### HON. THEODORE G. BILBO
OF MISSISSIPPI
IN THE SENATE OF THE UNITED STATES
*Thursday, November 1 (legislative day of Monday, October 29), 1945*

Mr. BILBO. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "More Research on Cotton," from the Southern Agriculturist for November 1945. This is one of the oldest farm papers in the Nation, being over 75 years old. It is ably edited by Hon. B. Kirk Rankin, the managing editor.

I direct special attention to this editorial because it deals with the great fight King Cotton is now carrying on to save himself from the competition of a thousand synthetics. Of course, this great agricultural product is one upon which many millions of our people depend. I invite the special attention of my colleagues to this editorial because to my mind it outlines what has to be done in order to save the cotton farmers of the Nation.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MORE RESEARCH ON COTTON

The South's tremendous stake in cotton makes it imperative that research programs be greatly expanded in the next year. We keep hearing that cotton is doomed. It is—unless far more work is done toward developing new uses for this southern crop.

Growing attention is given to synthetic textile fibers like rayon, nylon, and vinyon. Others are made from natural protein materials such as skimmed milk, soybeans, peanuts, corn, and fish. We even have glass fibers competing with cotton, silk, and wool. Scientific research made them possible. Similarly, scientific research can do much for cotton—provided it is done on a comparable scale.

Cotton will continue to meet increasing competition from synthetic fibers. Cheaper cotton-growing countries like India and Brazil also pose a problem. The war stimulated the production of rayon, especially in the Axis-controlled areas. In this country, total rayon production and consumption increased mightily during the past few years. Rayon is being steadily improved in quality following new processing developments.

Congress pledged itself to support the price of cotton at 92½ percent of parity for 2 years after the war was over. That was intended to help farmers. It does—for the time being. But from a long-range standpoint it may result in lasting injury. Why? Because nobody pledged a similar floor for rayon or nylon. As a result, rayon's cost has steadily dropped until it is now in line with that of corresponding grades of cotton. It will drop even lower in the next few years. Faced with a choice between low-priced, good quality rayon and high-priced cotton, manufacturers of clothing and tires naturally will choose in favor of the synthetic fiber.

We are aware of research undertaken in recent years, and especially during the war, to further the use of cotton. We refer particularly to the fine work of the Institute of Technical Research at Charlottesville, Va., the Textile Research Institute at Princeton, N. J., and the Southern Regional Research Laboratory at New Orleans, La., and the research of some of our large cotton mills like Bibb, Callaway, Cannon, Westpoint, and Riverside, and Dan River.

But the solution of these cotton problems is so vital to thousands of southern farm families, largely dependent upon this cash crop, that we must greatly expand all existing research activities. More than anything else we must attract to this job the best scientific brains of our country. This will cost money—and plenty of it. It presents a challenge to cotton growers, shippers, and manufacturers alike. If cotton is to retain its leadership in apparel and industrial uses, we must equal the time and money that have gone into research on synthetics.

## The Atomic Age

EXTENSION OF REMARKS
OF
### HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
*Thursday, November 1, 1945*

Mr. GATHINGS. Mr. Speaker, no one doubts that this is the atomic age in which we are living. It came with force and rapidity. It challenges the aspirations, the hopes, and the imagination of all of us.

America was fortunate in having the industrial might, skilled labor, capital, and brains to produce the atomic bomb which brought quick victory to our cause. One of those who was, to a great degree, instrumental in the success of this deadly modern weapon of war was Maj. Gen. L. R. Groves, officer in charge of the atomic-bomb project. General Groves and his aides worked tirelessly on this project and are deserving of the plaudits and praise of a grateful people.

On October 26, 1945, Lafayette College, Easton, Pa., bestowed upon General Groves the honorary degree of doctor of science. On that occasion General Groves delivered a speech on the subject of the atomic age, the full text of which follows:

Today is October 26. Today hundreds of thousands of Americans were scheduled to be on the water on their way to the beaches of Japan. The sons of many of you would have been there. Awaiting them were well-prepared fortifications manned by the most fanatical enemy we have ever faced—an enemy with guns and ammunition and the will to resist—an enemy who would have had to be destroyed cave by cave. This would have been the last voyage for thousands of our fellow countrymen. Many of them are on the water today but they are homeward bound. World War II is over. We did not have to storm the Japanese homeland and pay the price in American blood and tears to overcome the expected last-ditch resistance. Two bombs, produced through the efforts of a veritable army with a maximum strength of some 120,000 men and women and indirectly by tens of thousands more, ended the war. The course of history was changed.

The story of the atomic bomb is that of the greatest joint effort and achievement of organized science, engineering, and industry in history. Our scientists had the ability to piece together and to develop the theories, the discoveries, and the knowledge of many men in many different fields of science into workable practical processes. Our engineers had the ability to design and our industry the capacity to build and operate the unprecedentedly and incredibly complex plants and processes required.

Our achievement is a tribute to the American way of life. It could not have been done elsewhere in any comparable time. It required the intelligence, willingness to work, and ingenuity of the people of the United States—the same factors which give us our unparalleled high scale of living.

When the theories and preliminary experiments of the scientists revealed the possibility that an atomic bomb might be feasible, we were faced with an all-important decision. Was it wise—was it even sensible to proceed on a vigorous determined effort aimed at successful use in this war—what chance did we have of success? There were almost as many shades of opinion as there were advisers. The chances could not be calculated—they could only be guessed at and no one man or group of men was qualified even to do this. Could we develop a process to prepare or separate the basic material? If so, would it be so complicated that not even a Hercules could build it and if built not even the residents of Mount Olympus could operate it. Would the material even explode and if so with sufficient force to be effective? If we did manage to separate the material, and if it would explode could we design and build a bomb that would work?

We were sure that it would entail a major effort over a long period and that it would cost a tremendous amount of money and, further, that if it were to be done in time we would have to have absolute top priority in men, materials, and equipment. I was convinced that whoever first obtained such a weapon would gain a quick and complete victory. This conviction was shared by the Military Policy Committee—Dr. Bush, Dr. Conant, General Styer, and Admiral Purnell. This conviction overbalanced the possibilities of failure and brought the approval of the highest authorities in the land. We all knew that the chances of failure were far from insignificant.

Once the decision was made, the first move was to turn to industry. Our industrial leaders met the challenge—they did not hesitate. The task was immediate transition from the pretest-tube stage to practical production, with time the vital factor. American industry shouldered the vast production problems. These included the designing, building, and installing of complicated machinery, completely revolutionary in design, the construction of vast plants to the most exacting specifications and the operation of the most complex processes. As it turned out, it was a $2,000,000,000 job and required hundreds of thousands of employees. Industry had to carry this burden on top of its already tremendous armament program which, as you all know, was not limited simply to meeting the needs of our own military forces. Without American industrial capacity and performance, this war would not have been brought to a successful conclusion so soon, and in fact history might well have recorded the defeat of democracy and the triumph of Hitler and his ideologies.

The release of atomic energy ushers in a new era in the understanding of nature's forces. The use by man of this force in the atomic bomb has been characterized as the dawn of the atomic age—what that age has in store for us, no one knows.

The dawn of this new epoch has caused all thinking Americans to ponder the effect of this great development on the lives of our own people and on other nations. The effect on the policies of the United States and other nations will not be answered today or tomorrow. As President Conant, of Harvard University, has said, "Nothing like this has happened in the course of science or invention unless it be the invention of fire itself in prehistoric times."

The lessons of history must not be ignored. For that reason, I should like to review briefly the impact of scientific and technical developments on previous ages and the effects on the welfare of all peoples.

The origin of political relations between peoples of the western world started with the palisaded village which grew into a walled city and led to the establishment of the agricultural city-state. Since scientific methods and techniques were literally unknown, endurance rather than skill determined superiority. Had the intelligence of the citizen-soldier of that age been supplemented by a rational development of weapons, organization, and techniques, an energetic and courageous people, like the Spartans, might have changed the course of history. Instead, semibarbarian people led by Philip II of Macedonia and his son, Alexander the Great, established control over the then known European world. They adopted the principle of quality rather than quantity and established for the first time methods and procedures which were the foundation of modern civilization.

In the century following the death of Alexander in 323 B. C., progress in mechanics was unrivaled for many centuries. The Romans, who further developed the techniques of the Greeks, became the leaders of the then known European world. Their power reached its ascendency under Julius Caesar, who improved the military art and fostered engineering development. The Roman legions owed much of their success to their entrenched camps and excellent roads.

The barbarian invasions of the Roman world influenced the course of history profoundly and established the Middle Ages. The rigid standards of society made possible by feudalism retarded the development of new scientific discoveries. However, the military art developed, and a new weapon, the English long bow, prepared the way for a new social order as it psychologically, as well as tactically, heralded the fall of feudalism and the rise of the common or underprivileged human being by placing in the hands of the common soldier for the first time a truly powerful weapon. The power of the then privileged classes was diminished still more by the first use on a western world battlefield of gunpowder in A. D. 1327. Again the value of human strength and skill and personal courage was lessened.

The sixteenth century brought standing armies, the development of competitive armaments, and the introduction of the balance of power as a policy. Gunpowder was a decisive factor in the development of England as a naval power, even as her rise in the nineteenth century to world economic dominion was due to coal.

In 1698, the first steam engine was introduced in England and with its further development by Watt, the world entered the age of steam. The industrial revolution which now set in, synchronized with the preaching of a new way of life, equality, and liberty, by a host of philosophers such as Montesquieu, Voltaire, and Rosseau. Our own American Revolutionary War for Independence and later the French Revolution followed.

Napoleon Bonaparte turned France into a military nation and aimed at the domination of Europe at the same time the steam engine was beginning to turn the western world into a group of powerful industrial nations. Factories became even more important to armies. In 1813, Robert Fulton built the first steamer to cross the Atlantic Ocean and 6 years later the first true railway was constructed by George Stephenson. On the 9th of March, 1862, the battle between the *Merrimac* and the *Monitor* ended the wooden navies and forced more modern ideas on even the most conservative.

In the nineteenth century, the internal-combustion engine began to take practical form. Its development caused a rapid increase in the production of petroleum. As a commercial proposition, the gas engine was first introduced by Dr. Otto in 1876. Nine years later it was improved upon by Gottlieb Daimler, who fitted a small petroleum internal-combustion motor to a bicycle and produced the first petrol-propelled vehicle. It was then adapted to four-wheel carriages and in 1895 the first automobile race was held from Paris to Bordeaux and back, the winner covering the 744 miles at an average speed of 15 miles per hour.

Then, on the 17th of December 1903, at Kitty Hawk, N. C., Orville Wright remained in the air for 12 minutes in a power-driven airplane. Six years later a monoplane spanned the English Channel between Calais and Dover in 31 minutes.

Within a half century, the internal-combustion engine changed the face of the world, bringing us to year 1945. The changes brought about by oil, as well as changes resulting from scores of less spectacular inventions, when coupled with the studies made in the metallurgical, chemical, biological, and other sciences, set in motion forces quite different from those released by coal and steam. The relationships between nations were revolutionized. The possibilities of this vast industrial instrument were unfolded in World War I and reached a tremendous level of development by the end of World War II. Our conceptions of the potentialities and the interrelationships of air, sea, and land power have undergone a great change. A vast staff of engineers, technicians, mechanics, and craftsmen has become necessary to the conduct of war. The conflict among nations in the war we have just terminated demanded the participation of every citizen and absorbed nearly all the resources of the state.

We were still in the oil age when the first atomic bomb made history just over 2 months ago. Before we have had sufficient perspective to judge the effects of the oil age upon our civilization, we are face to face with the dawn of a new age. This age was precipitously opened with the successful large-scale release of energy by atomic fission in an isolated section of New Mexico on July 16, 1945. And 20 days later the strike on Hiroshima alerted a surprised world to its new historic era.

Behind this military use stretched the war's strangest army. Linked together for a common purpose were representatives of all branches of the military services, ranging from the men who stood untiring guard over our plants to the handful who dropped the two bombs on Japan. It was a high-speed army working without identity. It included on its roster engineers to design and construct vast plants, physicists, chemists, and other scientists and technicians, industrialists, and specialized Army and Navy personnel, all with the difficult, but vitally important mission of shortening the war by developing the atomic bomb. The front along which this army toiled and fought its battle against time and under the closest security extended completely across the Nation. The majority of its members contributed their specific skills without knowledge or foresight of the high urgency or aim of their accumulative efforts.

Our Nation's leaders watched with ever-increasing interest as the goal gradually was approached. Almost 3 years had gone by, almost $2,000,000,000 had been spent, we had built and were operating our separation plants; but we still did not know that the material would explode or that our bomb would work. On July 16, 1945, we found out that we were right—the bomb did explode.

A long slim tentacle of our organization had been extended to the Marianas; within 2 weeks we were ready for the final goal of the entire project. Here in the Pacific, young scientists and the military were indistinguishable as they toiled side by side. From here was launched the revolutionary weapon, end product of our venture. Precision, on a high plane, keynoted final assembly of the custom-made, intricate bomb—the missile which opened the military age of atomic energy. Only weather, and that only for 5 days, delayed ringing up the curtain on this decisive step into the future. Teamwork and the will to win carried us successfully into combat. The war ended—less than a month after we first proved that we were not on a wild-goose chase.

Steam had revolutionized society in 100 years, and oil in its turn in 50 years. I repeat, we do not know what the effect of atomic energy will be or when it will come into full bloom.

We hold in trust a power capable of destroying the structure of our civilization. The atomic bombs dropped on Japan have proven the destructive uses to which this power can be applied. I believe that it can and I hope it will—it must—be developed as a mighty force for human welfare. During the past 2,000 years, many different methods for preserving peace have been attempted. There was the Pax Romana based on the overwhelming military strength of Rome. A common culture was established throughout the Latin world with common language, citizenship, laws, and customs. In the nineteenth century, there was the balance of land power, plus English naval supremacy, which prevented wars from assuming world-wide dimensions. Today we are hoping that the United Nations will be the opening wedge toward complete world peace.

Only a few months ago, the military might of a nation was estimated in terms of the number of men, ships, and planes that it could put into action. These numbers were determined by the resources and industrial power that the nation could muster. But the atomic bomb wiped out such simple mathematical solutions just as it wiped out

Hiroshima and Nagasaki. We are now confronted with the possibility that even a small third-rate power could reduce a mighty industrial nation to helplessness with a relatively small number of atomic bombs. Necessity requires that any system for preserving peace be a solid one that will insure justice to all the peoples of all nations. We are for the moment entrusted with the future welfare of mankind. May historians of the future write that the United States of America fulfilled that trust.

## Land-Grant Railroad Rates

EXTENSION OF REMARKS
OF
## HON. JOHN J. COCHRAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

*Thursday, November 1, 1945*

Mr. COCHRAN. Mr. Speaker, the action of the House last Monday in rejecting the conference report on the bill to repeal the land-grant railroad rates was a step in the right direction. If we can keep that bill from becoming law it will mean a saving of hundreds of millions of dollars to the Government not only for the present but also for the future.

As I stated in my speech Monday, the concessions granted by the railroads to the Government in rates was the result of an agreement made at the time that the Government gave 130,000,000 acres of land for the purpose of stimulating the construction of railroads in various parts of the country. This was an outright grant of a tremendous acreage of the public domain. In return for that grant the railroads agreed to carry our troops and property free of transportation costs.

Some 60 years ago the railroads took the position that the agreement meant that the roads would be available to the Government to transport its troops and property and the courts sustained their position.

Following that the Government not desiring to go into the railroad business made an agreement with the land-grant roads to carry troops and Government property at 50 percent of the commercial rate. It is that agreement that the railroads desired to set aside by the passage of this legislation.

There is also another feature in connection with this matter that should receive the attention of Members of Congress and that is that when non-land-grant railroads desired Government business they secured permission from the Interstate Commerce Commission to make an agreement with the railroads to carry the troops and property at 50 percent of the commercial rates. As a result of that agreement our troops and property have been carried by the non-land-grant roads under what is called the equalization rate.

Therefore should the Congress repeal the land-grant-railroad rate clause in the act to regulate commerce the non-land-grant roads will immediately cancel their agreement with the Government to carry its troops and property at 50 percent of the commercial rate.

In order that the Members might be fully informed in reference to this matter I have secured a statement from the Comptroller General, and, under the permission granted me, I include as part of my remarks the Comptroller General's letters. They follow:

COMPTROLLER GENERAL OF THE
UNITED STATES,
*Washington, November 1, 1945.*

Hon. JOHN J. COCHRAN,
*Member of Congress,*
*House of Representatives.*

MY DEAR MR. COCHRAN: Reference is made to your personal inquiry as to the amounts paid by the Government to land-grant and land-grant-equalization railroads during the fiscal year 1945, and as to the cost to the Government of rail transportation services if it had not been for land-grant and land-grant-equalization deductions.

In my letter of May 15, 1944, to you, a copy of which is enclosed, it was estimated that about $2,000,000,000 would be paid to rail carriers by the Government during the fiscal year 1944, and that on the basis of past experience approximately $200,000,000 would constitute the "contribution" to the United States by reason of land-grant and equalization deductions. During that year land-grant deductions, which have been estimated at from 10 to 17 percent of the commercial charges applicable to military and naval traffic in the absence of such deductions, were relatively low in proportion because the predominant movement of traffic was eastward, much of it between points involving little or no land-grant mileage. On the other hand, during the fiscal year 1945 more traffic was moving westward to the Pacific ports, en route to the Southwest Pacific area, through territory involving a substantial amount of land-grant mileage, and the proportion of land-grant deductions to the total transportation bill was relatively higher. In addition, the total bill, as shown by the estimate below, was also higher than the amount stated in my letter of May 15, 1944, for the fiscal year 1944. These factors substantially increased the amount of land-grant and equalization deductions estimated for the fiscal year 1945.

It is now estimated that approximately $2,500,000,000 was paid to the railroads directly by the Government during the fiscal year 1945 for movement of freight and passengers on Government bills of lading and transportation requests. Of that amount, approximately $2,375,000,000 represents disbursements for military and naval transportation. It has been estimated that about 63 percent or $1,500,000,000 of the amount disbursed for military and naval transportation involved land-grant and equalization deductions. For the reasons stated above, it is considered that land-grant and equalization deductions, where applicable, averaged approximately 17 percent of the commercial charges subject to deductions, or 20 percent of the net amount paid after making deductions. Accordingly, it appears that $300,000,000 is a fair estimate of the amounts deducted for land-grant during the fiscal year 1945.

It has been further estimated that 40 percent of the above amount of $300,000,000, or $120,000,000, was deducted from payments to land-grant carriers and 60 percent, or $180,000,000, was deducted from payments to land-grant-equalizing carriers. Application of the same percentages to the total rail-transportation bill of $2,500,000,000 for the fiscal year 1945 would result in amounts of $1,000,000,000 and $1,500,000,000 as the payments to land-grant and to land-grant-equalizing carriers respectively. Addition of the deductions of $300,000,000 to the total rail bill of $2,500,000,000 results in an approximate amount of $2,800,000,000 as the constructive cost of rail transportation to the Government during the fiscal year 1945 had it not been for land-grant and equalization deductions.

I trust the foregoing will serve the purpose of your inquiry.

Respectfully,

LINDSAY WARREN,
*Comptroller General of the United States.*

COMPTROLLER GENERAL
OF THE UNITED STATES,
*Washington D. C., May 15, 1944.*

Hon. JOHN J. COCHRAN,
*Member of Congress,*
*House of Representatives,*
*Washington, D. C.*

MY DEAR MR. COCHRAN: In compliance with your telephone request of today there is furnished herewith such information as is available with reference to land-grant contributions by carriers to the United States, being deductions for land-grant from freight charges on certain shipments of Government property.

Of course, as you know, original land-grant statutes provided the Government with the free use of trackage developed over land which had been granted to carriers; that by judicial interpretation it was established that such right was predicated on the use of Government-owned equipment; and that since the Government did not own or use its equipment there was required a fair fixation or reduction of service charges and that subsequent legislation recognized a basis of 50 percent. In addition, you are familiar with the fact that many carriers whose revenues were not subject to land-grant deductions and who, accordingly, were not preferred for Government shipments inasmuch as the use of their trackage involved larger service costs to the United States, tendered to the United States and entered into equalization agreements which provided that their revenues from Government business would be limited to sums not in excess of the charges otherwise available to the Government had the business been restricted to land-grant carriers.

In the early years, in fact until just prior to World War I, the amounts realized by the Government in reduction of the commercial charges to land-grant charges or sums equal to land-grant charges were so small as to be hardly worthy of consideration when compared with the value of the granted lands, even though the national benefit as a result of development of unsettled areas is considered. Of course during the period of World War I and with the subsequent expansion of Government business the amounts contributed to the Government by reason of land-grant computations increased and may be roughly computed on a percentage of from 10 percent to 17 percent of the amounts directly expended by the United States for transportation. For instance, during the fiscal year 1941 it is estimated that the Government expended a total of $70,000,000 for transportation of matériel and personnel by all means of transportation facilities, i. e., rail, water, highway, air, and express. No records have ever been maintained of the exact figures representing the deductions allowed the Government by land-grant or equalizing carriers although it is believed to be fair to consider that of such amount $50,000,000 was expended solely for freight and passenger movements of matériel and personnel by rail and that only about from $5,000,000 to $8,500,000 accrued to the United States as land-grant and equalization deductions.

During the defense period just prior to the war and during the present war period the United States has greatly increased its obligations to carriers, so much so that for the fiscal year 1944 it is believed that there will have been expended a total of about $2,500,000,000; that of this sum about $2,000,000,000 will be paid to rail carriers; and that on the basis of past experience approximately $200,000,000 will constitute the contribution to

the United States by reason of land-grant and equalization deductions.

In connection with the figures cited above it is particularly significant and attention is particularly invited to the fact that land-grant carriers furnish only about 40 percent of the amounts contributed by the carriers as reduced charges and that 60 percent of such reductions are realized with reference to revenues due equalizing carriers. In other words, carriers which are under no legal obligation to offer the United States any reduction in charges constitute, on a revenue basis, the major carriers of Government business in connection with which reductions are offered and realized. It is also significant and important to point out that equalizing carriers are constantly liberalizing the services subject to land-grant equalization and that this trend is definite, despite the fact that under equalization agreements carriers may limit the services subject to equalization or may terminate such agreements at will.

It appears to be conceded that the carriers are enjoying a period of profit realization in which previously unheard-of sums are being made available for carriers' use and it has been estimated that carriers' revenues will approximate $10,000,000,000 for the fiscal year 1944, of which sum it is believed that $7,500,000,000 may be stated as Government business, direct or indirect, although only $2,500,000,000 is direct Government business. Therefore, it would appear that with reference to $5,000,000,000 of income due to governmental activities the carriers will realize full commercial charges with reference to the revenues involved.

At the present time when carriers are enjoying a period of unprecedented prosperity and are urging the repeal of land-grant statutes, attention is invited to the fact that this whole matter was considered some 4 years ago in much more detail and with much greater attention to the rights of the parties involved than appears to have been the case in connection with the pending legislation. The whole matter was carefully considered prior to the enactment of the Transportation Act of 1940, 54 Stat. 899, at which time land-grant benefits were removed from all Government traffic except "military or naval properties of the United States moving for military or naval and not for civil use" and "members of the military or naval forces of the United States." Consideration was again accorded the matter in April 1942 at which time the Congress took no action.

Too much attention cannot be invited to the fact that the term "land-grant rates" is loosely used and loosely understood, to mean that the United States is granted a reduction equal to one-half of the charges applicable to business generally in connection with its transportation matters, whereas, actually, carriers' revenues may be subjected to land-grant only with reference to line-haul charges, i. e., pure transportation charges, excluding from consideration all charges for special or accessorial services furnished by carriers. Also, in determining amounts due by the United States to carriers whose revenues are subject to land-grant computation, the computation is determined on the basis of a deduction for land-grant percentage as applied to road-haul revenue, i. e., each shipment is considered individually and the land-grant deduction with respect thereto ascertained on the basis of the ratio of land-grant-aided mileage to total mileage in the line of the land-aided carrier over which the charges are computed, divided by two. Thus, if a charge of $1 accrues to a line of railroad for its haul over 100 miles of its line embracing only 20 land-grant-aided miles, the deduction for land-grant from the charge of $1 is 10 percent, being one-half of the ratio of the land-aided mileage to the total mileage involved. In many instances, the land-grant "contribution" accorded to the United States may represent only 5 percent or less of the total charges involved. Deductions for land grant in connection with passenger transportation subject to land grant is determined on a similar basis.

It is hoped this will afford the information you desire.

Sincerely,

LINDSAY C. WARREN,
*Comptroller General of the United States.*

## The Full Employment Bill

EXTENSION OF REMARKS
OF
### HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
*Thursday, November 1, 1945*

Mr. GATHINGS. Mr. Speaker, the language of the full employment bill is beguiling, but not enough so to deceive stanch defenders of Americanism. I wish to include here an editorial taken from the September 30 Arkansas Democrat and signed by leading citizens of my State, in which the illusions and dangers of this proposal are cited.

The editorial is as follows:

PLENTY OF JOES IN SIGHT

Fear invites the evil it flinches away from. That's a truth which wise men, real leaders, have long understood.

Job declared, centuries upon centuries ago, "The thing which I greatly feared is come upon me."

President Roosevelt spoke from this ancient knowledge when he first took office, in that stormy time when the country seemed to be crumbling into ruin. He challenged the fear which had gripped the Nation, roused its energies, with the ringing words: "The only thing we have to fear is fear itself."

Now the Senate passes a measure, the full employment bill, which is written in fear, and whimpers with fear—that and the vicious purpose of creating a "spending heaven" for the pressure groups and politicians.

The bill has been modified, it is true. Certain checks are placed on government outlays to provide jobs. Such outlays would have to be accompanied by a tax plan to raise the money. The spending would have to be consistent with the Government's "needs, obligations, and other essential considerations of national policy"—whatever that means.

But there are loopholes in these restrictions that you could drive a cow through. For example, billions might be shoveled out in 1 year, with the tax to collect them spread over a "reasonable number of years." Congress could say that 10 years, or 40 years, was "reasonable"—and meanwhile add 10 billions, or 20 billions, to the already staggering national debt.

The vital thing is that if this bill passes the House, even as it is—even further modified—the spending camel will have its nose in the Treasury tent. And you remember what happened in that old fable. The camel kept inching farther into the tent till its owner found himself out in the cold.

This bill will work the same way if it becomes a law. Can you picture Congress refusing to make an appropriation for Government jobs in an election year, if the President should forecast that millions would want work?

Do you want to pay taxes to provide soft Government jobs whenever the pressure groups and politicians thought them useful to their personal plans?

Do you want to threaten the expansion of private enterprise—a vital matter to Arkansas—with the possibility that its taxes may be shoved up any year to furnish political or pressure-group employment?

If not, let your Congressman know. There is work in sight for all who really want to work if industry and business are given a fair chance.

"The only thing we have to fear is fear itself." Let's be men, true to our proud American heritage, not cringing socialistic mice.

## Transportation Facilities for Soldiers Eligible for Discharge

EXTENSION OF REMARKS
OF
### HON. JOHN C. KUNKEL
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, November 1, 1945*

Mr. KUNKEL. Mr. Speaker, providing boats to bring service men and women eligible for discharge back to this country so that they can be mustered out and returned to their homes and families is the most important problem facing this country today. To me it has the same relative importance now as did the supplying of our troops with necessary food, ammunition, and equipment during the war. The existing bottlenecks in the Atlantic and the Pacific must be broken. If the War, Navy, and merchant marine could solve the transportation problems involved in winning the war, as they did so magnificently, certainly they can and must solve this one at once. We have the greatest number of boats and planes in the history of the world. They must be used for this purpose until these men and women are returned.

Under permission to extend my remarks, I include a letter printed in the October 21 edition of the Stars and Stripes, which, in turn, is a reprint from the European edition of the New York Herald Tribune. The boys who signed this letter were located in the ETO and, consequently, their remarks are directed at that particular phase of the problem. However, it is well known that the situation is even more aggravated in the Pacific and that there are even more men eligible for release stranded in that vast area.

The letter follows:

All right, whose fault is the latest redeployment crisis?

1. At the war's end the United States had 5,000 merchant ships (source: Time magazine, October 15). Using only 3,000 of these converted to carry troops, these 3,000 could have taken every soldier in the European theater of operations home in one trip. Naturally, this would be too much to expect, but it shows the possibilities.

2. When the United States canceled lend-lease August 21, the British stated that they would have to withdraw their Queens as they were badly needed to repatriate their own and Canadian troops.

3. On October 13, the British withdrew only one Queen and the *Aquitania*. The United States was allowed to keep one Queen for the rest of the year. And the German *Europa* is now ready to replace the *Aquitania*.

ALL COULD GO HOME

4. If the United States had only used 600 of its own ships, roughly 10 percent of the available total, making only one trip per month, they could have returned every GI in Europe since VE-day. This would leave more than enough ships for: (A) The Pacific redeployment, (B) vital commerce and relief.

5. Operable United States ships are today rusting idly in United States harbors. Source of fact: Time magazine, October 15, page 27. A photograph shows five good new ships laid up in a single small port, Mobile. There is no shortage of shipping. There is a surplus.

6. More than enough time has passed since either: (a) VE-day, or (b) cancellation of lend-lease, to convert countless freighters into transports: Nobody can plead (a) lack of time, or (b) lack of materials or manpower as excuses. Shipyards have undergone terrific cut-backs.

7. Army spokesmen now blame the latest redeployment crisis on (a) loss of the British ships, (b) storms in the Atlantic and the English Channel, (c) strikes in the United States. These explanations seem flimsy afterthoughts providentially provided to cover up negligence and poor planning.

PLENTY OF SHIPS

It is outrageous to suggest that redeployment has been slowed up by turning over ships to the British in exchange for use of the *Queen Mary*. We have plenty of ships to turn over without taking any out of service.

High Army and War Department officials have just talked their way out of one crisis over congressional, civilian, and GI indignation concerning redeployment and discharges. And now another crisis—with no excuse whatever. It is a tragedy to the whole Nation that top Army planners are not wise enough to realize that the peacetime future of the Army depends on its performance during the post-VJ interval.

When our armies were triumphant on both sides of the globe, many of us thought that perhaps, after all, the professional "big brass hats" (General Eisenhower's phrase) were shrewd and competent men.

But since VE and VJ millions of GI's and more millions of civilians have returned to their former deep mistrust of the military mind. They had won our trust—then threw it away in an outbreak of poor planning, "chicken," bad faith, confusion, and ineptness. The result of civilian mistrust of military authorities may well be a smaller peacetime Army, reduced Army budgets, no postwar training, etc., thus affecting, perhaps tragically, the future history of the American Nation.

## The Situation in Palestine

EXTENSION OF REMARKS
OF
### HON. OWEN BREWSTER
OF MAINE
IN THE SENATE OF THE UNITED STATES
*Thursday, November 1 (legislative day of Monday, October 29), 1945*

Mr. BREWSTER. Mr. President, I ask unanimous consent to have printed in the RECORD a letter dealing with the Palestine situation written to the editor of the New York Herald Tribune by Mr. William S. Bennet.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

OCTOBER 19, 1945.

To the EDITOR OF THE NEW YORK HERALD TRIBUNE:

The press dispatches the other day carried in a matter-of-fact way the alleged statement that the Army officer assigned by the British court sitting at Lueneberg for the trial of Kramer, the "beast of Belsen," and some forty-odd defendants, made the remark that the victims that were killed in the concentration camps were "the dregs of the Ghetto." That the Army officer was what we call in this country "assigned counsel," that is, a counsel selected by the court for defendants who have no counsel, should have caused the court to rebuke the counsel for his remark even more quickly than if he had been counsel serving under a retainer from the defendants. In either case he would have been an officer of the court, but in the situation as it was, he was an officer chosen by the court itself. The impelling reason for the rebuke that should have been made was that the remark is completely without justification.

Just why this insulting remark of the defendant's counsel did not cause a wave of resentment everywhere that Jews are known I can understand only on the basis that we have had such a succession of shocking revelations of Nazi brutality that a more or less casual remark of an unknown defense counsel did not attract the attention which it otherwise would.

Prior to 1933 there were practically no ghettos in any country in Europe, that form of discrimination against the Jews having long since ceased. Ghettos were completely attributable to the Nazis. They could, and did, establish them in Germany and as rapidly as they conquered or overran countries they established ghettos, although I think that most Jews in Norway and Denmark escaped this humiliation. The fact is that there was not a country in Europe in 1933 in which the Jews were the "dregs" of the population. In Germany they constituted only about 1 percent of the population. Their standing socially and financially was high.

The same is true in Austria where they constituted about 3 percent of the population. In Russia Jews are now as highly regarded as are other Russian citizens. Many high officers were Jews. In Holland, Belgium, and Italy there was no anti-Semitism until Mussolini manufactured it in Italy under Hitler's orders. The only time I ever was in Rome the mayor (sindaco) of that imperial city was a Jew. "E. Nathan" was the way he signed himself on the proclamations which I saw. In 1933 the one country in Europe in which there was active and continued persecution of the Jews, which had commenced years before Hitler, was Rumania. As to Hungary, I had the honor to preside at an organization meeting here in New York of Christian clergymen of Hungarian birth or descent—Roman Catholic, Greek Orthodox, and Protestant—at which these Christian clergymen drafted and cabled the then dictator of Hungary a strong protest against the massacre of the Jews at the time when Hitler ordered Hungary to send its citizens who were Jewish to concentration camps.

As the Jewish population of Europe in formerly German-controlled territory is now stated to have been 9,600,000, of whom at least 5,700,000 were exterminated, it certainly could not be true that nearly two-thirds of the Jewish people were "dregs." The wanton recklessness of any such statement appears at once when it is recalled that this includes the Jews of Germany, Holland, western Russia, Belgium, Austria, Czechoslovakia, Hungary, and Bulgaria. I saw a letter the other day written by a businessman of standing still living in Budapest which detailed the deaths of members of his family in labor camps and concentration camps, and of his own wife from exhaustion consequent upon the hardships of her work while a sick woman to rescue her husband and son. The writer of the letter is a man of such standing that after he was released from German custody he returned to Budapest to his own residence and to his business in his own office, where he waits with pathetic hope for the return of some of the members of his family of whose fate he is not yet certain. I also know personally an outstanding scientist now in this country, a Czechoslovakian with numerous family connections, of whom, including cousins and second cousins, about 100 were killed in concentration camps, mostly in Auschwitz (Oswieczim). This gentleman assures me that he knew all of these people personally and that they were all worth-while and substantial persons, and not in any sense to be referred to as "dregs."

It should not be forgotten that we Christians have the same cause for resentment as have the Jews. Four million three hundred thousand Christian and other non-Jews perished in these camps, among them some of the best people in Germany, and in each of the countries that was invaded. In fact, it seemed to have become a Nazi practice if a person, Jew or Christian, showed any signs of independence or opposition to the Nazi actions to send such a person to one of these camps. Because of that practice all of Europe has suffered an irreparable loss in intellectual power and leadership. The remark of the defense counsel in a trial which on the whole is a credit to Anglo-Saxon methods of procedure with a desire to do full justice even to the most abhorrent of men and women, ought to be widely repudiated and the repudiation ought not to be confined to Jewish organizations, nor to the United States, but should be as widespread and wholehearted in the countries of our allies in Europe, in which countries the substance of the remark is known to be false.

WILLIAM S. BENNET.

## Russian Policy in Finland

EXTENSION OF REMARKS
OF
### HON. WILLIAM A. PITTENGER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, November 1, 1945*

Mr. PITTENGER. Mr. Speaker, just so we do not forget the facts Members of the House will recall the attitude of Russia toward the small countries of the Old World. It would be interesting to comment about different countries which have come under Russian influence. However, one of the striking examples is the Republic of Finland. Not much has been said about it but something over a year ago Finland and Russia made sort of a treaty of peace which required Finland to pay indemnity of something like $50,000,000 to Russia.

Just recently according to newspaper dispatches, Russia demanded another $15,000,000 from the Republic of Finland by way of additional indemnity. When Finland told the Russians that she could not pay the money, their suggestion was to come to the United States and borrow $15,000,000. The idea seemed to be that the United States was a big sucker anyhow and would greatly help out the little republic which is at the mercy of Russia. In addition to being a rather peculiar

evidence of the friendship of Russia for the United States, this $15,000,000 episode speaks for itself when you talk about humanitarianism and ideals which our pink-parlor people in this country stress so much, when they speak about Russia. I may have more to say about this later but these are just facts and our Communists and their fellow travelers in the United States are entirely too silent about the treatment of the small countries of Europe including Finland.

One of our American newspaper correspondents who is writing a series of articles dealing with problems in foreign countries discusses the problem of the Finnish people in a very interesting way in an article in the Duluth News-Tribune, for October 23, 1945. This article reads as follows:

FINNS ECONOMIC VASSALS OF RUSSIA BY INDEMNITIES

(By Walter Ridder)

HELSINKI.—Finland is right back where she started from in 1914. Before the First World War this country was a grand duchy of the Czars' Russia; now, after the Second World War and after 27 years of independence, Finland is once again a vassal of its eastern neighbor. No political ties bind the two nations, but through loss of her wars against the Soviet Republics, Finland has sunk into economic bondage to the Soviet Republic. Finland is today working for Russia.

The war indemnities claimed by Russia have turned Finland's entire home industry to the task of protecting Finland's reputation as a debt payer. The home consumer is going without essential articles so that the indemnity payments may be met, fully and on time. On September 19 of this year Finland celebrated the first anniversary of the armistice; it could also celebrate virtual fulfillment of the first installment on the armistice indemnities.

According to the terms of the agreement, Finland pays Russia goods worth $50,000,000 based on 1938 prices. She will pay that sum for each of 6 years. Nor can Finland choose the reparations in kind which she will send to Russia. The items have been very specifically designated, and only five-twelfths of the annual sum can be turned over in Finland's greatest export commodity—lumber. By straining herself to the limit, Finland met this year's installment, lagging slightly in metal goods, but overpaying in wood products. The lag in metal deliveries was due in large measure, the Finns assert, to the great metallurgical strike which hogtied Sweden's metal industry for 5 months this year. Finland was unable to procure vital metal supplies.

Finnish vessels are working for Russia. Under the armistice terms Russia took outright about 100 Finnish ships; at good fees, she has chartered almost all the rest of the once large Finnish merchant marine. Finland needs her vessels, but all she gets is the charter rent. Left to Finland are only small ships which are practically useless for resumption of Finland's normal marine commerce.

The full extent of Finland's trade contributions to Russia are well illustrated by Prime Minister J. K. Paasikivi. He said in an Armistice Day speech to the people of Finland: "Our whole export during the first 7 months of the current year was 2,694,000,000 marks, but of this 2,314,000,000 represented war indemnity payments for which nothing is received in return." In other words, 87 percent of Finland's export trade is headed toward the Soviet Union. Nor does the year 1946 show much greater promise. The Prime Minister estimated that Finland must import about $110,000,000 worth of goods.

Those indispensable imports cannot possibly be paid for. Because of the shortage of raw materials, the Prime Minister predicted Finland's foreign exports, exclusive of indemnities, will not rise to more than forty-four or forty-five million dollars (at 1938 prices). Of those free exports, $14,000,000 worth must go to Russia as compensation for goods which Finland removed from east Karelia and other now Russian territories. Thus, the extra fourteen million plus the regular $50,000,000 indemnity payments would show Finland having at least a 64 percent unremunerative trade in 1946, and all 64 percent going to Russia.

Finland is working out other kinds of economic relations with Moscow. Three trade agreements have already been consummated. Russia has already commenced to ship badly needed grain to Finland, although the amount received will not meet the demands of near-starving Finland. In the acute coal shortage which has struck every European country, the Finns have not been unscathed, but they are importing some of the vital commodity from Russia and Poland, although the quality of both the coal and the coke is said to be very poor.

This close relationship with Soviet Russia is something new to republican Finland. In the years before the First World War, Russia's grand duchy sent most of her imports to the mother country. After the bitter struggles of the White and Red guards in 1919, and the subsequent independence of Finland, the new republic sought other outlets for her exports and commercially turned her back to her eastern neighbor. Finnish trade figures for the period between the wars show almost no dealings with the Soviet Republic. Today, Finland has reversed her policy and so large are her relations with Russia that she is economically at the mercy of Moscow.

The extent to which Finland is living independently only through sufferance of the Soviets is well exemplified in other passages of the Prime Minister's Armistice Day speech. He found solace in this thought: "It must be borne in mind that in the autumn of 1944, as well as in the winter of 1940, the Soviet Union, by continuing the war which would have caused Finland additional heavy losses, could, if it had wished, have completely crushed Finland and destroyed its independence." He found it necessary to tell the Finnish people that Finland could exist as an independent state. "The government is convinced," he said, "that Finland, in sincere and firm friendship with the Soviet Union, can live its own life—in accordance with its own spirit and its own needs—as a sovereign state."

But this Paasikivi did admit, that the armistice agreements restrict the sovereignty of the Finnish state "and the exercise of the rights which belong to it."

However much the Finn may exclaim, "We are a free country," and however much he may desire to act independently, the facts of the matter are that Finland is today an economic vassal of Soviet Russia and shall remain so until September 1949, when the last war indemnity payment falls due. Until that date, the Finn will not be a free man.

Mr. Speaker, I do not need to elaborate on what Mr. Ridder has to say. His story is factual. It demonstrates very forcibly the truth of the suggestion that Russia is looking after Russia and has very little regard for the small countries in the world or for their people, or for anything else or anybody else except Russia.

I would respectfully suggest that some of the enthusiastic supporters of the United Nations Relief and Rehabilitation Administration look into this matter and then justify their enthusiasm for some of UNRRA's funds to Russia.

I am told that Russia asked for $700,000,000 of UNRRA funds but has finally agreed to compromise for $250,000,000. If Russia's treatment of Finland can justify this procedure, then I shall listen with interest to the excuses which those people who always want to do good to others, at the expense of America, have to offer.

## Los Angeles County Is Famous for Many Things, Especially Agriculture

EXTENSION OF REMARKS

OF

### HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Thursday, November 1, 1945*

Mr. McDONOUGH. Mr. Speaker, food production continues in peace as in war as one of the most important industries of southern California in general and Los Angeles County in particular. With entire countries ravaged by the evils of war, and millions of people in war-torn areas suffering acutely from years of malnutrition and starvation, the farmers of the United States are being looked to as the principal providers of the world's food supply. That the farmers in this area are making a real contribution to this challenge is indicated by the succession of records which they have and are continuing to set.

In 1939 the total f. o. b. value of farm products raised in southern California amounted to slightly over $277,000,000. This figure has increased steadily each year, reaching an all-time high in 1944 of approximately $733,000,000. An equally impressive record was made by Los Angeles County, the value of products sold in this county in 1939 being only $76,000,000, and rising each year to an all-time high in 1944 of slightly over $192,000,000. Although part of this tremendous increase can be attributed to high wartime prices, the records verify that no small portion was due to greatly increased acreage and production. It must be remembered that the high wartime prices were in many instances counteracted by comparably higher costs.

Holding first place among the 3,072 counties of the Nation in value of farm products ever since the census of 1910, agriculture in Los Angeles County continues in prominence, despite the expansion of war industries. Other southern California counties also demonstrate this prominence, the 1940 census revealing that 9 out of the 10 southern California counties were within the 100 leading counties in the United States in total value of farm products. Most of these counties were high on the list. Locally grown, nourishing, vitamin-yielding fruits and vegetables will play a big part in bringing health and energy to the half-starved nations of the world.

Further indications of the important role played by the rich agricultural area surrounding Los Angeles is afforded by statistics on local unloads of fruits and vegetables. Although only fifth in population, the arrivals here annually exceed those of all other United States

cities, with the exception of New York and Chicago. No other big city receives such a large proportion of its fruits and vegetables from the area surrounding it. Almost half of the produce used in Los Angeles is grown within 50 miles of the city, and approximately 84 percent originates within the State. By contrast, in New York City only 2? percent of the fruits and vegetables come from New York State, and Illinois furnishes about 6 percent of the Chicago unloads. It is estimated that Los Angeles County farmers produce about 18 percent of California's produce; the State provides 43 percent of the Nation's commercial fruits, and 13 percent of the commercial vegetables.

## Labor and Management and Government Must Cooperate Fairly To Accomplish Industrial Peace and Productivity for a Peacetime America

EXTENSION OF REMARKS
OF
### HON. JENNINGS RANDOLPH
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, November 1, 1945*

Mr. RANDOLPH. Mr. Speaker, we should lay down a broad policy under which labor and management, with the cooperation of Government, can eliminate much of the industrial strife that affects our peacetime economy. It is understandable that the reconversion period brings unrest and certain unwarranted work stoppages.

We have enacted, especially during the last 12 years, legislation under which labor received benefits long overdue and which were right and proper. There is a greater responsibility, therefore, on labor leadership than was expected in the days when management overstepped itself in withholding gains rightly due the great working population of our country.

The Charleston (W. Va.) Gazette editorialized October 28, 1945, as follows:

NEW PLAN FOR LABOR

The strike as a weapon is like impeachment as a weapon—a necessary factor in preserving civil liberties. If a man could be made to work against his will, this would no longer be a free Nation. But the strike is like the surgeon's knife or a drastic medicine—to be used only in case of actual need, and then with expert care.

When the strike weapon is used carelessly, without sufficient cause, it hurts everyone—strikers employers, and the whole people. It is like the knife or a dangerous drug. The weapon is not to blame, but it needs to be taken from irresponsible wielders and held safe for its right and proper uses. It should not be used until all other peaceful means are exhausted.

Federal Judge John C. Knox, of New York, has proposed a plan for labor courts which, if wisely worked out, might provide a sensible answer to the constant threat of irresponsible strikers under which the public now lives and moves, almost as under an enemy air force. He suggests Federal courts organized for the special purpose of adjudicating labor disputes. To these courts would be taken all labor contests—wages, hours, conditions, seniority, and the rest—which now distress the public by stoppage of service or production. Work would go on while suits were tried; the strike would be a last resort.

Of course such courts would have to function expeditiously, and the characteristic delays of the law would have to be overcome. It would have to be impossible for either side to a controversy to delay proceedings. Any objection that the courts might be bought up by powerful interests is unrealistic; American courts are not venal.

Something has got to be done to handle these ever-recurring labor controversies in orderly manner. They must come out of the realm of war into civilian responsibility.

Unless something of this sort is done—and quickly—Congress is going to be forced to pass much more stringent laws that may prove of great disadvantage to both labor and management.

Mr. Speaker, the suggestion which I now make will perhaps be in error in certain particulars, but I believe many of our labor and management ills could be found in a unified, coherent labor board, one with broad powers, operating without fear of censor and without desire to please any person or group. It should have full authority. Membership should be by appointment of the President, and he should retain the power to remove the members. But he should not have the power under any circumstances to set aside this board's decisions nor assume its role as arbiter.

Mr. Speaker, there are those who believe that a board of arbitration would fail to be helpful. It is my feeling, however, that such a board would not act as a jury, but rather in a judicial capacity, with power to make final decisions. I further trust that Congress consider now, not later, some proper approach to a problem which threatens to weaken our general well-being.

## Short Memories and Nice People

EXTENSION OF REMARKS
OF
### HON. J. WILLIAM FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
*Thursday, November 1 (legislative day of Monday, October 29), 1945*

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Short Memories and Nice People," from the October 26 issue of Yank magazine.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SHORT MEMORIES AND NICE PEOPLE

In 1935, in the period of comparative quiet between World War I and World War II, an advertisement appeared. Its illustration was a wounded, disabled veteran. Its caption was "Hello, sucker."

The text of the advertisement went on to explain the shocking waste of World War I and how little all the struggle had accomplished in spite of the high ideals of the cheering section. "Hello, sucker," seemed a brutal thing to say, but when you got through reading the ad, and thinking about it, the tag seemed quite appropriate.

There is a danger that the double of that advertisement might appear in 1962 to be just as true of World War II. It is a danger that is being spotlighted increasingly every day in newspaper reports and word-of-mouth stories from Germany and Japan. It is a danger we can avert only if all of us—the soldiers of this war and no less the officers—wise up and wise up quickly.

The reports from Germany, in a paper as unsensational and correct as the New York Times, tell of incidents like this:

"An American general (later kicked backstairs) stated that 95 percent of the members of the Nazi Party were forced in the party against their will.

"An American major in Munich said that he didn't believe all those stories about atrocities in the nearby concentration camp at Dachau.

"United States enlisted men have decided that the cleanliness and friendliness and efficient plumbing of the Germans are irrefutable evidence that the Germans are nicer people, 'more like us' than the Frogs or even the Limeys."

An enlisted man just back from Japan, a GI who had pretty strong feelings about the importance of the war, reports the following disillusionment:

"Many GI's, even GI's who had fought from Guadal on, are quick to forget their dead, and why their dead died, in the face of Japanese correctness and cooperation in surrender, and the pretty faces of Jap girls.

"A feeling is growing up that the Japs are a fairly decent, efficient, and 'westernized' people for the Orient, probably much nicer and more like us than the 'slopeheads.'"

It begins to look as if "Hello, sucker" is a label quite a few of us could wear already.

There are things we are forgetting, things we will have to remember if that label is not to be stamped indelibly on all of us. General Eisenhower, for one, has recognized the danger in his repeated directives to his subordinates in military government, reminding them of the terms under which Germany surrendered and of our obligations as victors to the ideals for which we fought.

We must remember that the general who analyzed Nazi percentages, although a good general in war, evidently never studies his history lessons beyond the military sections and that, whatever he may think, it did take millions of willing Nazis to arm Germany for war—millions of willing Nazis to inflict, in that war, 700,000 casualties on American troops. And it is frivolous and dangerous for anyone of any rank to compare the political tactics of these Nazis to a Democrat-Republican squabble back in the United States.

We must remember that the major in Munich was lazy physically as well as mentally; it would have taken him only a short ride to visit Dachau and to see, by evidence still available, that the atrocities there were no pipe dream. Or he could have asked the GI's who first liberated Dachau. After they had puked a few times, their only impulse was to slug any German who had anything to do with the Nazi Party.

The GI's who think cockeyed and rosy thoughts about the Germans are not a majority and may not even be entirely to blame for their own thinking. If their leaders are sometimes confused and contradictory, it is difficult to blame the men. Rules laid down to insure a hard and just peace are often broken by the very officers supposed to enforce them.

If soldiers have forgotten the reasons for this war, they must be reminded of them. If they fought only in the sudden hate of battle, they must remember that the ending of that hate does not mean a complete turnabout, an excusing and apologizing to their late enemies. Fraternization is natural, but it is possible for an American soldier to fraternize without being played for a sucker, to mingle with Germans without swallowing all their opinions, to treat Germans as human

beings without treating them as unfairly beaten supermen.

A concentration camp cancels a clean bathroom, and attempted mass extermination of a race overbalances a sunny dispcsition. The Nazis had been living on the loot of a continent for years, while the Frogs and Limeys were nursing their wounds and living on not much more than the hope of making that continent free again.

The GI's in Japan who are misguided about the Japs present the same problem as the misguid'd GI's in Germany. They, too, must wise up. They must learn that we need more insurance than an explosion in New Mexico to save our children for peace. Perhaps they may remember friends who died and how they died and friends who were captured and how they were treated.

We must remember, for those who cannot or will not remember, that the pleasant westernization of the Japs was a meaningless veneer on an old and cruel and internationally unmoral state. The cute tricks the Jap learned from the west, brewed in his undeveloped, not-yet-ready mind, exploded before Pearl Harbor in Manchuria and China and will explode again unless some drastic changes are made in Japan's attitude toward the rest of the world. The Jap is going to be even harder to reeducate than ourselves.

We must remember all these things, r.t just on Memorial Day or on Sundays, but all the time. Unless we remember them, unless we are prepared to work for peace as hard as we worked for war, the sucker sign is going to be back.

We don't have to be brutal conquerors, but we do have to avoid a sentimental good fellowship with the people who started World War II. There will be time for that when they have proved their worthiness and, for most of them, the proving will take some time. We do not need to, we must not, "compromise with the devil."

Because if ever people can point at us again and say with justice, "Hello, sucker," it will be our own fault—our own bloody fault.

## Mr. Davis Is Right

EXTENSION OF REMARKS
OF
### HON. ANDREW J. BIEMILLER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

*Wednesday, October 31, 1945*

Mr. BIEMILLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article from the Kenosha Labor of Thursday, October 11, 1945, by Alfred Baker Lewis, entitled "Mr. Davis Is Right":

MR. DAVIS IS RIGHT

(By Alfred Baker Lewis, member, American Federation of Teachers Local 189, New York)

William H. Davis, former Director of Economic Stabilization, has made a suggestion that we should aim at a 40-percent to 50-percent increase in average pay without any increase in average prices within the next 5 years. Naturally enough, the head of the National Association of Manufacturers has been startled almost out of his wits, and the economic ignoramuses among the newspaper columnists, editors, and financial-page writers who accept as gospel truth whatever the reactionaries say, have joined the chorus of pained critics.

The trouble is that such people do not know the facts of life—economic life at any rate. The truth is that Mr. Davis' proposals should be adopted as a goal if we are to avoid another depression. For the facts which led up to the Hoover depression in 1929–32 are plain and the lessons from these facts are even plainer.

The Department of Commerce publishes an index number showing the actual physical output of manufacturing industries on an average. That index number shows that between 1919 and 1929 the average output of "our" manufacturing establishments increased by 42 percent. This 42 percent more goods was turned out by 6 percent fewer people.

MORE GOODS, FEWER MEN

The population of the United States in that decade went up by 15 percent, but manufacturing only gave employment to 6 percent less workers at the end of the decade than it did at the beginning. Certain economic factors, among them the power of the unions, compelled some increases in pay. Total payrolls in manufacturing went up by 11 percent including salaried officials. Now it is obvious that you cannot sell 42 percent more goods to people with only 11 percent more pay. That is why we had a depression.

In each basic industry the constant stream of labor-displacing devices resulted in more goods being produced by fewer workers. While wage increases in some instances kept the decrease in payroll less than the decrease in employment, in no case was the increase in payroll equal to the increase in output. The result was that the production could not be sold. That is why we had "overproduction," unemployment, and depression.

If manufacturing had hired the same proportion of people in 1929 that it gave jobs to in 1919, it would have hired 15 percent more people instead of 6 percent fewer. In that case the increase in manufacturing output would have been 70 percent not 42 percent. The surest way to sell such an increased output would have been to increase payrolls by 70 percent. A 70-percent increase in 10 years is a 35-percent increase in 5 years, close to the minimum of 40-percent increase suggested by Mr. Davis.

The manpower shortage during the war gave a very great impetus to the invention and utilization of labor-displacing machinery and processes in the production of war materials. Most of these improved processes, because of the necessity for priority for war production, could not be applied to peace production while the war was on. There is therefore a 4-years' accumulation of new inventions and processes which have not yet been used to any great extent for the manufacture of civilian goods.

It is entirely reasonable to suppose that, when these new machines and processes are put to use for peace production, the average increase in productivity will be greater in the 5 years succeeding the war than in the period from 1919 to 1929, so that there will be substantially more than a 35-percent increase in manufacturing production in the next 5 years. Hence Mr. Davis' call for an increase of 40 percent to 50 percent in payrolls without any increase in prices is not only a reasonable one, it is necessary to avoid depression.

The figures already cited show plainly that the root of the trouble which brought on the depression in 1929 was that employers generally used labor-displacing machinery which made possible the increased output during that period in order to cut down their labor costs and try to increase their profits. Therefore, they did not raise wages equally with increased output, the increased output therefore could not be sold, and unemployment and depression resulted. Mr. Davis is the economic statesman trying to avoid a repetition of this result, and the National Association of Manufacturers and its followers are completely wrong.

SUPERFICIAL JUSTICE

Some persons who are well meaning and who do understand the danger of depression resulting from the effort to use labor-displacing machinery solely for private profit of the owners of industry, nonetheless feel that the way to prevent the increased productivity of labor from bringing about another period of overproduction is to reduce prices equally with increased output instead of raising wages proportionately. There is a superficial justice in their position, because such a reduction of prices, say about 25 percent, would reduce the cost of living for everyone, including salaried people working for the Government or for nonprofit organizations, and would let the members of organized labor benefit as consumers.

But this price reduction would involve an enormous unearned gift to security owners, especially bondholders. We have a larger national debt than ever before in our history, probably amounting to about $250,000,000,000. While more people own Government bonds than ever before, the smaller bond owners have been cashing them in fairly rapidly. The rate of sale and redemption of the bonds by wage earners is certain to increase in the next few months as transitional unemployment due to the problems of reconversion increases. More and more, therefore, the Government bonds will be held by the wealthier groups in the community and by banks.

Ownership by the banks, of course, means ownership by the banks' stockholders and bank stocks are traditionally a rich man's investment. The present bondholders bought bonds during the war, and the bonds are scheduled to mature at various times from 7 to 20 years from now. If there is a decrease in average prices of 25 percent or more in that time, that is equivalent to a 25-percent gift to the bondholders. They lent money to the Government when a particular commodity would cost $10, let us say, and would get it back when the same commodity would cost only $7.50.

OTHERS WOULD GAIN

In terms of actual commodities the burden of the national debt and of the interest on that debt would be increased by 25 percent. That would constitute a 25 percent gift in the form of increased wealth and increased income both, not distributed evenly through the population but bunched and concentrated for the special advantage of those already rich.

What applies to the interest and principal of Government bonds would apply equally to the interest and principal on other bonds and mortgages. The bondholders and mortgage owners, who we must remember are on an average the richer section of the population and those who least need an increase in their income, would gain. If the decrease in prices were 25 percent, the wealthiest group would gain 25 percent in wealth and income measured by the actual purchasing power of their money. Every farmer or home owner with a mortgage, on the other hand, would find the burden of servicing that mortgage, that is paying the interest and principal, increased proportionately.

Stabilization of prices and an increase in wages, just as Mr. Davis advocates, therefore, is what we should prefer as the means to avoid the unemployment and depression which would otherwise surely result from increased productivity of labor just as it did in 1929, as the figures so clearly show.

The members of organized labor will benefit most certainly and surely through an increase in pay (without an increase in prices) to meet the increased productivity of labor that will come from continued invention and use of new machines and processes.

It is both wise and right for organized labor to help other useful or needy sections of the population to get a similar improvement in their standard of living. Organized labor has usually supported increases in pay for Government employees such as teachers, firemen, policemen, postal employees, etc.

it should continue and increase its efforts in that direction.

It should steadily demand, as it is doing, increases in old age and unemployment compensation payments in so far as such increases do not follow automatically from increases in pay. It must work for improvement in the standard of living of the sharecroppers and unskilled workers who are particularly low paid now and who have little economic power to improve their own condition.

It must see that farmers get a chance to sell an increased output without a reduction in the price that they receive, as agriculture joins in the common tendency to increase the output per hour of labor of the farmer through improvements in seeds, fertilizers, and farm machinery. Where that does not occur, organized labor should realize that farmers are entitled in justice to some increase in price in order to share in the increased prosperity.

The main thing to remember is that we are certain to get a vastly increased flood of goods from manufacturing industry in the United States in the near future. We must increase purchasing power proportionately, or else we will have another depression, just as the failure of the owners of industry to increase pay proportionately with increased output plunged us into the depression of 1929–32.

## Prosthetic Appliances for Disabled Veterans

EXTENSION OF REMARKS
OF
### HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
*Thursday, November 1, 1945*

Mr. RANKIN. Mr. Speaker, there has been so much loose talk and unjust criticism of the Veterans' Administration, relative to the furnishing of prosthetic appliances to disabled veterans, that I think it is not inappropriate to call attention to a letter which I have just received from the Veterans' Administration on that subject.

The letter reads as follows:

VETERANS' ADMINISTRATION,
*Washington, D. C., October 31, 1945.*

Hon. JOHN E. RANKIN,
*Chairman, Committee on World War Veterans' Legislation,*
*House of Representatives,*
*Washington, D. C.*

MY DEAR MR. RANKIN: This is in reply to your informal request for a statement relative to the furnishing of prosthetic appliances by the Veterans' Administration.

Under existing laws the Veterans' Administration furnishes prosthetic appliances required for service-connected disability or disabilities aggravating service-connected disability. Furthermore, the Veterans' Administration is authorized by section 104 of Public Law 346, Seventy-eighth Congress, to furnish any person entitled to a prosthetic appliance the necessary fitting and training, including institutional training in the use of such appliance either in a service or a Veterans' Administration hospital or by outpatient treatment, including such service under contract.

There is no distinction made in appliances furnished officers and enlisted men and there is no fixed predetermined cost limitations for such appliances but the whole purpose of the Veterans' Administration is to furnish to disabled veterans the best available appliances.

Veterans' Administration practices permit flexibility in fitting and equipping veterans with necessary appliances. Of necessity, appliances must be approved by the attending doctor as suitable and orthopedically appropriate, but within that limitation, the veteran may choose the prosthetic appliance best suited to his needs.

The responsibility of the Veterans' Administration is an important and continuing one in the field of prosthetic appliances. Research and development of modern prosthetics have until recently had little organized support. With the aid of the Office of Scientific Research and Development, the National Research Council on Prosthetic Devices has been conducting a long-range research project in this field. Since the Office of Scientific Research and Development is a war agency which would not continue indefinitely, the Veterans' Administration has entered negotiations to take over the Council on Prosthetic Devices.

It is understood, of course, that the furnishing of prosthetic appliances and necessary training in the use thereof is in addition to the monetary benefits payable to veterans of World War II for service-connected disabilities. An additional allowance of $35 monthly is provided for certain anatomical losses or loss of use and payable where there is a ratable disability of 10 percent to total in degree in addition to the rates provided therefor which range from $11.50 to $115 per month; other specific rates for more severe disabilities range from $200 to $300 per month.

Very truly yours,

EDWARD E. ODOM, *Solicitor.*

## Boston Can Be a World Flying Center

EXTENSION OF REMARKS
OF
### HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Thursday, November 1, 1945*

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Lester Allen, from the Boston Sunday Post of October 28, 1945:

BOSTON CAN BE FLYING CENTER—ENTERPRISE NEEDED TO EXPLOIT CITY'S ADVANTAGES AS PLACE WHERE LAND AND SEA ROUTES MERGE

(By Lester Allen)

The first token flight over the North Atlantic with commercial, revenue-paying passengers, by American Airlines Overseas, has again brought to the forefront the subject of Boston as an international airport.

It is no matter for impatience or immediacy, but one which must remain in constant view and subject to constant planning if Boston is to avoid becoming a "whistle stop" on a world network of airways. Boston rightfully should and must be a terminal of international air routes.

Three powerful air lines have permits to fly the Atlantic route from Boston.

American Airlines Overseas, which has flown the first passengers from Boston, taking off and landing at Bedford, acquired its overseas permit by purchase of American Export Line.

Transcontinental & Western Air was granted its permit by virtue of its ability to draw upon a transcontinental air system for passengers.

Pan American, with the longest experience in overseas flying, naturally was entitled from the outset to a route across the North Atlantic.

To see the operations of these three holders of permits to fly to Europe from Boston as three titans struggling for power and position is a complete mistake. Overseas passenger service by air requires an immense investment, a combination of skills and experience and equipment, which, without a vast network of feeder lines, such as American and Transcontinental & Western operate, or immense prestige, which Pan American has acquired through successful overseas operations over a period of many years, would be doomed to early failure.

The immediate problem from Boston's standpoint is how to avoid becoming a whistle stop on the world's airways. An indication of the global scale of these air services may be gained from TWA's change of name from "Transcontinental and Western Air" to "Trans-World Air."

IMPATIENT OVER PROGRESS

In many quarters there is impatience with the slow progress of the development of Logan International Airport in East Boston to accommodate the bigger transport planes to be used in postwar operations with longer runways. It is safe to assume that the full use of the long runways will not be possible until next June. This is no reason for an outcry for more haste, however.

Be assured that other cities competing for designation as terminals for overseas routes would give their eyeteeth for a location like East Boston. No city in the country has a big airport so close to the heart of the business district or to railroad terminals. La Guardia Field, in New York, is far from ideal, and Idlewild, where New York is spending several times as much as Boston to develop a huge airport, is even more inaccessible.

The long limousine ride from LaGuardia Field to New York is the source of more griping among people using air service into New York than any other factor, and there is very little that New York can do about it short of operating a rapid-transit service at a loss.

If it is kept in mind that the construction in progress at East Boston airport, if continued through the next few years, will secure for Boston a commanding position among the cities of the world, Bostonians should feel highly enthusiastic.

If any index of the acceleration of air travel with the end of the war is needed the operations of Northeast Airlines on the Boston-New York run for the first 20 days of October may be cited. In the first 20 days of this month with only six planes available, Northeast carried 12,000 passengers between Boston and New York. American Airlines, with more equipment, carried correspondingly more passengers, and TWA, with fewer flights into Boston, showed proportional gains. In short, the traveling public is rushing to the air lines.

The distinction between Boston as a whistle stop on international air routes and Boston as a terminal is rather difficult for the layman to see, who knows only that the fastest and safest route from here to there is of primary importance.

If the routes of the two big domestic airlines coming into Boston are examined it will be readily understood that it is most important for Boston's future to have the Atlantic terminal here.

TWA has for example, the shortest route from coast to coast, and comes into Boston now via Pittsburgh and Albany, not touching New York from the West. It taps San Francisco, Los Angeles, Albuquerque, Amarillo, Wichita, Kansas City, St. Louis, Chicago, Detroit, Cincinnati, Pittsburgh—virtually all the big commercial centers of the country north of Mason and Dixon's line.

AMERICAN'S PROGRAM

It pioneered most of the new equipment and ideas in commercial aviation, and has to its credit the first Stratoliners, and en-

gineered with Lockheed the super-fast Constellation transport.

It was first with de-icers, Sperry automatic pilots, homing direction finders and speed-retarding wing flaps. TWA believes that subend feeder lines are uneconomical and that traffic should flow continuously from city to city with way stops. It is hooked up with Latin-American lines through part ownership of Taca and Aerovias of Brazil, and has service to about 130 American urban centers.

American Airlines, which carries the largest volume of passengers and express of any airline in the country, launched its token flight from New York with a stop at Boston's Bedford airport. American is shooting at connections with 10 cities of 1,000,000 or more population in a network of 82 cities in 32 States touching at least 40,000,000 potential air-travel customers.

American Airlines, originally out in the cold on overseas flying, moved in solidly by the purchase of American Export. The latter company had overseas permits from the Civil Aeronautics Board before the war, but couldn't seem to get going because as rapidly as a European terminal was selected it was overrun or made impractical by the war. During the war, however, American Export covered thousands of miles flying the routes for the Navy. This backlog of experience has now been assimilated by American Airlines.

Under the present set-up no good purpose would be served in changing the terminal from New York to Boston for the Atlantic because of the Newfoundland stop, where the planes can gas up and prepare for the overseas hop. But in the very near future the Newfoundland stop will be eliminated, and then will come the question of a point of departure or terminal to be used for the greatest economy of fuel.

Few people suspect that there is an overseas route to Europe on which the longest over-water hop is from Iceland to Scotland There are stops on Baffin Island, Greenland, Labrador, and Iceland, all of which were used throughout the war by Air Transport Command.

Pan American, with no domestic service, has the greatest experience in over-ocean flying through flying 98,000 miles of over-water routes, 64,000,000 miles a year. It maintains 297 airports and 224 weather and radio stations throughout its vast system.

Always operated with a tough realism, Pan American will use for a terminal that place which offers the best connecting service and the fastest connecting service to the rest of the country. It would seem that for the Middle and Far West, Boston is the best port of entry and exit—but all this depends upon how the terminal facilities at Boston are developed.

WHAT GOOD TERMINAL NEEDS

The kind of development the air-line operators want includes long runways, development of all-weather flying facilities, accessibility of the airport, skills required for servicing planes, adequate supplies of fuel at the lowest possible cost, and hotel facilities for passengers who stop over waiting for planes.

Boston can provide all these things within the next year, and it is possible that radar blind-landing devices will make it possible to land in Boston in any kind of weather. It has been done at Bedford airport in an experimental way, and radar experts say that further development depends upon training of pilots to absolute obedience to landing commands from the radar operators on the ground.

All that is needed to make Boston a terminal instead of a whistle stop can be accomplished, but it won't be done in 2 or 3 months. The Massachusetts Recess Commission studying the problem is learning many things about the almost fatal delays which have marred the program to date. One of the chief obstacles has been the tendency to regard air transport as a fad which will amount to nothing. The thousands of passengers who storm air-line ticket offices every day are ample proof that it is no fad—but a dynamic fact of the present.

That three big air lines feel enough confidence in the future to risk large sums of money to develop overseas services out of Boston is no accident. Establishment of Boston as a terminal rests with the people of Boston and New England. They have taken to the air. How far and how fast they want to go depends entirely upon them. But they will go greater distances at greater speed and in greater comfort and safety if Boston is a terminal airport instead of a whistle stop.

## Procedure for Discharge and Disability Cases Before Army and Navy Review Boards Suggested

EXTENSION OF REMARKS
OF
### HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, October 16, 1945*

Mr. BROOKS. Mr. Speaker, I have recently read an article appearing in the Disabled American Veterans Semi-Monthly by Hon. Millard Rice entitled "Retirement Review Tips Are Compiled." This article is well written and gives much helpful information. I am therefore asking that it be published in the RECORD that it may reach veterans and their families throughout this country.

Although the Army-Navy Discharge Review Board has been in existence since the Seventy-eighth Congress, very little is known to the public of its activities or its existence. More and more I am receiving requests from dischargees for the correction and the change of the discharge certificate. It is obvious that those who make the requests are not familiar with the procedure required of this discharge board and need help in asserting their rights to these changes and corrections, which rights are given them by an act of this Congress. It is with this idea of giving vital information the widest possible circulation, I am including the entire article below:

PROCEDURE FOR DISCHARGE AND DISABILITY CASES BEFORE ARMY AND NAVY REVIEW BOARDS SUGGESTED

WASHINGTON, D. C.—Numerous letters have been received from service officers and claimants as to the proper procedure for the handling of discharge and disability retirement cases before Army and Navy Review Boards, and it is hoped that the following information will prove helpful toward their proper presentation.

Under section 301, Public 346, Seventy-eighth Congress, all persons who have been discharged or released from further active service in the armed forces, except those discharged by reason of the sentence of a general court martial, are eligible to have their discharge reviewed by an Army or Navy Discharge Review Board.

ARMY DISCHARGE REVIEW BOARD

The first step in applying for a review of discharge is to obtain WD AGO Form 94. Execute this form completely and submit it to the Adjutant General's office, War Department, Washington, D. C., with the original discharge, whereupon the Adjutant General's office will make a photostatic copy and return the original discharge. The veteran, with no further effort upon his part, will be informed as to the date and time of the scheduled review of his case.

At the time the application form is submitted to the Adjutant General's office it would be advisable for the veteran or his service officer to prepare: (1) a notarized brief of all the pertinent facts involved in his case; (2) notarized affidavits from physicians where there is any medical question involved; (3) notarized affidavits from friends (former Army "buddies," teachers, ministers and employers as to the veteran's personal character prior to service, in the service and after his discharge). It is well to bear in mind that it is of paramount importance that the veteran should submit all of the pertinent facts relative to the conditions surrounding the discharge.

These notarized affidavits and other documentary evidence should be forwarded to the National Service Department, Washington, D. C., if the veteran desires to have a member of the staff of the Washington office represent him so that the counsel will have complete evidence to present to the Discharge Review Board.

The local service officer should thoroughly examine the veteran as to the purpose for which the veteran desires to have his discharge reviewed. It has come to our attention that many veterans are of the opinion that because they have a blue discharge that they are not entitled to compensation. Some veterans have even expressed the belief that because they do not have a CDD they are not eligible for compensation. If such is the case, the service officer can correct this erroneous impression, and the necessity for reviewing the discharge will be solved.

In certain cases, especially where a veteran has been released from the service because of a fear of flying, or lack of moral fiber, it may be advisable for the veteran to postpone having his case reviewed until the war is over. At that time the Army will not have to consider questions of policy, discipline, and precedent that must be considered at the present time. In these types of cases it is our opinion that after the termination of hostilities the veteran will have a much better chance to obtain corrective action than while the war is still on. Where the testimony of buddies in the Army may be of vital importance, it is best to postpone the case until such evidence from buddies now in the service can be feasibly obtained.

The proper procedure for obtaining a review of discharge from the Navy, Marine Corps, and Coast Guard is the same as for the Army, except the Navy Department uses a different application form. The National Service Department of the DAV, or the Bureau of Naval Personnel, Navy Department, Washington, D. C., will furnish his application form upon request. This form should be executed completely and sent to the Bureau of Naval Personnel, Navy Department, Washington, D. C. The Navy Department has recently amended their regulations concerning the requirements for the issuance of a full honorable discharge, Bureau of Naval Personnel Form 660. Previously, to obtain an honorable discharge from the Navy, the veteran must have obtained a final average of 3.5 in proficiency and conduct. The regulations now require that veterans who have obtained a final mark of 3.0 in proficiency and 3.25 in conduct can be issued the full honorable discharge instead of the discharge, under honorable conditions, Bureau of Personnel Form 661. Therefore, service officers who come in contact with these types of cases can simply forward the discharge Form 661 to the Bureau of Naval Personnel, Navy Department, Washington, D. C., and request

that the veteran be issued an honorable discharge, which can be done by administrative action without action by a review board.

A great deal of information relative to discharges, including the various types of discharges, reasons for, and AGO or Bureau of Personnel form numbers, may be obtained from Senate Document No. 152, 78C, pages 49–54, inclusive.

DISABILITY RETIREMENT

Under the provisior of section 302, Public 346, Seventy-eighth Congress, all officers who have been retired or placed upon inactive status by virtue of the decision of a retirement board are eligible to make application to have their retirement proceedings reviewed by either the Secretary of War's Retirement Review Board or by the Secretary of Navy's Retirement Review Board in Washington, D. C. It should be clearly understood that an officer who has been put upon inactive status and has not appeared before a retirement board is not eligible to have his retirement case reviewed under the provisions of Section 302, Public 346 of the Seventy-eighth Congress.

ARMY RETIREMENT

Application form WD AGO 0258 must be executed completely and sent to the Adjutant General's office, War Department, Washington, D. C. The officer who desires the Disabled American Veterans to represent him as counsel should designate that fact upon the application form. It is not necessary to submit a P–22 Form in these cases.

Since retirement cases are solely questions of medicine and medical judgment, the primary problem in preparing evidence to submit before the Retirement Boards is to prove that the disability was incurred in the service or was aggravated by such service. Therefore, the officer should prepare a brief of all the pertinent facts in each case and submit it to the National Service Department of the DAV in Washington, D. C.

This brief should be accompanied by notarized affidavits: (1) From physicians, if possible, as to his physical condition, both prior to and subsequent to his release from active duty; (2) including clinical and laboratory reports; (3) affidavits from friends and employers as to their knowledge of his physical condition, both prior to and after his release from the service; (4) reports of insurance examinations whenever possible; (5) proof that the officer's physical disability prevents him from obtaining employment or is a handicap to him in retaining employment; (6) proof that the veteran is under the doctor's care and is following a very rigid diet or routine of living; (7) another type of material evidence which has proved effective in the past cases is to have the veteran furnish the diagnosis of the Veterans' Administration, plus the degree of stability that it has been awarded him. In summary, the officer should take as complete and as factual a brief as possible, showing that his disability is a very definite handicap to him in civilian life, and, if it can be shown by affidavits, evidence that this condition was definitely incurred in or aggravated by the service, then he has greatly increased his chances of being awarded retirement benefits.

Since in these cases, when an officer is granted retirement benefits, there are no further physical examinations, he should be impressed with the fact that it is very necessary to make sure that every factor which would have a bearing on the decision of the Retirement Board should be presented.

NAVY, MARINE CORPS, AND COAST GUARD RETIREMENT

In the retirement cases of the officers in the Navy, Marine Corps, and Coast Guard, the procedure to be followed is the same as Army retirement cases except there is a special form necessary. This form may be obtained from either the National Service Department of the DAV or the Bureau of Naval Personnel, Navy Department, Washington, D. C. This form should be executed completely and sent to the Bureau of Naval Personnel, Navy Department, Washington, D. C., and the applicant will be informed as to the date and time of the scheduled hearing of his case.

GENERAL RECOMMENDATIONS

Where an officer has been discharged with a condition of psychoneurosis, it is our considered opinion, in view of the experience before the retirement boards, that such case be postponed at the present time. In view of the fact that the great majority of officers suffering from psychoneurosis will make a full and complete recovery in a period of a few short months, retirement boards have been very loath to grant a man retirement benefits for this condition. The basic premise upon which an officer is granted retirement is that his physical disability will be a permanent condition. Since psychoneurosis is not a permanent condition, and medical judgment has shown that such men, in the vast majority of cases, make complete recovery, the basic tenet is not fulfilled. Therefore, this office is suggesting that when a service officer contacts such a case he urge that the officer postpone his appeal of his retirement-board proceedings until such time as: (1) He can prove by factual evidence that his disability is a definite handicap in obtaining employment; (2) that his disability prevents him from living a natural, normal life; and (3) that it has existed over a period of years and medical judgment has determined that this condition is permanent.

Whenever it is possible for an officer to do so, it is advisable that he appear and testify in person. In a great number of cases the applicant's personal testimony as to the facts and conditions relative to his physical disability may well be the deciding factor in the case.

## OPA Prices Threaten Honey Industry

EXTENSION OF REMARKS
OF
**HON. ROBERT K. HENRY**
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
*Thursday, November 1, 1945*

Mr. HENRY. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following letter:

OCONOMOWOC, WIS., *October 25, 1945.*
Hon. Congressman ROBERT K. HENRY,
*House Office Building, Washington, D. C.*

DEAR CONGRESSMAN HENRY: The two cars of honey that we had bought and contracted for in the Republic of Mexico at OPA ceiling of 9.7 cents per pound were actually resold and now we are out on a limb and what are we going to tell our customers, and what will we do to deliver honey to those people?

The whole picture is heart-rending. If we can't bring any honey in from the outside and import honey for baking and manufacturing purposes we are just going to be out of luck and we'll have to close our doors.

Why can't price restrictions be entirely removed from honey and let us have a free market and in that way we would probably be able to compete with the European market. The fact that they're taking all the honey of the West Indies as well as Central and South America leaves the dealer in honey in the good old U. S. A. completely out of the picture.

Don't you folks in Washington realize and understand that when we furnish the money to the Europeans to buy the products that we should buy, that we're cutting our throats and doing it double handed? How can the Europeans afford to pay 15 cents per pound for honey or almost 50 percent more than the American ceiling? We are licked and licked to a finish, and we don't know what to do about it.

May I have your reaction to this matter and what can be done to put an end to this thing, otherwise we'll be out of business insofar as the sale of bulk honey for baking and manufacturing is concerned?

The regrettable part of the whole thing is that the industrial users that saved the day for the honey industry in the so-called good old days, if they do not receive any honey at this time may leave it forever. When all is said and done, it is the old-time industrial user of honey that saved the day for the honey industry in America when honey was a drug on the market and that time will come again. When sugar comes back there will be a lot of honey and no one to buy it. If we can't save these customers we're just up against it.

Yours very truly,

C. W. AEPPLER CO.
C. W. AEPPLER.

## Palestine Pledges and Policy

EXTENSION OF REMARKS
OF
**HON. EMANUEL CELLER**
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Thursday, November 1, 1945*

Mr. CELLER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address entitled "Palestine Pledges and Policy" delivered by me over the CBS network program Congress Speaks, Tuesday, October 30. The program originated at WTOP, Washington:

On October 18, Secretary of State James F. Byrnes made the statement that the administration is exploring every possible means to aid in the relief of the displaced Jew in Europe. But—and it's a large but—he added no final decision would be made concerning Palestine without full consultation with the Arabs as well as the Jews.

Thus, at one fell swoop, the Secretary of State again dashed to the ground the hopes of the Jews for relief in Palestine. Secretary Byrnes' statement amounted to an announcement of American policy directly in opposition to the openly declared statements of American officialdom for 28 years.

Assuredly, Secretary Byrnes must know when the Democratic Party, which almost nominated him for Vice President, promulgated the Palestine plank of the Democratic platform, called for untrammeled Jewish immigration and for the establishment of a Jewish democratic state, the party did not consult the Arabs. And when Attlee, Bevin, and Morrison in their platform pledges before election said that the Arabs should get out to make way for the Jews, they did not consult the Arabs.

Consulting the Arabs at this late date is part of the abominable policy of appeasement, the appeasement that brought us the fake "peace in our time"—the Munich Pact, and the nefarious white paper which shut with a bang the doors of Palestine against the Jews.

The demarche of the Secretary of State is apparently based upon the texts of letters passing between King ibn-Saud, of Saudi Arabia, and the late lamented President Roosevelt, wherein Mr. Roosevelt talked in terms of consultation with the Arabs. How can one letter, the depths of its meaning something we cannot now plumb because the writer is dead, establish to that degree administration policy?

Remember, Palestine is not a cause that has been relegated to inch notices in newspapers, nor confined to Tuesday night club

discussions. It has been the subject of covenants and international treaties. Its pros and cons have echoed through the halls of the two most powerful democratic legislatures in the world—the Congress of the United States and the Parliament of Great Britain. Every political party in England and the United States seeking favor with the public has been pro-Zionist—until, of course, it came into power. The Labor Party in Great Britain, the Republican and Democratic Parties in the United States made room for a Palestine plank in their election platforms. Even Churchill when on the Opposition bench whipped out against Parliament when the white paper was being debated before passage. Leaders of historic stature, Thomas Masaryk, Lord Balfour, Lloyd George, Woodrow Wilson, Field Marshal Smuts, Lord Wedgewood, and yes, Franklin Delano Roosevelt openly and verbally, at least championed Zionism.

Further, there was the Balfour Declaration. There were 52 nations signing consent to Britain's mandate over Palestine which called for the establishment of a Jewish National Homeland. There was the Anglo-American Treaty of 1924, reiterating the terms of the mandate. Strange, isn't it, that all these documents of state and all the party platforms and all the oratory should sink beneath the weight of one letter whose meaning, at best, is dubious.

American public opinion is solidly against the attitude of the administration as revealed by the Secretary's statement. Four hundred Members of the House and Senate have gone on record endorsing untrammeled immigration of the Jewish people into Palestine and for an eventual democratic Jewish commonwealth therein. Thirty States through their Governors recently petitioned President Truman to adhere to those principles. In addition, only recently a debate was staged in the Senate wherein Members of both parties inveighed against the perfidity of England in its failure to redeem its oft-repeated pledges. On October 16 in the House of Representatives over a score of Members on both sides of the aisle severely condemned the British Government for its callous repudiation of its pledge.

Thus, we have a coalesced public opinion vehemently expressed in and out of Congress, and against that opinion dare the administration set its face? There are some who are misadvising the Secretary of State, if not the President. Both should not be purblind and fail to recognize the avalanche of public opinion that is daily gaining in momentum.

It would appear that a marked effort is being made to stem the tide of that public opinion. Else, why should the Roosevelt letter at this time have been released to the press? Or the vindictive, inaccurate letter of King Ibn-Saud, too, for that matter? The timing of the release was not accidental; it was deliberate, and, I add, with a studied purpose.

Much, entirely too much, has been made of Arab claims to first consideration. Have the Arabs a case? Emphatically no. As Eliahu Ben Horin in a recent issue of the Nation pointed out, there seems to be an endless stream of Arab protests and proclamations. King Ibn-Saud thunders his demand for the maintenance of the abominable white papers which bars Jewish immigration into Palestine and even dares to threaten the peace of the world should the issue be resolved in favor of the Jews. British statesmen, though knowing better, carefully let it be known they have fallen for this tripe. The build-up has been so great that even some of the advisers of President Truman have been smitten. Any idea of a Pan-Arabian military force in the Levant capable of military victory is too ludicrous for words. Two battalions of British troops suppressed the pro-Axis revolt of the Rashid Ali Bag Gailani Government in Iraq in 1941. In fact, the Iraq revolt is the clearest example of the ineffectuality of appeasement. It's an old truism, "Appease a rascal as you will, he was and is a rascal still." A few airplanes would scatter and render ineffective the horsemen and camel riders of Saudi-Arabia. And let me emphasize this: No American and no British troops should be necessary to defend the integrity of Palestine against Arab marauders. A Jewish brigade could be readily recruited as they were in the war against the Axis to defend to the death their homeland.

The white paper is no law to the Jews nor to the world. Just as the Americans disregarded the stamp tax and tea tax in the American Revolution, just as Ghandi and his followers disregarded the salt tax, the Jews in Palestine do not recognize the white paper. They are prepared to make every sacrifice. The Jewish D-day has arrived in Palestine. The landing of homeless refugees in Palestine will take place. Let the British troops dare to fire upon them. If nobody will teach the British the meaning of honor, the Jews will. They will return blow for blow and bullet for bullet.

Let us not forget that ibn-Saud, the self-styled ruler of the Arabs didn't even lend a camel or a donkey to the Allies in their most distressful moments in the Levant. Right now, there are remnants of the Arab Legion, who as prisoners of war are now at Camp Opelika, Ala. Under the leadership of the traitorous Grand Mufti of Jerusalem, they fought against American and British troops. They fought as members of the Waffen SS against the Yugoslav partisans. When Rommel was at the gates of Alexandria, not only did King Farouk and his Egyptians fail to lift a finger in their own defense, but members of the King's cabinet were arrested carrying the plans of the British High Command, and carrying them to the Nazi generals.

It is interesting to note that the Grand Mufti of Jerusalem who fled to Berlin is not on the war criminal list due to the failure of the British Government to place him there, although he is under residential surveillance in France. The so-called Pan Arabian League is demanding his release and reinstatement, although collaborators like Laval and Quisling have already met the firing squad. They would make of the Grand Mufti, erstwhile friend of Hitler, a national hero.

In the face of all this, I received a letter from the Foreign Economic Administration which revealed that as of June 30, 1945, we had transferred to Saudi Arabia under lend-lease goods value at $9,492,000, consisting of industrial and agricultural commodities and as of the same date we had furnished lend-lease aid to Iraq in the sum of $4,144. Further, substantial quantities of lend-lease goods has been sent to Transjordan to the British forces stationed in those countries. To my mind, this was a flat violation of the intent of Congress. Under the lend-lease statute, this aid was to be given only to those countries who had been on the Allied side.

In stark contrast was the display of devotion to the Allied cause by the Jews of Palestine. The Jewish agency was able to raise a volunteer army of a higher ratio than did the United States through selective service. The Jewish brigade performed brilliantly in Italy and elsewhere as the citations show. Two hundred new industries were started by the Jews of Palestine to service the Levant theater of military operations. Medicines, drugs, chemicals, and potash, to name but a few.

The equities weigh heavily against the claims of the Arab big chiefs. The Jews have no home. They relied upon the promise, internationally confirmed, that the tiny strip of land, no larger than the size of Vermont, approximately 10,000 square miles, would be theirs. The Arabs have 2,000,000 square miles self-admittedly underpopulated. It is absurd for them to claim the patch of land that was promised to the Jews at the same time when the Allies in the First World War released all of Arabia from Turkish domination.

What I say here is well known to the British authorities. Then why this frantic appeasement of the Arab big chiefs? Is this all being done for the benefit of the Arab peasant and worker? Decidedly no. Far from being displaced in Palestine, the Arab has doubled in population in the past 10 years. Here is the highest standard of living for the workers in all of the East. The Arabs recognizing this have flocked in increasing numbers to Palestine. The birth rate among Arabs had increased as the death rate from disease decreased. The Jewish pioneer had brought a social awakening to the East, an awakening that is feared by reactionary Englishmen and Arab rulers alike. The modern techniques of the intensive cultivation of the soil and the quickening brought in the wake of the industrialization swept new values into the East. The disease-ridden, exploited, illiterate Arab has found a new source of strength. What he knows of schools, medical treatment, the developments of the arts and sciences, the protection of labor, he has learned from Jewish settlement in Palestine. Without the redemption of Palestine by the Jews, that part of the Arab world would have slumbered on, the mass of its people held firm in the grip of feudalism and imperialism.

Again, then, why this appeasement of the handful of Arab potentates? Can the answer lie in oil? The Arab potentates know that international rivalry for control of these oil lands in Saudi Arabia has increased. They are playing it up for every bit of its worth. And so the powers of the world bid feverishly for Arab favor. Are the powers ready to trade human dignity and honor for oil? The New York Post has put it well, "We can have a Near East that will be more than an oyster for a few pincelings. It can be a decent place for all—for the Arab common man as well as for the pitiful remnant of Europe's Jewry.

In the financial negotiation talks now going on between England and the United States, Lord Halifax raised the question of honor. England, he pointed out, has obligations to its dominions and the maintenance of the imperial preference trade duties is important to her honorable discharge of those obligations. That's a strange word, "honor," to be used by Lord Halifax. It is unbecomingly absent in the British Government's observations on Palestine. Where was British honor when she slammed shut the doors of Palestine when a haven of refuge would have saved thousands of lives?

Let's face it.

We are at the crossroads today. We either face the beginning of a new era in which decency and honor are more than words a politician glibly uses or we face the destruction of our civilization. That's the story the atom bomb tells. If we remain indifferent, if we remain apathetic, we ourselves sanction a world of moral degradation.

What happens to and in Palestine will be the clearest indication of the road the powers of the world have elected to follow.

---

## H. R. 2536

EXTENSION OF REMARKS

OF

## HON. B. CARROLL REECE

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

*Thursday, November 1, 1945*

Mr. REECE of Tennessee. Mr. Speaker, under leave to extend my remarks, I include a statement on the Bulwinkle bill by Col. J. Munroe Johnson,

Director of Defense Transportation and a member of the Interstate Commerce Commission, before a subcommittee of the Committee on Interstate and Foreign Commerce:

Mr. JOHNSON. Mr. Chairman and gentlemen of the committee, I am J. M. Johnson, Director of the Office of Defense Transportation, a war agency created by Executive Order 8989, dated December 18, 1941. I am and was also a member of the Interstate Commerce Commission.

I am pleased to accept the invitation of the committee on Interstate and Foreign Commerce to appear before it to discuss the measure under consideration at this hearing, H. R. 2536.

Mr. REECE. Mr. Chairman——

Mr BULWINKLE. Mr. Reece.

Mr. REECE. If I may ask, you are still a member of the Interstate Commerce Commission?

Mr. JOHNSON. I am and was before I became Director of the Office of Defense Transportation.

Mr. EULWINKLE. And also, may I just say here, you are from South Carolina.

Mr. JOHNSON. Yes, sir; I am very glad to say that.

Mr. BULWINKLE. And you and I had the same teacher, I believe?

Mr. JOHNSON. Yes.

Mr. REECE. He and I served in the same division in France, so I will not let you get ahead of me there.

Mr. JOHNSON. Yes; and I might give the name of that division. The famous Rainbow Division.

You have already been advised by the chairman of the legislative committee of the Interstate Commerce Commission and by Commissioner Aitchison of the views and recommendations of the Commission concerning this bill. With those views and recommendations I am in full accord.

The members of this committee are fully aware, I am sure, of the unparalleled accomplishments of the railroads, the motor carriers, and other forms of domestic transportation during World War II. And, I may interpose, I presume you are to some extent familiar with what transportation did in World War I, and I will refer to that again after I shall have read this prepared statement. Confronted by an unprecedented volume of traffic, both freight and passenger, which seemed to more than tax their capacity; faced with the necessity of expediting the movement of troops and materials of war and at the same time providing transportation necessary to the maintenance of the essential civilian economy; beset by shortages in manpower, facilities, materials, and supplies—and I will revert to that again—and other difficulties which attend an all-out war effort, the carriers of the Nation rose to the occasion and wrote into the history of transportation a page which shall forever remain indelible.

It is not necessary or appropriate at this hearing to attempt to evaluate the various factors that contributed to the magnificent record of domestic wartime transportation, but I do feel justified in saying to the members of this committee that in my sincere opinion the task could never have been performed adequately in the absence of machinery and procedures for joint and collective action among the various types of carriers and among the carriers themselves. It is true, of course, that the executive order creating the Office of Defense Transportation invested it with the necessary authority to coordinate and direct domestic traffic movements with the objective of preventing possible points of traffic congestion and assuring the orderly and expeditious movement of men, materials, and supplies to points of need, but the discharge of our responsibility in this behalf was very greatly facilitated in the field of regulated transportation by the existence of associations, committees, bureaus, and conferences—agencies which had been set up in peacetime by the carriers to deal collectively with each other and with the public. The situation not only made for ease in administration but because it was in existence it contributed immeasurably to the time factor in putting policies into effect, which, in time of war, is of paramount consideration. It was found unnecessary except in a very few instances to set up additional committees to assist in effectuating policies and recommendations of this office, relative to joint or collective action by regulated carriers.

During the fore part of the war—in 1942—the bureau or conference method employed by the railroads and motor carriers in dealing with rates and practices affecting the charges made for transportation was sharply challenged. Because of the obvious adverse effect which the challenge would have upon the ability of the Office of Defense Transportation and other agencies of the Government to utilize carrier committees and bureaus in promoting joint and collective action among carriers, and without attempting to appraise the merits of the challenge, the then Director of the Office of Defense Transportation, the late Joseph B. Eastman, requested the Chairman of the War Production Board to issue a certificate under section 12 of Public Law 603, Seventy-seventh Congress, granting immunity, under proper safeguards, from the provisions of the antitrust laws of the United States to common carriers and their representatives participating in rate bureaus, rate conferences, and other similar organizations. In this request the Director was joined by the War and Navy Departments. As a result, on March 20, 1943, the Chairman of the War Production Board issued his certificate No. 44, applicable to the situation. One of the conditions of his certificate is that joint action taken by common carriers or freight forwarders shall be in compliance with certain regulations for rate conferences formulated by the Interstate Commerce Commission. These regulations were made a part of the certificate. Unless there already is in the record a copy of the certificate and regulations, I should like to submit a copy.

Mr. BULWINKLE. Without objection, that may be done.

(The document, certificate No. 44, above referred to, is as follows:)

"CERTIFICATE NO. 44

"To the ATTORNEY GENERAL:

"Pursuant to the provisions of section 12 of Public Law No. 603, Seventy-seventh Congress (56 Stat. 357), I hereby approve joint action by common carriers or freight forwarders, or their respective representatives, through rate bureaus, rate conferences, or other similar carrier or forwarder organizations, in the initiation and establishment of common carrier and freight forwarder rates, fares, and charges, and carrier and forwarder regulations and practices pertaining thereto: *Provided*, That such action is taken subject to and in compliance with certain regulations for rate conferences formulated by the Interstate Commerce Commission, a copy of which is hereunto annexed and made a part hereof; and after consultation with you, I hereby find and so certify to you that the doing of any act or thing, or the omission to do any act or thing, by any person in compliance with my approval herein expressed, is requisite to the prosecution of the war.

"DONALD M. NELSON,
*"Chairman, War Production Board.*

"MARCH 20, 1943."

Mr. JOHNSON. This certificate No. 44 is still in effect. However, a communication dated October 4, 1945, from the general counsel of the War Production Board requests that the Office of Defense Transportation suggest a date prior to November 1, 1945, on which the Chairman may withdraw the certificate, or in the event there is some reason why it is thought the certificate should not be withdrawn before November 1, 1945, to suggest the first date thereafter, prior to January 1, 1946, upon which it may be withdrawn. I have consulted with the War and Navy Departments and the Interstate Commerce Commission and it is our common view that the certificate should not be withdrawn prior to February 1, 1946, and I have no great doubt that we won't recommend a further extension- -and representations to that effect have been made to the War Production Board.

So far as I am advised, operations of rate bureaus, rate conferences and other similar organizations under certificate No. 44 and the Regulations for Rate Conferences of the Interstate Commerce Commission have been eminently satisfactory.

The purpose of the measure pending before this committee, as I view it, is, in effect, to replace the wartime protection afforded the regulated carriers by certificate No. 44, with permanent statutory immunity under conditions which will assure a full measure of protection to the public. In my judgment, no one who is familiar with the history of regulated transportation can offer any valid dissent to this objective. Rate bureaus and similar carrier organizations have existed and functioned for years. They have, in general, the full support of shippers, regulatory commissions and regulated carriers alike. They are, in my opinion, a creature of necessity. I cannot conceive of the regulated carriers of the country conforming to the duties and obligations imposed upon them by the Interstate Commerce Act unless they are in position to consult, confer and deal collectively with many phases of the matter.

I have not attempted in this statement to analyze the specific provisions of the pending measure. This I have felt to be unnecessary in view of the testimony which has preceded and particularly in the light of the very adequate statements made upon behalf of the Interstate Commerce Commission.

So far as the Office of Defense Transportation itself is concerned, you no doubt know that it is in the process of liquidation. It seems unlikely that permanent legislation of the type under consideration will affect the functions of this Office during the remainder of its existence. However, it would be unfortunate in my opinion if there should be any hiatus between the expiration of certificate No. 44 and the enactment of permanent legislation on the subject, particularly in view of the problems of reconversion which confront the country.

My connection as Director of the Office of Defense Transportation with the railroads has been largely one of operations, and while this bill has more to do with the rate features, which is a connection of the citizens with the carriers, still operations make and control rates.

You have heard both Admiral Mitchell and General Gross on this subject. They spoke to you from the standpoint of the military man; spoke to you about their tonnage. They, perhaps, know but they did not mention what these railroads and our truckers have done in this war. It has been spoken of as a miracle, long before it had reached its peak.

Mr. REECE. May I interpose there?

Mr. JOHNSON. Yes, sir.

Mr. REECE. And I think it also ought to be said for the record or otherwise that the Office of Defense Transportation under your predecessor and under yourself as Director has contributed a great deal to the accomplishment of this miracle. I feel, and I say without any intention of exaggeration, that the Office of Defense Transportation has functioned as efficiently, or more efficiently, than any emergency office that was set up in connection with the prosecution of the war.

I have not talked with officials of the transportation industry, but I think they would feel the same way about it.

It is a credit both to your predecessor and yourself and staffs which have supported you in this effort. You deserve the gratitude of the Nation.

Mr. BULWINKLE. With which I agree.

Mr. CHAPMAN. And I, very strongly endorse that statement.

Mr. JOHNSON. You are very kind, gentlemen. I appreciate it. We certainly have done our utmost; but I want to tell you it is not the Office of Defense Transportation. It is the over-all unification—conferences of carriers, and to include the shippers, too. If there ever was a time when the entire transportation service of the United States served the world in the greatest avalanche of transportation the world has ever seen in one nation, it was during this time, and it was because these organizations brought them all in and it has been one industry, and the Government was with them.

Mr. BULWINKLE. And you regulated them.

Mr. JOHNSON. We forgot who owned the railroad cars; we forgot who owned the trucks. It was one unit, and that is the only way the United States will ever have the transportation it deserves and can have.

Mr. REECE. That is why you did a good job.

Mr. JOHNSON. Well, I do not know why I did a good job. I did it because I was working with good patriotic people ready to make any sacrifices in the world regardless of cost, and they did it, and if they had not done it our war effort would have been wrecked and our allies defeated before we ever reached their side on the battlefield. Just as sure as we won a victory, that would have happened.

Transportation cannot win a war, but you cannot win one without transportation. And this transportation and service was furnished under the most appalling difficulties transportation ever faced. We went into this war with 600,000 less freight cars than we had when we went into the First World War, and we still have 600,000 less freight cars; we went into it with 18,000 less passenger cars, and we still have 18,000 less passenger cars; we emerged from this war with half a million less employees than we had at the end of World War I, and we have carried two or three times the burden that was imposed on the then transportation system, and we have done it without any annoyance to the civilian in his every day life. How it was done, was only because it was done as a unit. We did not, nor did they exercise any of those individual activities urged by profit pursuits. And, God is good. With all of the sacrifices, without regard to expenditures, it has been profitable to them, not only as compared with what they might have had, if they had not done so well, but as compared with World War I, when the railroads, the shippers, and the Government suffered enormous losses.

The United States Goverment in the First World War, to cordinate, took over, and if you take out these bureaus, the Association of American Railroads, Association of Short Lines, Southeastern Association, Northern Association, and the Western Association, and Association of Truckers, the Government has got to organize and establish something of that sort itself running into millions of dollars; millions of dollars every year in peace and in war. Then think of the revenue that we spent on our transportation when we took it over, and this time they paid taxes, and we emerged with a lower freight rate than we had when we entered this war.

You cannot conceive of such things being done when every piece of steel was used for shells, tanks, trucks—we could not get enough rails; could not get enough material to build cars, nor enough people we thought to run the railroads and the trucks and the air lines, and our inland waterways. In all of those agencies transportation, our coastwise shipping, our foreign shipping, all went out. We had to furnish fuel to New England by rail that formerly went by ship. We had to take that freight that moved by truck, because the truck had to drop out because of lack of rubber and parts, and put it on the rails. Our entire shipments from South America that formerly went up the east coast and the west coast, taken to the first port and we transported that traffic by rail. We fed this enormous northeastern corner by rail for its petroleum and when this first was mentioned as an additional burden doubt was expressed that they could transport 200,000 barrels a day into the northeast. We transported at times more than a million barrels per day into the northeast. All of the tank cars in America, private and publicly owned, were pooled and taken away from everybody and put into solid blocks of trains and given passenger schedules—as fast as the cars would take it.

Why, think of some man down in Tennessee, my brother in arms, wanting to ship something up into Canada and each railroad being its own agent; and it travels over 5 or 6 different railroads, 20 or 30 different routes by which it would reach its destination, and each one of these, sometimes short 50-mile railroads, at each station could never figure out the freight rates. And, it might move by rail, by barge, by truck, then on the rails again, and then on a barge again. You would have confusion worse confounded at the time transportation is going to be needed in this Nation as never before, and there is something about transportation that you cannot understand. It is one industry that will commit harikari if left alone. They will haul the tonnage rather than see some competitor haul it, at a loss—assuming that a train moves, or a truck is going to run anyway—and it does not cost anything to move something that somebody else would move, and they get the business.

You cannot permit railroads to be unbridled among each other and certainly not with the water carriers, or a water carrier with the railroads; or a trucker with another trucker; and certainly not a trucker with a railroad. You would have confusion worse confounded.

Now, somebody, of course, has to govern this conference method of serving this Nation. They cannot be turned loose as an industry, because they can throttle this country in a week. This country does not tick long without transportation beyond the dreams of any other nation. Someone must govern it and we must assume whoever governs it, whether the courts of the land or the Interstate Commerce Commission, that they possess integrity and in addition to that you want skill.

There is no danger, no matter how many conferences may be had among these various transportation agencies and between the various forms of transportation—a problem you gentlemen have to solve now pretty soon—if that is done under regulation, published and known to the world. You may have transportation and will have transportation.

I have never met a more patriotic group of people nor a more skillful group of people than it has been my pleasure to meet and work with in all of the transportation agencies of the United States, and I want to tell this committee they have done their very best, patriotically, and nothing less than their best would have served this Nation in a desperation that never existed before. They are going to need intelligent, safe regulation, and I can think of none that gives and guarantees a nation securing that national transportation needed that is greater than the Bulwinkle bill.

Mr. BULWINKLE. Any questions?

Mr. REECE. I would like to ask one.

Mr. BULWINKLE. Mr. Reece.

Mr. REECE. Does this bill have any important relationship to this southern freight question that the southern governors have heretofore presented?

Mr. JOHNSON. I see no connection whatsoever between this and the unification of rates between territories and zones. Whatever eventuates from that will eventuate more intelligently under the Bulwinkle bill than without it.

Another thing I want to let you understand, too. Perhaps I did not advert to it. You heard the two transportation directors of the greatest shippers in the world, the Army and the Navy. They could not have started if they had had to deal with the individual railroads. It could not have been done. And, the Office of Defense Transportation, had there not been the Short Line Association, the Association of American Railroads, the Trucking Association—which, by the way, has not covered its field to the same extent as the others have—it is younger—if they had not been there you would have had appropriations for the Office of Defense Transportation rivaling some of these other war agencies and spent hundreds of millions of dollars, for I would have established not a short line or Association of American Railroads, but a railroad agency, a truckers' agency, and I would have had to spend millions of dollars to create organizations not as skillful or as effective as those in existence.

These railroads could not run without such overall supervisory coordinating agencies as the Association of American Railroads, or the American Short Line Association, and the truckers will do well if they get theirs inclusive, so that the Government can talk to one place.

I can get out a service order. That is an interstate-commerce order. And, I still use that bureau of service of the Interstate Commerce Commission almost as a part of the ODT. You cannot see where the line is. I can call the AAR and say we are issuing such and such an order. The order will be mimeographed and out this afternoon, and before we will have mimeographed that order; before it reaches the AAR, every railroad in America knows what that order is and begins observing it.

Suppose we had to deal with individuals, with a thousand railroads, and millions of truckers. You would be sunk and such a war could not be successfully waged.

Regulated conferences as unifications of action is essential to transportation. Without it you are crippled beyond repair.

Mr. BULWINKLE. Any further questions?

Colonel, we certainly appreciate your coming here today.

Mr. JOHNSON. If I can do anything to better the transportation of the United States, I will have had a satisfactory tour of duty with the United States Government. There is no activity in America any more important to the United States as a nation than its transportation.

Mr. BULWINKLE. We thank you, sir.

Mr. JOHNSON. Thank you.

---

## Address of Harris J. Booras at Unveiling Ceremonies of Bust of Franklin D. Roosevelt

---

EXTENSION OF REMARKS

OF

### HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

*Thursday, November 1, 1945*

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following dedicatory address by Harris J. Booras,

supreme president of Ahepa, at the unveiling ceremonies of statue of Franklin D. Roosevelt, known as the war President, at Roosevelt Library, Hyde Park, N. Y., October 28, 1945:

Your Grace, Mrs. Roosevelt, distinguished guests, and my fellow Americans, it is now autumn of 1945 in this historic Dutchess County of New York. Most befittingly, Mother Nature donned her multicolored beautiful fall attire in order to behold this memorable day. The ancestral fields of the Roosevelts at Hyde Park are bathed with cheering and refreshing smiles of a brilliant sun and the invigorating odor of the pure country air. All is peace and serene, but not like ever before.

An incense of sanctity has now baptized this historic site. A national or rather an international shrine has been here installed, a sanctuary of glory and altar of liberty. For here lies at rest here we behold the sepulchre of Franklin Delano Roosevelt, the greatest war President of the United States of America.

We assemble here as pilgrims with sad and heavy hearts that our late Commander in Chief is no longer in our midst to inspire us and to lead us on to a lasting world peace. But we come with the profoundest gratitude and pride as participators and inheritors of most glorious pages of our country's, nay, even of the entire world's history, which he made possible by his genius, his leadership, and his sacrifices.

For, never before in the annals of freemen was it ever recorded that so many millions the world over, during this past darkest period of history, looked upon one man for inspiration, hope, and deliverance. Before the person of this giant of intellect, of freedom, and of the rights of man, there was a momentary pause in the whole record of mankind; here the past, the present, and the future met, and in him and under his great leadership, terror, peril, evil, and suffering at the worst, gave way to new found strength, hope, confidence, and freedom; here the world tyranny and despotism were destroyed and again liberty and justice triumphed and won.

Most befittingly indeed, therefore, our illustrious President Harry S. Truman, proclaimed Franklin D. Roosevelt as the greatest war President of the Nation. I say that he was the greatest war leader of the entire world and that justly he is acclaimed by all freedom-loving people as a world deliverer.

His illustrious name belongs to America; his immortal fame to all mankind. The loftiness of his spirit, the majesty of his soul, the magnitude of his character, the sublimeness of his intellect, and the greatest of his ideals, shall guide the pathways of all generations to come as a brilliant beacon of freedom and democracy. With unbounded reverence and respect, therefore, we come before our Hero's grave to dedicate a memorial to him, to whom all humanity has already dedicated its heart.

The fraternal Order of Ahepa, an organization composed largely of Americans of Hellenic descent, was accorded the high privilege by our late President, who was also a distinguished member of our brotherhood, of presenting to the people of the United States, the statue of the war President. This outstanding work of art was carved and molded by the ingenious hands of a new Phidias, our world-famed American sculptor, Walter Russell, of New York City. In accordance with the wish of our beloved late President that the same be unveiled soon after the war, we are here today to make this formal dedication.

We have chosen October 28, my fellow citizens, on account of two reasons. Firstly, because the Order of Ahepa, as an official issuing agency of our Treasury Department, having sold in the past various war bond drives more millions in bonds than any other similar organization in America, it was accorded the distinctive privilege by the Secretary of the Treasury to commence its Victory loan campaign a day earlier than the rest of the Nation. We, therefore, officially commence, at these historic ceremonies, Ahepa's Victory bond drive, and our chapters throughout the land, having been instructed to stand ready, now shall begin their patriotic activities with zeal, enthusiasm, and unremitting devotion. We pledge to the memory of our war President that Ahepa will again lead this triumphant march of our Nation, so that we may all prove worthy of the victory that he made possible. The Ahepa calls upon every American to buy a bond so that we may be bonded together as freemen forever.

Secondly, this day was selected as it marks an annual of glory in present world history. For, on October 28, 1940, Fascist Italy of 45,000,000, supported by Nazi Germany of 75,000,000, treacherously attacked with all its might and fury the freedom-loving people of heroic and noble Greece, who numbered only 8,000,000 souls. A miracle was witnessed. The results we all know. The legions of Mussolini were smashed to pieces by the bayonets of the Greek evzones. It was the first victory against the Axis; it marked the turning point of the war. The more ferocious and resolute resistance of the brave Hellenes against the Nazi hordes and the Bulgarian sattelites that poured into Greece in order to extricate the doomed Fascists, destroyed the myth of Axis invincibility and shattered to pieces the timetable of Hitler. Thus it made it possible for Russia to stop the Nazis at the gates of Moscow, gave Britain much needed time and moral aid and gave America opportunity to organize her industrial and military might. A new and more glorious Marathon was born on this day of 1940.

This day shall also be marked in the records of time because of our present historic ceremonies. This memorial of bronze, stamped as it is with immortality, shall stand here as a pillar of glory of this great democracy that brought forth to the world a worthy and true son of all America's traditions. Ordained as it is with the breath of life of an ageless spirit, it shall serve as a trophy of triumph, for victory and freedom. The brilliancy of its rays vibrating from this living image of our great war President shall forever light the pathways of all generations to come.

In the name of the Order of Ahepa, it is my proud privilege and high honor to now officially present to the people of the United States and their posterity, this glorious memorial of the war President, Franklin Delano Roosevelt.

## Inland Plants to Aid Defense Program

EXTENSION OF REMARKS
OF
**HON. OLIN D. JOHNSTON**
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES

*Friday, November 2 (legislative day of Monday, October 29), 1945*

Mr. JOHNSTON of South Carolina. Mr. President, on behalf of the Senator from Missouri [Mr. BRIGGS] I present the following request by him for the printing of a statement in the Appendix of the RECORD:

Mr. President, our safety of the future is going to be dependent on the proper location of our strength and on the disintegration of our defense plants. In the Middle West, a group of interested loyal, patriotic citizens has studied this problem and has made specific recommendations to Congress, to industry, and to all others concerned. Mr. President, I ask unanimous consent that a statement on national safety and economy require inland plants to aid defense program, issued by the West Central Industrial Association, be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

NATIONAL SAFETY AND ECONOMY REQUIRE INLAND PLANTS TO AID DEFENSE PROGRAM

A MATTER OF VITAL IMPORTANCE TO EVERY CITIZEN OF THE UNITED STATES

Now that World War II has ended in victory, it is the responsibility of the Congress, aided by military and naval officials, to formulate and effectuate an adequate program for our national defense in this atomic age.

This must be done without undue delay.

It must be done so as to assure, to the fullest extent possible, our national safety.

It must be done so as to enable us to cope with any foreseable method of enemy attack.

It must be done with due regard for the economical expenditure of the taxpayers' money, so as to secure maximum results for the funds expended.

Air power in all of its phases will be a chief factor in our defense program, and our air power production facilities must be in the least vulnerable locations. Also, we must make adequate provision for constant research and experimentation.

Even before the development of the atomic bomb, the strategic military advantages of the West Central region of the United States for air-power production had become widely recognized during World War II. Now that we have the atomic bomb, we are absolutely compelled, as a matter of national safety, to both recognize these advantages of this region and to plan our future defense program accordingly.

Air power production facilities can be operated in the west central region with maximum certainty of successful defense in case of enemy attack. This fact is implicit with inland locations, whereas coastal locations afford the least opportunities for defense. This vast advantage of inland locations for plants can be ignored only at the expense of national safety.

The Nation's newspapers on September 20, 1945, published an item quoting Lt. Gen. Barney Giles, who had just led a one-stop flight of Superfortresses from Japan to Washington, D. C., as declaring that the Pacific Northwest would have been bombed by Japanese suicide planes before the end of 1945 if the war had not ended suddenly. He said those same Superforts took off from a super air field on Hokkaido, from which Japan was planning to send four-motored suicide bombers against Seattle and other Pacific coast cities. In his opinion the bombing would have come within 6 months if the war had not ended.

The extravagant claim was made recently in a nationally circulated magazine that, by flying the Great Circle route, certain nations could attack this inland west central region as easily as the coastal areas. This cannot be successfully argued for the simple reason that inland locations afford time and space within which to apply effective defense measures. All coastal areas are vulnerable to carrier-based aircraft. This was demonstrated by the Japanese in the attack upon Pearl Harbor and by other actions in World War II. In planning a continuation of our air power production program, these facts must be recognized.

It is worth noting that many millions of dollars of the taxpayers' money were expended during World War II for coastal plant protection. For example, Associated Press

news and pictures were published throughout the Nation, July 24, 1945, of Boeing plant camouflage at Seattle, and the Wall Street Journal of August 10, 1945, published a story of similar camouflage, costing $18,000,000, at aircraft plants in southern California, stating that additional millions will be required for its removal. Douglas, Lockheed, Consolidated Vultee, Northrop, and North American plants were included.

Additional millions were spent for air-raid shelters, black-outs, antiaircraft defense, barrage balloons, revetments on airports, bomb-proof walls separating important plant areas, and duplicate sets of original drawings of whole plants for safekeeping in the interior.

All of these measures were necessary in World War II because, being on the coast, these plants were wide open to enemy attack. Such expenditures were not made at plants in the West Central region, because such protection was believed unnecessary. The inland plants were considered safe, or at least much less vulnerable than those on the coasts.

By concentrating much of our air-power production in dispersed, inland locations, the Government very probably can avoid the necessity for and the tremendous expense of such protective measures in case of another war emergency, as the presently existing production facilities of this region can be preserved and, if war comes again in a few years, they could serve as the nucleus for quick expansion to meet requirements. Even if, as some argue, the atomic bomb and other scientific developments in warfare should require some types of protective measures for inland plants in the event of future conflicts, the inland plants would still afford the tremendous advantage of time and space within which to stop anything directed toward them by the enemy. This might very easily spell the difference between defeat and victory, between safety and disaster.

Prior to World War II, airplane manufacturing was heavily concentrated on the west and east coasts. During the war, these facilities were augmented by Government-built plants, and the Government also established large plant facilities in several dispersed locations in the West Central region. These factories still are owned by the Government. The West Central region's aircraft plants, it should be noted here, have made the most outstanding production records in World War II, proving this region's labor is superior—no serious strikes, less absenteeism, more production per worker. Furthermore, the West Central region has better transportation to the east coast than exists between east and west coasts, with only seven transcontinental rail lines, as against numerous railroads between the West Central region and the east coast. Bombing could far more easily knock out the seven east-west lines, where they cross the Rockies, than the numerous West Central-east coast lines. This is a vital advantage which we cannot afford to sacrifice.

Due to the fact that the prewar west and east coast locations usually include the home plants of the parent companies, there is a natural tendency on the part of the companies involved to draw back into these prewar coastal plants, now that war orders have been canceled and their services are no longer required for operation of the inland Government-owned plants.

If this is allowed to happen, leaving all of the inland plants idle or permitting their sale and diversion to other types of manufacturing, our defense program would necessarily depend on the coastal plants for essential production, and they would have to serve as the nucleus for quick expansion of production in the event of a sudden war emergency. Such concentration of production in the coastal areas not only increases vulnerability to attack but reduces the potential expansibility because of the limited reservoir of manpower.

To permit the development of such a condition would be, manifestly, the height of folly and in utter disregard of our national safety, for the reasons already cited.

For these same reasons, it is obvious that our wisest and safest course, and the one least costly to the Nations' already heavily burdened taxpayers ,is to prepare for the concentration of a large portion of our production in these inland plants, which already are in dispersed locations. From the cost angle, our expenditure of $300,000,000,000 in World War II, representing unavoidable and tragic waste and destruction, and leaving us with a national debt of astronomical proportions, compels judicious fiscal policies if we are to provide the defense measures required for national safety and simultaneously retire or even carry our existing debt, thereby avoiding national economic ruin.

Some of the companies, therefore, should be induced to move inland. Surplus Government plants at inland locations might be traded for privately owned coastal plants, or they might be leased to the coastal companies on such attractive terms that they could afford to move their operations inland. Expense of such removal to the interior should be borne by the Government, to assure such removal and because this would be less costly in money and far less hazardous to our national safety than to have our production concentrated in the vulnerable coastal areas, with expansibility reduced by inadequate resources of manpower.

It may not be found necessary or desirable to keep all of these inland Government-owned plants to produce for our defense program. Congress, with advice from military and naval officials, should decide how many and which of them are to be retained. Some of the communities where these plants are located may prefer to have them made available to private enterprise for other types of manufacturing. Where this would not conflict with the needs of the Government in developing an adequate defense production program in dispersed inland locations, such uses should be permitted.

It cannot be truthfully said that these arguments are motivated by selfish sectionalism. It just happens that the facts of life force this Nation, as a means of self-preservation, to be realistic in planning its future defense program so as to most effectively meet the new conditions of this atomic age. Such realism will, of necessity, accept the conclusions herein expressed. There is no disposition to injure or take advantage of other sections of the country by developing the proposed program. All sections are equally and vitally concerned. Indeed, the west and east coast sections should, and probably will, recognize the validity of the arguments advanced and therefore, in the interest of the Nation's safety, not to mention economy in the use of public funds, may very well be expected to favor such a program. Opposition would be an untenable attitude on the part of any section, because, when national safety is at stake, all other arguments fall.

Of course, if this Nation knows positively that no other nation will suddenly attack us at some future time, these conclusions can be ignored. Manifestly, we possess no such knowledge, but, on the contrary, it is reasonable to assume that a danger exists and that our safety requires adequate defense plans for possible future emergencies, more especially so since we cannot hope to permanently monopolize the ability to employ atomic energy in warfare.

There is no time to be lost in developing this defense program. Congress should move swiftly, assisted by military and naval officials. The program should be defined and the necessary funds appropriated by Congress, followed by prompt effectuation of the program. Our national safety demands it.

FACTS ABOUT THE WEST CENTRAL INDUSTRIAL COUNCIL

The West Central Industrial Council was organized on April 6, 1945, at Oklahoma City, Okla. It is composed of chambers of commerce, public officials, and other interested organizations and individuals of the 15 States and parts of States comprising the area embraced.

The west central region is bounded by the Mississippi River on the east, the Rocky Mountains on the west, the Canadian border on the north and the Gulf and Mexican border on the south. The States affiliated with the council through representatives as indicated, are: Louisiana, Arkansas, Missouri, Iowa, Minnesota, North Dakota, South Dakota, Nebraska, Kansas, Oklahoma, Texas, and those parts of New Mexico, Colorado, Wyoming, and Montana lying east of the Rockies.

The purposes of the council, agreed upon when the council was organized, are:

1. To ascertain the policy of the United States Government and its interested subdivisions with reference to postwar disposition of industrial institutions and facilities established in promotion of the war effort, and to cooperate with those Government agencies in the most efficient utilization of these facilities and institutions for the benefit of the Government and of the communities where located.

2. To promote the general recognition and acceptance by the Government and by the Nation of the factual information and practical conclusions of the McCarran report to the Senate of the United States.

3. To secure the cooperation of the congressional and governmental representatives of the States composing this area in recognition of the problems above stated, and their cooperation in finding solutions of these problems which will be advantageous to the national interest and to the interests of this area.

4. To cooperate in the solution of such other problems of common interest to this area and States composing it as may from time to time arise.

West Central Industrial Council Executive Committee: Governor R. S. Kerr, Oklahoma, Chairman; Geo. W. Catts, Kansas City, Mo., First Vice Chairman; William Holden, Fort Worth, Tex., Second Vice Chairman; Lloyd A. Wilson, Wichita, Kans., Secretary-Treasurer; Russell S. Rhodes, Tulsa, Okla.; John D. Adams, Des Moines, Iowa; George Collisson, Denver, Colo.; Oliver W. Roberts, Omaha, Nebr.; Scott D. Hamilton, Little Rock, Ark.

## Some Bottlenecks of Reconversion

EXTENSION OF REMARKS

OF

## HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

*Friday, November 2 (legislative day of Monday, October 29), 1945*

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an address on the subject Some Bottlenecks of Reconversion, which I delivered before the seventeenth annual meeting of the Grey

Iron Founders' Society, at the La Salle Hotel, Chicago, October 24, 1945.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman and friends, it is certainly a pleasure and privilege to be with you here at this luncheon. In a certain sense I feel as if I had almost come home. There are friendly folks here, and, of course, Chicago was once a part of Wisconsin Territory.

I needn't tell you gentlemen the problems of your own industry, which are not only grave and crucial to you men, but to the Nation as a whole.

I, personally, in Washington, have watched with concern the failure of some of our Government officials to understand the importance of the foundry industry in meeting the reconversion needs of this Nation and in providing jobs for the Nation. The Government is proving a bottleneck on this score.

And that is just what I want to talk to you about—not only the bottleneck of the Government; not only the bottleneck in your own industry, because of insufficient manpower, but the bottleneck of strikes; and lastly, the greatest bottleneck of all in the human mind—the bottleneck of synthetic and loose-minded thinking.

THE FIRST BOTTLENECK: LACK OF MANPOWER IN THE FOUNDRY INDUSTRY

Now, to take these four bottlenecks in order, let's consider the bottleneck in the Gray Iron Founders' industry first. I believe I have covered that in a letter which I recently wrote to Mr. John Snyder, Director of the Office of War Mobilization and Reconversion. I am going to read that letter to you. It is as follows:

OCTOBER 10, 1945.

Hon. JOHN R. SNYDER,
*Director, Office of War Mobilization and Reconversion,*
*Washington, D. C.*

DEAR MR. SNYDER: There has recently been called to my attention a very serious situation in the gray iron founders industry.

As you know, we have a number of gray iron founders in Wisconsin.

I am informed that if this situation is cleared up—if 68,000 to 70,000 men can be secured for this industry—it will mean that as a result of what they produce, jobs for three or more million men in industries which use the gray iron castings will be created.

I will be specific in this matter. The automobile industry, as you know, is in dire need of gray-iron castings for motor blocks and heads. The refrigeration and air-conditioning industries require castings for motor compressors and heads, motor endframes, cylinders, and rings; the washing-machine industry for frames, arms, motor endframes; the textile industry for repair parts for looms, weaving machines; and all types of textile machinery; the rubber industry for tire molds and repair parts for the rubber-making machinery; the mining industry for coal-mining machinery; the railroads for brake shoes and car wheels. Other industries need these vital items for farm machinery; for food-processing machinery; for office equipment, etc.

I have recently listened to talks over the radio and seen press releases in relation to shortages, but all of these seem to have missed the vital point that none of these shortages can be met without the prior production of gray-iron castings.

As you know, much of the machinery that we are relying upon for reconversion has been worn out, and the need for new parts (castings) in all the lines suggested above, is so critical that I feel that I am doing the proper thing in calling your attention to this fact, which you undoubtedly know, but because of pressure of business and other matters may have overlooked.

Now, anyone who makes a suggestion should have a remedy.

If the Government is really interested—as I think it is—in getting reconversion under full steam, then the Government must look after first things first. That means getting 70,000 workers into the gray iron founders' industry—70,000 jobs there are looking for men. What is the Government doing about filling those jobs? I am sure it is not disputed that these jobs will produce 3,000,000 other jobs. Is there anything more important in America than the matter of creation of jobs—the very thing about which I am writing you? If there is, I don't know it. On other occasions the Government has taken steps to get men to fill critical situations. I think that is what must be done now.

Will you kindly let me hear from you in the immediate future in relation to what is intended to be done and what is done on this matter?

With kindest regards and best wishes, I am

Sincerely yours,

ALEXANDER WILEY.

I might say that I also sent a copy of this letter to each of the following:

Hon. James M. Mead, chairman, Special Committee To Investigate the National Defense Program; Hon. John D. Small, Chairman, Civilian Production Administration; Hon. J. A. Krug, Chairman, War Production Board; Hon. James E. Murray, chairman, Special Committee To Study and Survey Problems of Small Business Enterprises.

I have already spoken in the Senate and introduced this letter into the RECORD. On that occasion I said:

"It was not so long ago that we heard talk about bottlenecks in the production of materials for war. The situation has now changed. We are no longer producing for war, but we face bottlenecks in reconversion which will interfere with our economic prosperity unless we 'bust' them wide open.

"I especially stress the importance of this matter (the Gray Iron Founders' problem) to the chairmen of the two committees I have mentioned. Without any reflection upon any individual or committee, I wish to say that failure to take action in this matter will not only clog the channels of employment, but will demonstrate an utter lack of perspective.

"There is another phase to this matter. There are some ugly rumors going around. They are to the effect that there are those in Government, and those in labor, who don't want reconversion to run along smoothly and get under way at a maximum pace. I pass no judgment on such rumors, but I do say that there is a lot of dumbness in high places.

"I said the other day that the public interest was paramount to any individual interest; that is, the right of the Nation should not be interfered with by individuals or groups. At that time I spoke on the subject of strikes. Strikes, of course, constitute a bottleneck, especially when they occur in industries, the closing of which results in shutdowns in other industries, in dissipation of jobs.

"But the bottleneck I am speaking of today is outlined in the letter I have just read. It is one that Government can iron out, if it will get under way, if Government will assist in siphoning men into this (Gray Iron Founders) industry instead of interfering with the industry, as was done a few years ago. The general average of pay in this industry throughout the Nation is $1.02 an hour. But the big thing about it is that it is calling for help, not so much for itself as for the general welfare of the Nation. It will produce wealth and 3,000,000 additional jobs."

I know that you gentlemen want action on this matter. You are fed up (and I don't blame you) with empty promises from Government, with the futile exchange of correspondence, with the issuance of meaningless Government reports that tell of insignificant gains in your manpower and the like. You gentlemen want results from Government in helping you to serve this Nation. And I, for one, am going to do everything within my humble power to see to it that you do get results.

Now, I am not going to talk any further "shop" with you. That would be just as foolish as my attempting to talk mathematics with Einstein. So let what I have said cover "shop."

THE SECOND BOTTLENECK, GOVERNMENT

The second bottleneck to which I have already referred is the bottleneck of Government. As you so well know, men in Government have often been a hindrance to the Nation's business during peacetime years for the past decade, during the war years, and now during the reconversion period. Just why is this?

1. Government has too many pegs in round holes, too many misfits in high places who haven't been weeded out by efficient administrators. It has too many petty dictators, too many extravagent wastrels who squander the resources of our people.

2. Government simply has too many people and they are stepping over each others' feet. Right now, the Federal Government has more than 3,000,000 civilian employees! The financial costs of their employment are staggering, particularly when you consider the $300,000,000,000 of national indebtedness which faces this Nation.

3. Government administrators have adopted policies which are inimical and harmful to free American enterprise. They have failed to provide incentive to produce. They have penalized our businessmen instead of encouraging them to maximum production. The OPA, in particular, has adopted a reconversion pricing policy which in many instances will not even allow business to turn a profit at all.

4. There are too many snoopers in Government. A business friend of mine said he had 10 in 1 day. The Government's habit of requiring a multitude of reports and questionnaires, its habit of sending out incomprehensible instructions and a thousand other nuisance pieces of correspondence and orders, not only plagues private enterprise but sets it far back in its work.

5. The Government is handling functions now which should properly be handled by the State and local governments. Our States and municipalities are in a far better position today financially than the Federal Government. We should turn back to them the functions which were taken over by Washington, D. C., first during the depression emergency, and then during the war emergency.

THE THIRD BOTTLENECK: STRIKES

The third bottleneck is the matter of strikes. I have already proposed on the floor of the Senate a 10-point plan which would meet head-on this strike situation. It is obvious that the strike conditions in this country are going to get worse before they get better. But we want to make absolutely sure that they get better mighty quickly. If strikes imperil the Nation's food supply, its fuel, its transportation, its communication, then there is no telling what grave consequences there will be, not only to labor and management but to the public as a whole.

I have proposed the following steps:

1. Reevaluate the entire Wagner Act. That act obviously filled a certain need in bygone years, but it is hopelessly obsolete and even harmful today to the best interests of the American people. It is a segmental act, designed for only one segment of our population. It must be revised in the interest of the public welfare.

2. Immediately enact legislation to have compulsory arbitration protect the public interest. Compulsory arbitration is now with us in some labor-management contracts and between business concerns, and has been very effective. It results in protecting the public interest. There may be some differences of opinion as to imposing compulsory arbitration upon all disputes—big and small. There can be none, because the public interest is so overwhelming, in disputes covering such matters as the food and fuel supplies for whole communities, transportation, communications, public utilities, and the like. The public interest and safety require it.

3. Establish the policy of having representatives of the public participate in every labor-management conference.

4. Enact any necessary clarifications of the draft law in order to insure full protection of the reemployment rights of veterans.

5. Insure full protection by law enforcement officers to all veterans and others who want to take up jobs vacated by strikers.

6. Establish the legal responsibility of unions for all violations of contract in the form of wildcat strikes, and so forth.

7. Require the full and accurate reporting of union finances and officers in the same manner as we require such reports from corporations.

8. Establish the labor-management-public conferences in Washington on a continuing basis rather than on a one-time basis.

9. Request of labor leaders that they themselves come forth with legislation that will end the menace of strikes and provide ways and means of collaboration between management and labor.

10. Amend the Sherman Antitrust Act to make labor organizations whose members are engaged in interstate commerce subject to that act. Prohibit them from engaging in unreasonable restraints of trade, for example, those restraints designed to compel the hiring of useless labor to prevent the use of cheaper material, improved equipment or more efficient methods, etc.

That concludes the 10-point labor program which I have proposed. But I might say here that last Thursday I introduced a bill which would naturally supplement this program. This bill would prevent the plundering of union treasuries for political purposes. It would ban election expenditures by unions and would thus, I believe, constitute an important addition to our present statutes on the election process.

THE FOURTH BOTTLENECK: MAN'S THINKING

Now, the last bottleneck, one which affects every last one of us, is the bottleneck of our own thinking. The human mind, one fellow Senator once told me, is a "helluva contraption." The occasion for that phrase was this: We had heard two Senators speaking on the floor of the Senate, interpreting the same subject, but interpreting the same absolutely different. My answer to the statement that the human mind was a "helluva contraption" was this: There are 96 men in the Senate with different backgrounds—economic, social, religious, political, racial, educational, and geographical—and because of that, these men rightly see things differently.

In other words, we know now that the human eye, looking at the same object with different powered electroscopes, sees things differently. In the days of Galileo, the wise man thought he was crazy when he spoke of the world as a globe and said that it moved. Their limited vision determined their approach.

But we need not be discouraged. In fact, it is a good thing that we have this difference of opinion, because it provides the check and balance that is fundamental in our American way of life.

We were told by St. Paul that we should "have that mind in us which was in Christ Jesus." Not this human confused thinking of the average mortal. In other words, we must not let the demands of the passing human events obscure our vision, befuddle our thinking, and take from us the "kick" that comes from living—living expectantly, constructively, joyously, adventurously, getting a joy out of meeting problems head-on and solving them.

Socrates once said there was only one evil—ignorance. Now what did he mean? Ignorance of what? Certainly he was not talking about man's wisdom which St. Paul characterized as "foolishness with God." No, he was talking about ignorance which stunts man's growth mentally and spiritually; that ignorance which creates fear and indecision and makes man stumble along; that ignorance that makes man oblivious of the fact that he serves God best who serves best his fellow man.

You know it was Browning who said: "Life has meaning and to find its meaning is my meat and drink."

Undoubtedly both Browning and Socrates were looking for light, that inner light, not the light of the sun or the moon or the stars, but spiritual understanding; a knowledge not of the transitory but of permanent values; a comprehension of life as an eternal thing, not a passing show; a glimpse of the truth about man, a sensing of power within, giving him dominion.

I want to tell you a story which has in it the atomic bomb of truth which will cast out the fear which grips too many of us Americans in this age. You know, I think that because of the high degree of integration and interdependence which now characterize our American national life, and because we now seem to have awakened to the realization that we are so dependent upon each other (for example on our long distance telephones, our railroads and all transportation, our coal and oil supply), and because we realize what the tying up of one or more of these industries would mean to the safety and health of this country—a fear has come upon us that we will not be adequate.

Now, that is part of this bottleneck of our thinking that I want to "bust" wide open. I have suggested a way to handle this strike situation in my previous remarks. But there is a strike situation within each one of us that must be handled, and this incident which I am about to relate has in it the way out.

The story is as follows: There were two Irishmen, the proverbial Pat and Mike, who worked and roomed together on a war job. One morning Pat woke up and said: "Mike, I had a strange dream. I dreamed that you died and you were on your way to heaven, and then I dreamed that I died and that I was following after, and as I got up near the pearly gates, I saw you knocking at the portal and St. Peter came. I hid behind a bush and was I surprised! St. Peter never asked you anything about the Ten Commandments. He didn't apply any of them. He didn't ask you a question about any of them.

"His first question was: 'When you were on earth, Mike, were you guilty of arrested development?' And I heard you say to St. Peter: 'Sure I don't know what you mean.' And then St. Peter explained: 'Were you one of those who quit growing; did you graduate from college and get a degree and think you had arrived; or were you one of those who were satisfied with doing a little good and neglecting the bigger jobs? In other words, did you remain mentally stunted, spiritually dwarfed, or did you realize that this link in the chain that you called life was but a kindergarten; was it your business to know more and more about life's meaning?'

"Then I heard you say, 'Mike: 'St. Peter, you will have to pass that one, so I can think about it.

"Then St. Peter said: 'Michael, were you a sewage carrier down on earth?' And I heard you say: 'Oh, no; I just worked for the Government, had a good job with Uncle Sam.' And then I heard St. Peter say: 'Now you could still have been a sewage carrier.'

"Then you said: 'Just what do you mean, St. Peter?' 'Well, were you one of those who carried around idle gossip, idle tales; were you one of those who dispensed fear and doubt and criticism; were you one of those who always talked defeatist, spread gloom, peddled filth, caused frustration?'

"And then I saw you bow your head, Mike, and say: 'St. Peter, you will have to pass that one.' Then St. Peter said: 'Well, here's one I trust you can answer. It is this: When you were on earth, did you pay your obligations?' And I saw your face light up, Mike, and you said: 'I always paid by bills—the butcher, the grocer, the doctor, and the dentist. All my bills are paid,' you said.

"And then I saw you look expectantly up at St. Peter and St. Peter said: 'Is that the only obligation you had? How about looking after the interest of your city, your State, and your government? Did you see to it that good men ran for office—not racketeers; did you support principles; did you pay that obligation? How about the poor in body and spirit? Did you think about them and do what you could to brace them up? In other words, Mike, were you a Good Smaritan? How about paying your obligations to your Government? Did you stand for the right principles outlined in the charter of your Government? Did you think about the neighbor boy who needed a little encouragement? How about that obligation? Did you try to bring cheer and confidence to those who needed it? Did you praise the little woman after you married her?" etc.

"You know, Mike," Pat continued, "just then I fell out of bed and woke up."

The next day was the Sabbath and Mike and Pat went to church. After mass they had an opportunity to talk with the good father, and Pat told him the story. Pat then asked, "Isn't it queer, Father, that St. Peter never asked me about the Ten Commandments?" And the good father, being an understanding man, said: "Pat, in every one of those tests, there was not only one, but all of the Commandments."

Ah, yes, my friends, this is no time for arrested development. Growth is the law of the soul as well as of every other of God's creatures. America needs, as never before, men with faith and glory in their inner parts—growing souls.

Not so long ago I attended the funeral of a friend, and I remember the clergyman saying of him: "John is all right. When he lived here on earth, he was aware of the glory of the presence of his Maker. He has simply gone on ahead in the journey we all must take. I have only one fear, and that is that when I come to go, he will have gone so far ahead that I will not be able to overtake him."

We need voices cheering the timid; enthusing our youth; encouraging the down and out; standing by the Republic as valiantly in peace as our fighting sons have done in two world wars; casting out all foreign "isms." We must not forget that we are privileged to be in the center of an heroic epoch, wherein America has been precipitated to leadership among the nations of earth.

We have mastered the earth; split the atom; circumnavigated the globe in 6 days; multiplied our knowledge of the heavens. Read General Marshall's report, and you will glimpse the mastery, character, and ability of this Nation of which you and I are a part.

We must not forget that "eternal vigilance is the price of liberty," and we must maintain eternal vigilance with all that implies, in this new world. There must be no more Pearl Harbors for America.

In conclusion, I give you this thought: God is in His heaven; available for guidance and direction if we seek Him; the future of America is in our hands; we will not fail her but will transmit to those who come after us our liberties, unimpaired.

## Letters From Men in the Armed Services Respecting Demobilization

EXTENSION OF REMARKS
OF
**HON. W. LEE O'DANIEL**
OF TEXAS
IN THE SENATE OF THE UNITED STATES
*Friday, November 2 (legislative day of Monday, October 29), 1945*

Mr. O'DANIEL. Mr. President, in order to give a wider circulation to the sentiments of our men in the armed forces regarding the demobilization program, I ask unanimous consent to have printed in the Appendix of the RECORD three letters from officers and men in the armed services. One letter comes from a group of Navy officers and men at Okinawa, another letter comes from a group of Army officers and men in France, and the third letter comes from a group of 300 Army officers and men in the United States who are alerted for overseas shipment today. I have thousands of letters of a similar nature, but I should like to have the three letters in question printed in the RECORD.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

LETTER FROM GROUP OF NAVY OFFICERS AND MEN AT OKINAWA

OCTOBER 18, 1945.

Hon. W. LEE O'DANIEL,
*United States Senator from Texas,*
*Washington, D. C.*

MY DEAR SENATOR: We received word over the radio that Congress is planning to make an investigation of the Navy discharge system and we wholeheartedly agree that nothing better could happen because it certainly needs investigating from top to bottom. The Navy is lagging behind and is not trying to release the men quickly enough, especially from overseas. I am aboard the U. S. S. *Zaniah*, Ag–70, anchored at Buckner Bay, Okinawa. We repaired battle-damaged ships all through the Okinawa-Gemto campaign while under constant attack by the Jap suicide corps. All during the compaign our ship and three other repair ships repaired all battle damage. Since the war is over and there is no more work of this nature to do, 11 other big repair ships have joined us. We do nothing but sit around and wait for another typhoon to wreck or sink us. Especially the typhoon of October 9 and 10 needs investigating. We realize that some must die during war, but in peacetime this should not happen. The Navy has been warned as we have had three typhoons here in the past 30 days, yet we stayed on and had 74 ships sunk or damaged, 1,500 casualties—900 dead which will never return to the country they saved. The Navy is keeping quiet about all this; we know what happened. We are here. It is nothing but murder; even in the typhoon of September 16 we had several ships sunk and dozens of men killed and yet the Navy just waited and let more ships sink and more men die. They are still waiting. The Army is evacuating this typhoon-infested place, except for a small garrison; the Navy is yet doing nothing and there is no reason to keep all these ships tied up here doing nothing, but costing the Government millions of dollars. We men out here paid for the war in blood and sweat and when we come home we're going to have to pay it in taxes.

In reference to the point system, whenever changes are made we are not notified for several days and they are trying to hold men on the ships as long as possible even after they have the required number of points. On October 1 men with 3 children were eligible for immediate discharge, but not one of these men have yet left the ship, and they say they're being held for lack of transportation; that is absurd when there are hundreds of ships and thousands of aircraft we have that are doing nothing. The Navy discharge system is a flop and unfair, if they are going to give any points at all for dependency, the only fair way would be to give so many points for each child. The Navy places no value on men's lives, and not the slightest consideration is given them. We realize that there are some who would like to see a military regime in our country; so many of these men are afraid of losing their jobs, so they want to keep as many men in as possible to retain their commands. The Army is getting the job done, but there is a "nigger" in the woodpile somewhere in the Navy set-up; the Navy men out here are very, very bitter and to the highest and fullest extent. Men at home with 44 points can get immediate discharge, but out here in the Pacific they hold the men on the ships for a month, then it takes another month to get home. We were made to come out here and fight, to leave our wives, children, and families, and now we want back as fast as possible. We don't care how it's done, but we want it done because it can be done.

We fully agree that Congress should thoroughly investigate these typhoons and also completely investigate and revise the Navy discharge system to speed it up. The Navy is letting the men out in their own way and according to their own fancies without regard to what Congress, the people at home, and the men overseas want. We are still out here fighting for our very existence against these typhoons.

We who have been overseas in combat away from our families, we who have kept those at home safe from the horrors and tenor of war, plead with you to investigate this deplorable Navy situation to the fullest extent. Anything you can do in this regard will be greatly appreciated.

LETTER FROM GROUP OF ARMY OFFICERS AND MEN IN FRANCE

We, the undersigned, members of the Eighty-eighth Cavalry of the Eighth Armored Division, wish to express our views on the redeployment of troops to the United States.

Our division (the Eighth Armored) was scheduled to sail on the 2d of October 1945 for America. On the 3d of October, the AFN radio announced that the Eighth Armored Division was on the high seas for America. But we would like for the Members of Congres to know that the Eighth Armored Division is still sitting at Camp Oklahoma City, France. An assembly area command. Each day we are fed new rumor about the date we will leave here to go to one of the cigarette camps, but as it stands, we will stay here indefinitely.

Not only is the Army holding us here but they are trying to make the last few months of army life as miserable as possible. We have to take road marches each day and listen to boring lectures on "going home," etc. We do not complain of living in tents, that we do not mind; but when we ask for a stove, as it is very cold here, we are told by higher headquarters that it is not winter and stoves will not be issued until headquarters decides it is winter.

We know we do not have the highest points in the Army, but every man in this division meets the requirements for discharge. What we do not understand is why the Army does not speed up the redeployment of men with high points, so we, in turn, can return to our homes as civilians. Men with high points eligible for discharge have been in the ETO for months now, and yet the Army claims to be breaking records.

Whether it is a lack of ships or what, we would like to know and so would the public as a whole. If that is so, then we would be willing to sit here and wait a few weeks.

Rumors lay the lag in redeployment to strikers. If this is so, why not take congressional action? If the soldiers went on strike, you know very well what would happen to them.

As men of every State, we send this as a request and a plea for Congress to step in and take immediate action to see that our return home is expedited.

We believe that Congress has performed an excellent job throughout the war, and believe that they will continue to do so. Thanking you in advance, we remain—

LETTER FROM GROUP OF 300 ARMY OFFICERS AND MEN IN UNITED STATES

We, the undersigned, have served our country in various capacities for from 2 to 3 years and are now on the alert for overseas shipment. We feel this a great injustice, as it was no fault of our own that the Army did not send us over previous to this time. This group of men is composed of approximately one-half men with above-mentioned service and feel that due consideration should be given us for our time spent in the service. In view of the fact that Gen. George C. Marshall, Chief of Staff, informed Congress that men with our qualification would be released by late winter, we feel the War Department is ignoring our length of service as a soldier. We, the undersigned, are listing our names and total time of service so that attention can be brought to proper authorities and consideration be shown.

If Gen. George C. Marshall's statement last month is the truth, and men with 2 years' service are to be discharged by late winter, then we would like to have it explained to us how we shall be included in such a discharge system, or must we spend additional time overseas to qualify. Thanking you for your consideration shown and anything that can be done to justify the situation.

## The Effect of the Atomic Bomb on American Foreign Policy

EXTENSION OF REMARKS
OF
**HON. J. WILLIAM FULBRIGHT**
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
*Friday, November 2 (legislative day of Monday, October 29), 1945*

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "The Effect of the Atomic Bomb on American Foreign Policy," delivered by me at a meeting of the Foreign Policy Association held at the Waldorf-Astoria Hotel in New York City on Saturday evening, October 20, 1945.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

To say that there is confusion in this country regarding our foreign policy, particularly in governmental circles, is a rank

understatement. Science has so changed the world that the ancient international political order is intolerable. The conflict in a world united by science and separated by outworn political barriers will continue, either until science destroys man, or man destroys that archaic political system. In July, after months of preparation and weeks of debate, we adopted the United Nations Charter. We thought we had taken quite a large step toward the creation of an effective political system for the maintenance of a stable and peaceful world. Although some of us thought the Charter, as adopted, inadequate to maintain a lasting peace, we believed there would be sufficient time to improve it later on. At least the United States had joined it, and there seemed to be that universal support which was lacking in the creation of the League of Nations. But our satisfaction was short lived. Within a few days of the adoption of the Charter, the atomic bomb, not only blasted the Japanese into submission, but also blasted our confidence in the Charter. Since then a profound uneasiness has spread over the world, the uneasiness of fear of the unknown. Like primitive man in the darkness of the caves and jungles, we too are faced with elemental and infinite forces which we do not understand; forces which threaten to snuff out our lives like one does a candle between the fingers. We are doubtful of our ability to control this terrifying new force. We have lost our bearings and are unsure of our future.

Ten years ago, it was unthinkable that human beings could possibly be as savage and as completely immoral, according to Christian ethics, as the Germans have proved to be. We have had an ugly but powerful demonstration at Belsen, Buckenwald, Dachau, and many other extermination camps, of what lies beneath that thin crust of civilization so laboriously acquired by man through countless centuries of struggle up from the jungle. Although we talk bravely about our prowess, we in the United States are worried in our hearts. Like children who have lost their parents, we have lost, since the airplane and rocket bomb, the protection of two great oceans. We are now exposed at close quarters to the violent forces of a turbulent world. Our confidence in our own invincibility and our faith in the solicitude of a beneficent providence have been shaken by the atomic bomb.

The incredible scientific progress of the last few decades induced in many people, besides the Germans, a certain arrogance and a feeling of superiority which seemed to make them unconscious of moral obligations to other men. Few people were bothered about the fate of the peoples of other lands. Let them stew in their own juice was the common slogan. They were great, they were powerful, they could take care of themselves and, therefore, they reasoned they must be good. But the cleverness of man has now brought into the world a power of destruction against which there is no defense. We are troubled by a feeling of helplessness. We are beginning to take a greater interest in our fellow human beings. Now we wonder if those people who concerned us so little are good people. We hope that they are and that they will not use the bomb against us first. On every hand this fear, amounting almost to hysteria, causes otherwise rational men to act in strange ways and to utter the grossest absurdities. Men react in strange and unpredictable ways when afraid.

Even before the affair of Hiroshima, we were unpredictable in our own policy. We declared great principles on occasions, but we faltered in carrying them out. In September 1943, by an overwhelming vote, the House of Representatives declared that it favored the creation of appropriate international machinery with power adequate to establish and maintain a just and lasting peace,—but we have wavered in our path toward this objective. Our principles surely include the support, wherever possible, of liberal democratic governments and the creation of a multilateral organization to preserve peace. What have we done? We went down the line, with all our strength, for Argentina under Peron, at San Francisco. We insisted upon exclusive jurisdiction over conquered bases in the Pacific, thereby setting the precedent for similar demands from Russia. In the drafting of the Charter, we supported the concept of national sovereignty as the first principle and we defended the veto power in the Council, both inconsistent with the ultimate purpose of the United Nations Organization.

In spite of our professed intention to build an organization with adequate power, we have done little to achieve that end. Instead we have already fallen to quarreling with Russia like two big dogs chewing on a bone. While I am sure the alleged stubbornness and bad manners of the Russia diplomats are irritating, it should not be decisive of policy. To be tough, or to be soft, toward a nation is not a policy. Our objectives must be clear and our principles must be adhered to if we are ever to have a policy. Our policy should not be merely to love or to hate Russia or any other people; it should be to obtain their assistance in the creation of a bona fide organization based upon law, and with force and vitality in its system. The control of the atomic bomb, coupled with important strengthening of the organization's powers, could be that vitality.

Inconsistencies between our declared policies and our actions indicate the confusion in our minds. We undertook to play a large role in the occupation and pacification of the conquered nations, but we precipitately withdraw our armed forces and demobilize even before the peace treaties are signed. One may wonder, Are we, or are we not, going to use our influence and play a leading role in world affairs?

On the subject of the disposition of the atomic bomb, there is similar inconsistency and confusion as to the proper course. A few have chosen, apparently, to ignore its significance. They still talk of armies and navies, ships and planes just as if nothing important had happened. They seek refuge in the old saw that after every discovery of offensive weapons, a defense has been developed. They discount the advice of the physicists who tell us that they are unable even to imagine a defense to the ruthless use of such power.

Our common sense should tell us that an enemy who chooses to attack us in peacetime, as Japan did, without declaring war, can plant bombs in all our large cities and wipe out one-third of our population in one night. Or if one chooses to speculate, a single fleet of 500 planes could, in peacetime, without any warning, drop sufficient bombs to destroy our cities and our industrial powers. I cannot imagine how a nation can maintain constantly, and indefinitely, an effective defense against a sudden attack without warning. I do not believe there is a defense against total destruction inflicted instantaneously.

There are others who say that the bomb is a secret and that we must keep it for our own protection and for the peace of the world. We paid for it, we found it, why shouldn't we keep it, and besides we are good people, we should be trusted for the good of mankind. These ideas which you may think superficial and worthy of little notice, are nevertheless held by many people, some with considerable influence, and cannot be dismissed as being of little consequence. Such views are the natural reactions of unsophisticated people, they are easily understood, they are simple, they are popular, and they are in accord with our traditional isolationism. They require no mental effort and no break with the past. They give one a feeling of security. It is the same basic philosophy that led us to believe that we were so self-sufficient that we could live apart from the world, that we, all by ourselves, had created a rich, comfortable life and should not be disturbed in our enjoyment of it by concern over the troubles of other peoples in China, Spain, Ethiopia, or Poland. In opposition to this popular conception, we have the word of the scientists themselves, practically all of them, that there is nothing secret about the bomb except the industrial process of manufacture and that any one of several industrial nations probably can produce bombs in from 3 to 5 years. Further, it is common knowledge that the scientists of many nations, men and women from Italy, Germany, Hungary, Denmark, and England, to mention only a few, contributed to the production of the atomic bomb. This discovery is ours only in a limited sense. Our money would have been fruitless without the brains of others. But even if we had found it by our efforts alone, is it possible that we regard this cosmic discovery as a mere chattel for our personal use? To those good citizens who think the peoples of the world should trust us to use the bomb to protect them, I can only say that I am sure those other peoples disagree. It is already clear that the Russians have some doubts about the stability and security of such a world. More than words will be necessary to convince them. We should ask ourselves, would we be content to entrust our lives and fortunes to the Russians if they alone had the atomic bomb? I agree that we have, on the whole, been relatively peaceful and nonaggressive people, but there is no guaranty that we shall remain so. In fact, I have heard of some people who advocate our immediate attack upon potential enemies, and one prominent general recently asserted publicly, in no uncertain terms, that a third war is inevitable. With whom is it inevitable, we may well ask. I do agree that such foolish talk is calculated better than anything I know to induce another war. But regardless of these considerations, a peaceful and decent society has never been and is not likely in the near future to be founded solely upon the assurances of individuals or the good will of peoples. Throughout the long and troubled history of mankind, the only organizations which have been successful in providing security for human beings, have been based upon law. It seems clear to me, therefore, that the only possibility for a decent and peaceful world lies in the adoption of laws of universal application and sanctioned by the moral and physical force of the civilized world.

The discovery and use of atomic energy has dramatized in a highly effective manner a fact that many observers had already sensed. That fact is the fundamental disequilibrium that has gradually grown up between the natural sciences and the art of government. Regrettable as the use of the atomic bomb may have been in the opinion of some people, it may well be that without the awful warning of Hiroshima the world might have stumbled along into the atomic age without any realization of its arrival, and therefore without the shock necessary to arouse it to a realization of the danger, and compel action before it is too late. Hiroshima provided that shock, and I do not think it is too late. There is the question of whether or not we have the intelligence and courage to adopt the proper means of control within the short time at our disposal. In other words, can we bring back into balance the art of government and natural science? Can we readjust the disequilibrium which has been growing for approximately 170 years?

The last significant advance in the art of government occurred in the era of the American and French Revolutions. Democratic representative government and the Federal principle for the association of States were great and momentous political events, bringing to a close in vast areas of the world the oppression and slavery of feudalism. With the release of human beings from bondage,

a great surge of energy and inventiveness brought on the industrial revolution and the rise of modern science. Throughout these 170 years, with ever-increasing rapidity, we have advanced from one scientific miracle to another. From the wagon to the railway, the automobile, the airplane, and the rocket ship; from sailing vessels to submarines; from smoke signals to radio and radar; from buckeyes to penicillin; from foot power to electricity and atomic energy. The advance has been at a dizzy pace in science, but can any of us recall during that entire period a truly significant advance in the art of government.

It is true that during this period the petty German principalities and the autonomous Italian states were welded into large nations. Russia exchanged the absolutism of the Tzars for the dictatorship of Stalin, but it is scarcely a novel principle of government. Throughout this period no important step for the control of independent sovereign states was adopted nor any machinery seriously considered, except the League of Nations. On the contrary, nationalism and the principle of absolute national sovereignty were enormously enhanced in every land. During this period when science was rapidly reducing the world to a small community and making it interdependent economically and socially, nothing whatever occurred politically to compensate for this change. In a very real sense, I think it may be said that both world wars were the logical consequence of this disequilibrium.

It should not require an extended argument to persuade anyone that something is seriously wrong with our world order. Two World Wars within a quarter century should be sufficient proof. Likewise, it should be clear that the trouble is the lack of any law or rules of conduct, agreed upon and binding, as among all nations. This void in the international field must be filled either by reason and agreement, or by force, as attempted by the Germans. The alternative to a system of law for the settlement of differences is constantly recurring warfare of rapidly increasing destructiveness. Peace and order have rarely, if ever, been achieved by good will alone. In all ages rules of conduct accepted by all, and superior to all, have been the indispensable basis for a decent and peaceful society.

To me, it seems clear that the medieval political status under which the world operates is obsolete and that it must be discarded just as we discarded the horse and buggy, not over night, but by stages as we develop the appropriate machinery. We have in a very limited sense, already begun the process in the creation of the United Nations Organization. But this organization provides us only with a skeleton machinery without life and vitality. Before it can become an effective instrumentality, it must be given more definite and certain powers. The greatest defect of the Charter, which was quite clear at the time of its adoption, is the requirement of unanimity of the five big powers on all matters of importance. This rule of unanimity is but another way of saying that we shall go along and abide by the rules if it suits us in each particular instance. As a practical matter it is a hopeless principle for any governmental organization. The League of Nations demonstrated its weakness and more recently the London Conference of Foreign Ministers has shown us what to expect from its operation. I know of no instance in history in which it has been effective. At the time of San Francisco this requirement was apparently indispensable to obtaining agreement. However, since the atomic bomb, it may well be that all the nations will agree that, at least in the field of armaments and especially the production of atomic weapons, a complete and definite power to inspect and control throughout the world should be given the organization. This power should be carefully limited, but within its proper limits it must be positive and complete or there can be no confidence in its efficacy. The scientists who are familiar with the theory and techniques of nuclear physics should act as the agents of the organization to maintain a continuous system of inspection and reporting. By an extensive system of exchange of students and of industrial scientists, together with unrestricted access to industrial records of various kinds, it should be possible to know of any serious effort to evade the rules pertaining to atomic weapons.

I feel very strongly that the path of wisdom is not secretiveness and suspicion, but is the widest possible dissemination of scientific knowledge, coupled with an efficient system of control. If many people in all advanced nations know something about nuclear physics, it will be difficult to prepare secretly for an aggressive attack upon an unsuspecting neighbor. The knowledge will spread through many channels. On the other hand in an atmosphere of suspicion and secrecy, each nation naturally and inevitably will suspect every other nation of preparing an attack and sooner or later someone will no longer endure the suspense of impending annihilation.

I do not pretend to be qualified to describe to you the exact nature of regulations which would be adequate to insure the world against the possibility of a sudden devastating atomic bomb attack by some future Hitler. The details of such rules are for the scientists themselves. One problem is to reconcile legitimate research and use of atomic energy with the prevention of illegitimate production for aggressive purposes. The greatest difficulty is, I believe, not in the technical problem, but in the problem of obtaining from the various governments the authority for the agents of the United Nations to enter and inspect as a matter of right. The great obstacle to this step is the ancient and antiquated concept of sovereignty. The absolute sovereignty of nations is utterly inconsistent with the establishment among nations of any laws with sufficient force to give confidence in their effectiveness to the peoples of the earth. For centuries treaties and compacts have been made among nations, but whenever a nation believes its vital interests are threatened, it always ignores the treaty. We have pretended that treaties are binding, but at the same time we have refused to recognize any power superior to the independent sovereign state. There is an inconsistency in the position which has never been solved. The only solution that I can conceive of is the recognition, by all nations, that at last the time has arrived for all of us to delegate certain and definite powers over armaments to the United Nations Organization. Safeguards and limitations should be carefully worked out and agreed upon. Disputes of any kind relating to the subject should be under the compulsory jurisdiction of the international court, and every nation, and every individual in every nation, must be subject to the verdict of the court. If a nation, or individuals within a nation, should prove to be recalcitrant, then the full power of the organization collectively and severally should be pledged to the enforcement of the judgment.

To those who object that this is setting up a world government, I can only reply that call it what you will, there is no other principle with the slightest chance of success in the control of the atomic bomb. All other methods of controlling armaments and preventing wars have been tried. It is entirely vain to say that we shall renounce the use of the bomb or that we shall outlaw it by treaty. The very words "to outlaw" as between sovereign nations are a fraud. There is no law in the real sense between sovereign nations and it is fallacious to speak of outlawing any practice they may believe to be to their advantage to use. It is just barely possible that atomic power is so deadly that all people will be afraid to use it, but this is a very faint hope upon which to erect a decent and peaceful world. If it is so deadly, why should we object to a strict regulation of it by the United Nations Organization?

To those Americans who find so much satisfaction in the thought that we alone have the bomb and at least for 3 to 5 years no other will have it, I repeat that the scientists are unanimous in the opinion that the principles are not secret and that the industrial know-how cannot be kept a secret for long. In addition, they should ponder the physical organization of our industry and the location of our population. Our great cities which contain a third of our population and a much greatest percentage of our industry are perfect targets for atomic bombs. The 20 largest metropolitan areas contain 40,000,000 people. In one night of carefully planned attack without warning we would be paralyzed. Compared to the dispersion of Russian industry and population, we are infinitely more vulnerable. It is not so much the ability to make great quantities of the bombs above an essential minimum that would count in an atomic war, rather is it the ruthlessness and the will to attack first, without provocation, that would be decisive. Does anyone believe that America, with its history of reluctance to make war, with its aversion to militarism, will be the first to attack? The very qualities which inspire our devotion to this country are the ones which make it the most vulnerable in a war of atomic bombs.

One of the most desirable and attractive qualities of these United States, before this war, was the freedom and open-handedness, the easy hospitality of the people, both socially and commercially. Having been permitted to grow to maturity without outside interference, and with no hereditary enemies, we were not a suspicious people. I for one would dislike to see this quality destroyed. Not only does it make life agreeable, but if it can be preserved without danger to our security, I believe it will induce, in time, a reciprocal trust and friendliness in others. If we are suspicious and distrustful of others we must expect the same in return, and that road leads to trouble. I recognize that it is difficult for us to forsake any ancient political custom or practice, because we associate those practices with happier days. Two characteristics of our people have been the alacrity with which we adopt and apply, for the comfort and happiness of our citizens, the new discoveries of science and at the same time the stubborn reluctance with which we entertain new ideas in politics.

I, for one, would rather adopt a new idea in politics than risk vaporization by an atom bomb or, as some have suggested, spend the remainder of my days in the subterranean recesses of the earth. What a curious picture it is to find man, homo sapiens, of divine origin, we are told, seriously considering going underground to escape the consequences of his own folly. With a little wisdom and foresight, surely it is not yet necessary to forsake life in the fresh air and in the warmth of the sunlight. What a paradox if our own cleverness in science should force us to live underground with the moles.

The hope for America, and for the world, does not lie along the road of secret methods of destruction or more and bigger armaments. I do not suggest disarmament in the world as it is now constituted. The only hope lies in the application to all men of the principles of law, which are the only principles that have ever brought peace to mankind. Within large areas of this world peace has prevailed for centuries among the inhabitants. These people are not substantially different from those to whom we attribute the wars. We have the compelling motive of complete extinction if we are too timid and fail. We have at hand the rough skeletal machinery to begin our task. It is

the kind of opportunity which is not likely to come to a people more than once. As so often happens, a great poet, many years ago, described our present opportunity in these fitting words:

"There is a tide in the affairs of men—which
taken at the flood leads on to fortune.
On such a full sea are we now afloat.
And we must take the current when it
serves
Or lose our ventures."

## On the Atomic Bomb

EXTENSION OF REMARKS
OF
## HON. JERRY VOORHIS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, October 31, 1945*

Mr. VOORHIS of California. Mr. Speaker, the atomic bomb is not just another weapon. It is cosmic energy, the primordial power of this universe. When science found a way to release atomic energy it broke down the last barrier between mankind and the ultimate sources of power of creation itself.

Except for the birth of Christ, this is the most portentous event to occur on this earth in thousands of years. It has plunged mankind into a completely new world and placed in his hand the power to either create a world of peace and plenty heretofore undreamed of, or to wipe from the earth the civilization that has been built since the beginning of history—yes; even to destroy himself.

All the great advance which natural science has made and which has culminated in the release of the very basic energy of the universe will prove not a benefit but a terrible curse to mankind unless we quickly make a corresponding moral advance and an advance in the ability of men and nations to control their own actions. When man presumed to tap this reservoir of God's power it became incumbent upon him to bring the power of conscience among men and nations to a stage of development comparable to that of his intellect.

Two imperative duties now confront us. The first is to make certain that the peacetime benefits from the release of this atomic power will be spread equally among all the people and never permitted to be monopolized by a few.

The second duty upon which everything else on this earth depends at present is to prevent an atomic war from taking place. It will take a higher degree of statesmanship, in my opinion, than has yet been shown anywhere in our country if we are to avoid committing ourselves and the world to the kind of armament race in atomic weapons which, according to all the expert testimony, can only end in a devastating sneak attack by some nation willing to become the worst aggressor in history, and which probably would result in the destruction of civilization as we know it.

To these ends any legislation passed by Congress must provide for national control in the United States over atomic power and the establishment of national ownership of the basic energy. For in no other way can we assure that its benefits will be generally and equitably distributed among all the people or made available on equal terms to all producers. And any such bill should at least carry a section setting forth a general national policy to the effect that America does not propose to develop atomic energy for the purpose of precipitating an atomic war and that she stands ready at any time that proper basis can be laid for such action, to join fully and freely with other nations in an international control of this completely new and fearful force. Every competent person who has testified has declared that there is, and probably can be, no defense against atomic weapons. Our policy must be a lot more helpful policy than one which simply states, "We are going to keep this thing secret." Especially when there is no evidence to indicate that any real "secret" can possibly exist for more than a few brief years.

It is the duty of Congress to make it absolutely certain that all right and title to the basic power developed from atomic energy—as distinguished from development or exploitation—must be vested in the whole people of the United States. It should contain a provision that all patents covering the release of atomic energy should become the property of the United States, due compensation being given therefor.

No commission established to exercise control over this great new force should consist of part-time people who might in that case be on private pay rolls while still being called upon to do by far the most important piece of work that any officials of the United States have been called upon to do in all its history. Such a commission must consist of full-time people, paid as much if necessary as $50,000 per year, who would be forbidden to be on any other pay rolls excepting that of the United States. It should not be made too difficult for members of the commission to be removed for the whole future will depend on faithful performance of their duties. It would be altogether right, also to provide that a certain number of members of this commission should be scientists, certainly that some of them should be representatives of our armed forces, and that the balance of them be so appointed as to represent every group and phase of American life. For this problem is a problem of the whole American Nation and not of any single group in it.

And there must be the strongest possible provisions against any possible monopolistic control over the application of atomic energy to peacetime uses. The legislation must require that, if and when its use can be safely licensed or leased for industrial purposes, it must be done on absolutely equal terms to all qualified persons. Nor can we now turn back to an earlier age. And therefore there must be provision to guard the right of science to continue free research in this field.

But the main question lies in the field of establishing effective international control to prevent an atomic war in the only way it can be prevented, namely by stopping before it starts any armament race in atomic weapons. America should push research and development in this field. We cannot do anything else for the time being and we should try to stay ahead of other nations in this development. But this must be done for one reason and only one and that is because America's possession of this tremendous new power is her main hope and opportunity for forcing the establishment of a peace mechanism in the world that can save mankind. If I believed that there were any possibility of the United States retaining any effective secrets with regard to the development of atomic weapons so that America and America alone would possess this power, then I would say that for a time at least we should keep it in trust, giving a solemn pledge to all the world that America would never use this power under any circumstances whatsoever excepting to enforce the peace and prevent aggression. But unfortunately, by every single bit of competent testimony that has been given, no such simple solution is even remotely possible. We know that no effective secrecy can possibly be kept and here let me quote a recent editorial from the St. Louis Post-Dispatch on this very point:

On the subject of the atomic bomb, Mr. Truman repeated his Reelfoot Lake statement that we are not going to share our know-how as to its manufacture. The scientists tell us that this policy is madness and will surely lead to a race in which other nations, sooner or later, will find out what we already know. It satisfies no other nations for Mr. Truman to proclaim our possession of atomic secrets "a sacred trust." A trustee usually serves by agreement of others. Who nominated us?

This newspaper does not think we ought to hand the bomb on a silver platter to one and all, but it does think we should place it on the world conference table and make it a factor in the process by which a "brave new world" can be constructed—a world in which the atomic bomb can never be used to destroy mankind, while the atom divisible is used for the security and happiness of mankind.

Is that idealism? If so, then so be it. We are either going to have to be idealistic and cooperative with the other nations in this world, or there isn't going to be any world. And it could be a very fine world indeed if we only have the sense to make it so—if we only have, in our social and political thinking, a shred of the sense we have in manufacturing instruments of destruction.

And so unless we use within the next few years, or maybe it is within the next few months, our present powerful position to bring about international control and to create an atmosphere of knowledge and confidence among the nations and to end the present psychology of terrible fear and suspicion, we shall be responsible for committing the world to the kind of armament race and ultimate destruction of which I have already spoken. I cannot forget the Scriptural injunction, "What shall it profit a man if he gain the whole world and lose his own soul." I believe this can be applied to nations as well.

I am not for having America give away her knowledge, but we must, if we are to have a moment's thought for our children, use it with all the vigor and statesmanship at our command as the one instrument that might forge a genuine peace-keeping mechanism in the little time that remains to us.

The Los Alamos scientists, the men who with the Oak Ridge group created the atomic bomb, have told us just where we stand today. I want to quote their statement in part:

One proposal is for this country to try to maintain its present position by producing more and bigger bombs than other countries. Merely having more bombs than other countries is not decisive if another country has enough bombs to demolish our cities and stores of weapons. The overwhelming advantage will lie with the aggressor and our superiority might be lost in the first minutes of a surprise attack. A world in which nuclear weapons are owned by many nations and their use held back only by fear of retaliation will be a world of fear, suspicion, and inevitable final explosion.

It has been suggested that the United States, together with Great Britain and Canada, assume unilateral control over atomic power development throughout the world and by force, or threat of force, prevent all other nations from producing atomic bombs. Other nations will not willingly lose their sovereignty to those who maintain their own in this way. Such a policy will lead to an unending war more savage than the last. We cannot conceive of it leading to a stable, peaceful world.

We are convinced that we are left but one course of action. We must cooperate with the rest of the world in the future development of atomic power, and the use of atomic energy as a weapon must be controlled by a world authority. We are heartened by the statement of our President in which he says that there will be "* * * an effort to effect agreement on the conditions under which cooperation might replace rivalry in the field of atomic power." Such conditions will demand some modification of our conception of national sovereignty. This makes it imperative that we have the good will of all nations, for it must be realized that we are dealing with a deadly challenge to civilization itself.

We believe that international control is technically feasible. However, we must emphasize that the problems of such control are not essentially technical. For example, the abolition of secrecy in national and international relations may be necessary. A world authority, if it is to be effective, must eventually realize free access to all laboratories, industries, and military installations. We realize the serious problems that control presents. The actualities of the situation require a drastic solution and the atomic bomb is a sufficiently revolutionary force to impel us to such a solution.

It certainly is the move of the United States, not of anyone else. And we might save humanity, which can only be done if an atomic war is prevented, by a frank proposal that on condition that other nations will make a simple agreement with us, we will entrust to an international authority our knowledge of atomic power. The agreement would require all nations signing it to pool together whatever knowledge of military weapons they may possess.

The agreement would provide further that the nations entering into it would open every nook and cranny of their nation, every laboratory, munitions plant and factory to the inspection and control of an international body of scientists and others commissioned by all the nations to perform the task of preventing mankind from plunging into self-destruction. This group of men would be privileged to enter every country and to know all about what that country was doing, not only in the field of the development of atomic weapons but in all other fields of military preparation. Since the only thing the United States possesses now which the other nations do not have as yet is the know-how of production, such an agreement would not hurt our position a single bit; but even if it did, that is not the primary consideration in these days. For with the establishment of the kind of system here proposed, and by such means only, could fear and suspicion and the danger of sneak attack be allayed. With military secrecy ended and with all nations knowing just what other nations were doing, it would then be possible for the first time to make and enforce joint covenants for the keeping of the peace and the outlawing of atomic weapons by forbidding any nation to possess them at all.

Such a covenant should call for two primary things. First, the setting up of a world-wide technical police with power to forbid and prevent the manufacture of any atomic weapons by any nation in the world. Only the world authority would be allowed to possess them, and it could only use them to prevent any nation from acquiring or using them.

The scientists have all testified that it would be entirely feasible for such inspection to be made and for it to be effective.

In the second place there should be created an international body of scientists to direct and make safe the development of atomic energy for peacetime purposes in order to guide it along lines that would be of benefit to mankind. The scientists understand the enormity of the power they have released and in their hands it would be safe and could be made a boon to all mankind.

If any nation or nations refused to cooperate in the establishment of such world authority for the control of this great and terrible power, then it would be clearly known who they were and all the other nations could join even more strongly together and be guided in their actions accordingly. Ultimately any nation refusing to join would in my judgment be compelled by its own people to do so. For I cannot believe that any of the common people of the world will actually want to be the victims of an atomic war.

And here I quote an editorial from the Washington Post which will I am certain reinforce the position I have taken in this speech:

EINSTEIN'S IDEA

Anything that Albert Einstein, the original discoverer of the secret of atomic energy, has to say is bound to be significant though it must be borne in mind that he is a physicist and not a political scientist. He and men like him have been at work for the past 2,000 years in improving and strengthening our physical organization. So shrunken has the world become as a result of their discoveries and inventions that mankind now finds itself in a common room. Professor Einstein, in an interview with Mr. Raymond Swing in the Atlantic Monthly, recommends that we acknowledge the sameness of our living quarters in our political organization. Authority, in other words, would henceforth be universal. Instead of subjecting ourselves to the Nation-State, we should subject ourselves to a world government.

The trouble is that there has been so little preparation for the world state. The riddle of the universe has been unraveled to a generation which is still wedded to life under separate sovereignties—to the authority of a unit instead of a cosmos. There is no form in our planetary life in the shape of a common religion let alone a common polity. Accordingly most people, we fancy, will approach the issue of political accommodation to the atomic age in terms of preparation for a world state. At any rate, this has been the newspaper's approach. However, the administration thinks differently. The President on Saturday talked of keeping the secret of the know-how of the atomic bomb as a sacred trust. The fact is attested by all nuclear scientists that the trust would be temporary. Within 18 months, according to Professor Oppenheimer, any nation armed with the Smyth handbook issued by the War Department and a hunk of U-235, or the kind of uranium which is at present fissionable, will be able to make an atomic bomb. Maybe by that time other materials will be fissionable.

In another 5 years or so, according to Sir James Chadwick, the energy in the atom can be canalized for peacetime uses as well as exploded for war purposes. This is an age that has dawned suddenly, not slowly, as did the age of steam or of electricity. This fact alone makes imperative an adjustment in the thinking of our statesmanship. We are thinking mainly of American statesmanship. For the responsibility is singularly ours, since this Nation is, in Mr. Churchill's words, on the summit of the world, and, moreover, took the lead in the first use of the atomic bomb for lethal purposes.

Action, in our opinion, should be taken at once to sound out the other governments of the world on a project to institute world government over all applied research on atomic energy. This would involve a proffer on our part of the secret of atomic know-how. In return we should require that these properties in every country be brought under control of a world body to be set up by UNO: all factories engaged in atomic work and all uranium and thorium deposits. In addition, the world body should be given the right of inspection for its technical police in the countries of participating governments. If one or more countries refuse to help set up this world body, the proffer should be withdrawn, steps should be taken at once to form an alliance with those who had offered a partnership, and the objecting countries should be declared world outlaws. This is a suggestion which we advanced when the atomic bomb was first announced; we have seen no suggestion as yet which would improve upon it.

Certainly Professor Einstein's idea belongs to the future. It is the present we are concerned with. It is obvious from the setting up of atomic commissions in one country after another that a new and highly dangerous arms race is on. Already the shadow of the atom bomb falls across the conference table, and will continue to do so as long as the United States holds it as "a sacred trust." It is a shadow that by the same token is falling over the entire human race, making people prey to fears and nations anxious only to protect themselves by making bigger death-dealing missiles. No civilized life can be redeemed out of the holocaust of the last war unless this country makes a move along the suggested lines.

This is an hour when statesmanship is called for as never before in this world. We have our choice between some such plan as I have outlined, or a world so fearful that none but the ignorant or the brutish will be able to live happily for a single day.

## Brig. Gen. Harry H. Vaughan—Statements of Rev. Cliff R. Johnson and Chaplain Luther D. Miller

EXTENSION OF REMARKS
OF
### HON. LISTER HILL
OF ALABAMA

IN THE SENATE OF THE UNITED STATES

*Friday, November 2 (legislative day of Monday, October 29), 1945*

Mr. HILL. Mr. President, recently Gen. Harry H. Vaughan, military aide to the President of the United States, made an address at the Westminster Presbyterian Church, Alexandria, Va. General Vaughan's address was either grossly misunderstood or grossly misrepresented. The address was given most unfavorable publicity, and he was subjected to criticism for what he was alleged to have said during the course of his address.

I have before me a letter from the Reverend Cliff R. Johnson, pastor of the Westminster Presbyterian Church, Alexandria, Va., to Luther D. Miller, Chief of Chaplains, of the United States Army. In that letter Reverend Johnson said, among other things, as follows:

With reference to General Vaughan's recent address to the Women's Auxiliary of the Westminster Presbyterian Church, let me state that those who heard the address, including several ministers, left the meeting without the apparent feeling that General Vaughan had made any remarks derogatory to the chaplaincy. There could hardly be this feeling when he had given us unstinting and sincere praise to a chaplaincy record studded with heroic action and outstanding work.

Among other things, Reverend Johnson also said:

In my day-by-day contacts with my congregation following the meeting, I can recall not a single remark of any more consequence than that General Vaughan had given a good talk, and that it had been a good meeting.

* * * * *

I should be proud to know, as a Christian minister, other men in positions comparable with General Vaughan's who, Sunday after Sunday, prepare a Sunday-school lesson, and teach faithfully a little class of six or seven boys. I should like to know others in comparable position who would be thoughtful enough, while abroad, to seek out a little souvenir for each member of the Cub Scout pack in his church and see that it was personally presented.

General Vaughan is a Christian gentleman who is rendering valuable service to the cause of religion in the position he holds by the manner of his life.

Mr. President, I ask unanimous consent that the entire letter of the Reverend Cliff R. Johnson to the Chief of Chaplains, Luther D. Miller, as well as the letter from Chaplain Miller, be printed in the Appendix of the RECORD.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

WESTMINISTER PRESBYTERIAN CHURCH,
*Alexandria, Va., October 18, 1945.*

The CHIEF OF CHAPLAINS, LUTHER D. MILLER,
*Washington, D. C.*

Re Brig. Gen. Harry H. Vaughan.

MY DEAR GENERAL: This letter claims merit for your attention on the basis of the fact that it is from the minister of the church in which Brig. Gen. Harry H. Vaughan is a ruling elder.

With reference to General Vaughan's recent address to the Woman's Auxiliary of the Westminister Presbyterian Church, let me state that those who heard the address, including several ministers, left the meeting without any apparent feeling that General Vaughan had made any remarks derogatory to the chaplaincy. There could hardly have been this feeling when he had given unstinting and sincere praise to a chaplaincy record studded with heroic action and outstanding work.

Because of its location, the auxiliary in this church has had the opportunity to be addressed by United States Representatives and other men of some note. General Vaughan's address elicited neither more nor less comment than others which the group had heard.

In my day-by-day contacts with my congregation following the meeting, I can recall not a single remark or any more consequence than that General Vaughan had given a good talk, and that it had been a good meeting.

It came, therefore, to those who heard the address as rather a surprise that any one of the newspaper representatives had heard anything considered worthy of particular comment, much less controversial, and all the more less deserving attack. Especially was it surprising that when there had been only the briefest factual reports in the papers, there should come an editorial after a lapse of several days. Of those who noticed or had their attention called to the publicity in the Post, and Time magazine, the reaction has been a measure of surprise, as I have said, mingled with half amused tolerant disgust at the attempt of these publications to make something out of nothing.

So much for General Vaughan's address and the reaction, or what was in Westminister, the lack of reaction to it. But, having presumed to address you, I beg permission to make further a personal comment.

My particular concern over this matter has not been with the merits of the matter under discussion, in that there seemed to me to be no merits. It seems that a forest of significance for Christian leaders is being missed by surprising preoccupation with a distorted twig.

By far the most significant fact was that the military aide to the President was addressing, at all, a small group of Christian people in a little inconspicuous church. You as an Episcopal minister, as well as chief of our chaplains, are doubtless aware, as am I, that one of the greatest obstacles we encounter in trying to do our job is the widespread indifference we must meet. In contrast, we have here a man who, having risen to national prominence, continues to serve his church with regularity, sincerity, and unselfish devotion. The fact that in the highest political circle of our Nation, we have a man who proudly and faithfully and effectively serves in his little church—that is significant.

I should be proud to know, as a Christian minister, other men in positions comparable with General Vaughan's who, Sunday after Sunday, prepares a Sunday school lesson, and teach faithfully a little class of six or seven boys. I should like to know others in comparable position who would be thoughtful enough, while abroad, to seek out a little souvenir for each member of the Cub Scout pack in his church and see that it was personally presented.

General Vaughan is a Christian gentleman who is rendering valuable service to the cause of religion in the position he holds by the manner of his life.

Sincerely,

CLIFF R. JOHNSON.

HEADQUARTERS ARMY SERVICE FORCES,
OFFICE OF THE CHIEF OF CHAPLAINS,
*October 26, 1945.*

The Reverend CLIFF R. JOHNSON,
*Westminster Presbyterian Church,*
*Alexandria, Va.*

DEAR MR. JOHNSON: The delay in acknowledging your letter of October 18, relative to the address delivered by General Vaughan to your women's auxiliary, is due to my being out of the city on a trip to military installations in the Southwest.

I appreciate your thoughtfulness in writing me so fully of what General Vaughan really said at the meeting. It was indeed unfortunate that he was misquoted, for our Protestant chaplains are deeply hurt by his reported statements.

Everything possible will be done by this office to give the chaplains the true picture.

Thanks again for writing to me.

Wishing you every blessing in your work, I remain,

Sincerely,

LUTHER D. MILLER,
*Chaplain (Brigadier General),*
*United States Army,*
*Chief of Chaplains.*

## Individual Security in the Postwar World

EXTENSION OF REMARKS
OF
### HON. CARL A. HATCH
OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

*Friday, November 2 (legislative day of Monday, October 29), 1945*

Mr. HATCH. Mr. President, recently the Secretary of Labor, Hon. L. B. Schwellenbach, issued a statement for the Trans-Radio Press entitled "Individual Security in the Postwar World." I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

INDIVIDUAL SECURITY IN THE POSTWAR WORLD

(By L. B. Schwellenbach, Secretary of Labor)

Economic security for the individual is as necessary as collective security for nations. Tyranny and aggression thrive on uncertainty and poverty. When faced with the brutal realities of economic privation people will surrender their liberty to gain a promise of security. We must not let this occur in our country.

Security was the companion of opportunity in the early history of America. Escape from the poverty and insecurity of the old world was a vital factor in attracting settlers to the new. Here a man might progress on his own merits; here he had opportunity. Here, also, he had access to the fruits of agriculture and the animals of the forest; here he had security from the stark privation of the crowded cities and restricted estates of the Old World. There is no true opportunity without a degree of security; no true security without opportunity.

The Federal Government, as a source of security, is not a new factor in our life. One hundred years ago the early American labor movement was pressing for a program of free homesteads for settlers. The purpose was relief to the wage earners from the insecurity of economic existence in the urban East. The 1830's like the 1930's were a time of depression, and security was an important factor in the minds of the wage earners.

While land remained the Nation's greatest expandable resource, it was the basis of Federal aid to the poor and restless worker,

as to the railroads and the newly developing educational system. With the passing of the physical frontier, this source of Federal largess disappeared and Americans, including the rapidly growing millions of wage earners, were forced to work out their own destinies where they dwelt, without recourse to the Government. The struggle for economic existence became more severe and resulted in social unrest. If measures had not been taken to restore in some degree the security which had passed with the physical frontier, these factors might have threatened severely our democratic way of life.

Over the past 30 years, and particularly during the last 15, we in this country have been building a system of security which frees the the individual once again from the brutal and devitalizing effects of hopeless insecurity and economic privation. This movement is not alien to our way of life; it is essentially American and democratic. Its aim is not social revolution, but the restoration of that security which guided the early settlers to these shores and played so important a part in developing a hardy democracy and progressive industrialism.

We have behind us in the recent past a depression which showed us the dangers of insecurity, and a war-production program which indicated the limitless scope of our industrial frontier. A constantly developing system of security for the individual will help guard against a return of the former and be of material assistance in recapturing in peace the power and abundance of our wartime economy.

## Implications of the Atomic Bomb

EXTENSION OF REMARKS
OF

### HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

*Monday, November 5, 1945*

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

IMPLICATIONS OF THE ATOMIC BOMB

(By one of the scientists who developed it)

According to the official release a General Account of the Development of Methods of Using Atomic Energy for Military Purposes Under the Auspices of the United States Government, 1940–45, by H. D. Smyth "the answers given to the political and social questions may affect all mankind for generations. * * * Such questions should be debated by the people. * * * It is hoped men of science in this country can * * * help their fellow citizens in reaching wise decisions. The people of the country must be informed if they are to discharge their responsibilities wisely."

The following questions and possible answers suggest some of the problems which are now facing the thinking people of the world:

"Why is the atomic bomb so much more powerful than previously known explosives?"

One bomb is equivalent to 20,000 tons of TNT. In all previous explosives the atoms have remained unchanged, but in the atomic bomb there is a breaking down of the atoms with an actual disappearance of matter which reappears as enormous energy. These atomic disintegrations evolve a million times as much energy as chemical reactions.

"Did the use of the atomic bomb shorten the war and save countless American lives?"

Yes. Winston Churchill released the estimates of casualties expected in an invasion of Japan—1,000,000 American and 250,000 British Empire troops.

"Has a new era of international relations been ushered in?"

Yes. It will be either an era of warless prosperity—or the end of civilized men.

"Were the high military and civil authorities aware of the implications of the atomic bomb and did they realize that its use involved much more than military expediency?"

Yes.

"Can Washington and Chicago be destroyed as well as Hiroshima or Nagaski?"

Certainly.

"How long would it take another nation to make atomic bombs and use them against us?"

Possibly 3 years or more, depending upon the nation's resources in scientists and industrial productive capacity, and its willingness to sacrifice national living standards to speed up the program. The general principles involved were known to scientists throughout the world before Pearl Harbor.

"What military defense can be developed against the atomic bomb?"

As seen at present—practically none, except retaliation. Theoretically each nation will be able to destroy the cities and manufacturing centers of any other nation instantly and without warning.

"Should we decentralize manufacturing facilities and populations?"

Yes. This decentralization is desirable also for other reasons. We should not allow our large cities to grow larger. Some of the factories and the people should move to smaller towns. Modern transportation makes such a change possible.

"What about living underground?"

The construction of underground factories and homes should be encouraged. Modern ventilation and lighting render such a development possible. Atomic bombs can penetrate the ground but if they do, the area destroyed is smaller.

"Is there a chance of developing still more powerful atomic bombs?"

Yes.

"Could atomic bombs be smuggled into a country and exploded by remote control years later?"

Very likely.

"Is the danger of atomic bombs confined only to international warfare?"

No. A group in control of an atomic bomb could threaten to destroy a city if its demands were not met.

"Why publish these ideas? Someone might make use of them."

Evildoers will have these ideas, anyway, and peaceful citizens of the world must face the facts if they are to act wisely and in time.

"Is there danger of an atomic bomb setting off a chain reaction which will suddenly destroy the whole earth?"

Such a catastrophe, although conceivable, is extremely unlikely. A general atomic conflagration cannot be started by any means now known.

"Atomic bombs are made from uranium. How much uranium is there in the world?"

Enough to destroy all the major cities of the world. High-grade ores of uranium are known to exist in Canada, the United States, Africa, and eastern Europe. New deposits will be found and the low-grade ores, which are widespread, can be utilized if there is sufficient incentive.

"Why not control the supply of uranium and other materials needed for the manufacture of atomic bombs?"

Certainly; but such control will not be easy. Uranium mines should be internationalized and their output controlled and licensed. All material entering the country should be inspected and checked for radioactivity. An international commission should be given authority to inspect and police all parts of the earth to see that no plants are allowed to manufacture materials for atomic bombs. Severe penalties should be imposed on any unlicensed person having such materials in his possession.

"Now that we have the atomic bomb, what shall we do with it? Bury the secret, burn the records, and kill the scientists who have the knowledge?"

No. A phenomenon of nature is not like a legal document which can be hidden or destroyed. It is free to the scientists of any nation who have sufficient training, ingenuity and perseverance. The secret would soon be rediscovered.

"Is not the international control of atomic bombs a matter for the new United Nations to take over?"

Certainly. The United Nations was organized just in time. Furthermore, the assignment of a problem like this would serve to strengthen and develop the United Nations organization. A strong world government offers the most promising solution.

"Why cannot the United States of America alone control the atomic bomb program?"

Because a temporarily held secret offers less security than international good will and cooperation. We can be trusted more than any other nation to keep the peace of the world, but we will certainly incur the ill will of other nations if we alone have in our possession the means of instantly destroying any other nation. Free and open international discussion has always been the way of science. It should continue even now. We are in a strong bargaining position for peace now if we cooperate with others, but this unique position will soon disappear.

"What are the chances of utilizing nuclear energy for useful purposes?"

Man has for the first time tapped the source of energy which feeds the sun and the stars. One cannot predict all the future applications which may follow. It will be easy to use the nuclear energy for the controlled production of useful heat and power. The energy can be released instantly or over a period of days or years at will. The material in a single atomic bomb could be adapted in a few months to supply all the electricity needed by a city for a long time. Engines and dynamos of standard design can be utilized in converting the heat into work. However, nuclear fuel will be expensive and limited in quantity. At the present time, sunlight and the burning of coal are much cheaper. Moreover, the nuclear fuel carries with it a health hazard due to radioactivity which must be kept under careful control. No immediate large-scale displacement of coal, oil, or water power is in sight now, but there will probably be applications in isolated regions or under special conditions where the transportation of ordinary fuel is difficult. One pound of uranium 235 is equivalent in heat value to a trainload of coal.

"Will it not be much more difficult to control the production of atomic bombs if nuclear energy is permitted for operating engines and for other peaceful purposes?"

Yes. This may well be one of the difficult questions for the people to decide. Denial of the practical use of nuclear power would involve no great economic hardship now—yet it would be unfortunate to deny man the use of any of nature's resources merely because he cannot be trusted.

"What about our national security based on the largest navy in the world and the greatest industrial productive capacity?"

Gone with the atomic bomb. These things are no longer a protection against war waged by a nation which can drop the new bombs on major cities and factories without warning.

"Weren't we foolish to develop the atomic bomb and thus render obsolete our old lines of defense which would have given us national security?"

No. We must explore all possibilities. Other nations would have developed atomic bombs within a few years even if we had done nothing. Not until our development of the

atomic bomb was practically complete did we learn that we had far outstripped Germany in the race.

"What about universal military training?"

This is now a minor issue. Scientific research is far more important to the security of the Nation than a large army and navy. Even as it has been our policy to train reserve officers we should assure that sufficient numbers of young men have an opportunity to become scientists and skilled technicians.

"Does the atomic bomb affect the plan of controlling Germany's and Japan's war potential through repression of the manufacture or aluminum, nitrogen, and heavy industries?"

These materials are less important now for making war, and insofar as they contribute to a higher standard of living and economic contentment, they should be permitted, as least on a limited scale.

"Would it not have been a good plan to have dropped a few more bombs on Japanese cities?"

The atomic bombs were used in the hope that they would shorten the war and thereby save human life. The use of two bombs accomplished this purpose. We would have gained only a troubled conscience and loss of respect if we had used more.

"Was it not a mistake to use these atomic bombs? We would have won the war anyway. Perhaps we have saved our sons only to lose our grandsons."

We know that we have saved many of our sons. Arguments for prolonging the war usually come from those who are far from the front. Men have stopped killing each other, and our casualty lists have ended suddenly. Atomic bombs will be available in other countries in the near future, whether we had used them in this war or not.

"But haven't we lost our moral prestige with other nations and with ourselves? We have long preached against the bombing of civilians."

"Yes, but we had lost it before we dropped the atomic bomb. What difference whether we destroy 60 percent of a city with one atomic momb or with thousands of explosive and incendiary bombs. The dead are no more dead and the injured no more injured. For a long time we have been killing women and children by bombing cities from the air. Few protested. War forced upon us tasks of destruction and slaughter we did not want. Our cities have gone unscathed and our people have become prosperous making weapons of destruction which have brought death and misery to the rest of the world. We had to do it because we were fighting for a better world and for a chance to live in freedom and peace. Perhaps the atomic bomb has shocked us into realizing that we, the high-minded, peace-loving citizens of the United States, have been guilty of mass murder for years. Fortunately we and our military leaders have never glorified war. We will now hate war more than ever.

"Is not the atomic bomb worse than poison gas which was outlawed? We respected our pledge not to use poison gas even though it could have been used to our advantage on some of the Pacific Islands."

There is no real difference between these and other methods of warfare. We did not pledge ourselves against the use of atomic bombs; they were previously unknown. The tragedy is not that men fight with knives, arrows or bullets, or flamethrowers, or poison, or exploding molecules or disintegrating atoms—the tragedy is that men make war. Debate on the relative wrongness of different weapons is of questionable value. The common enemy is war itself.

"Wouldn't it have been better if we had demonstrated the atomic bomb—on a desert islands or on Mount Fujiyama, and then told the Japanese of its power and given them a chance to surrender?"

Possibly so. Only a few would have been impressed. Now the whole world knows that there can be no compromise with the institution of war.

"Let us abolish wars by frightening the nations into keeping the peace. Friendly union against a common enemy has often been effective in keeping the peace. The atomic bomb may be the last common enemy which will force all nations to unite."

Fear of war has rarely prevented war, but now the existence of such an awesome weapon may shock us into accepting the national sacrifices necessary to eliminate war. When it is realized that every nation can have a "pistol" loaded and aimed at the heart of every other nation, it should be easier to form a world government or an international union for settling disputes by peaceful means. Even before the atomic bombs we were approaching the "pointed pistol" stage in international relations with the possibility of many super rockets focused on the cities of a neighboring nation ready to be released at or just before a declaration of war.

"How shall we prevent war?"

We must remove the causes of war—such as population pressure, ideas of race superiority, economic restrictions, thoughts of isolation, and attempts to sell indefinitely without buying. Intelligent, enlightened self-interest will go far, but the only real solution lies in raising the moral standards of the men and nations of the world. The principles of unselfish brotherhood have always been desirable—now they are necessary for survival.

---

## UNRRA

EXTENSION OF REMARKS
OF

## HON. FRED BRADLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Monday, November 5, 1945*

Mr. BRADLEY of Michigan. Mr. Speaker, under permission granted to extend my remarks in the RECORD, I include a recent broadcast which was prepared for the three radio stations in my district, WSOO, Sault Ste. Marie; WMAH, Marinette-Menominee; WDBC, Escanaba:

One of the greatest international problems confronting ourselves and the other United Nations today, and about which we hear a great deal of conflicting comment, is the very important question of what we are doing to feed, clothe, and otherwise help to rehabilitate Europe in general and more especially the displaced peoples of Europe. We have heard a great many reports about the probability of widespread starvation in Europe during the coming winter months and it is, of course, a very important matter in which all of us are greatly interested here in Washington. You will recall that many months ago the United Nations set up what is commonly known as UNRRA and officially known as the United Nations Relief and Rehabilitation Administration. Theoretically, this international organization is contributed to by all the United Nations who were signatories to that agreement but in reality of course—as usual—the lion's share of this money is being put up by Uncle Sam.

Recently a subcommittee of seven members of the House Foreign Affairs Committee left for Europe for a 7-week tour of western Europe to learn at first hand just what the situation actually was; and as I promised you in my last week's broadcast, I am fortunate today to have with me in the studio a member of that subcommittee from our own State of Michigan, the Honorable BARTEL J. JONKMAN, representing the Fifth District. Mr. JONKMAN is effectionately known to all his colleagues as Barney, and I shall call him that from now on in this broadcast. So now I want to present to you my dear friend, BARNEY JONKMAN, and ask Barney if he will briefly tell us in general just what the committee found out in that part of Europe the committee covered.

Mr. JONKMAN. As you stated, Fred, I was a member of the subcommittee of the Committee on Foreign Affairs which was delegated by a resolution of the Congress to investigate UNRRA and lend-lease. On this mission we left New York on the 5th day of August on the *Queen Mary*. An interesting sidelight on this ocean trip was the tremendous change that had been made in the *Queen Mary* to transport our servicemen from Europe back to the States. As you know she is capable of accommodating 15,000 servicemen in her revamped condition. I was amazed how large lounges had been converted into bunkrooms, some of them accommodating as high as 400 to 700 men. To provide additional transportation they used what they called the d-b ticket (double-berth ticket). About every other man as he came aboard was handed one of these tickets and that meant that he would alternately sleep on the bare deck or in a bunk. In this way they accommodate 3,500 additional servicemen on each trip.

Mr. BRADLEY. I imagine the boys did not kick much on that as long as they were getting home.

Mr. JONKMAN. The first night out at about 11:30 we were notified by the captain that he had just had a wireless from the FBI stating that incendiary bombs had been placed aboard ship to explode at twelve. He immediately assured us that there was nothing to worry about and it turned out that it was a false alarm; although coincidentally our ship did receive an S O S signal from another ship that was afire at just exactly 12 o'clock.

We arrived in London on a Saturday morning and the next week attended the UNRRA Conference which was being held there at that time. However, as you will recall the unofficial VJ-day came just about that time canceling most of those sessions.

Mr. BRADLEY. What is the general appearance of London today. Is it pretty badly bomb shattered?

Mr. JONKMAN. In driving through London we could not help but feel that the damage had been grossly overstated. In one district around St. Paul's Church a great many blocks had been demolished and the damage was severe although it had been cleared up. When walking through one will find in certain districts that flats and apartment houses have been bombed. However, in most cases the structure still stood subject to internal repairs. When we are told that four out of every five homes in London have been damaged, much of it is only flak damage or damage by flak to roofs which have since been repaired.

One of the first things we interested ourselves in was the, at that time, proposed $75,000,000 lend-lease provision for prefabricated houses for England. We immediately sought these prefabricated houses and after considerable seeking finally located them. One was of American make at $1,500 and the other English make at $2,500, which incidentally was built with lend-lease materials from the United States. We were told these houses were wanted to replace slum districts. We asked the British Ministers of Health and Construction to show us some of their worst slums, and upon examination we found their conditions were far less serious than our own slum conditions in Washington and other cities over here.

Mr. BRADLEY. I understand that you toured through France, Belgium, and Holland, and then into Germany. Can you tell us what the food situation looked like in those areas?

Mr. JONKMAN. Yes, Fred, Paris was our next headquarters. It, of course, had not

been bombed. Business was in very listless condition and food shops were inactive, furnishing only staple and coarser foods. From there we made it our business to drive by automobile through northern France and later through Belgium and well up into Holland. In all this territory we found crops in excellent condition—wheat, potatoes, sugar beets, rye—although we saw little corn. Not only that but we were all surprised to find all through these countries more herds of cattle than I have seen driving through Michigan, even when I was driving through your dairy counties of Menominee, Delta, and Chippewa. These cattle were in most instances tethered in straight lines, 12, 20, or 30, alongside a field of rich red clover, enabling them to eat of a fringe each day. We found the same condition in Germany after passing through about 10 miles of borderline territory between Belgium and Germany, which we were told was neglected because the land mines had not yet been removed therefrom.

Mr. BRADLEY. Well, Barney, as they have all this food growing over in these countries what then is the bottleneck and why can't this food get to market?

Mr. JONKMAN. By making that statement I do not mean to infer by any means that Europe is self-supporting as far as food is concerned. It never was even in peacetime; but the real problem in Europe is transportation. We all know that Europe depended for transportation largely on rail and river and canal traffic. It was pathetic as we drove through the country to see how railroads and river boats had been destroyed. In Holland, for instance, we could see this and we were told that a little railroad 33 miles long had 90 bridges destroyed. In the other countries it was pathetic and often times you could see with one sweep of the eye, four, five, or six large bridges crumbled like a roller-coaster, part in the water and part still above its foundations.

Mr. BRADLEY. Did that condition maintain down in southern Europe?

Mr. JONKMAN. Well this is true practically all over Europe except in Italy—even in Greece. In Italy, as we know, our armies pushed the Germans up from the south and as the latter destroyed the bridges our boys at least replaced some so far as was necessary for military operations so that Italy is in the best shape as far as transportation is concerned. A healthier state of agriculture was also found in better than half of northern Italy. In the southern part of Europe, especially Greece, the food situation has been impaired not only by the ravages of war but even more so by a drought which they have experienced now for 6 years and of which 1945 is by far the worst, so that Greece will have only a 40-percent wheat crop this year. Dozens of times I have asked leaders in communities, "Isn't it true that there is enough food produced within 200 miles of this place to relieve your needs if you had transportation facilities to get it in here?" In every instance they answered "Yes." In other words, if adequate transportation could be provided for food produced in Europe, there would be a marked reduction in requirement from this country.

Mr. BRADLEY. Well, Barney, to get back to this UNRRA situation. What is your impression of the work UNRRA is doing as a whole?

Mr. JONKMAN. I understand that the criticism to which UNRRA has been subjected and which was admittedly justified by many of their own members has improved the situation and UNRRA is now desperately seeking to secure trucks from the various Army forces and I understand they have already made arrangements for 80,000 trucks which, however, are being delivered to them in such small quantities that the winter will be well advanced before they solve this problem. Of course, it must be borne in mind that UNRRA could not accomplish much toward securing trucks until after VJ-day because even after VE-day the Army was reluctant to part with this equipment until the war had been won.

Mr. BRADLEY. Well, Barney, isn't it true that as the Army proceeded in its campaigns and liberated these countries like France and Belgium and Holland that the Army itself undertook a great burden in feeding and clothing these natives and displaced persons?

Mr. JONKMAN. Yes; the Army did an excellent job—an outstanding job—but it must always be remembered the Army was doing it only to facilitate their military operations and not as a relief agency in itself.

Mr. BRADLEY. But, of course, the fact remains that UNRRA could not move in to any area until the Army turned it over to them. Isn't that correct?

Mr. JONKMAN. That's correct.

Mr. BRADLEY. Well, now, Barney, tell me something. What are we doing to help these Jews and displaced persons at this time?

Mr. JONKMAN. In my opinion, General Eisenhower and the armed forces have done a splendid job. As of September 10 last, or barely 4 months after VE-day, they had repatriated nearly five and a half million displaced persons. I call that magnificent. Harrison, in his report, calls it phenomenal. This leaves about one million, or less than 16 percent, almost wholly consisting of displaced persons, who refuse or are afraid to return.

Even Harrison, in his report to the President, says: "It is undoubtedly true that the great majority of Jews now in Germany do not wish to return to those countries from which they came." Harrison frankly states that these displaced persons want to go to Palestine and the United States. Of course, the Palestine situation cannot in the slightest degree be ascribed to us or to Eisenhower and the armed forces. For that, the British, in the violation of their mandate, must accept responsibility.

The voluntary refusal of this million to be repatriated, created a second problem which could be developed only as the repatriation was being accomplished. Certainly, no one will contend that the Army should first have taken a census of those who refused to go home, found villas and private homes for them, and thereafter proceed with the main job.

Now, please remember that Harrison in his report admitted marked improvement had already taken place, although he says his report was being written only 3 months after VE-day. In my opinion, that progress in 3 months shows another splendid achievement by General Eisenhower.

I visited some of those displacement camps. The Hanau camp, for instance, consisting of old barracks, providing individual apartments and wards, just out of Frankfort. The looting of a consignment of industrial alcohol by inmates (to which Eisenhower refers in his defense) had just occurred, killing or permanently paralyzing eight hundred to a thousand of them. The director complained of flagrant disregard of hygienic and sanitary rules, as well as immorality, which could not be punished or disciplined. When one considers that this million is the residium or leavings of over six million who had lived for years under the most degrading conditions, it is not difficult to realize that operating these camps is a problem.

It is true that UNRRA, with its admitted inefficiency and handicaps, had taken over much of the camp care at that time. However, their failures cannot be blamed on us, but are the fault of the United Nations. And that's why I say we are doing as much as possible at this time.

Mr. BRADLEY. Barney, is UNRRA getting any cooperation from Russia or are they being handicapped in the distribution of supplies to those east European smaller nations such as Yugoslavia, Czechoslovakia, and Poland, which are under Russian influence at this time?

Mr. JONKMAN. This involves the question of cooperative effort all the way through and immediately upon my return, I made a statement that the whole situation in Europe is one of chaos, red tape, and inefficiency. To this all the agencies, the Control Council, which is composed of the military staffs of the four governments, our American military government, and UNRRA are all contributing but it is my opinion that Russia's failure to cooperate—just as she failed to cooperate in the Foreign Ministers' Council—is the principal obstacle to progress.

---

## Cash and Carry: European Plan

EXTENSION OF REMARKS
OF
### HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

*Monday, October 29, 1945*

Mr. WOODRUFF of Michigan. Mr. Speaker, American foreign policy during the late war was based largely upon America's ability to produce and to give away. In some instances no acknowledgement whatsoever was made of the fact that war supplies and material were acquired through lend-lease. In other instances, lend-lease has been utilized by foreign powers in such a way as to bring reflections upon the good intentions and the good name of the United States.

Members of Congress who traveled in Europe, the Middle East, and the Far East have observed these cases of neglect or actual misuse of materials supposedly loaned but actually given to our allies to win the war. Representative BARTEL JONKMAN, of Michigan, on his return from Europe, was quoted as saying that Soviet troops in Berlin were much surprised to see the Americans riding in jeeps since the Russians were under the impression that jeeps were manufactured only in their country. They could not understand how Representative KARL MUNDT, of South Dakota, told the Associated Press on his return from a tour, which included the Middle East, that Syrian men and women, fighting for their promised liberty with primitive weapons, had been mowed down by one of our allies with American modern battle equipment furnished that ally through lend-lease.

Similar reports have been brought to the attention of the American people concerning American lend-lease weapons being employed by the British to kill Greeks, and by the Dutch to kill Indonesians.

Lend-lease has been terminated. Foreign nations have been deprived of this particular means of getting something for nothing.

Yet, hardly had the ink dried on the Presidential order ending lend-lease than alien pressure groups invaded the United

States demanding economic concessions and outright gifts. The British monetary mission, headed by Lord Keynes, to whom I have referred heretofore, encountered unexpected opposition. The British asked a direct gift approximating a sum between five and six billion dollars. They met with Americans who took the stand that the United States could do business only with a Great Britain who had abolished the sterling bloc and the empire preference in trade.

A spokesman for the British delegation summed up the British attitude when he said:

> We are unwilling to put our names to a loan we cannot repay, and to giving up our system of empire preference.

Robert Boothby, influential member of Parliament, went even further. He said in the House of Commons:

> If the price demanded by the Americans is * * * abolition of the sterling area, then I think the price is definitely too high and we ought not to pay it.

Within the week, according to the press, a tentative agreement has supposedly been reached to "loan" the British four billions at one-half of 1 percent, payment of such interest not to begin for 10 years. It also provides that payment of principal and interest shall be suspended at the pleasure of the British. This means, of course, that they will pay only at their convenience. Let us not forget that it has not been convenient for them to pay anything on the six and one-half billion dollars debt growing out of the First World War in the last 13 years. It is understood that Lord Keynes and his cohorts are still hopeful of securing the advantageous gift they originally set out to get.

Nor is Britain alone in her expectations that the United States will pay her way through postwar recovery and set her up as a commercial competitor with American businessmen in every market in the world.

Chinese officials have named sums varying between five and ten billions of dollars as the basis of their needs to develop China's resources, to improve Chinese inland communications, and to open Chinese ports for foreign commerce. France, too, is seeking an enormous loan from the American Government.

The Soviet Union wants at least six billions—and should this money be given to Stalin—we will never learn whether it was used to improve the lot of the Russian people, or to augment the use of the power of atomic energy for world conquest. Russia has never permitted general observers of the press to penetrate beyond their policed areas in Moscow and elsewhere. It is beyond the realm of possibility that Stalin should allow the trained observers of science to investigate the true objectives of Russian spending.

The people of the United States—for it is the American taxpayer who pays all bills—are financing the American occupation forces in Europe. We are the sole source of funds for the present policing of Japan. We are to be the heaviest contributor to the currency stabilization fund and to the World Bank. We are supporting the United Nations Relief and Rehabilitation Administration beyond the combined support of other member nations and we are being called upon to advance additional sums.

A recent United Press report, quoting Department of Agriculture officials, has this to say:

> October (through) December food plans call for the export of more than 3,000,000 tons to continental Europe, excluding Russia * * * almost equal to shipments in the first 6 months of 1945.
>
> Nearly 90 percent of all food in the relief pipe line is wheat and flour. In addition, the 1945 exports will include 171,000 tons of meat, 54,600 tons of cheese, 304,000 tons of other dairy products and 137,000 tons of lard and other fats and oils.
>
> Relief authorities estimate that Europe will need 18,000,000 tons of imported food during the next 12 months.

How is that to be carried to Europe? According to the European view, that food will be carried in American ships operating at the expense of the American taxpayer or in 1,000 British ships, built by Americans in American shipyards and transferred as an outright gift to the British.

Douglas Larsen, American economics authority, writing in the Washington Daily News of October 12, says of the British shipping situation:

> At the outbreak of the war it was agreed that Britain would concentrate on making warships and the United States, with its capacity for mass production, would build cargo vessels. This program would have given the United States 68,000,000 tons of shipping—more than all other nations combined. Losses and the abrupt end of the war caused America to fall short of that goal by about 8,000,000 tons—still more than all nations put together.
>
> Now it is the growing belief that England hedged her bargain to concentrate on warships. There is evidence that in spite of losses of more than 5,000,000 tons in ships sunk and damaged her merchant marine is close to its prewar size.

Before the war, the United States ranked second to England in the size of our merchant marine. During the war, the next four ranking merchant marine competitor nations have been practically eliminated from world competition—Japan, Germany, Italy, and Norway. By giving Britain a thousand merchant vessels we would add those thousand ships to the British Empire shipping pool, and give Britain almost complete control of foreign markets. It might necessitate making our foreign trade policy everywhere subservient to that of our British competitor.

The term "cash and carry: European plan" means that we should give Europe our cash and our products and furnish the ships in which Europe can carry away these spoils.

Just exactly what are American statesmen expected to do for the rest of the world? They are being called upon to give away American money, American processed goods, and American raw materials. They are being asked to reduce the American standard of living, to still further burden the American taxpayer with an ever-increasing unbearable load. They are being urged to increase the national debt of the United States to such a point that we can no longer be a solvent nation. They are under tremendous pressure to coddle a world that wants to ride piggy-back through the reconstruction period at our expense. It must appear incredible to our statesmen—as it will certainly appear to the American taxpayer—how Europe ever passed through over 2,000 years of recorded history without the help of the United States.

Let us be realistic and face facts.

The United States is getting no cooperation from the Soviet bloc or from the sterling bloc in the establishment of world peace and security. Yet, it is the doctrine of both of these blocs, together with their satellite nations, that America must finance them, feed them, clothe them, underwrite their farms and factories, give them ships and renounce our foreign markets. This is not a doctrine advocating charity. It is, rather, a doctrine which attempts to rationalize international piracy.

If we must have a doctrine of charity, that doctrine, like charity itself, begins at home. Millions of Americans face temporary unemployment due to the dislocations of the reconversion period. The needs of these men and women who served either in the armed forces or in war work must first be met. No one will help them but their fellow Americans. We have yet to hear any expression of a desire to help Americans from the heads of States who demand everything from America.

It is only after we have helped our fellow Americans that we can turn to the task of helping others, if we then so decide. In this, the foreign diplomats themselves have given us the cue: The English think first of Englishmen; the Russians think first of their Soviet comrades; the French think first of Frenchmen. It is time that we think first of Americans.

In reconstruction we must first build a sound American economy. American businessmen must be assured of the safety of their investments in order to assure the American workingman security in his job. We must acquire our fair share of foreign markets. When we have made America strong and secure and safe, then we can, if conditions should then warrant, pass along that strength and security and safety to the world. But we cannot give these inimitable gifts to an uncooperative world, a world that refuses to work for its daily bread, a world that insists on a philosophy of something for nothing.

"Cash and carry: European plan" is an impractical nightmare. It cannot work in a civilized world community. A community of nations, like a community of individuals, must adhere to a code of laws. If we do not want to revert to jungle savagery in international finance, then we must play the game by the rules. Nations who wish to borrow must do so honestly, with the determination to pay their debts. We can make a valuable

contribution to world self-respect by insisting on looking after the future of the American taxpayer and standing for the practice of making reputable loans to only those countries whose national honor will force them to treat financial agreements as well as treaty agreements as more than scraps of paper.

## Naval Academy on West Coast

REMARKS
OF
**HON. GORDON L. McDONOUGH**
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 5, 1945*

Mr. McDONOUGH. Mr. Speaker, as further evidence that the congested situation at Annapolis prevents our expanding the institution to provide for the training of naval officers, I call the attention of the Members of the House to a resolution recently adopted by the Virginia Chapter of the American Institute of Architects, which resolution is as follows:

VIRGINIA CHAPTER, THE
AMERICAN INSTITUTE OF ARCHITECTS,
*Radford, Va., October 22, 1945.*

Whereas the Navy Department has announced plans for the acquisition and demolition of the land and ancient improvements known as St. John's College at Annapolis, Md.; and

Whereas it is the opinion of the chapter that such acquisition and destruction would deprive the Nation of one of its most notable cultural and architectural monuments; and

Whereas it appears that the aforementioned proposal is not founded on real necessity or the results of competent establishment of design requirements: Now, therefore, be it

*Resolved*, That we, the Virginia Chapter of the American Institute of Architects, being sensible of the obligation inherent in such a professional group, do hereby protest to the Congress of the United States to the end that such proposed abuse of the Government's power of eminent domain may be prevented; and

That copies of this resolution be forwarded to the President of the United States, to other appropriate officers of Federal and State governmental administration, to all representatives in both Houses of Congress, to the president and board of directors of the American Institute of Architects, and to all chapters of same American Institute of Architects.

By direction of the chapter.

CHARLES A. PEARSON, Jr.,
*Secretary.*

Mr. Speaker, I have been advocating that the facilities for training naval officer personnel be increased by building a new naval academy on the west coast. We just passed a bill here setting up the composition of the postwar Navy. We plan on training 50,000 officers for that purpose, but we cannot do it with the present facilities at Annapolis. We have a disjointed program for training these men in various universities throughout the United States far separated from each other. How much better would be the esprit de corps if they were trained together at the same institution. How much better would it be if a new institution, a new naval academy, were built on the west coast where broad expansive facilities are available, where a wide choice of shore line and ideal climatic conditions which permit all year-round training on land, sea, and in the air, which is not possible at Annapolis. These facts are recognized by the resolution recently adopted by the Los Angeles County Board of Supervisors, which I had the honor and privilege of being a member for 11 years:

OFFICE OF THE BOARD OF
SUPERVISORS OF THE COUNTY OF
LOS ANGELES, STATE OF CALIFORNIA,
*October 30, 1945.*

The board met in regular session. Present: Supervisors William A. Smith, chairman, presiding; Leonard J. Roach, John Anson, Ford, Raymond V. Darby, and Roger W. Jessup; and J. F. Moroney, clerk, by Alice Burks, deputy clerk.

IN RE PROPOSAL FOR NAVAL ACADEMY ON PACIFIC COAST: RESOLUTION URGING FULL SUPPORT BY CALIFORNIA SENATORS AND CONGRESSMEN

On motion of Supervisor Jessup, unanimously carried, it is ordered that the following esolution be, and the same is hereby adopted:

"Whereas for some years serious consideration has been given to proposals that the Federal Government establish a naval academy on the Pacific coast; and

"Whereas southern California would be an ideal location for an institution of this kind because of the splendid all-year climatic conditions which prevail here; and

"Whereas the development of a two-ocean Navy by the United States assures the permanent importance of the west coast as a major defense area; and,

"Whereas the great and growing importance of southern California as an aviation center provides an additional advantage that southern California has to offer for the location of such a training center; and

"Whereas the need for additional training facilities for Navy officers is necessitated by the increased size of the Navy and by the overcrowded conditions at the training center at Annapolis; and

"Whereas the increasing importance of the Pacific area from the standpoint of commerce and population requires that great emphasis be placed on the defense of this area: Therefore be it

"*Resolved*, That California Senators and Congressmen be urged to give full support to this naval academy proposal and that the clerk of the board be instructed to send copies of this resolution to all of the aforesaid; be it further

"*Resolved*, That city councils, chambers of commerce, other civic-minded groups, and individual citizens be urged to support this plan by sending letters of endorsement to their representatives in Washington."

## Communist Says "We Must Do Everything We Can To Abolish the United States"

REMARKS
OF
**HON. JOHN E. RANKIN**
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
*Thursday, November 1, 1945*

Mr. RANKIN. Mr. Speaker, the Communists and their fellow travelers, who are attacking the Committee on Un-American Activities, are busy in one place attacking us and in another place attacking the Government of the United States.

A distinguished lawyer from Cleveland, Ohio, yesterday sent me a clipping from the Cleveland Plain Dealer of October 29, containing excerpts from a speech delivered in that city by one Prof. M. J. Adler, of the University of Chicago, in which he said: "We must do everything we can to abolish the United States."

This lawyer asked: "If this is not treason, what is it?"

This Professor Adler, who, according to Who's Who in American Jewry, was born in New York, December 28, 1902, went on to say in his speech in Cleveland:

The only answer to the threat of atomic war is world government—complete relinquishment of the United States and all other national sovereignties.

In other words, these communists are not asking us to help keep the peace of the world through cooperation with other civilized nations, but they are demanding that "we must do everything we can to abolish the United States."

That is a doctrine that has not been preached openly in this country before since the days of Benedict Arnold.

No wonder that crowd want to get rid of the Committee on Un-American Activities!

No wonder they want to humiliate the Daughters of the American Revolution!

No wonder they do not want our American boys to come home!

They want to "abolish the United States," and they know they can never accomplish that treasonable undertaking with patriotic Americans on guard.

## The News Behind the News

EXTENSION OF REMARKS
OF
**HON. ROY O. WOODRUFF**
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 5, 1945*

Mr. WOODRUFF of Michigan. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article by Paul Mallon from the New York Journal-American of November 1, 1945:

THE NEWS BEHIND THE NEWS
(By Paul Mallon)

WASHINGTON, November 1.—The British are more than our best friends in this none too friendly world.

They are in a way our grandparents—grandparents who have fallen upon hard times. But they have put over some amazing stunts on us, always doing it in a half-hurt, half-superior sort of way, as if they had a right to our gold eye teeth or the world's oyster.

Anyone who says, "Wait a minute; let's see what is going on here," they look upon with their injured air as if he were just too backward to understand, or worse, possibly anti-British. You never know whether to laugh at their obviousness, or get angry at their imposition upon your intelligence.

Not the least of their offenses for their own business interests against the world is what they have done in Assam, Malay theater, where native insurrections are top news. You may not believe these inside facts, but I have them by direct, objective, provable written pipe line, and would not present them if they were not true beyond successful contradiction, to wit:

Although the natives are naked, hungry, and ill the British have succeeded in imposing upon our armed forces an officially ordered restriction against leaving anything behind of benefit to the natives.

Our hospitals will have to be razed to the ground, unless the British take them over for themselves. The medical supplies and equipment which the natives need so much already are being subjected to the same foolish disposition.

Believe it or not, the sun glasses of our Air Corps men were collected as they departed for the States, and taken out to the air strip where a steam roller was run over them. They were expensive Government property of the $7.50 type.

Again, 6,000 ordnance wrist watches were destroyed within a 2 weeks' period by M. P.'s. Our men were not permitted to purchase them, but if they lost one, they had to pay the purchase price.

Our soldiers were told the Government had overbought airmen's Swiss watches during the war to keep the Swiss watchmakers from making precision instruments for the Nazis, and all this surplus must be destroyed as Government property—and cannot be given to the natives or brought home for use by our men.

Three auto vehicles were stalled at a missionary rest camp due to the monsoon. The missionaries asked to buy them for the mission. Instead an officer was sent out with three sticks of TNT and destroyed them to prevent anyone from using them.

Chemicals and drugs are buried in the ground for destruction when no longer of use to us and surgical instruments are systematically ruined in a Government dump prepared for that purpose. Appeals for use of the drugs in mission hospitals were unavailing.

Want some more? In India all electric current is AC, but all our equipment is DC. Our generators, fans, refrigerators, radios, and X-ray equipment are being destroyed by us—DC generators decimated by 14-pound sledgehammers.

The British will not furnish DC current, and will not allow us to leave our generators to the needy natives. They will have to buy British, or else—and it must be else because they have no money.

Our American pay standard to the natives had to be lowered at the request of the British. Even so, we paid a top of about 33 cents a day for the best Indians around hospitals. This will be lowered to 8 cents a day when we leave, and the natives are pleading with our men to bring them to the States. We introduced them to combs, mirrors, shaving creams, soaps, towels, and decent clothing, which they will have no more.

Burma conditions are customarily described among GI's as CBI—confusion beyond imagination. The medics are screaming to get home because they have nothing to do, as the 1,000-bed hospital in one locality has only 285 patients. But the Army still carries it as a 1,000-bed hospital and therefore must needlessly keep a staff there equal to its full assumption.

Five troop ships came into Calcutta to take troops back to the States, 6 weeks or so back, but no troops were permitted to go on them. So much of a fuss was raised, one officer lost his job. We are getting the men out now, 24,000 being scheduled to leave during October, but 6,000 had to wait another month until they acquired more points. Morale is not what you would call high.

The basic British impositions certainly laugh at the "four freedoms." Shades of a quart of milk a day! We cannot even leave our hospitals, give medical supplies or leftover lighting or radios to the needy. We cannot give them our sunglasses or watches, indeed we cannot carry these home ourselves.

I hear one American officer did permit disposition slyly of some of our worn-out Army clothing to a few naked natives, but I hesitate to report this sensible kindness for fear he might be punished.

I was sitting in a restaurant eating dinner the night I heard the radio flash about the war declaration by revolutionaries in the Burma-India area, the first of new wars before the breath of the old one died. My companions suggested the Communists might be financing opposition to the British there. I decided to investigate what was behind the matter. I found the British themselves apparently responsible rather than the Commies—or crochety, self-interested grandparents who are dead set in their colonial and commercial ways.

## Gould Lincoln

EXTENSION OF REMARKS
OF
**HON. SOL BLOOM**
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 5, 1945*

Mr. BLOOM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Gould Lincoln, which appeared in the Washington Evening Star of Thursday, November 1, 1945:

THE POLITICAL MILL
(By Gould Lincoln)

Millions of men and women in war-torn Europe and the Far East face starvation and death from disease unless they get help. It's a situation which this country, all other members of the United Nations which escaped invasion in the war now ended, and even those which suffered the actual physical ravages of war, must face. There is no way of dodging the issue except the unthinkable way of allowing these people to die.

The organization set up to meet the situation—the United Nations Relief and Rehabilitation Administration, headed by former Governor Lehman, of New York, has just made its appeal to Congress for $550,000,000 to keep open the pipe line of food and relief to these desperate people. This will complete this country's promised contribution of 1 percent of its estimated income for the year 1943—a contribution totaling $1,350,000,000 and of which $800,000,000 already has been appropriated by Congress.

Forty-five nations, as of September 15, had promised contributions amounting to $1,882,760,000, including those which had been overrun by war. The lion's share is the contribution of the United States. Next is the United Kingdom—Great Britain—with $332,400,000. Canada is third with $69,369,000, Australia fourth with $38,400,000, and Brazil fifth with $30,000,000.

The same yardstick—1 percent of national income—was followed for contributions—except that the contributions from the invaded countries, which included Russia, France, China, the Philippines among others, are contributions for administration.

These sums are not going to be sufficient to turn the trick of relief and rehabilitation. The UNRRA's first job was in Greece—beginning in 1944—where it literally saved the people from destruction, not from war but from lack of food, clothing, and transportation.

Since then UNRRA has been active in many parts of Europe and is now turning its hand to the liberated areas of the Far East. The additional $550,000,000 from this country makes it possible to go ahead without a hiatus in the work. Without it deliveries from the United States of the most needed supplies would cease almost entirely in December and January. It has been estimated that the relief and rehabilitation work of UNRRA can be completed in Europe by the end of 1946 and in the Far East 3 months later.

This country and the other nations are to be called on to make additional contributions of 1 percent of their estimated incomes for the same year, 1943. It means that American taxpayers must dig down in their jeans for another $1,350,000,000, bringing the total for UNRRA contributions from this country to $2,700,000,000.

The job UNRRA has been set up to do has two aspects. First, it gives relief, the essentials to keep needy people alive. If the organization were limited to that work it would be in danger of becoming merely the source of a dole. It would leave these people no better off at the end of its operations than they were at the commencement—or little better.

The second main job of UNRRA, therefore, is rehabilitation. These people must be enabled to help themselves. To help themselves, UNRRA is providing these destitute people with seeds, fertilizers, farm machinery, trucks, limited amounts of raw materials, power plants, textile and other machinery. So completely devastated have huge areas been, by war and by the stripping the Germans gave them, that unless such supplies are provided the people haven't a chance to stage a comeback.

Thus far UNRRA has gone into Greece, Yugoslavia, Albania, Italy and, with limited programs, Poland and Czechoslovakia. It is opening up in China. It is prepared to undertake an enlarged program in Italy, assuming that responsibility from the military and Allied Control Commission. It is ready to take over in Austria, when requested by the military, and to assume responsibility for a program in Korea, and to carry on a limited program in the two Soviet republics which were hit with terrific force by the Nazis—the Ukraine and Byelorussia.

The organization has met many difficulties—but it is rolling now.

## When Are They Coming Home?

EXTENSION OF REMARKS
OF
**HON. CLARE E. HOFFMAN**
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 5, 1945*

Mr. HOFFMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

The following facts are now prevalent on Okinawa:

The high-ranking officers here on Okinawa (particularly the Signal section) are trying to keep as many troops here on this island to create as large a base as possible. They are trying to do this to make it necessary for them to hold their present grade of colonel

or whatever it may be so that they won't have to be reduced to their permanent Army grades, which, in the case of the island Signal officer, Colonel Baer, is the grade of captain.

General MacArthur's headquarters has authorized a very small signal group as permanent garrison of this island, but Colonel Baer has submitted a list of some 1,400 signal troops that he says that he needs to handle communications on this island. He originally tried to keep 2,200 troops for signal personnel, but the local island G–3 cut him down, and he ended up with a request of 1,400. The allotment of men from General MacArthur's headquarters wouldn't take more than 50 to 100 men.

You can see how we would feel about something like this when we realize that he, Colonel Baer, is trying to pull the wool over the eyes of the boys upstairs. I believe that you have seen the statements of General Stilwell and General Lawson, who said that this place was unfit as a base.

Well, here are a few figures to bear that out: During the month of September there were 13 days unfit for unloading ships, and the month before, 8 days were unsuitable for unloading. This is because barge unloading has to be used. It takes some ships as long as a month or more to discharge their cargoes. There are no dock facilities available, as the port of Naha was ruined when we shelled the place during the campaign. Goodness only knows how many days during the month of October have been lost for unloading, what with the last big typhoon of last week. There is a report out tonight that there is another one on the way. Right now it is raining outside. We have had one major and two minor typhoons in the last month. All of this makes Okinawa sound like a hellhole, and it amounts to about that. Winter is coming on, and there has been no provision made for quarters, and it really gets cold around here. Now we are sleeping under three blankets and could use still more.

All of us here got a big laugh when the news reports said that there were Quonsets and tentage being rushed in for replacement quarters. There are no Quonset living quarters on the island except for the visiting dignitaries who are carefully shown around and see only the things that are intended for their eyes. All of us have always lived in pyramidal tents and the "Ascom Hotel" is the only place where living quarters are actually Quonsets or buildings. This "hotel" is the place where visiting generals and Congressmen stay on their way through.

The food situation has always been a serious situation here because they cannot unload ships fast enough to keep a good backlog of food in the dumps. The news reports said that the typhoon created a food shortage that had to be remedied by the flying in of food in B–29's. This existed long before the typhoon ever hit us here. For 3 weeks before the typhoon, we had been eating various kinds of emergency rations, "C's" or "K's." We have had very little fresh food ever since we have been here. The only times that it has been available is when someone makes a deal with one of the naval vessels in the anchorage to take some of their refrigerated stock off so that they can haul cargo out. The food situation has always been the gripe on this island. We thought that is would improve when the war was over, but it got much worse instead of better.

Vitamin deficiency is a common trouble, and dehydrated potatoes and corned beef won't cure it. I don't know how long it has been since we have had any fresh vegetables. We have had occasional oranges and apples, but they are very few and far between.

This is the situation on Okinawa today.

## One Negro's Viewpoint on Communism

REMARKS
OF
**HON. JOHN E. RANKIN**
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 5, 1945*

Mr. RANKIN. Mr. Speaker, if anyone wants a real picture of the damages communism is doing to the Negroes of this country, I invite him to read a letter which I am inserting in the RECORD, written by Charles Lee White, a Negro now living in Jersey City, N. J.

In addition to organizing a certain element of the Negroes and encouraging them to adopt an attitude of antagonism to the white people, these Communists, in the early days of the war between England and Germany, and especially at the time of the nonaggression pact between Russia and Germany, encouraged their stooges among the Negroes all over this country to buy up all the firearms, pistol cartridges, shotgun shells, and other ammunition they could get their hands on. Here in Washington they even bought up all the ice picks at one time preparatory, evidently, to carrying out the Communist mandate for a revolution at the proper moment.

These Communists might as well understand it now: This Government is not going to be overthrown, and communism is not going to control America.

It is about time that men in public office stop coddling these Communists for political effect, and help us rid the country of this menace.

Here is a Negro who has struggled to make himself a place in the world among his own race, turning the sunlight onto just what the Communists have done, and are now doing, to the Negroes of this country.

It reads as follows:

To the EDITOR:

SIR: This continual arguing back and forth about the DAR is so childish it seems to me that the real cause of all the trouble should be put before the people. The Communists in this part of the country have caused so much trouble and disagreement between the races it is about time we got after them and chased them out of the country so that we can plan a peaceful future.

In the first place, the Communists have been working for years to cause not only trouble between the North and South, but to cause trouble between the races. The whole organization is based on deceit. They have spurred the Negro to demand things he sincerely does not want such as moving into white neighborhoods, demanding entrance into white institutions, even intermarriage.

This is not the Negro's idea of equal rights—that is, the intelligent Negro. I am a Negro with a college degree, and I most certainly want my race to have certain privileges, but being an intelligent person, I certainly don't approve of the Communist propaganda which has fired the Negro's demands for such privileges to the point where he may marry with the white man.

I came north from Tennessee 14 years ago. My mother worked for a white family and helped raise their children. They paid her a reasonable salary and gave her an ideal home. I worked on this country estate for several years before entering a Negro university. To this day, I correspond with the family, and only deep devotion remains even though my mother died several years ago and the entire family—the white family for which she worked—attended her funeral and wept for her.

Is there any such devotion in the East between the white man and his Negro help? There is not. Communism has destroyed all that is fine in these relationships. However, I would never even consider dining at the table with this fine white family, or even entering their church, for I would much rather be with my own people in a place exclusively for them. The Communist has done his best to try to make the less intelligent Negro think differently. He has encouraged him to demand entrance to white hotels, organizations, and I was told of a case where Negro girls entered a white beauty parlor demanding service. This makes me ashamed of my race, and no Negro with any intelligence would consider such things or be so impressed with Communist propaganda that he would be led to such actions.

If we, as a race, are given good living conditions, a chance to make a decent living, and an opportunity to have our own clean hotels, hospitals with our own Negro staffs and nurses, our own churches and schools where our own teachers might teach, then and then only will we lick communism. Some of my dearest friends in the South are among white people, and I do not expect any Communist-contaminated Negro or white in the North to understand this relationship.

I have no enemies among the white men, and I have no desire to enter his institutions—hospitals, schools, and so forth—but when that i the only decent place for me to go, what am I to do? There should be money to finance a Negro hospital with a Negro staff, especially where the number of Negroes in that city warrants an institution of their own. My children would be much happier in a school where only Negro children attended, and where only Negro teachers taught. That is all we ask.

CHARLIE LEE WHITE.

JERSEY CITY.

## A Scolding President

EXTENSION OF REMARKS
OF
**HON. CLARE E. HOFFMAN**
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 5, 1945*

Mr. HOFFMAN. Mr. Speaker, whether the President was irritated because his fishing trips and pleasure jaunts were interrupted by the necessity of recognizing the danger to reconversion and full employment caused by the strikes pulled by his political ally, the CIO, we do not know. But we do know the Presidential-congressional honeymoon was rudely blasted when he heaved, not one, but several, wrenches at congressional committees.

Sidney Hillman and his Political Action Committee, responsible for his Vice Presidential nomination at Chicago, are demanding payment for their support. They insist the President jam through Congress legislation which would guarantee the payment of $25 per week for 26 weeks to all those who are unemployed

and who do not find suitable jobs. But a majority of the Ways and Means Committee refused to take orders from Sidney, though relayed through the President. So the President heaves a brickbat their way.

Sidney and the PAC also demand the enactment of the so-called full employment bill. The House Expenditures Committee has been holding hearings on the bill, but, while now charging delay, the administration did not send up its big shots in support of the bill until this week when Reconversion Director Snyder, Secretary of Commerce Wallace, and Secretary of the Treasury Vinson appeared on the scene.

Nevertheless, the President, perhaps prodded by Sidney, exploded and accused both committees of holding up reconversion. There is no more foundation for that statement than for the one that the Yanks were mistreating the Jews in Germany or the one that the American people were to blame for the disaster at Pearl Harbor.

Although the bill states that its purpose is to give all Americans an opportunity for full, regular, useful, remunerative employment, either by aiding private enterprise or by providing Federal jobs through the expenditure of Federal money, behind it all is deficit spending and statism or a socialistic state—government regimentation.

The automobile industry, the steel industry, corporations making radios, refrigerators, washing machines, and a hundred or more other items, are ready now to go into full production, if strikes end and agencies of the administration lay off. Big business may be able to survive the attacks of the administration's agencies, the demands of some unions, but little businesses are finding it extremely difficult, if not impossible. The result, if the President does not change his policy, will be that ultimately we shall have more and bigger monopolistic corporations; little business will fade out of the picture, and a titanic battle between industry and labor, with unemployment, will follow.

That the bill will not afford equality of opportunity to all unemployed Americans is evident when we remember that, under Federal law and the Administration agencies, no man can work on a Federal job unless he joins a union and continues to pay the dues and special assessments levied upon him. This week a veteran with a record of 5 years' service reenlisted because he would not pay the $50 demanded by the union as an initiation fee before he could work.

There is neither legal nor moral justification for the practice of labor politicians and Mr. Truman's administration which, by law, takes from the taxpayer his dollar, uses it to create a Federal job for the unemployed, and then denies to him, because he does not join a union, the opportunity to work at that job. I called upon Mr. Snyder, Mr. Wallace, and Mr. Vinson, when they appeared before our committee, to justify that practice, and each and all dodged the issue, refused to give a direct answer.

Under the administration practices which now prevail, the bill, if enacted into law in its present form, would deny to more than 50 percent of our workers who might be unemployed the opportunity to work on a job created by their money. To that doctrine I will not subscribe and the President can blow his top off as often as he wishes.

## Accomplishments of FSA in Richland County, Wis.

EXTENSION OF REMARKS
OF
## HON. WILLIAM H. STEVENSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 5, 1945*

Mr. STEVENSON. Mr. Speaker, I have just had a report from the acting FSA supervisor of Richland County, Wis., outlining some of their accomplishments during 1945. The work of the FSA office in Richland County since July 1944 has been carried on by two women, Edna H. Puttkammer, acting supervisor, and her assistant, Eleanor Nelson, while their supervisor has been serving his country in the Navy.

According to this report Richland County was high in its district in making new loans; high in supplemental loans, and near the top in collections. Their case load changes every year; old borrowers pay up their loans in full, and new borrowers are added.

A fact that speaks very high for the work done by FSA is that many borrowers now feel free to go to the FSA office for financial guidance and other agricultural guidance, even though they have paid their loans in full.

The report expresses gratitude to Members of Congress who made the FSA possible, and to Administrator Frank Hancock for the fine progress made by Farm Security since he took over its administration.

One of the finest tributes to the work accomplished by FSA for the people is found in the report of the acting supervisor, Mrs. Puttkammer, when she says:

I am now beginning to get applications from boys and girls who have been reared in homes under the influence of Farm Security. As they come in, I am more convinced than ever that this program, properly administered, can be one of the most outstanding factors in keeping America free, as her children are reared in homes free from hunger, cold, and disease, and are free from any other form of direct relief. I am sure I bring to you the deepest gratitude of the 150 families which now comprise the Richland County farm security family. We are grateful for your continued support of our program and for all of the things you have done or can do to aid Farm Security in helping more families.

Mr. Speaker, I am including in these remarks a few paragraphs from the report of the acting supervisor of Richland County, which pictures very clearly the good work done by the Farm Security Administration in my district:

XII. HEALTH

The largest amount of time spent on any one phase of home supervisory work has been spent on health. As each plan is developed, we have discussed the need for medical care (both new and supplemental loans). If there seemed to be a need for something and money was not available, this was included in the loan. When an emergency comes up, we have released income to take care of the problem. In two cases we have asked for county help.

One case was a little girl who seemed to be having increased "growing pains." Mother was not satisfied with doctor's diagnosis and child was finally taken to the State hospital where she was thoroughly checked. Rheumatic fever with gall-bladder complications was the diagnosis at the hospital. She is still in a convalescent home for rheumatic-fever patients, and her heart condition is improving.

XIII. FARM-OWNERSHIP PROGRAM

Our goal was three farms purchased, but we were able to buy only two before the funds were exhausted. Those two families are proud owners today. One is a young family with two small children. The energy and enthusiasm they have shown in their farm development this summer is great. They are remodeling an old barn, and the problems have been many, but they have not been discouraged. The crops are good, well tended, and harvested, yet every spare minute has been planned for in the remodeling of their farmstead. Logs have been cut, fences built or changed, new land brushed for additional pasture, the well has been cleaned out, and a cow tank made of concrete has been built, besides other jobs which come in routine farm operation.

The other family, an older one, had rented on one farm for 11 years. They had always had a desire to own land but had never seemed to get far enough ahead to make the down payment. After hearing about the TP program, they made application. It was with caution that they considered this method of ownership because it sounded so impossible. They are making progress in their building program and at the present time are extremely conscious of the run-down appearance of their farm compared to the farmsteads which are owned by older families and well improved.

We have made 24 tenant-purchase loans and so far every one seems satisfied with the farm they have purchased. Eighteen of these borrowers are paid ahead of schedule, 2 are paid to date, and 4 have paid in full through income. There are no delinquencies.

Total amount loaned to date for FO farms, $158,970; amount due as of April 10, 1945, $19,928.62; amount paid as of April 10, 1945, $49,663.25.

At the present time we have 13 applications on hand but no funds to make loans. The price limit is making this program move rather slowly in our county as the better farms are worth more money in normal times than our allotment is at the present time.

The program is well recommended by those folks operating under the set-up. Applicants frequently mention the name of present borrowers as recommending this method for purchase. There is no better advertisement for any product or program than a satisfied user.

One of the most outstanding cases in the county is a family where the father is 60 years of age and the mother is 55. Years ago they purchased a farm. Later it needed some repairs and they mortgaged what they thought to be only the livestock to buy the lumber for the barn. When the note came due they discovered it covered the farm and livestock. The man and his wife were Norwegian immigrants and unused to legal documents. The lady who held the mortgage

(through a bank) felt sorry for them and allowed them to remain on the farm and receive one-half of the income for a number of years. In 1944 she died and the estate had to be settled. The family could not raise the funds so their cheese-maker asked them if they had contacted the Federal land bank. They tried that source and failed. Then the Lutheran minister asked them to see the farm-security supervisor and they came to us. We were able to make the chattel loan and found local credit to carry the farm loan.

Another case is the R family. Five years ago they made application for an RR loan. The family were a thoroughly good family. After visiting the home and giving them the routine investigation, the loan was made.

This farm of 243 acres kept them busy every minute. The older boy was fond of the farm and the father was most interested. This farm offered a diversified crop venture, a few beef cattle, sheep, 24 dairy cows, and 4 brood sows. The buildings were better than average and the land belonged to the State annuity board and they had kept the land well fertilized and farmed by soil-conservation methods. Their landlord rented the farm cash rent, then put one-half the cattle on, and subleased the farm, so it was a share-rent unit for them. After renting for 3 years in this manner, Mr. K., the landlord, decided he would like to invest his money in something different. The family were faced with a new problem—moving or buying out Mr. K.

Finally, after serious thought and much discussion, the family decided they could carry on by themselves. By careful planning they were able to salvage enough cows to continue on, letting Mr. K. take the young stock, most of the beef cattle (keeping only a few heifers for foundation stock), and the sheep. Then Mr. R. borrowed additional money from FSA for the pieces of machinery which were necessary.

Mrs. R. says, "It was a sacrifice on all our parts, the children, too, since, because of a lack of funds, they could do only a limited few of the things high-school students do." After 2 years at the county normal, the daughter went on to Platteville State Teachers College, taught 2 years, and is now in the University of Wisconsin studying to be a home-economics teacher. Two of the boys are in service—one serving overseas as a marine and one in the Navy.

This year they purchased the farm from the annuity board. I wish I might be able to picture the joy of ownership which comes to this entire family.

To me, America's greatest crop is still her children. If in our county, typical of the many counties in the Nation, we can keep the younger generation of low-income families from knowing what it means to be reared in homes where members are forced to seek aid from any relief agency, then anything we may have done or can do will not be wasted.

EDNA H. PUTTKAMMER,
*Acting FSA Supervisor.*

---

## It Is Time for President Truman To Act

EXTENSION OF REMARKS
OF
## HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

*Monday, November 5, 1945*

Mr. MURRAY of Wisconsin. Mr. Speaker, the commentators friendly to the present administration are becoming more and more critical of the manner in which demobilization is being conducted. The proadministration columnists are also becoming more and more insistent that the demobilization be speeded up. Evidently President Truman is as much Commander in Chief as he ever was, and since none of his wartime powers have been given up, there surely is not any reason why he cannot issue a directive to speed the demobilization by utilizing ships now in the harbors of the United States to bring the veterans home by Christmas. I find the following in the National Whirligig Column in one of the Wisconsin papers:

Senator ALBEN W. BARKLEY and Representative JOHN W. MCCORMACK, Democratic leaders on Capitol Hill, do not worry over the shafts of criticism shot by the GOP. Secretly they declare that their partisan foes are using up their ammunition before the campaign really starts. By the time election rolls around they expect verbal blasts against strikes and OPA to sound stale. The more pressure Republican Congressmen exert on the military to speed up demobilization, the sooner that troublesome subject will be settled.

It had not occurred to me that demobilization was a partisan question, but if it is, no doubt the Republicans have at least made a worth-while effort to get the boys back home.

If this or any other administration thinks the American people care to see the military take over; have hundreds of idle ships that are not being used; have space provided for shipment of horses instead of veterans, they are deceiving themselves and not the people.

The following article is from the Sunday, November 4, 1945, Washington Times-Herald:

VETERANS' AFFAIRS

(By Lt. Comdr. Tyrrell Krum, USNR, retired)

It is now almost 6 months since the guns of war were silenced in Europe. And yet, we still have more than 2,000,000 good American lads who won that war sweating it out over there awaiting their return to home and civilian life.

The War Department has just released a glowing report showing that 2,225,000 soldiers were released from the Army between May 12 and October 26. These figures, of course, include men from all theaters of war as well as many whose service was entirely in this country.

Which means that some 4,000,000 soldiers are still to doff their uniforms between now and next July, the target date when demobilization will be completed.

Just what is the reason for the snail's pace at which men are being returned home? The public would like to know. Congress would like to know. And above all else, so would the Army families and the soldiers, themselves, like to know the answer.

Ask the War Department and they'll tell you blandly that everything possible is being done to bring the boys home. But, they add quickly, if there is delay it is due entirely to the lack of shipping space. A matter of transportation, entirely.

All of which brings up the big question: "What's happened to our huge merchant fleet?" The Liberty and Victory ships that cost such an astonishing amount of money and about which such great boasts were being made by high officials in the Maritime Commission before the war ended.

At war's end the United States had some 5,000 merchant ships. Of course, they were built primarily to haul cargo to all parts of the world, a task which we all admit is still important if we are to feed and supply our men overseas. But there is certainly no reason remaining why they should haul anything else. They don't need tanks, guns, and airplanes at the fronts any more.

Supposing we had converted right after VE-day only 600 of the merchant ships we built during the war into troop carriers, or roughly 10 percent of the available total, and each ship made only one trip per month carrying troops, we could have hauled every soldier in Europe back here by this time.

The biggest ships afloat—Britain's *Queen Mary* and *Queen Elizabeth* and *Aquitania*—used to arrive regularly every 2 weeks with as many as 15,000 soldiers comfortably berthed below. In fact, the two Queens and the *Aquitania* did the lion's share of the job so far.

Admittedly, one Queen and the *Aquitania* have been withdrawn. But there has been added the *Europa*, which we grabbed from the Germans. Which still leaves us two big liners to add to the *West Point* and *Monticello*, which we always have been using.

It just don't make sense for the Army to blame the whole thing on a lack of shipping space and still not do anything to try and remedy the situation by converting cargo ships into troop carriers.

The high command would probably say that a cargo ship is no place for a returning hero to come home from the wars. But ask the hero himself and see what he says. I've talked to a lot of them returning home. They would gladly have shipped in a rowboat, if it would have gotten them home sooner.

To repeat: "What's happened to our merchant fleet?"

Some faint glimming of an answer was seen the other day in a picture that appeared in a national magazine of five good new ships lying idle in a southern port. Are they and hundreds like them to be left rusting at their moorings while millions of good American citizens are literally going to pieces in foreign lands?

Lack of shipping space is not the only reason the Army will give you for the breakdown in the return of our victorious Army. They blame it on longshoremen's strikes, on storms at sea, and on bottlenecks that have been built up in American separation centers.

The last reason is actually laughable. There was a time when men were delayed at separation centers.

But these activities have been geared so that men are passing through on a virtual conveyor-belt system. Right over at Fort Meade, more than 1,600 men are being turned out as civilians every working day.

And if more evidence is needed that the hold-up is not on this side, you have only to read the announcement by the Army Air Forces lowering its critical score to 50 points a month ahead of schedule. The AAF admits it had run out of men on this side to be released and is begging Army Transportation Corps to bring back more men to process.

And finally, why does the Navy have to step in the try to solve the problem? One of the great heroes of this war was the carrier *Enterprise*. Instead of gaining the rest to which it is so deserving, the *Big E* is being converted, along with several other carriers, into troop ships to bring soldiers home from Europe.

Mr. Speaker, the time has come for President Truman to issue a directive the same as he did for the boys being allowed to finish high school. This is the only language the brass hats seem to under-

stand. If he does not, his administration can receive all the criticism on this subject it deserves.

## Postwar Organization of the Armed Forces

EXTENSION OF REMARKS
OF
**HON. HOMER D. ANGELL**
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 5, 1945*

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Oregonian of October 30, 1945:

MR. EBERSTADT'S REPORT

Ferdinand Eberstadt, appointed by Secretary of the Navy Forrestal to report on the best postwar organization of the armed services, has recommended against unification of the Army and Navy. And whether or not the decision is with him or against him, he has done a brilliant job of analysis and in two particulars especially he has brought out points which have been stuffed over and which badly need emphasis.

First, he reminds us that unification where it has been tried has "accomplished the subordination of civilian to military life." (In our blunt way of thinking, that means it is a preparation for fascism.)

Second, he asserts, and proves at great length and conclusively, that the grave lack of coordination which developed during the war was no more a phenomenon of the relationship between the services than a phenomenon of the relationship between the services and the civilian organization.

Consequently he does not see the answer in unification of the Army and Navy. He would keep the War and Navy Departments in Cabinet status. He also would add a Secretary for the Air Forces out of the logic of the atomic bomb and the separate striking power of that branch. He wants the Joint Chiefs of Staff retained, along with a National Security Council, a Resources Board, a Munitions Board, and a Sciene Board. Mr. Eberstadt lets us know that in logistics even more than in actual military operations, the services and the civilian population were out of step. Vast surpluses were piled up in some places, and serious shortages developed in others. His concern is with a smooth flow over all, if we have to go through it again. And he doesn't think this can be achieved by merger of the Army and Navy.

When the matter comes down to its final test in Congress, these two points certainly will have far more weight than they have had up to the present. There is something about the proposal for a single department which makes the average democratic American distrustful. Unquestionably it would make seizure easier, if we ever should come to that. And meanwhile, as Mr. Eberstadt has brought out, there can be no argument over his conclusion that coordination of the services with civilian production and civilian life is quite as essential as coordination between the services themselves.

It is the turn now of the advocates of unification to reassure us as to the dangers of unification and also to reassure us as to the superiority of their program so fas as logistics are total mobilization is concerned. One thing is clear: That in the future there must be a better working arrangement between the services and the public. We are afraid the stock piles are going to prove appalling when the curtain is raised.

## Return of Pacific Veterans

REMARKS
OF
**HON. EARL WILSON**
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 5, 1945*

Mr. WILSON. Mr. Speaker, the following is a letter which I have received from some 40 stranded and homesick boys on Luzon Island, all of whom have many more than a sufficient number of points making them eligible for discharge. I want to select for emphasis one or two remarks from the letter:

The duty of returning the Pacific veterans to the homeland has obviously been bungled * * * there should be an immediate and thorough congressional investigation of the current situation.

Mr. Speaker, with these statements I wholeheartedly concur. It is nothing short of alarming to read of strikes by our longshoremen, of Navy Day shows consisting of the display of hundreds of ships, of the return of seized ships to their original owners, of the sale of merchant ships and of the hundreds of idle ships, all of which could be used to return hundreds of thousands of high-point boys to their homeland. Mr. Speaker, if this administration and some Members of Congress were half as anxious to get these boys back to their homeland as they were to get them sent across, many more boys would be home now than there are, instead of sitting in some of these godless, outlying spots all over the world.

It is the responsibility of this administration to get these boys home; and I join the signers of the letter which I am including in my remarks in their accusations, for they are 100-percent right:

TWENTY-FIRST EVACUATION HOSPITAL,
*Manila, Luzon, P. I., October 24, 1945.*
Hon. EARL WILSON,
*Representative from Indiana,*
*Washington, D. C.*

DEAR SIR: This is a letter from a group of GI's hailing from Indiana who are now, and have been for over 2 years, in the Pacific. We are plain fellows calling upon the Congressmen of Indiana to help us get something we have all fully earned.

Every man who has signed his name below has more than 67 points, 27 months overseas, 17 months' service in combat zones, and 3 years in the Army. Each man has turned in an unblemished service record, and all of them have accomplished their duties in a commendable manner.

The object of this letter is to lay our case before you in a hope that by doing so you will be moved to aid us, and by doing it for us you will be doing it for all the veterans in the Pacific theater.

In order to best present the problem, we have enclosed letters written by other soldiers in this sector and addressed to the Daily Pacifican, the principal Army newspaper in Manila. The thoughts that they express are held by 99 percent of the troops here.

The duty of returning the Pacific veterans to the homeland has obviously been bungled. Whether this was because of incompetency in method, policy, machinery, or individuals, we, in our lowly positions, are unable to ascertain. But since thousands of us hold the same opinion, it is without logic that we are wrong.

These letters are typical, and were not chosen for their excellence, nor close proximity to our own convictions. They reflect admirably the basic opinions of the soldiers in the Pacific.

Deep in their minds is another thought: "There should be an immediate and thorough congressional investigation of the current situation."

The greatest issue in our lives at the present moment is our getting back to the States and rejoining our families. This is such an all-important factor, measured in the human element, that we can not begin to impress you with its magnitude.

Yes; we are dreaming of a white Christmas, but we are doing it with a grimness that can be done only by men who have suffered violations of a great trust. We have accomplished our mission. America's war is won. Now it is principally your mission to get the American fighters home.

We will be indebted to you gentlemen in Congress for all of our lives, if you will only take up the banner where we must leave it. Get us home, please.

(A copy of this letter has been sent to all Indiana Congressmen.)

## Universal Military Training

EXTENSION OF REMARKS
OF
**HON. COMPTON I. WHITE**
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, October 16, 1945*

Mr. WHITE. Mr. Speaker, of the many issues under the consideration of our Government and the Congress, the proposal to establish universal peacetime military training is a serious threat to the freedom of the American people and our form of government.

Starting from a small beginning, surrounded on every side by potential enemies with a foothold in this country, in Canada on the north, in the Louisiana Territory on the west, and in Florida on the south, the plan that provided an army and navy for our defense and protection in those perilous times and which was given us by the founders of this country, has made this Nation preeminent among world powers. Now, after winning the war which extended to every quarter of the globe, with all but our allied nations defeated and helpless for generations to come, we are told we must sacrifice the best years of the education of our youth to adopt the same plan of compulsory military training which was followed by the heretofore strongest military powers in Europe—Germany and France—a plan that saved neither country in the holocaust of war which has just swept over the world.

In this conflict we fought for peace and justice. Now that we have peace let us direct our efforts to achieving amity and fair dealings among all the people of the earth and establishment of a just and enduring peace. The principles of the issue of peacetime military training we are called upon to deal with are ably presented in the following article by Joy E. Morgan, editor, Journal of the National Education Association, to which I fully subscribe:

To the EDITOR OF THE STAR:

Lowell Mellett's comparison in the Star of peacetime conscription with required attendance at school, calls for further consideration. He has performed a service in his admirable column by bringing this issue into the open. Let us make a comparison.

First, take required attendance at school. It applies to young children, not to men at 18 or over who are face to face with getting established in life. School attendance does not take the child out of his home, away from his parents, and away from his community and local church. The school requirement does not insist that the child attend any particular school—he may go to a Catholic school or a Lutheran school or any kind of private school which meets reasonable standards. Whatever school he attends is in charge of persons responsible to the community. Education is guided growth. It does not seek to force the child, but in cooperation with the home and local church and neighborhood to build his natural endowment into the finest possible well-rounded character. The common free school, more than any other institution is close to the people, responsible and responsive to their wishes, and devoted to the ideals of the golden rule and the brotherhood of man.

HIS VIEW OF CONSCRIPTION

Second, take conscription. It proposes to go into every home, community, church and school and by force to take from those homes and communities their mature young men, to put them under military law, in charge of officers not selected by the community and not responsible to it. It proposes to put these young men in charge of an Army hierarchy whose whole outlook, training, experience, and faith are associated with the use of force and the conviction that force and only force can maintain peace. It is proposed to give these young men a training in the art of killing, which in many cases will destroy the very finest elements of their manhood. It proposes to give them training in "citizenship" Army style, which by its very nature is totalitarian and medieval. Every young man is to be exposed to a life which as any one familiar with such life knows multiplies drinking, gambling, and prostitution.

In a nutshell the fundamental difference between educational philosophy and military philosophy is this: Education asks, What is right? What is best? and allows wide freedom. The military asks, Who's boss? and Who's strongest? One builds democracy, the other destroys it and always will. The day the United States adopts conscription, if it should do so, which I do not believe it will, would mark the beginning of the end of American democracy and would be a black day in the life of humanity everywhere. Conscription would be a constant threat to our personal rights, political liberties, and representative institutions.

SEES NO NEED TO HURRY

This is not a matter that needs to be decided hurriedly. We can afford to wait until the shape of things to come is clearer; until the United Nations Organization is in operation and we can know our obligations under it; until a sincere effort can be made under Representative MARTIN'S bill for a world conference on the limitation of armaments; until plans can be evolved for whatever peacetime program is needed in a form that will not destroy our democracy and produce riots and rebellion, and until the issues can be thoroughly discussed and considered in at least one congressional election.

Nothing could be more foolish than to try to rush this issue through Congress before Christmas to avoid the next election. The issue should go over into the next congressional election and it will go over unless its proponents drop it. Even the passage of conscription by Congress would not prevent that, but would merely make certain that the question would be an issue in every congressional election until it was repealed. Members of Congress know this. They know that the people will hold them accountable and will not forget. The people will not forget because they will be reminded year after year as families are broken up, men taken from farm, office, store, and community when most needed. They will be reminded when their sons who wish to go to college and to prepare for the professions are delayed in their careers. The people will not stand for conscription in the form in which the Army hierarchy is trying to ram it down their throats by methods which reveal all too well how much respect many Army men have for the democratic processes. We are all proud of the part our Army leaders have played in winning the war; we shall have to look to civilians to win the peace.

JOY E. MORGAN,
*Editor, Journal of the National Education Association.*

## Bobtailed Program

EXTENSION OF REMARKS
OF
### HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 5, 1945*

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Oregonian of October 29, 1945:

BOBTAILED PROGRAM

President Truman gave the finest talk we ever have heard from a man deeply and righteously determined and yet much confused.

His program, reduced to the bare bones, is for the United States to maintain its land, sea and air forces at whatever the cost, demanding that the world accept this armament on our part because of our superior moral position—our denial of any desire for additional territorial possessions except those required for defense. He asserts, without enlightening us further, that those persons are 100-percent wrong who think the atomic bomb may have made the traditional services out of date.

And yet he goes on to state that the problems of the atomic bomb are so urgent that they cannot wait upon the machinery of the United Nations. There must be action promptly. But in the process of that action the United States will give away none of its secrets of manufacture.

If this isn't a bewildering outline, we never have encountered one. Not one single solitary concession is proposed by the United States. We are to have universal military training; we are to maintain the naval ascendancy achieved during the war; we are to do the same with regard to our air forces; we are to hug and nurse, and exclude from the rest of the world, the manufacturing details in regard to the atomic bomb. We are to sit around the green-topped conference table with the nations of the world, preserving and hiding every advantage which we have gained and refusing to divulge anything. All we put into the pot is our moral position—our assertion, embodied in Mr. Truman's several points, to the effect that the United States want nothing except a few naval bases guarding the approaches to the western continents.

The Oregonian feels that the President's address has high value, in that it is notification that the administration has backbone and will not be pushed around by Russia or anyone else; that it has uncompromising moral ideals. But we see little in it pointing toward a permanent solution of the problems in which we find ourselves involved, and there is no answer, except the President's unsupported testimony, to the question of whether the atomic bomb will alter the time-worn practices of force.

After all, our President has a touch of both the questionable and the admirable qualities of the Missouri mule. And one cannot ignore the dramatic setting in which he gave his widely advertised Navy Day address—with a million people gathered in Central Park and its environs, and with many of the proudest of the Navy's ships at the adjacent Hudson River docks. Since this came at the close of the world's worst war—a war in which our armed forces played so magnificent a part—one would anticipate that his address would tend toward national pride and toward support of those implements of war which, in reality, had won the war before the introduction of the strange new power—the atomic bomb.

And that is exactly what came to pass. Mr. Truman made a magnificent address in a magnificent setting in support of the Army, Navy, and Air Forces, and in support of the American view that America's possession of these must be accepted by the world because America is right at heart. Meanwhile, he gave our minds little to feed upon in connection with the atomic age which broke upon us at the close of the war. In fact, his tone was disrespectful of that age, and so in conflict with the scientists and with the dreadful record of Hiroshim and Nagaski. Thus, as a nation, we emerge from his talk swelling our chest as to what has been done during the war, and assertive as to our position in the future, but still not knowing the true meaning of atomic power and without any real glimmering as to a peaceful world.

It was a stirring address under stirring circumstances, with the best dramatics of the world's greatest city as a background, and a triumphant Navy at the docks. But we are troubled. The President said it would be the duty of the Navy to guard the approaches to America. Many of the scientists believe a specially constructed submarine, with a special bomb, could rise at night off this same city, and discharge a bomb which would destroy it. The President was a Missourian in this particular. He resorted to pride in our present victory, and ignored the true problem.

## Wages, Prices, and Profits

EXTENSION OF REMARKS
OF
### HON. FRANK E. HOOK
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 5, 1945*

Mr. HOOK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

"Wages, prices, and profits are today the Nation's No. 1 problem," Walter P. Reuther, vice president of UAW-CIO and General Motors department director, said today, declaring that "325,000 General Motors workers who are members of the UAW-CIO will fight against increases in car prices just as hard as we are determined to fight for the 30-percent increase in wage rates which unanswerable economic facts prove General Motors is well able to pay without increasing car prices one cent.

"In doing so, we are supporting President Truman's policy that wages can and must be increased without increasing prices if we are to avert a disastrous shrinkage of purchasing power that would throw all of us, wage-earners, farmers and business, into an economic tailspin. Everything the President said on this point is conspicuously true of the highly profitable automobile industry and particularly of General Motors Corp., always a record profit maker in that industry.

"The Bureau of Foreign and Domestic Commerce study released yesterday by Secretary Wallace supports and documents, for the automobile industry, the OWMR report which found that industry can increase wages by an average of 24 percent without increasing prices.

"When, as I will show later, the Commerce Department study is adjusted to bring it up to date, in terms of actual 1945–46 production figures, wage rates actually being paid, etc., it shows that the automobile industry generally, and conspicuously General Motors can now pay even more than the 30-percent increase in wage rates needed to make up for the loss in take-home pay caused by reduction of the wartime workweek to the normal workweek of 40 hours.

"The automobile industry is maneuvering and pressuring OPA in an effort to secure unwarranted and unnecessary price increases by feeding its own self-serving costs figures, including materials, parts, and wages into a so-called reconversion price formula which ignores the accelerating economies of the volume of production that in 1946 will rise 50 percent and more above 1941. This formula adds to the 1942 car price the following:

"1. Increase in material and parts costs since 1941.

"2. The increase in labor cost as measured simply by increase in wage rates (ignoring decreases in real labor costs resulting from improved technology and productivity).

"3. Except that the margin of profit permitted is not higher than that earned in the base period years 1936-39.

"If the economic fifth columnists succeed in translating industry's pressures into regulations boosting car-price ceilings in violation of the President hold-the-price-line policy and in defiance of the economic facts of the industry, such increases will be a betrayal of the interests of American consumers and the Nation's efforts to achieve a peacetime economy of full production and full employment.

"We refuse to believe that President Truman and Administrator Bowles will permit the industry's high-pressure boys, inside and outside OPA, to get away with this bold raid on a car-hungry consuming public. If they do, they will have put short-run profits ahead of long-run welfare of the industry and the public interest.

"We prefer to hope that the President and Mr. Bowles will break up this game in the back room, this cozy practice whereby automobile producers furnish their own figures on their own costs to prove their own contentions that prices must be raised and the public servants thereupon apply a cockeyed formula to stack a deck of marked cards.

"Because the Nation's whole economic future is at stake in our price policy during reconversion, we believe that Mr. Bowles, the President, or Congress must reconsider and change the policy of secrecy restated in Mr. Bowles' letter addressed to me, which I received today:

" 'As I understand it, your position is that facts and allegation of facts be opened to public examination exactly as are the facts which you are setting forth in support of your demand for a 30-percent increase. However, this office, as an agency of the Government, cannot make public confidential data filed with it, and I am, in fact, prohibited by law from doing so.'

"The relationship of wages, prices, and profits determines the health of our economy. They cannot be rigged in secret by selfish groups at the expense of the public interest. We renew our demand that all the facts be brought out in public, that the cards—all the cards—be put out on the table in public hearings when they can be examined and tested not only by the agency officials but also by other parties in interest, labor and consumers.

"If the policy of public prices secretly arrived at is allowed to continue and if price increases, wholly unjustified by the incontrovertible economic facts, are put into effect, the 325,000 General Motors workers, represented by the UAW-CIO, will fight those price increases just as hard as we are now determined to fight for a 30-percent increase in wage rates.

"The public welfare requires that these basic economic facts be gotten out of the locked vaults of the corporation so that the public can know the truth.

"Collective bargaining will not succeed until and unless these facts are public property. It is the Government's responsibility to get these facts and put them in the hands of the people.

"In the event that OPA orders increased ceiling prices on cars above the 1942 level, as reported in today's press, we will then take the first step toward an injunction against OPA setting aside and enjoining the OPA order by filing immediately on behalf of the General Motors workers and all consumers and protesting with the Administrator as provided in the Emergency Control Act, and we will demand a showing of the economic facts upon which the CPA order is based—a showing to which the protestant is entitled under the law, in the event the Administrator denies this protest."

Reuther quoted section I (a) of the act which states as its purpose "To protect persons with relatively fixed and limited incomes, consumers, wage earners, investors, and persons depending on life insurance, annuities and bonuses."

Tuesday night the President, Reuther added, told the Nation why the price line must be held—"White-collar workers would find that their fixed salaries buy less food and clothing than before. Farmers' incomes would shrink because they would have to pay so much more for what they buy. Therefore wherever price increases would have inflationary tendencies, we must above all else hold the line on prices."

Reuther included in his statement an analysis of the Wallace report on the auto industry in which he said:

"The Bureau of Foreign and Domestic Commerce report released by Secretary of Commerce Henry A. Wallace fully supports the UAW-CIO contention that General Motors can maintain 1942 prices, increase wages 30 percent and do it now. The Commerce Department report was written last spring, before the end of the war, and its assumptions on volume of auto production were based on the expectation that the war would continue into 1946.

"The Commerce Department report assumes that 1946 car production will be 15 percent below 1941 production and that we shall not reach high volume production until 1947. The early end of the war makes these assumptions of the Commerce Department report out-of-date, since figures already announced by spokesmen of the auto industry indicate that volume of car production will reach a level early in 1946 higher than the Commerce Department assumed would be reached in 1948.

"This increased volume of production, which will be reached early in 1946, is the key to the wage-price-profit problem. C. E. Wilson, president of General Motors Corp., stated at his recent Detroit press conference that General Motors would be producing at the level of 1,150,000 cars per year by December 1945 and that by March 1946 they will have achieved a level of 50 percent or more above the 1941 level of production.

"According to Wilson's figures, General Motors will in March 1946 be producing at a higher rate of production than the Department of Commerce reports assumed would be achieved by 1948. This high level of production, according to the Department of Commerce report, will permit the maintaining of 1942 prices, the earning of record profits, while paying the 25-percent wage increase on a base rate of $1.20 per hour. Since the current average wage rate is $1.12 per hour, the Commerce Department reports prove that General Motors could pay a 34-percent increase on this base rate and pay it now. The break-even point in General Motors after applying a 30-percent wage increase and 15-percent increase in material cost while maintaining 1942 prices will be at the production level of 1,100,000 cars per year. General Motors will exceed this production in December of this year.

"The Commerce Department report, brought up-to-date in accordance with actual and anticipated production scheduling, arrives at the same basic conclusion reached by our independent economic study and upon which we have based our 30-percent wage demand—with no price increase. Each day the economic facts from Government reports further prove the union demands reasonable and sound."

## Repeal the Pauper Oath

EXTENSION OF REMARKS

OF

## HON. VICTOR WICKERSHAM

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

*Monday, November 5, 1945*

Mr. WICKERSHAM. Mr. Speaker, in support of my bill H. R. 2417, I desire to present for your consideration, an article by Joseph Leib, service officer of Vincent B. Costello Post, No. 15, Inc., the American Legion, Washington, D. C., together with copy of P–10 Form, Legion resolution and copy of petition adopted by the national executive committee, which I will read:

DISTRICT OF COLUMBIA AMERICAN LEGION URGES ABOLITION OF VETERANS' PAUPER OATH

(By Joseph Leib)

In September 1944, Costello Post, the largest American Legion unit in Washington,

D. C., started a Nation-wide movement to bring about a much needed revision of the infamous pauper oath that presently appears on Form P–10—Application for hospital treatment or domiciliary care.

It is now gratifying to report that veterans groups throughout the Nation have since added their voices to the steady mounting chorus demanding the removal of this un-American and obnoxious oath.

This month the District of Columbia, Department of the American Legion, representing over 50 posts finally joined our ranks and it is with great pride that we welcome them among our supporters.

The Washington Legion adjutant has forwarded copy of the following petition to national headquarters for further action by the national convention to be held at Chicago, Ill., November 18–21, 1945. In this connection it may be well to point out that the national executive committee of the American Legion adopted a resolution submitted by the Illinois Department covering this matter which in turn was an exact reproduction of the original Costello Post resolution. This action came on July 28, 1945, while the committee met at Indianapolis, Ind.

To date there are seven bills in Congress to repeal this pauper oath. The Legion resolution, together with copy of P–10 Form and copy of petition adopted by the national executive committee, follow:

"OCTOBER 30, 1945.

"Whereas it is deemed that certain information requested on VA Form P–10 is unnecessary and whereas in replying to certain questions the applicant may subject himself to unwarranted criticisms and possible prosecution: Therefore be it

"*Resolved*, That the American Legion recommend a change on Form VA P–10, revised in May 1945, under question 4, as follows: 'Where application is for condition for which applicant was discharged for disability in line of duty, or held service-connected by Veterans' Administration questions 5 and 7 need not be answered; be it further

"*Resolved, in this connection*, That question 6, which reads 'Are you financially able to pay the necessary expenses of hospital or domiciliary care?' be entirely eliminated; be it further

"*Resolved*, That question 7 be changed to read 'Are you able to pay transportation to and from a Veterans' Administration facility without causing undue hardship.'

"HERBERT J. JACOBI,
*"Department Commander, the American Legion, District of Columbia."*

Veterans' Administration
Form P–10 Rev. May 1945

APPLICATION FOR HOSPITAL TREATMENT OR DOMICILIARY CARE

The applicant should forward this form, when fully executed, with the original or a certified copy of his discharge or release from last period of service, to the Veterans' Administration facility nearest his home, which is located at _____
(Location of facility)

1. I, _____ C-No. _____ Social Security No. _____ hereby apply for
(Print) (Last name) (First name) (Middle name)
admission to a Veterans' Administration facility for *(hospital treatment) (domiciliary care) _____
(Date of birth) (Color) (Sex)
_____
(Place of birth) (Present place of residence)

2. My entire service in the active military or naval service of the United States has been as follows:

| Enlisted | | Serial No. | Discharged | | Rank and organization | Character of discharge |
|---|---|---|---|---|---|---|
| Date | Place | | Date | Place | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |

NOTE.—If you served under a name other than the one used in this application, indicate the name under which you served and the period of service _____

3. Have you filed claim for pension, compensation, or retirement pay? _____
(Yes or no)
What office has your case file? _____
(Location)

4. Give the name and address of your wife, or nearest relative, or guardian, or other person to notify in event of emergency.
_____
(Name) (Relationship) (Address)

NOTE.—Where application is for condition for which applicant was discharged for disability in line of duty, or held service-connected by Veterans' Administration, questions 5, 6, and 7 need not be answered.

5. Are you entitled to hospital care by membership in a lodge, society, community group treatment plan, etc., or as a beneficiary of an insurance company, workmen's compensation commission, industrial accident board, etc.? _____ If "yes," give name of agency or organization _____
(Yes or no)

6. Are you financially able to pay the necessary expenses of hospital or domiciliary care? _____
(Yes or no)

7. Are you able to pay transportation to and from a Veterans' Administration facility? _____
(Yes or no)

8. Have you received hospital care from the Veterans' Administration? _____
(Yes or no)
If "Yes," state when _____ and where _____
(Give most recent dates) (Name of facility)

9. Have you received domiciliary care from the Veterans' Administration? _____
(Yes or no)
If "Yes," state when _____ and where _____
(Give most recent dates) (Name of home or hospital)

10. If discharged against medical advice, absence without official leave, for disciplinary reasons, or given an enforced furlough, underline applicable term.

I *{have read / have had read to me} and understand all questions and answers on this form, and the printed provisions on the reverse hereof.

The answers to all questions are true and complete to the best of my knowledge and belief. The foregoing questions and answers are made a part hereof with full knowledge of the penalty provided for making a false statement as to material fact in this application.

Witness to signature by mark (X)

1. _____ _____
(Signature) (Signature of applicant or representative)
_____ Post office address _____
(Address) (Number) (Street)

2. _____ _____
(Signature) (City) (Zone) (State)
_____
(Address)

Subscribed and sworn to before me this _____ day of _____, 19____, by _____, claimant, to whom the statements herein were fully made known and explained. I certify that the questions and answers thereto have, in my presence, been *{read to / read by} the claimant.

[SEAL] _____
*Notary Public.*

*Strike out inapplicable words or phrases.

[Reverse side]

PENAL PROVISIONS APPLICABLE TO TITLE I, PUBLIC, NO. 2, 73D CONG.

SECTION 15. Any person who shall knowingly make or cause to be made, or conspire, combine, aid or assist in, agree to, arrange for, or in anywise procure the making or presentation of a false or fraudulent affidavit, declaration certificate, statement, voucher, or paper, or writing purporting to be such, concerning any claim for benefits under this title shall forfeit all rights, claims, and benefits under this title, and, in addition to any and all other penalties imposed by law, shall be guilty of a misdemeanor, and upon conviction thereof shall be punished by a fine of not more than $1,000 or imprisonment for not more than 1 year, or both.

REDUCTION OF PENSION, COMPENSATION, OR EMERGENCY OFFICERS' RETIREMENT PAY WHILE RECEIVING HOSPITAL OR DOMICILIARY CARE

Where any disabled veteran having neither wife, child, nor dependent parent is being furnished hospital treatment, institutional or domiciliary care by the United States or any political subdivision thereof, the pension, compensation, or emergency officers' retirement pay shall not exceed $20 per month, provided that the amount payable for such disabled veteran entitled to pension under Part III, Veterans Regulation No. 1 (a), as amended, for non-service-connected disability shall not exceed $8 per month: *And provided further*, That where any disabled veteran who is being furnished hospital treatment, institutional or domiciliary care by the United States or any political subdivision thereof, has a wife, child or dependent parent the pension, compensation, or emergency officers' retirement pay may, in the discretion of the Administrator, be apportioned on behalf of such wife, child, or dependent parent, in accordance with instructions issued by the Administrator.

NOTE

This application is made with notice of Public Law No. 782 approved December 26, 1941 (38 U. S. Code 17–17i) which in effect provides that upon the death of any veteran receiving care or treatment by the Veterans' Administration in any institution leaving no widow (widower), next of kin or heir entitled to inherit, all personal property, including money or balances in bank, and all claims and choses in action, owned by such veteran, and not disposed of by will or otherwise, will become the property of the United States as trustee for the Post Fund.

MEDICAL CERTIFICATE

A careful physical (including mental) examination of the applicant discloses these findings and diagnosis:

(1) Brief history:

(2) Symptoms:

(3) Physical findings:

(4) Diagnosis:

(5) Strike out the clauses not applicable: The applicant (is) (is not) ambulant. He (is) (is not) mentally competent. He (will) (will not) need an attendant during his travel. The proposed attendant's name is ..... address .....
The attendant (is) (is not) a relative of the patient. It is proposed that travel to the hospital will be made by (train), (bus), (automobile).

(Date) (Signature of examining physician) (Street) (City) (Zone) (State)

RESOLUTION ADOPTED BY THE NATIONAL EXECUTIVE COMMITTEE OF THE AMERICAN LEGION, JULY 26–28, 1945

*Be it resolved*, That the existing and written method of interrogation for admission to veteran hospitalization, as non-service-connected patients or as service-connected patients seeking treatment for ailment other than cause of discharge—either emergency or extensive cases—is un-American, degrading and in addition clothed with the dubious but legal power of subjecting a veteran of the World Wars to the possibility of prosecution by arrogant and antagonistic Government bureaucrats.

Whereas the membership of the Department of Illinois, the American Legion, respectfully suggests that Veterans' Administration officials be requested to authorize and institute a more democratic and more appropriate procedure of ascertaining and determining the financial status of an applicant or his or her eligibility for hospital treatment; and

Whereas these pleadings are not submitted for the intention of removing proper or necessary restrictions and safeguards for hospital admittance but to eliminate the apprehension of being stigmatized in official records by a so-called act of pauperism, and to remove the contingency of being coerced or threatened by overzealous public officials: Therefore be it

*Resolved*, That the Department of Illinois, The American Legion, is authorized and directed to recommend for consideration the deletion of questions Nos. 5 and 9, respectively, from Veterans' Administration Form P–10, "Application for hospital treatment or domiciliary care," otherwise known as the pauper's oath.

## Compulsory Military Training

EXTENSION OF REMARKS
OF
### HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 5, 1945*

Mr. MILLER of Nebraska. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a resolution adopted by the Nebraska Conference of the Evangelical Church relative to compulsory military training.

Mr. Speaker, the President's program favoring compulsory military training during peacetime is meeting with a great deal of resistance in my district. The people are more concerned about getting their sons and daughters, husbands and wives home from the military than they are about inducting them for military training. The armed forces are now getting nearly 3,000 men a day by voluntary enlistment methods. The recruitment program is just starting. It would seem that sufficient men are now enlisting under this program to meet all the needs of the armed forces. If this is true, why the haste about compulsory military training? Should not this program wait until the boys and girls are home from the service?

The letter follows:

NATIONAL SERVICE COMMITTEE,
NEBRASKA CONFERENCE,
EVANGELICAL CHURCH,
*Culbertson, Nebr., October 31, 1945.*

The Honorable A. L. MILLER,
*The House of Representatives,*
*Washington, D. C.*

DEAR MR. MILLER: Following is a resolution passed by the ministers of our Nebraska conference of the Evangelical Church in which we express our opposition to peacetime compulsory military training:

"Whereas the President of the United States, Harry S. Truman, has expressed himself as favoring compulsory military training during peacetime; be it

"*Resolved*, That we, the ministers of the Nebraska conference of the Evangelical Church, now in session at Hastings, Nebr., hereby register our opposition to such peacetime compulsory military training, in that it is a hindrance in the promotion of world peace and security, and is undemocratic in that it is an infringement upon the personal educational, social, and economic rights of the citizens of our Nation, and that we ask our Representatives in Congress to oppose any legislation to put into effect any compulsory peacetime military training." (Enacted October 24, 1945, at Hastings, Nebr.)

Your most careful consideration in this matter will be much appreciated.

Most sincerely,

FRANK E. SCHROEDER,
*Secretary, National Service Committee.*

## Adjustment of Labor Disputes

EXTENSION OF REMARKS
OF
### HON. LESLIE C. ARENDS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 5, 1945*

Mr. ARENDS. Mr. Speaker, under leave to extend my remarks, I include therein a very splendid editorial from the New York Times under date of November 1, 1945:

ARBITRATING THE GOOSE AND THE GOLDEN EGG

(By Arthur Krock)

WASHINGTON, October 31.—The President's broadcast on labor disputes, accompanied by his revised wage adjustment formula, was devoted in great measure to a plea for the spirit of cooperation and mutual understanding between industry and its workers on which he said the success of any plan must depend. But this spirit has been notably absent in recent management-labor exchanges, and today few would venture to predict that the President's invocation, or the general agreement to the unexceptionable axioms he stated, will restore it.

The reception of the speech and the Executive order by persons close to both sides of the growing national controversy suggests the answer Hotspur made to Owen Glendower when the Welsh chieftain proclaimed he "could call spirits from the vasty deep." "Why, so can I, and so can any man," replied the young Percy, "but will they come when you do call for them?"

FIRST TEST SOON

The response of labor and management to the President's appeal for a more constructive attitude toward each other, a more common-sense appreciation of each other's problems and rightful expectations, will first be

tested in the conference that has been summoned for the early part of November. Already, however, labor is resisting the suggestion that it renew its no-strike pledge of wartime, even though that was broken on numerous occasions, as a material advance toward the halfway mark. And already management is drawing back from a commitment to collective bargaining which would be left to the interpretation of the political power, fearing the construction would be that such bargaining is not real unless demands are always met in substance.

Unless a broader formula than the President's, on which reasonable wage-and-hour negotiations can be reasonably conducted, is the outcome of the conference, and with the formula an enforced determination to abide by it, little hope was expressed here today by experts in industrial relations that Mr. Truman's speech and Executive order can be relied on to bring the issue nearer to peaceful solution. By these his plan was held to be inconsistent in part with his axioms and stated objectives, and they turned their eyes on the conference and Congress and the corrective legislation it is considering.

AN UNCOVERED SITUATION

One of the many advisers on whom the President relied for the patchwork of ideas that took form in his speech made two points about it to this correspondent today, one hopeful, the other not. Mr. Truman, he said, was planning as late as last Thursday to confine himself to a statement and an amended Executive order, but he was prevailed on to go to the country with a full-length speech in which he would stress the need of mutual understanding and recite the problems of each industrial group. But Mr. Truman failed to touch the situation of workers in industries that are continuing on the wartime basis of 48 hours a week, who, when they note that 40-hour workers are getting almost as much, will quit or strike and thus cut down the high productivity the President set as a national standard.

This disparity was implicit in certain passages of the broadcast, and Government boards could readily effect it in their findings. The President did say that wartime take-home pay could not as a general practice be expected by labor, now that the war is over. But he did not indicate in any way that those workers on 40-hour base pay should expect or accept reductions to the amount of 8 hours less earnings than those whose industries are proceeding on the 48-hour basis. Mr. Truman sanctioned the 40-hour week as a standard, but he did not explain how this could achieve the production he concedes to be a necessity.

A MIXED PATTERN

"It is pretty hard," said one informed critic, "to give birth to triplets—to preserve the authorities and positions of Chester Bowles, John Snyder, and the CIO at the same time."

Others noted that the President dealt with the excess-profits tax as a reservoir for wages, not as the temporary war measure it is but as a producer of funds to which the Government was entitled in wartime and therefore labor should be given in peace. Mr. Truman did not include the reserves which wise and successful management has laid by in industry as another reservoir from which to draw wage increases. But labor spokesmen have cited it as such, denying that this project amounts to socialism.

So many minds and pens joined and clashed in the preparation of the broadcast that its inconsistencies and omissions are not surprising. The analysts of such compositions are sure they recognized the plain tracks of Judge Rosenman, Robert Nathan, and other New Deal economists and literary amanuenses. But they are equally certain that in other passages they came on the footprints of Mr. Snyder, of Chester Bowles, and of Philip Murray. The latter were definitely missing in the place where the President might have fixed a percentage for wage increases and did not. But the tracks of Mr. Snyder and Mr. Bowles, though at times these suggested a scuffle ending in a draw, were heavy throughout the area of composition.

## The Atomic Bomb

EXTENSION OF REMARKS
OF
## HON. HELEN GAHAGAN DOUGLAS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 5, 1945*

Mrs. DOUGLAS of California. Mr. Speaker, I desire to bring to the attention of the Members of Congress the following letter and statement of principles which I have received from a distinguished group of Philadelphia scientists concerning the future policy of the Government of the United States with respect to the control of the atomic bomb and atomic energy. I am advised that in addition to the names which appear on the enclosed letter, 600 Philadelphia scientists have signed this statement of principles in the past few days.

The letter and statement of principles follow:

OCTOBER 23, 1945.

DEAR FELLOW SCIENTIST OF PHILADELPHIA: In view of the extreme importance of the atomic bomb and atomic energy to our own lives and probably to the existence of civilization, we are initiating this method of allowing Philadelphia scientists to endorse two statements. One was made by fellow scientists who worked on the bomb at Los Alamos Laboratory calling for a world authority to control the atomic bomb as a weapon. After this statement was issued the May-Johnson bill was introduced in Congress for domestic control of all aspects of atomic energy. This bill in our considered opinion stifles scientific research and individual scientists. Consequently we endorse also the statement of 500 Boston and New York scientists who protested the restrictive character of the bill.

As a scientist you should rally to the support of nuclear physicists because you also realize that science cannot flourish in such a contemplated environment of restriction, secrecy, and control. We again emphasize that this protest applies to the fundamental research aspects of atomic energy only and that we do not wish to encroach upon the technical details of atomic bombs over which there must be control.

We speak here as scientists in appreciating the significance of the destructive and constructive uses of atomic energy and in realizing the effects of rigid control on fundamental research. We speak as citizens in examining the courses of action open to us as Americans and in advocating control by a world-wide authority.

We therefore ask you, as we are asking many Philadelphia scientists, to sign this letter to President Truman and Congress and return it speedily to Dr. W. E. Stephens, physics department, University of Pennsylvania, Philadelphia, Pa.

In addition we strongly urge you to write personally to your own Congressman, Senators, and to President Truman. Your speedy action on these two requests is solicited.

Dr. W. E. Stephens, Assistant Professor of Physics, University of Pennsylvania; Dr. Park Hays Miller, Jr., Acting Head, Physics Department, University of Pennsylvania; Dr. Robert Hodes, Johnson Foundation University of Pennsylvania, President, Philadelphia Chapter of the American Association of Scientific Workers; Marion Bernheimer, Secretary, Regional Council, Federation of Architects, Engineers, Chemists, and Technicians, CIO; Dr. Loren Hurd, Jenkintown, Pa.; Dr. D. W. Wilson, Head, Department of Physiological Chemistry, University of Pennsylvania School of Medicine; Dr. Stuart Mudd, Head, Department of Bacteriology, University of Pennsylvania School of Medicine; Dr. Melvin C. Molstad, Professor of Chemical Engineering, University of Pennsylvania, Vice Chairman, Philadelphia Section, American Chemical Society; Dr. Richard M. Sutton, Head, Physics Department, Haverford College; Dr. George Morris Piersol, Professor of Physical Medicine, University of Pennsylvania School of Medicine; Dr. A. L. Patterson, Head, Department of Physics, Bryn Mawr College; Dr. L. V. Heilbrunn, Professor of Physiology, University of Pennsylvania; Dr. John A. Goff, Dean, Towne School of Engineering, University of Pennsylvania; Dr. Abraham Cantarow, Professor of Biochemistry, Jefferson Medical School; Dr. Otto F. Meyerhof, Research Professor of Physiological Chemistry, University of Pennsylvania School of Medicine; Mr. Morris L. Cooke, Consulting Engineer.

A STATEMENT OF PRINCIPLES BY SCIENTISTS OF PHILADELPHIA

*To President Harry S. Truman, the White House; to House and Senate Military Affairs Committee; to the Members of Congress, the Capitol Building, Washington, D. C.:*

In view of the extreme importance of the atomic bomb and atomic energy to our own lives and to the existence of civilization, we, the undersigned Philadelphia scientists, endorse the statement of our fellow scientists at the Los Alamos Laboratory when they said:

"President Truman, in his message to Congress on atomic power said, 'Never in history has society been confronted with a power so full of potential danger and at the same time so full of promise for the future of man and for the peace of the world.'

"The scientific background necessary to develop an atomic bomb is generally known throughout the world. The technical design and industrial methods of production are at present the secrets of this country, Great Britain, and Canada. However, it is certain that other countries can achieve these ends by independent research, before many years they also may be manufacturing bombs, bombs which may be tens, hundreds, or thousands of times more powerful than those which caused such devastation of Hiroshima and Nagasaki.

"This country, with its highly concentrated industrial centers is particularly vulnerable to such weapons. The fact that the atomic bomb represents such a concentrated form of destructive energy makes counter-measures against each of the large number of possible methods of delivery extremely difficult and uncertain. It is particularly difficult to develop counter measures that would provide a sufficiently large proportion of interceptions of high-speed missiles of the V-2 type such as recently described by General Marshall.

"The success of the best possible defense system would, in any event, require a continuous hour-by-hour alert. A single heavy attack, lasting a matter of minutes, might destroy the ability of a nation to defend itself further.

"One proposal is for this country to try to maintain its present position by producing more and bigger bombs than other countries. Merely having more bombs than others is not decisive if another country has enough bombs to demolish our cities and stores of weapons. The overwhelming advantage would lie with the aggressor and our superiority might be lost in the first minutes of a surprise attack.

"A world in which nuclear weapons are owned by many nations and their use held back only by fear of retaliation will be a world of fear, suspicion, and inevitable final explosion.

"It has been suggested that the United States together with Great Britain and Canada assume unilateral control over atomic power development throughout the world and by force, or by threat of force, prevent all other nations from producing atomic bombs. Other nations will not willingly lose their sovereignty to those who maintain their own in this way. Such a policy may lead to an unending war more savage than the last. We cannot conceive of it leading to a stable, peaceful world.

"We are convinced that we are left but one course of action, however difficult it may be to achieve. We must cooperate with the rest of the world in the future development of atomic power, and the use of atomic energy as a weapon must be controlled by a world authority.

"We are heartened by the statement of our President in which he said that there will be 'an effort to effect agreement on the conditions under which cooperation might replace rivalry in the field of atomic power.' Such conditions will demand some modification of our conception of national sovereignty.

"This makes it imperative that we have the good will of all nations, for it must be realized that we are dealing with a deadly challenge to civilization itself. We believe that international control is technically possible and feasible. However, we must emphasize that the problems of such control are not essentially technical.

"For example, the abolition of secrecy in national and international relations may be necessary. A world authority, if it is to be effective, must eventually realize free access to all laboratories, industries, and military installations.

"We realize the serious problems that control presents, and the atomic bomb is a sufficiently revolutionary force to impel us to such a solution.

"We have seen the beginnings of cooperation among nations during the war. The extension of this cooperation is made imperative by the terrible nature of a future conflict.

"World-wide control of nuclear energy in which the scientific tradition of international collaboration may play an important part, provides a unique opportunity for preventing the current suspicions among nations from growing into tensions which lead to war.

"It is our hope that the bomb will be a great force for world cooperation and peace. To this end we urge this country to assume its responsibility in the initiation of action leading to a world authority for the control of nuclear energy. We suggest that the United Nations Organization be adapted to such control.

"The need is urgent. Effective action is impossible not only when other nations have atomic bombs but even when programs for their manufacture are well under way. Lack of decision within even a few months will be preparing the world for unprecedented destruction, not only of other countries, but of our own as well."

In addition, we disapprove of the May-Johnson bills, H. R. 4280 and S. 1463, because we realize that science cannot flourish in such a contemplated environment of restriction, secrecy, and control. We emphasize that this applies to fundamental research aspects of atomic energy only, and we agree that the technical aspects of the atomic bomb be controlled. We insist that the results of all fundamental research should be published freely and the peacetime applications be made available to all. Consequently we support the statements of many other nuclear physicists on this subject and particularly endorse the sentiment of over 500 Boston and New York scientists when they say:

"We, the undersigned scientists have read President Truman's message to Congress on the control of future work in nuclear physics with interest and with care. It suitably reflects the gravity of the problems that face us. We agree that the fundamental problem is an international one needing the exercise of statesmanship of the highest order. We also agree that reasonable national measures of control must be taken immediately while international negotiations proceed.

"These need not extend beyond supervision of all sources of war material, licensing of all production on an industrial scale of fissionable material such as plutonium, and regulation of the use of products in dangerous quantities. However, the purpose of national measures of control now before Congress in the May-Johnson bill go far beyond these necessary measures. They include restrictions of the dissemination of purely scientific knowledge.

"We believe that such additional restrictions are contrary to the national interest. They will make very difficult, if not impossible, the attainment of the objective outlined in the President's message. They will curtail the spirit of national and free enterprise and will hardly permit the widespread distribution of peacetime products on equitable terms which will profit the people as a whole.

"We address you primarily as citizens who are concerned with the security of our country. We have special knowledge about this matter that entitles us and encourages us to speak. Because of our professional training we are familiar with the kind of scientific questions involved.

"The restriction of peacetime work in nuclear physics to a few licensed groups would inevitably slow it down. The rush of new ideas is unpredictable, but there is no doubt quantity would decrease severely if the number of people allowed to have basic information were appreciably reduced. If security measures are to be enforced, even widespread licensing would not produce effective work in the universities and other laboratories. There is an inevitable degenerating influence at work under such conditions. The consequences of violation of security regulations are immediately and highly personal where as playing safe by withholding information is all too easy. It produces a slow insidious smothering that is cumulative and certain and for which individuals cannot be blamed.

"Our military potential stands in large part from our ability to make technological application of scientific principles and to organize for such efforts on a large scale. If we are to maintain this strength, there must be a steady flow of new ideas. As they first appear they are seldom ready for immediate use. To develop these ideas for application, a considerable policy of rejections by many interested scientists is required. The possibility of this will be lost if limiting restrictions are applied.

"We maintain that the national interest will be best served by a policy of complete freedom of fundamental research and its publication. This is based on our conviction that the country would lose more by hampering and restricting research and the training of scientific men than it would by forcing potential enemies to find the facts of nature for themselves. This they can, and will, do anyway. Our security can be the security of achievement; it may not be the security of concealment."

## James A. Farley

EXTENSION OF REMARKS

OF

## HON. SOL BLOOM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Monday, November 5, 1945*

Mr. BLOOM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by the Honorable James A. Farley at the John Adams High School, Ozone Park, Queens County, under the auspices of the Queens County Democratic organization, Tuesday, October 30, 1945:

Every 4 years in New York City we engage in a most extraordinary commotion. It has to do, of course, with the selection of a mayor to preside over the great business corporation that manages the affairs of five boroughs and affects the well-being of more than 7,000,000 people. Incidentally, the man we select, of necessity, takes on national size and becomes an important figure in the life of our Nation, for this is considered by many the second most important job in the Nation. To a very considerable extent he speaks for the municipalities of the country, especially when he goes to Washington.

The mayor of New York centers in his hands, under the present charter, the most sweeping powers. He has great influence on municipal finances, frames the city's policies, and speaks its mind and attitudes on all important questions. He can and has determined whether we shall have meatless days, lightless nights, radical or conservative policies, clean or immoral plays, bookmakers, loan sharks, and what not.

Recently the mayor has had a house to live in, a radio to talk over, and divers cars to speed him around the city. One of these cars is decorated with five vari-colored glass stars, all lit up like a Fourth-of-July fireworks display, when the mayor is dashing to a fire or somewhere else. He has distinguished guests and visitors to entertain, commissioners, judges and what not to appoint, patronage, a big salary, banquets to preside over, and go to, critics to answer.

Our mayor has abuses to right, houses to build, tunnels to construct, subways and busses to operate, street names to change, a theater to run, zoos to manage, reservoirs to build, publishers, editors and reporters to assail, playgrounds to supervise, a governor to deal with, a citizens union to please, ferryboats to run. He has taxes to collect, political leaders to placate, and, I might add, many other tasks and duties too numerous to mention. One of these is after-dinner speaking. Once the mayor led a simple life, like the rest of us, but now he is a fairly busy man—whether he wears a fire hat, a derby, a Dobbs, a Knox, an Adam—or a 10-gallon Stetson.

And yet, all down through the years, despite the intimate and important respects in which his acts affect the daily lives and activities of us all, so many of our citizens by neglecting to qualify to vote in the approaching election, display an amazing and regrettable indifference over the type of individual to occupy the city hall during the next four and very vital years of our existence.

At this moment another period of commotion and agitation is upon us. While the clash over the mayoralty this year has provoked some bitterness on the part of our opponents, this has been compensated for by the universal belief that our candidate, General O'Dwyer, is destined to win by a most substantial majority.

Some experts insist the only question in doubt is whether the Republican candidate, or the No Deal nominee will run second or third. And I am equally certain, as you are, that General O'Dwyer's running mates, State Senator Lazarus Joseph for comptroller, and Vincent R. Impelliterri for president of the council, and in fact, the entire ticket, will triumph on election day.

A few false issues have been raised against General O'Dwyer, but what the voters are concerned about may be summed up in these three questions:

What manner of man is General O'Dwyer?

How does he measure up?

Does General O'Dwyer's past give assurance for the future?

The answers to these queries are found in the picturesque life story of the man. We begin with him as a small child in Ireland. One of a number of children, a large family, not poverty-stricken, but certainly far from rich, as in common with the Irish. His parents, like others in his family, were school teachers. Do you know what school teachers got in the old days in Erin? Great gratitude, great personal satisfaction, but little money.

We see young O'Dwyer bound for America—for the land of opportunity. He went from job to job, always ambitious, seeking his future.

Ultimately we find him on the New York police force. It meant good pay and enough time to continue his education at night.

At last he is a full-fledged lawyer, after years of striving, study, effort and, I might add, patience and fortitude. In succession we follow his career, ever upward, as magistrate, county judge, and finally district attorney of Brooklyn. He didn't gain eminence by luck or pull. Nor did burning the midnight oil alone make it possible. It took sturdy character, hard work, a tolerant helpful attitude, a progressive viewpoint, and a notably independent spirit.

Who can truthfully say that a man who has thus prepared himself is the creature of any one man or group of men, good or bad? By the very nature of things he is a free agent and a foe of evil.

Who can truthfully say General O'Dwyer is not steadfast in his allegiance to a nation and a government that made such an enviable career possible? Having attained the success he has in the country of his adoption, can it conceivably be possible that he will raise barriers against other young men who follow in his footsteps by lending encouragement to those forces which would make a mockery of the "four freedoms"? I'll answer that with a vigorous "No," as I am sure you will.

It should be apparent to anyone, too, that General O'Dwyer has ideally prepared himself for the mayoralty. Let us go down the line a minute and see how well he is endowed to become a tenant at the City Hall.

Let us take one pressing problem that faces us—housing. Everyone knows there isn't a living place to be found within the confines of our city, and practically that same condition prevails in our suburbs.

Will General O'Dwyer be alert to a solution of this vexing condition? I answer that by asking you a question. Isn't it safe to assume that a man who has been a policeman, a magistrate, a county judge, and a district attorney is aware of the fact that from decent homes law-abiding children emerge, while the tenements and hovels too often breed crime, corruption, sickness, and death? In all the public positions General O'Dwyer has filled he has seen juvenile delinquency linked with the slums, the back alleys, and the street corners where gather the children whose homes are an affront to civic decency.

Crime is another problem greatly aggravated by the war. How are we to cope with it? What remedial measures should be applied? What must the viewpoint of your fine police department be? Doesn't General O'Dwyer know the answers? Hasn't experience prepared him and taught him? Didn't he patrol a beat? Didn't he meet the sorrowful parents of delinquents face to face in court? Doesn't he know a gangster, a racketeer, a chiseler—any enemy of society—when he sees one? Hasn't he tried and sentenced them as a judge and prosecuted them as a district attorney? Who sent the members of Murder, Inc., to the chair but General O'Dwyer? When the New York County Democrats failed to endorse District Attorney Frank S. Hogan for reelection for another 4 years, who forced the party to accept Hogan? General O'Dwyer, of course. And when one talks of racketeers, one remembers that Hogan has been their hated enemy, and has closed the iron bars around many, while sending others to the electric chair—as General O'Dwyer himself has done.

I talk as a New Yorker. I am exceedingly proud to be a New Yorker. True, I wasn't born here but I did first see the light of day within a short distance of Manhattan—just a few miles up the Hudson River. I have been in and out of New York for 40 years. I went to school here and I hope you will pardon me if I say I cut out a career here. My intense love for this great city would not permit me to support for mayor a man not eminently fitted for the place.

I hope you won't consider me vain if I say I know a little about politics. I have been conversant with it in city, State, and Nation. And I have learned most, if not all the tricks indulged in by irresponsible candidates, especially when they become desperate as certain defeat faces them. And Americans, quite generally know these tricks.

For instance, you can't charge a fine decent, honest man like General O'Dwyer with unholy alliances with underworld characters in the last weeks of a campaign and make such an unwarranted allegation stick. His unblemished life and his manifold good deeds in behalf of a better world in which to live are a sufficient answer to this foul charge.

Discard if you will everything he did before the war and judge our candidate for mayor by the splendid record he made in the Army from which he emerged as a brigadier general. He tracked down the crooks, racketeers, and profiteers for Uncle Sam and brought them face to face with stern justice. Then he went to Italy to help the displaced and starving people of that most unfortunate land, crushed by fascism. That job done, he took over the gigantic task of feeding and rescuing the war refugees.

In passing, it might be well to recall that the Republican Party in this campaign is not any different from the Republican Party we have known down through the years. It is still the same old stand-pat organization it was back in the twenties and thirties. Its leadership is constitutionally opposed to progress and reform. They are still walking backward, and this despite the many in the party's rank and file who violently differ with its reactionary leadership.

Witness the spectacle of the Republican Party, publicly confessing that it was so bereft of talent and ability that it had to step over into the ranks of the Democratic Party to get a man to make the mayoralty race for it.

Witness also a newspaper advertisement paid for by the Republican ticket's supporters wherein it was shamelessly proclaimed that if the Democratic Party won this mayoralty campaign the red light district will be resurrected. In the 40 years I have worked and lived in New York, there never has been a red light district.

Such base falsehoods as these are unworthy of a party with even the slightest pretensions to decency, and it is just this sort of thing that will swell the vote of General O'Dwyer and his running mates. This sort of thing is always resented by the electorate. A smear campaign never elected anyone.

Now, fellow-citizens, as we approach the impending election it seems to me we should honestly consider what is best for our city in the next 4 years. That should be a paramount consideration with every voter.

As I conceive it, the highest service which General O'Dwyer, as the next mayor, and his running mates in their offices, can perform is to maintain the supremacy of New York City. We must increase its prestige, its earning power, its industries, its commerce. We have the great port of New York, the finest in the world. We are inclined to forget its importance. It is what gives our city its vitality. Not only our own prosperity, but, to some extent, that of the Nation depends upon the trade passing through here. Our margin of foreign trade will be the critical balance upon which our well-being will depend.

Remember it is this trade, foreign and coastwise, entering into New York Harbor with its myriad ships and all its manifold industries and services, which makes for a prosperous and happy metropolis. Yearly it represents several billions.

We must improve our port. We must modernize it at any cost so that here we can compete on a parity with every other port in the world. And to this project I know General O'Dwyer is committed.

Let us never forget that through our port have come the peoples from all the world seeking sanctuary and a better way of life for their children. Let us even remember how these folk from other lands have contributed to our material and cultural development. And above all, let us never forget that twice when the freedom of our Nation was threatened, the descendants of these emigrants and many of these emigrants themselves, millions in all, embarked from this magnificent ocean terminal we call New York, for every battle. Let us pray that henceforth and forever this port shall never again have to send forth soldiers to fight on foreign soil, but shall be used for the profitable trades of peace.

The Democratic candidates are certain to be elected on November 6. Let each and every one of us continue to put forth our best efforts on their behalf so that they will go into office backed by the greatest majorities ever given Democratic candidates in the city of New York.

## The Mexican Cross of Military Merit Awarded to Col. Modesto E. Rodriguez, United States Army

EXTENSION OF REMARKS

OF

### HON. JESÚS T. PIÑERO

RESIDENT COMMISSIONER FROM PUERTO RICO

IN THE HOUSE OF REPRESENTATIVES

*Monday, November 5, 1945*

Mr. PIÑERO. Mr. Speaker, Col. Modesto E. Rodríguez, United States Army, of Puerto Rico, received on August 8, 1944 the Cross of Military Merit from the Government of Mexico.

Col. Rodriguez served as liaison officer for the United States Army with the Mexican Army and was decorated in the name of the President of the Republic of Mexico by General Felipe Rico, commander of the Second Military Zone and Governor of the Territory of Lower California. The decoration was bestowed for invaluable contributions to cooperation and understanding between the two countries.

General Rico began the ceremony by addressing the following remarks to his soldiers:

Young soldiers derive inspiration from these men whom we honor here today. They symbolize the spirit that should guide every soldier, that spirit for which the highest values are not found in material things.

When he presented the decoration to Col. Modesto E. Rodríguez in name of the President of the Republic of Mexico, General Rico said:

Colonel Rodríguez, when the world-wide conflagration threatened the safety of the United States and Mexico and both Nations decided to unify their plans of naval and military defense along the Pacific coast, you came to our country to be the spokesman of the Army of the United States before the military authorities of Mexico. Yours was a grave and difficult mission. Two nations were involved, each with its own personality; two strong races, two different civilizations. But you brought your intelligence and your tact to bear, your understanding and affection for both nationalities, in developing the plans for the western defense of both peoples in the historic conferences at Agua Caliente and you, Colonel Rodríguez, built a bridge of friendship and understanding between the Armies of the United States and Mexico, inaugurating the perfect harmony in which during your service in this zone the military questions entrusted to your wisdom were decided. Your dynamic energy, at the service of both armies, was devoted solely to the hard work of the true soldier who knows how to comply with his duty. Even when you were taken to a hospital for treatment and observation after a serious aviation accident, you chose to take another airplane within a very few hours in order to complete an important mission of your Army without hesitating for personal considerations of health or family. Your mission in our Army was carried out with wisdom and love, and therefore, in name of the President of our Republic, I have the honor and the pleasure of conferring you the Cross of Military Merit.

## Atomic Energy Control

EXTENSION OF REMARKS
OF
### HON. HELEN GAHAGAN DOUGLAS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

*Monday, November 5, 1945*

Mrs. DOUGLAS of California. Mr. Speaker, at a conference on atomic-energy control held at Rye, N. Y., October 27 and 28, the attached resolution was adopted by a group of prominent American scientists, whose names are attached to the resolution.

I believe that the recommendations made by this distinguished group of American students deserve the careful consideration of the Members of Congress.

The following is the text of the resolution:

I

The Johnson-May bill for the regulation of atomic energy, now before Congress, does not protect the vital interests of the United States. This bill should be withdrawn.

Amendments have not corrected the essential defects of the bill. They retain the objectionable features of the original bill. The bill, if enacted, would:

1. Weaken the national defense.
2. Jeopardize the democratic institutions of the American people.
3. Frustrate fundamental research necessary to the maintenance of American leadership in the development of atomic energy.
4. Set up an authority within the United States responsible to no one—not even to the President or the Congress.
5. Take atomic energy away from the American people, where the President says it belongs, with the danger that it may become the exclusive property of the military.
6. Make it more difficult, perhaps impossible, to stop the present drift toward an atomic armaments race.
7. Block the normal negotiation of international agreemens in the field of atomic energy, and interfere with attempts to set up vitally necessary international controls.

The bill, as now amended, creates a Commission with autonomous powers not only in the area of atomic military research, but in scientific, medical, and industrial fields. The new amendments do not require the Commission to license independent research or to make materials available to independent laboratories under proper safeguards. Nor are standards set up under the bill for atomic research privileges. The Commission would have power to grant exclusive rights in atomic energy development to certain private companies, or to withhold these rights from other companies at its own discretion.

II

In our judgment, any legislation in this field should, as a minimum, provide the following:

First, the Commission and its Administrator should be responsible to the President and to Congress. They should be removable by the President in the same manner as Cabinet Officers.

Second, any secrecy regulations should be applicable only to the disclosure of the design features and laboratory tests pertaining to the plant and to details of the atomic bomb itself; that is, only to such matters as are normally kept secret when the manufacture of munitions or weapons of war is involved. We note that the President of the United States had distinguished between the scientific knowledge and the design features, tests, plants, and details of the bomb itself. Other regulations should be limited to removing hazards to safety.

Third, prior to promulgation, all secrecy regulations should be reviewed by a special Cabinet committee to make sure that the public interest in full disclosure is protected whenever possible.

Fourth, to protect individual research, the Commission should be required to provide sufficient materials, under proper safeguards, to make independent research possible. It should be made perfectly clear that the Commission has no power to control research.

Fifth, the Commission should be required, after an appropriate interval, to recommend to the Congress a program setting forth the standards which should apply to the Government regulation of the industrial use of atomic energy. Until such a program has been recommended and enacted by the Congress, the Commission should not have any power to permit the use of atomic power for industrial purposes. Such a program should deal specifically with such problems as patents, exclusive rights, and those steps to be taken to encourage private enterprise to assist in this development. Research and experiments looking toward the industrial use of atomic power should be permitted prior to the submission of the industrial program.

Sixth, we believe that the free exchange of scientific information with the United Nations as proposed by the President is of the utmost importance, and is not entirely separate from the development of a domestic program. Atomic power has been made possible only by the work of scientists all over the world. Many of the most eminent of these scientists are not in the United States and are citizens of foreign countries. Legislation must be framed by the Congress so as to take advantage of such international agreements as may be achieved, and to permit the free exchange of scientific information, not only within our own country, but with foreign scientists.

III

President Truman has said: "Never in history has society been confronted with a power so full of potential danger and at the same time so full of promise." Surely, any legislation on a subject so momentous deserves the gravest consideration by Congress. We welcome the creation of the special committee of the United States Senate to deal exhaustively with these matters. Equal consideration must be given by the House of Representatives. To forestall the dangers and realize the promises of atomic energy, Congress owes the American people the best legislation which its combined wisdom can draft.

## Arguments For and Against Compulsory Military Training

EXTENSION OF REMARKS
OF
### HON. RICHARD F. HARLESS
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES

*Monday, November 5, 1945*

Mr. HARLESS of Arizona. Mr. Speaker, the American people will face in the very near future a most important and far-reaching decision. The question, Shall we establish compulsory military training? should be answered intelligently rather than sentimentally.

In order that my constituents might have the knowledge contained in the following compilation of arguments on both sides of this important question, I ask unanimous consent to insert in the RECORD the appended subject matter. I also intend to mail with this subject matter several thousand post-card questionnaires on this subject, which I hope will be returned to my office marked in such a manner as to indicate their thoughtful and careful advice on this very important legislative problem.

The compilation follows:

NATIONAL SECURITY AND INTERNATIONAL AFFAIRS

FOR

In the 168 years of its existence the United States has had seven major wars, all undertaken with various degrees of unpreparedness. Realism demands that in the future we prepare continuously for whatever emergencies may come.

In spite of any peace terms that may be made and any system of international cooperation that may be established at the end of World War II, compulsory military training is essential to the future security of the United States.

Universal military training is the only dependable way in which the United States can match the military strength of other world powers.

For defense against sudden attack in undeclared wars the United States should have at all times a large reserve force of trained civilians—perhaps a constant reserve of about 10,000,000 men. This would be more economical and more effective than to maintain a large professional military establishment.

Because of technological advances the geographic location of the United States no longer affords sufficient protection to permit adequate preparation for war after it has been declared.

Military preparedness not only affords safety in case of attack but is the best way to prevent attack. Thus, in a nonaggressor nation such as this, it promotes peace.

Universal military training would give the United States greater stature in international affairs; create greater respect for our international policies and proposals.

In the United States universal military training would always be regarded as a defense measure. Committed as we are to the principles of democracy and the right of self-government, our military force—no matter how powerful—would never be used in a war of aggression.

NATIONAL SECURITY AND INTERNATIONAL AFFAIRS

AGAINST

There is no convincing proof that universal military training from the beginning of our national life would have prevented any of the major wars in which we have engaged and the outcome, in each case, has been satisfactory.

Universal military training will be entirely superfluous if suitable peace terms and a workable international organization can be developed. The introduction of universal military training now would be a retreat toward isolationism, would deny our faith in world cooperation, and would jeopardize any plan of international collaboration that may be developed.

Military training alone would be no guaranty of security, or victory, if the United States were to come in conflict with a highly industrialized China or Russia with manpower and production in excess of our own.

For defense against sudden attack the United States should have, not an enormous reserve of common soldiers with training only more or less up to date, but a powerful Navy, a large and effective Air Force, and a well-equipped mechanized Army that is highly mobile and has plenty of striking power.

Assuming that the Navy, Air Force, and Regular Army are strong enough to withstand the first shock of a surprise attack, a well-educated citizenry, together with a highly developed industrial and agricultural life, afford the only basic protection that is needed in the United States. Specific military training en masse can be given after the threat of war appears.

Active military preparation stimulates armament rivalries and tends to provoke wars rather than prevent them. That compulsory training does not prevent aggression, witness the German attack on France and Russia, particularly.

Peacetime conscription would cause other nations to regard us with suspicion, particularly our Latin-American neighbors who would resent this obvious threat of interference in their affairs.

A powerful military machine, to military and political leaders, is ever a source of temptation. It could lead, even in the United States, to overaggressiveness in international affairs and perhaps even to imperialistic ambitions.

POSTWAR MILITARY NEEDS

FOR

For several years after this war ends, the responsibility which the United States will have in policing various regions will require a large military force.

Because of the unrest and uncertainty which are sure to follow World War II, the United States should have a trained reserve ready for any emergency.

POSTWAR MILITARY NEEDS

AGAINST

Although the size of the military force needed after war ends cannot be accurately determined now, every probable need can be met with those trained under the present Selective Service System.

The seven to ten million veterans and trainees who will return to civilian life at the close of this war will constitute a reserve adequate for any emergency for a period of at least 10 years.

MILITARY EFFECTIVENESS

FOR

Unpreparedness at the outbreak of a war always results in hasty, partial training, which in turn results in a large number of needless casualties.

In order to train a large reserve army the United States would necessarily have at all times a considerable stock of military equipment and supplies. In the absence of such a program, the tendency is to allow these stocks to dwindle.

Universal military training would give our reservists an esprit de corps which is never developed in a hastily assembled civilian army. If called to combat duty, the reservist would be a professional, not an amateur.

Compulsory military training would develop physical fitness, generally, and build the toughness and stamina which are essential to effective military service.

After we are engaged in war there is not sufficient time to give a conscript army the training the men should have in basic military facts and skills.

MILITARY EFFECTIVENESS

AGAINST

Training given when needed is up to date, not out of date. Without extensive retraining, a reserve army, too, would be subject to the "casualties of ignorance."

Existence of standard equipment and supplies may be a handicap rather than a help, leading to the use of obsolete materials. Without a large stock pile our armies must be equipped with new materials produced to latest specifications.

Much of the success of our armies in all wars is attributed by some military authorities to the fact that they have been com-

ECONOMIC CONSIDERATIONS

FOR

Preparation after war begins must necessarily result in extravagant outlays for the necessary military equipment and supplies. The step is too great in changing over from peacetime to wartime production.

Manufacture of the equipment and supplies used in the training program would provide employment for thousands of people and thus add a substantial amount to our annual national income.

The boys in training would be off the labor market, out of competition with older men, and the total number of gainfully employed persons would be permanently reduced by narrowing the age range of employment 1 year.

PERSONAL VALUES

FOR

Through induction procedures health defects would be discovered and, in many cases, would be corrected. Thus the whole level of health would be materially lifted in the United States.

Military training establishes good health habits and teaches personal health care. These are valuable assets in civilian life.

Military training develops acquaintance with outdoor living and independence in taking care of one's self under whatever circumstances arise.

The proposed year of military training would include not only basic military instruction and drill but also, in a large percent of cases, a valuable program of vocational education.

Military training is a valuable experience in citizenship. If universally required, it would increase patriotism and give each trainee a feeling of personal investment in the country's welfare. It would teach the responsibilities as well as the rights of citizenship.

Military training affords valuable lessons in cooperation, efficient teamwork, assumption of personal responsibility, and so on.

In their military training, many boys would find vocational interests and aptitudes, and lay the foundation for their peacetime careers.

In military camps, many would be removed from a too-sheltered home life, would overcome homesickness, and gain that degree of personal self-reliance necessary to their own success.

Military training would often bring out qualities of leadership and administrative ability which had not been discovered and developed in civilian life.

The discipline imposed during military service would be a valuable asset to the individual all through life. Everyone needs a wholesome respect for duly constituted authority and the habit of prompt obedience to it.

Military training would afford opportunities for boys to travel about over the United States, becoming acquainted with the dif-

MILITARY EFFECTIVENESS
AGAINST

posed of civilian rather than professional soldiers—men who were fighting to defend their homes or their ideals rather than disinterested, well-discipline regulars.

Most of the reservists, if away from training a year or more, would require essentially the same toughening up schedule as if they had never been in service. Military training would do nothing for those rejected because of defects.

Physical fitness, not specific military instruction and drill, has been the outstanding training problem both in the present war and in World War I.

ECONOMIC CONSIDERATIONS
AGAINST

A continuous program of military training at an estimated annual cost of two to four billion dollars would, in the long run, be less economical than periodic preparation which admittedly involves a certain amount of waste. In addition to the actual cash outlay, peacetime conscription would keep about a million men out of productive pursuits at all times.

Production for military purposes is economically unsound, since the output is focused on destruction. Economically, from every point of view, extensive military training represents the choice of guns rather than butter.

Because of the pool of unemployed persons which regularly exists, a system of compulsory military training would have little influence on the labor market except for the first year. About the same number of new workers would be seeking jobs each year, whether at age 18 or age 19.

PERSONAL VALUES
AGAINST

Induction age is too late to check up on health defects. This should be done through an adequate school-health program beginning with the first grade and extending through the entire period of school attendance.

The health improvement claimed for military training could be achieved at lower cost and with better results through adequate school- and public-health programs.

The same degree of self-reliance in outdoor living which military training gives can be acquired in nonmilitary activities, notably in well-planned camps for older children and youth.

Vocational training, the same as education of other types, should be the function of the schools rather than the Army.

Citizenship in a democracy can be taught more effectively in schools and in civilian pursuits than in an army camp. Even a period of national service, if that were deemed advisable, might be required without resort to military training.

Effective teamwork and group loyalty can be developed—are being developed—by schools, camps, and many other nonmilitary agencies.

Compulsory military service would necessarily interrupt either the educational or occupational plans of young men and tend to postpone the time when they could marry and establish homes.

The moral atmosphere of military camps usually is not the most wholesome. Probably the dangers from this quarter are fully as great as that of an excessive amount of "apron-string" control.

Those who would "find themselves" through military training must be balanced against those who, because of the delay, would not go on to college and whose vocational plans would be revised downward.

Enforced obedience, as exacted in military discipline, is not the conduct pattern needed in a democracy. Military life makes a small contribution to self-discipline and to harmony in personal relationships.

PERSONAL VALUES
FOR

ferent regions, and to experience something of the frontier adventure once available but now virtually gone.

RELATION TO DEMOCRACY
FOR

Since volunteer military service is never, never adequate when the United States is at war, universal peacetime conscription is a logical national policy. Compulsory military training in peacetime is just as democratic as universal conscription in wartime.

A year of military service would help young men to understand, and to revere, the principles of democratic government. It would help them to understand and appreciate the basic freedoms on which democracy rests.

Lack of peparedness at the onset of war makes it necessary to yield dictatorial powers to the executive branch of government in times of crisis. Because of the difficulty in recalling these powers, every war emergency is a threat to democracy.

Compulsory military training is democracy in action. In the training camp, rich and poor would live together and engage in common tasks. Boys from city and country, the sons of professional men and unskilled laborers, youth of all nationalities and creeds, would live and work together.

A year of compulsory military service would increase the percent of voting citizens. Through preparing to defend democracy with their lives if necessary, the trainees would learn the importance of the ballot.

Through military training many competent leaders would develop their powers and afterward use them in the service of their country.

A reservist army would be useful in preserving the peace in case of any internal disturbance or emergency situation arising within the United States.

Those whose formal education ends with high-school graduation or before, need, especially, another year of educative experience and training. Even those who continue in college would profit by a year of military instruction.

THE TIME TO DECIDE
FOR

Universal military training should be introduced now while there are officers and camp facilities to handle such a program.

Unless the issue is settled now, while there is a keen awareness of defense needs, the public is likely to take no action. In peacetime it is hard to dispel the sense of false security which is blind sometimes even to the most essential requirements.

PERSONAL VALUES
AGAINST

Due to improvements in travel facilities we are well on the way toward the elimination of provincialism. Travel is neither an adventure nor a novel experience for a substantial number of American youth.

RELATION TO DEMOCRACY
AGAINST

The fact that conscription in wartime is the fairest, most democratic way of meeting an emergency, nowise means that peacetime conscription is also democratic. On the contrary, it is an encroachment on personal rights and freedom which millions of immigrants came here to escape.

Conscript armies have been the foundation of the totalitarian states. Schooled in the use of force and trained to unquestioning obedience, they have been ready to follow a strong leader. Democracy is not enhanced by training which makes "the voice of the drill sergeant louder than the voice of conviction."

Dictatorial powers must be given to the executive branch of government in wartime, irrespective of degree of preparation. The threat to democracy in peacetime conscription is fully as great as the threat arising from the wartime delegation of any additional discretionary powers to the President of the United States.

Military training, no matter if universal, is undemocratic. The officer caste system accentuates inequalities. Aside from accidental acquaintance little is done to bridge the gap between the rich and the poor. Military camp management is autocratic, not democratic.

Trainees would acquire a dangerous respect for, reliance upon, and skill in the use of force. This would soon be reflected in public opinion on international issues. Perhaps, also it would result in greater violence in the case of strikes, more frequent attempts at mob rule, and other resorts to force instead of to the ballot.

Just as some of the most intelligent and aggressive young men from other countries have come to the United States to escape military service, so would military training here tend to drive out some of our best potential leaders.

Reservists, including union members, could be called into service and sent back to their jobs, in uniform, to break strikes. This was done in France.

In a system of universal military training all boys would come under complete Federal jurisdiction just before they reach the present voting age. Yet Federal control of education—which surely could never be so complete—is generally recognized as a hazard to democracy.

THE TIME TO DECIDE
AGAINST

Facilities and training officers will be readily available for a considerable time after the present war ends. This is a secondary rather than a primary consideration.

If military training is a wise national policy, the American people can be trusted to make that decision on the basis of cold facts, without the strong emotions and hysteria of war. Also, those now under arms should participate in any decision of such importance, both to the Nation they are defending and to their own sons.

## Compulsory Military Training

EXTENSION OF REMARKS
OF
**HON. A. L. MILLER**
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 5, 1945*

Mr. MILLER of Nebraska. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a letter from a constitutent in my district on the subject of compulsory military training.

Mr. Speaker, I am certain that the observation of this fine citizen in Nebraska represents the thinking of many thousands of anxious mothers and fathers.

This Congress may soon be called upon to decide a very vital issue—that of compulsory military training. The President, in his message to this body, did not call it compulsory military training. He called it citizens training but, Mr. Speaker, it is compulsory regardless of the dress you put upon the subject. Wh, is it necessary to exhibit so much haste acting upon this most vital problem? Does this administration feel it is necessary now under a guise of mob hysteria and thinking to force a compulsory military training on the country before the soldiers who have just fought and won this war get home? Are they afraid of the reaction that may come from these soldiers? The country will have some 12,000,000 men who have had immediate training. At least 5,000,000 of these men who have had training would be ready should another emergency develop in the next several years.

This administration apparently is embarking upon the game of power politics. If that is to be our policy, it will be necessary to have a rather large trained Army. It will be necessary for them to create emergency after emergency. They are following the pattern of the last 12 years. This Congress should go slow and think, look and listen before they adopt a program of compulsory military training. The letter of my constituent is as follows:

OGALLALA, NEBR., *October 30, 1945.*

Dr. A. L. MILLER,
*Washington, D. C.*

DEAR DR. MILLER: As a resident of the State and district of Nebraska which you represent, I would like to voice my opinion on compulsory military training.

For 25 years I have been in favor of military training, as my husband served in both World Wars I and II; and as you know, the Legion and its Auxiliary have favored this youth training.

Now, however, I'm dubious of such a program for the following reason, and I'm not taking into consideration the atomic bomb. Since VE-day, my son, who had been in the service for some months prior to that date, has had no constructive program mapped out for him and he, with several I personally know, have been shifted from camp to camp without doing a thing but putting in time.

Now I'm aware of the fact that events happened fast after VE-day and it, no doubt, would take some time to readjust the needs of peace, but should it take so long? Now, I question the advisability of placing our youth in the hands of the military who are not giving the boys any instruction now, when everything was operating supposedly as a going concern. How will we know they will do any better later?

My son, as soon as he was 17, went into the Army specialized-training program, as I convinced him he would be more valuable to the service with a little knowledge. While still in the AST he joined the Air Corps, to be called as soon as his age would allow. Then came VE-day and after that the military seemingly cannot get a program functioning which includes them.

If the administrative officials cannot handle this situation better than the proof seems to bear out, what assurance do the parents of boys have that the program they wish to put into operation will be any better?

The welfare and influence of such a training program would depend primarily on the caliber of the men selected to administer it. Do we have enough high-minded men to do the job and what check would the average parent have on such a program? It could be a program giving immeasurable benefit to the youth, or it could be the ruination of a boy

Yours sincerely,

## The Development of the Coast Guard

EXTENSION OF REMARKS
OF
### HON. SCHUYLER OTIS BLAND
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 5, 1945*

Mr. BLAND. Mr. Speaker, I ask unanimous consent to extend my remarks in the Appendix of the CONGRESSIONAL RECORD and to include therein an article written by Elizur Yale Smith on the development of the Coast Guard. The article appears to have been written for information on the one hundred and fifty-fifth birthday of the United States Coast Guard by Major Smith, who is said to be an authority on early American history and, while its insertion now may be somewhat belated, I think that its insertion will serve a useful purpose:

THE DEVELOPMENT OF THE COAST GUARD—ITS CHRONICLE INCLUDES FINE RECORD OF DUTY FOR THE TREASURY AND THE NAVY SINCE 1790

The one hundred and fifty-fifth birthday of the United States Coast Guard was celebrated throughout the Nation and on shipboard throughout the world. This branch of our armed services was established by the First Congress of the United States, under the Constitution, in Federal Hall, corner of Wall and Nassau Streets, here in New York City, by the signature of President George Washington to "An act to provide more effectually for the collection of the duties imposed by law on goods, wares, and merchandise imported into the United States and on the tonnage of ships or vessels." Alexander Hamilton, as the first Secretary of the Treasury, was the instigator of the organization. Included in this act were four sections which provided for a revenue cutter service, which became a sort of naval police for the suppression of piracy and smuggling.

At the time of the creation of the service, whose name has since been changed to the United States Coast Guard, we had no navy. The Continental Congress, during the Revolution, created a small navy and authorized the commissioning of privateers, but after this war the navy fell into a state of desuetude. At the end of the war the navy was almost annihilated, and the only American ship of the line remaining in 1782, the *Alliance*, was presented to the King of France to supply the place of a similar vessel lost in Boston Harbor by accident.

THE TREASURY'S 10 CUTTERS

After Washington had resigned his commission as Commander in Chief of the Continental Army in 1783, a small standing Army was maintained, but, as before stated, the idea of a navy was relegated to the deep, and this same situation continued in force after the formation of the Government under the Constitution, so that all naval affairs came under the authority of the War Department until 1798, when the Navy Department was created. Even the frigate *Constitution* was launched in 1797, and her sister ships were slid from the stocks, before a Navy Department came into being. All the naval protection we had was the Revenue Cutter Service

When Hamilton's subsequent recommendations for a new protective tariff were adopted by the First Congress in 1790, he stated that the collection of impost duties could not be enforced without ships. Consequently, the Congress authorized him to build and equip not more than 10 cutters, at a cost not to exceed $10,000, and to man each of them with one master, or captain, at $30 a month, and with first, second, and third mates, four mariners, and two boys. The wages ranged down to $4 a month for the boys, and all hands received subsistence allowances. The officers and men were deemed officers of the customs and were under the control of the Treasury Department.

They had authority to search ships bound for the United States within 12 miles of the mainland coast. The act also provided for collectors of the various customs districts, located from the northern part of Massachusetts to the southern borders of Georgia. The act likewise gave the collectors power to provide and employ small open row and sail boats, and men to serve in them, for going on board vessels, and for the better detection of frauds. Even then, as in late years, much contraband rum was being smuggled into the United States from the West Indies and Europe. It was the collection of imposts on rum, spirits, and merchandise that gave us our first principal revenue for financing the costs of running the Government. Although the Continental Congress had raised money by means of a national lottery and foreign loans, the first tariff act was adopted in 1789, and it was for the collection of this tariff that a naval police force became necessary. Our first issue of Government bonds was not authorized until 1790.

No other nation in the world has a comparable organization to our Coast Guard. It is purely a product of the formation of our Union. During its span of life of over a century and a half it has constituted a part of the military forces of the United States; has operated under the Treasury Department in time of peace, and under the Navy Department in time of war. The President may direct its departmental affiliations. This famous branch of the services has fought side by side with the Navy in every war in which the United States has fought since the undeclared war with France in 1798–1799, when vessels of this service fought against French privateers in the Caribbean Sea. At that time one of the original cutters, the *Pickering*, made two cruises and captured 10 prizes. In the War of 1812, 16 cutters defended the coast and commerce of the country as far as the caliber of their guns and the size of their vessels would admit.

MULTIFARIOUS DUTIES

Down through the years—in the Mexican War, the Civil War, the Spanish-American War, and World War I, high standards of duty and a seaman's job well done have crowned the efforts of the Coast Guard. Over a month before the attack by the Japanese at Pearl Harbor the Coast Guard was taken over by the Navy by Presidential proclamation on November 3, 1941, but operates as a separate unit of our naval forces. It is proudly living up to the traditions of its motto, Semper Paratus (always ready).

Since its birth in 1790, as time went on, many duties were added to the original Revenue Cutter Service besides its first purpose as a naval police force and protection against foreign aggression. It assists vessels in distress, prevents oil pollution, assists in the immigration, quarantine, and neutrality laws, protects the fur seal, game birds and fisheries, cares for lighthouses, maintains the North Atlantic Ice Patrol, and performs a dozen or more other duties for the enforcement of Federal statutes.

The Coast Guard maintains an academy for the instruction of cadets at New London. The mission of this academy is "to graduate young men with sound bodies, stout hearts,

and alert minds, with a liking for the sea and its lore, and with that high sense of honor, loyalty, and obedience which goes with trained initiative and leadership; well-grounded in seamanship and sciences, and the amenities, and strong in the resolve to be worthy of the traditions of commissioned officers in the United States Coast Guard in the service of their country and humanity."

NOW THE SPARS

Remembering Hamilton's "10 little sailing cutters" with keels of about 40 feet, it is interesting to note a recent statement made to me by Rear Adm. Stanley V. Parker, the captain of the port of New York and commanding officer of the Coast Guard in this naval district, in which he said:

"The size of our vessels has increased greatly, so that today one of our most effective types is the 328 footer, which has been so successful in operations against submarines. Among the names distinguished in this connection are the *Campbell*, the *Spencer*, the *Duane*, and the *Icarus*. Our types of seagoing craft vary all the way from the motor lifeboat and picket boat of about 36 feet in length through 125 footers; tenders for servicing aids to navigation, ice-breaking cutters of the *Mohawk* type of 165 feet in length, the 250-foot cutters which were transferred to the British, and many other varieties of craft that I have not mentioned. Their armaments range from the service small arms to the 5-inch guns and the variety of special weapons which this war has developed. The compliments of personnel of these vessels extend today from two or three men to several hundred."

George Washington and Alexander Hamilton did not foresee that women would some day form a part of the revenue-cutter service. Today they are a valuable addition to the service. That they should be ought easily to have been foreseen, but the proof of the pudding is in the eating, and high officials in the Coast Guard have stated that they are very well pleased with the demonstration of usefulness which the SPARS have given.

## U. S. S. "Oakland"

EXTENSION OF REMARKS
OF
## HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 5, 1945*

Mr. MILLER of California. Mr. Speaker, the city of Oakland, Calif., recently had the distinction of welcoming home the U. S. S. cruiser *Oakland*.

It was a glorious Navy Day celebration which saw a spontaneous greeting given this veteran ship by the people of the city for whom she was named.

The *Oakland* is a product of the West that has lived up to the proud traditions of the West.

At a testimonial dinner honoring the commander and gallant crew of this historic ship, Capt. A. P. Calvert delivered the following:

Mr. Chairman, Mayor Beach, other distinguished guests, ladies and gentleman, very few ships in the United States Navy other than the *Oakland* have been fortunate enough to be returned to the city which they were named for Navy Day. For that reason I feel that we have been deeply honored in having this opportunity to show the people of Oakland the wonderful ship that has been named after their home city.

Sponsored by Dr. Reinhardt, president of Mills College, our ship was commissioned in July 17, 1943, at the Bethlehem Steel Co., in San Francisco and departed for the combat area in October with Capt. W. K. Phillips as her first commanding officer. At the end of the war she had taken part in 10 "star" combat operations which I would like to list: Gilbert Islands; Marshall Islands; Asiatic-Pacific raids, 1944; Bismarck Archipelago; Western New Guinea; Marianas; Western Caroline Islands; Leyte; Okinawa.

Third Fleet operations against Japan—July and August of this year.

Additional awards authorized were the Philippine liberation ribbon with two stars.

The *Oakland* assisted in sinking a Japanese destroyer and a 7,500-ton freighter and took part in two shore bombardments. Fourteen Jap aircraft were shot down during the war operations.

The *Oakland* is not an inexpensive national investment. To launch her cost $20,000,000. To build and maintain her would have cost every man, woman, and child in the city of Oakland each $75.26. She has steamed over 200,000 miles doing her part in this war or the equivalent of about 10 years of peacetime steaming.

In November of 1943, the *Oakland* together with some heavy cruisers and destroyers rendezvoused near Funa Futi in the Ellice Islands group with three carriers and additional cruisers.

On the afternoon of November 20 this task group was attacked by a formation of Jap two-engine torpedo planes, better known as Bettys, and the *Oakland* received its baptism of fire by shooting down two of them and assisting in splashing two more. The remainder of November and early December were taken up by strikes supporting the Gilbert Islands operations and action against the Marshall Islands, prior to the invasion of the latter group.

The ship was relatively inactive until February when it became a unit of the famous Task Force 58 and took part in the action against the central Caroline Islands and the first attack on Truk. During this operation the *Oakland* splashed two more Jap planes.

In March of 1944 the ship made a trip to the South Pacific furnishing support for the landings in the Bismarck Archipelago and the first air strikes against the Palau, Yap, and Woleai before returning to Majuro in the Marshall Islands group.

Until June our time was largely taken up with maintenance work, drills, and training for the prospective invasion of Saipan and Guam. The *Oakland* took part in the attacks on Guam on June 11, 12, and 13 and proceeded with Task Force 38 to meet the menace of the Japanese combined fleet which was advancing toward the Marianas group, and participated in the first battle of the Philippines Sea on June 19 and 20. Iwo Jima and Pagan were taken under fire on June 24.

On July 9 we had our first taste of shore bombardment when Guam objectives in the vicinity of Agat were taken under fire.

In early August the *Oakland*, together with several other cruisers and destroyers, made an antishipping sweep northwest of Chichi Jima and assisted in the sinking of a Japanese destroyer and medium-sized freighter during a night engagement, which was followed by a shore bombardment of Chichi Jima early in the next morning. During the bombardment the *Oakland* was fired on by large-caliber shore batteries, but no hits were scored.

In early September Task Force 38 was organized and the *Oakland* resumed the job of furnishing antiaircraft support in actions against the central Philippines, after which the ship proceeded to Ulithi for replenishing of ammunition, fuel, and provisions.

The later part of October was taken up with Task Force 38 strikes against Formosa and Okinawa during which the *Oakland* covered the withdrawal of two damaged United States cruisers. Before Ulithi could be reached with the cruisers the second battle of the Philippines was brewing, and the *Oakland* proceeded at high speed toward Leyte Gulf and took part in the engagement against the Japanese battleships and cruisers that were attacking our escort carriers.

During November and December 1944 we operated with various task groups of Task Force 38 supporting the Southwest Pacific forces amphibious operations in the Philippines. Targets on Luzon and Visayas were hit repeatedly by Task Force 38 aircraft in support of Leyte and Mindoro operations.

The *Oakland* weathered the first of a long series of typhoons on December 18, the typhoon during which three destroyers capsized, although the *Oakland* received no serious damage. On Christmas Eve 1944 the Flying "O" received orders to return to the United States for a much-needed overhaul and returned to Pearl Harbor therefrom in early March 1945, prior to proceeding to join Task Force 58 at Ulithi. At this time this force was conducting daily strikes in support of the landings then in progress on Okinawa. Six planes were shot down by the *Oakland* during this series of operations.

In mid-April the *Oakland*, together with Task Force 58, swept to the northward to launch strikes against airfields in the Japanese home islands. Twice during these operations the *Oakland* opened fire and assisted in shooting down a Jap twin-engine bomber and driving off another before it could attack the task force. On April 17, we met up with Kamikazes for the first time and assisted in splashing two of them before they could reach their targets.

The first 10 days of May were spent off Okinawa furnishing support for the operations thereon. Task Force 38 sortied from Leyte Gulf on July 1 to take part in air strikes and shore bombardment on the Jap island of Honshu, which occupied our time until the Japs decided to call it quits on August 13, at which time all offensive operations were halted.

On August 31, we dropped anchor in Tokyo Bay off Yokosuka Naval Base and witnessed the surrender ceremonies on the *Missouri* on September 2.

Prior to entering Tokyo Bay, we picked up a Jap naval officer who was supposed to pilot us through the mine fields at the entrance to the bay. However, he possessed no chart and only a few words of English, and, besides that, he wasn't tall enough to be able to look over the bridge railing, so, all in all, he was practically of no assistance. He only succeeded in getting his coat burned on somebody's cigarette.

During our stay in Tokyo Bay the crew was able to go ashore in Yokosuka, Yokohama, and Tokyo for sightseeing. However, the Army B-29's had arranged it so there was very little sights to be seen. The devastation there was even more than we had anticipated. The people themselves did not appear to us to be hostile but were helpful, the ones who could speak English. The children invariably held up their fingers in a V-for-victory to us as we went by.

There were very few souvenirs to be bought. Food appeared very scarce. Victory gardens—victory for us—were growing up in the business district even between the sidewalks and the pavements. It looks to me like they are going to have a very hungry winter.

We remained in Tokyo Bay for about 1 month taking typhoons at regular intervals, weathered them all very nicely until one night on a midwatch when two large tankers moored together, dragged their anchors and came down and smacked us. Didn't do a great deal of damage but it's just like getting a scratch on the fender of a new car. I hated to see it happen. Did have to leave our calling card in the form of our starboard

anchor and chain in Tokyo Bay in order to get away from the tankers.

We left Tokyo Bay on the 1st of October and proceeded in company with other ships to Buckner Bay in Okinawa to load passengers for return to the States and had a typhoon blow us in and we left on the 6th with one right behind us, except it deviated enough in order to get out of its way. That was the typhoon that did so much damage in Okinawa on the 9th of October.

Our passengers consisted largely of Seabees who were extremely grateful for anything we were able to do for them. They had been living in the mud and dust of Okinawa for several months and proceeded to have a fine time on the way home.

Finally in closing I wish to thank Mayor Beach, for the ship, for all the wonderful hospitality that has been extended to us, and the Oakland Chamber of Commerce for this marvelous souvenir booklet which we have and which all of us will treasure forever.

## Montana Tops Nation's E-Bond Sales

EXTENSION OF REMARKS
OF
### HON. MIKE MANSFIELD
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 5, 1945*

Mr. MANSFIELD of Montana. Mr. Speaker, once again Montana is out in front in the Victory bond drive. Our record in all previous drives is unsurpassed. Before the bond campaign even got under way six of Montana's counties were over the top. This is only an indication of what we intend to do. I want the Congress to know that Montana will occupy once again its usual position of leadership in this drive.

Mr. Speaker, under unanimous consent, I am including with my remarks an article from the Christian Science Monitor of November 3, 1945, concerning Montana's place in the Victory loan drive:

MONTANA TOPS NATION'S E-BOND SALES

WASHINGTON, November 3.—The total sales to individuals in the Victory Loan yesterday stood at $314,000,000, of which $167,000,000 was in series E bonds, the War Finance Division of the Treasury reported.

Montana was leading the Nation in percentage of E bond sales against the quota, with 20.7 percent of its State quota sold in the first 5 days of the drive. Eight Montana counties already had exceeded their E bond quotas, six of them on the first day of the drive, and Powder River and Treasure Counties since then.

The over-all goal of all securities to all investors is $11,000,000,000. Of this amount, $4,000,000,000 is the goal for sales to individuals and half of that is the goal for E bonds.

"E bond sales in the Nation are holding the gains over the anticipated sales of the first few days," said Ted R. Gamble, National Director of the Victory Loan drive. "This is most heartening, for it indicates that our volunteer sales force is working hard, determined to finish the job, and that the public is responding."

Robert W. Coyne, assistant national director, returning from a trip through New York, New Hampshire, Massachusetts, Illinois, Ohio, Iowa, and New Jersey, reported that he found war workers even more optimistic in rural counties than in the industrial urban centers.

## A Man's Value to Society

EXTENSION OF REMARKS
OF
### HON. BUTLER B. HARE
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 5, 1945*

Mr. HARE. Mr. Speaker, it was my privilege and pleasure to attend the graduating exercises of the FBI Academy here in Washington, October 26, 1945, and to hear the address to the graduating class by Rev. Joseph R. Sizoo, D. D., of New York City, and under unanimous consent granted, I am glad to include same in my remarks, which follows:

Mr. Hoover, distinguished guests, members of the graduating class, ladies and gentlemen, I am not unmindful of the very great honor of having a part in this closing impressive ceremony and for that honor I wish first to express my sincere gratitude. A man's value to society is determined not by what he begins, but by what he ends. Anybody can begin a thing, but to bring it to a successful conclusion gives you the earmarks of a great spirit before God and man. What you began you have ended and with your friends I pause to express gratitude.

Emerson once said that any movement is always the lengthened shadow of someone's life, and I cannot help but feel again this morning that we have here a dramatic and spectacular demonstration of something that has come to pass through the genius and through the inspiration and through the imagination of one who is the director of this enterprise, Mr. Hoover. And with you I pause to express also my gratitude. Now no one can take his place in the work of the world unless he understands that world. To serve your generation you must know your generation. A physician cannot heal or cure unless he has made an accurate diagnosis. No man can help build a better tomorrow until he knows what is wrong with yesterday. Because your work and mine have so much in common I want to think a little while of some of the characteristics of the world in which we work and then to point some attitudes of life which must guide us.

Obviously there is this to be said about the world into which you are going: We are living in a world which is talking a moral tail spin. You don't have to live long or read much or travel far to discover that the tides are running out upon ethical values. There are well-meaning but misguided people who live in our country with a pleasing illusion, and because this illusion is pleasing it is so deadly and fatal. It is this, that the enthusiasm for unselfishness and high idealism generated by the war will be permanent.

Many have made themselves believe that the lofty standards of devotion to country, disciplined living, and restraint of common life in time of war will run over into the time of peace. Well, history holds no such warrant. After the Napoleonic era, with the signing of the Peace Treaty of Vienna in 1815, there followed a period of exploitation, of class consciousness, of undisciplined nationalism that ended in chaos. At the close of the Civil War, which in the North was fought that union might be obtained, there followed a period of dark political corruption striking an all-time low in the Tweed Ring. After the First World War, fought to make democracy safe for the world, there came this period of freedom. Let yourself go. Obey that impulse without asking yourself if you are worthy of expressing, bringing social irresponsibility, untutored nationalism and undisciplined restraint in conduct. High moral effort is always followed by moral lassitude. That is the kind of a world in which we live. And you have to take it into consideration in all the enterprises to which you are committed. I don't have to stand here and tell you about that, for it is perfectly obvious. Vulgar indecencies, the inordinate display of wealth, flagrant violations of decency, juvenile delinquency, sordidness of thought, dreadful deterioration on the stage and on the screen—how real it is, this thing we call modern moral lassitude. But I am not thinking of that, for this kind of moral tail spin of which I am thinking goes deeper than that, because it becomes something that goes to the root of our national life in its moral instability.

Going up and down the country, and I do it a great deal, going up and down the country, I find that thoughtful people are not asking "is the Nation turning to the right of center or to the left of center?" but they are asking if there is a center. People are wondering if there is some standard of ethical idealism. Is there some north star of morality by which we shall sail the ship of state? Is there, in the last analysis, some great form of moral conviction by which we live? For we now know that we have got to stop fooling with the Ten Commandments and the arithmetic table; moral instability; letting "I will" wait upon "I would"; following the line of least resistance; constant vacillating; sending up a trial balloon to find out which way the wind is going before a conviction is expressed; gyrating from one side of the street to the other; living with expediency; obeying the impulse of pressure groups; accommodating ourselves to this point or to that point without first asking, "Is it right or is it truth?" That is the peril which you will have to deal with in all the problems in the world of tomorrow. And it is on that basis that contemporary communism becomes such a tragic force. For at least my indictment of communism is not its social attitude or its political construction or its economic structure, but rather this, that it is so utterly unprincipled in advancing its call. It gains its converts so unscrupulously. There is no sense of moral conviction behind its progress. It advances by creating confusion and by creating fires of chaos and misunderstanding. It is so utterly unethical and immoral in its advance. And you have to deal with it, so I say we are living in a world which is taking a moral tail spin and you can never play your part unless somehow you begin with that fact.

Now there is a second characteristic in the world of today which you and I, in our separate spheres of activity, must deal with. It is this. We are living in a world with a new kind of frontier. There was a time when the frontiers of nations were determined by geography. The boundaries between peoples and races were largely natural barriers. People separated themselves from one another by these ordinary frontiers, a ridge of hills, a tall range of mountains, a wide river, swamp areas, thick forests, and as long as these stood nobody from without could come in. Nobody from within could go out and they thought themselves secure. But modern science has shrunken this earth and these frontiers are no longer tenable. There are not two points in the world which are more than 50 or at the most 60 flying hours apart. Why you can go around the whole thing in 150 hours. Barriers are meaningless. Frontiers are imaginary lines. Walls have become windows. The old frontier is gone, but in the place of it races and nations are building a new kind of frontier, and this frontier is invisible. It isn't something you can put your hands upon. It is much more impenetrable. It is much more difficult to hurdle. It sinks so deep long before you dream it exists, for

the new frontiers are in the frontiers of the mind and of the heart. They are the frontiers of suspicion and fear and hate and greed and power, and we can never have a better world until these new frontiers are penetrated, and you can never take your place in modern society until you deal with these new frontiers which are coming in the world of today. Well, at any rate, there you have something of a diagnosis, a world in a moral tail spin and a world with new frontiers. Now the question arises, How can we play our part in that kind of a world? I would like to suggest at the very beginning that to live in a world like that we shall have to walk with caution. By the mercy of God and the gallantry of men, our enemies have been utterly conquered and subdued. But their evil dies hard in the world. It may coo like a dove. It is still a serpent at heart. It may wear sheep's clothing, but it is still a wolf inside. We have invaded their land. We have not yet invaded their conscience. We have destroyed their power to make war but we have not yet destroyed their will to make war. And in this other conflict we shall have to use other weapons than the weapons we used to invade their land or destroy their power, and I have been asking myself the question whether we have these weapons of the mind and of the heart, we shall have to walk with caution. What is true in the world outside is true in the world within.

One of the most magnificent and inspiring sights of modern American history was the sense of unity which held us together. We buried our differences. We put aside the areas of disagreement and we held together to a common task. But the peril of it is, and I have seen it up and down this country, that the honeymoon is over. And it may be that we are beginning to tumble apart into broken and brittle groups, each seeking some advantage at the expense of the other. Why there are men who are beginning to think that if we only hate enough we will build a better country and bring in prosperity. I say to you men, if you are going to minister to a world in a moral slump and with new frontiers, we shall have to walk with caution.

Now there is a second one. If it is true that we shall have to walk with caution, it is also true that we shall have to live with courage. Believe me, yesterday will never come back. Yesterday is dead. Yesterday ought to die. It was not good enough. Mankind deserved something better. Man was entitled to something different. I haven't lost my faith because so much of yesterday has been shattered. If the things that are wrong did not tumble apart every now and again then I would lose my faith and life would be insanity. Live with courage, because there are coming into being new attitudes, new attitudes to life; a new sense of value to living; new concepts of wealth and of race and of government and of stewardship. Live with courage. There is coming something in the world to which you men may appeal. We have got our chance. It may be our last chance to build a world without hate, without disease, without panic; a world in which childhood shall not be forgotten, womanhood not neglected, and old age not abandoned; a world in which man shall come before the machine and personality before profits; in which man's inhumanity to man shall be supplanted by the higher law that we are our brother's keeper. Live with courage. The age into which you are going needs men and women with imagination, with courage, with adventure, who can live creatively. Never forget, it is better to light a candle than to curse the darkness. The kind of a world into which we are going to live was the kind of a world of which Wordsworth wrote of the French Revolution. "Bliss was it in that hour to be alive and to be young was very heavy." Walk with caution. Live with courage, but that isn't enough. You may be cautious. You may have imagination and you may still make a wreck of the universe. Our enemies were cautious. They were resourceful. They were adventurous. They had imagination, but look what they did to the world, and look what has happened to them. There must come another attitude in the minds of those who would serve this kind of a generation.

During the war I went up and down the Army camps and naval bases for a long time in many places. One day I found myself in a camp. Early one morning at dawn three regiments were to march out into an open field a few miles away and there sit down in the morning dew on the long grass to listen to a lecture from an officer overseas on how to advance one's position. I marched out with them. There we sat at dawn on the wet grass and the colonel was describing how men should advance. He would first describe the wrong way and then demonstrate it. Then he would describe the right way and he would demonstrate it with seasoned troops. So in the course of his lecture he was talking about how to take a certain objective out yonder on the edge of another hill. And then he described how it should be done correctly and we saw a group of seasoned soldiers creeping through the grass hugging the soil, keeping close to the earth. You could hardly see them move on their hands and knees, and as they advanced the colonel said, "when you advance on your knees you are always safe." Men and women, that sentence should be written on the door post of every school and on the lintels of every home. When you advance on your knees you will be safe.

Five months before Pearl Harbor the first of my two boys who are in the service was spending the last evening with me. We were talking together, and at the end of a long conversation he said to me, "Where did your generation break down that all this had to happen?" Oh, I think we know the answer. I could give him the argument of political chicanery. I knew something about the economic maladjustment of the world, and I was familiar with the social injustices up and down this universe. I knew something about political chicanery and diplomatic double talk. I knew something about crackpot ideologies, and it was all a part of it, but it wasn't the truth, because the world became what it was not because it did not have enough or did not know enough, but because it was not good enough. We have seemingly forgotten that the basis of a nation's greatness is not in its political technique or in its social structure, but in the character of its men and women and a new day for the Nation can never come in the last analysis except through the reconversion of the human spirit. The same God who gave us eyes to see and ears to hear and lips to speak gave us knees to bend. It is still true that the Nation alone is great whose God is the Lord. So you and I are each of us now going back to the task committed to us, in a world with a moral slump, in a world with dangerous frontiers, and we shall walk with caution. We shall live with courage, and we shall advance on our knees.

Once a week I go to Halloran Hospital to see some of the men there who have been pretty badly shot up. A few weeks ago I was there, and I was visiting with a roomful of men, and we were talking about things that we are talking about now; about a braver tomorrow, and a better country, and a finer concept of national oneness and integrity. And after we had talked about it a little while a chap over yonder in the corner with one arm shot off, the other arm in a sling, paralyzed from the hips down, craned his neck, and lifted it from the pillow and said to me, "Padre, do you think anything will come of it?" Well, will it?

## Inflationary Pressures

EXTENSION OF REMARKS

OF

## HON. GEORGE E. OUTLAND

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, November 5, 1945*

Mr. OUTLAND. Mr. Speaker, under permission to extend my remarks in the Appendix of the RECORD, I include a talk delivered on September 22, 1945, to the New England Newspaper Advertising Executive Association by the Honorable Zenas L. Potter, special assistant to the Administrator of the Office of Price Administration:

For the past week I have been trying to determine what I might say to you today that would have the most significance. The conclusion was inevitable—the message is that inflationary pressures do not end when war ends.

We know that this is true if we let our minds go back to 1919 and 1920. To me that does not take great effort, for as Assistant Director of the Central Bureau of Planning and Statistics of World War I, in charge of preparing weekly reports on the progress of all war activities for Woodrow Wilson and Bernard Baruch, I was in the midst of the economics of the First World War.

I remember how we failed then to control prices. Living costs rose 62 percent before the armistice. I remember also how all the businessmen who came to Washington to make the world safe for democracy hurried home when the fighting ended. What few controls were set up during the war were quickly rescinded. The Nation returned to normalcy. Or did it?

For a few months while reconversion was going on prices turned downward. Then they started up again and in 16 months they rose another 56 percent above start-of-the-war prices. Forty-three percent of the total inflation in living costs came after the armistice.

When prices get out of hand as a result of war's inflationary pressures they never stay up. In June 1920 came the collapse. In 13 brief months prices fell 109 percent of start-of-the-war prices and the Nation paid heavily for its failure to control prices. The normalcy it returned to did not turn out to be happy normalcy. It brought tragedy for millions of our people.

Corporation profits of $6,400,000,000 in 1919 turned to losses of $55,000,000 in 1921, and in the next 5 years 106,000 businesses failed. (By way of contrast I would like to call attention to the fact that in 1944 only 1,222 businesses failed.)

Labor, too, took punishment. Factory employment fell 31 percent. Factory pay rolls shrank 44 percent. Just when sustained business activity was needed to give employment to demobilized soldiers, millions of workers lost their jobs.

Farmers, however, were hit hardest of all. Farm prices went all to pieces. Average farm income dropped from $1,360 to $460. I want to repeat those figures: From $1,360 to $460; and in the next 5 years 453,000 farmers lost their farms through mortgage foreclosures; not only their homes but their jobs gone out of the window.

Stop if you will and imagine the sleepless nights of worry spent by owners of those 106,000 businesses that failed; by millions of workers who lost their jobs, and by the 453,000 farmers who lost their farms through mortgage foreclosure. They were defenseless against forces over which they had not

the slightest control. These were not, however, forces over which the Government had no control. The millions of Americans who lost their homes or jobs might have been guarded from their troubles had the men who then filled the Nation's legislative halls had the foresight of our present Congress.

If there is any lesson to be learned from that experience, it is this: We do not necessarily get back to normalcy when we decide to do so. In fact, we are pretty sure not to get back to normalcy if we turn the laws of supply and demand loose in the face of powerful inflationary pressures built up during a war.

Living costs in World War I inflation rose 108 percent in 71 months, which was exactly the length of the recent war. In World War II in a like period we held living costs to a gain of only 31 percent, against far more powerful inflationary pressures.

How much more powerful will be clear from these simple facts:

The last war cost a total of $32,000,000,000. The recent war cost three hundred and one billions—almost 10 times as much.

In the last war only 25 percent of all goods produced went off to war. In 1944, 44 percent of our national output was used for war.

In the last war currency in circulation increased less than $2,000,000,000. During the recent war it increased by $19,000,000,000—over nine times as much.

In the last war checking accounts in banks increased less than $5,000,000,000. During the recent war they increased by $45,000,000,000—over nine times as much.

During the last war savings of the public increased by $27,000,000,000. Those savings hanging over the market played a considerable part in the postwar inflation that brought distress to millions of Americans. Well, let me tell you something. During the recent war savings of the public totaled $145,000,000,000. Compare those figures: twenty-seven billions—one hundred and forty-five billions.

One hundred and forty-five billion dollars is equal to 1 year and 8 months of our total national income in our most prosperous prewar year. In other words, if we could consume without producing (which, of course, is impossible) we could live on our wartime savings for a year and 8 months at the highest standard of living ever attained before the war.

Increase in checking accounts in banks during the war totaled $45,000,000,000. No assets save cash is more easily spendable than checking balances in banks. Forty-five billion dollars, by the way, is three billions more than our total national income in our bottom depression year, 1933.

Other facts also have an important bearing upon the situation. Every billion dollars' worth of goods we send abroad for relief is as inflationary as war expenditures. So, too, are the billions we are going to lend liberated countries to provide them with materials and machinery to rebuild their cities and factories. In both these cases we pay industries and workers to produce without any goods becoming available for purchase in our domestic market. Even the millions being spent to reconvert our industries for peacegoods production are as inflationary as war expenditures, for people are paid for work that brings no consumer goods directly into the market.

I got to wondering the other day how our military expenditures for the first year after VJ-day would compare with the total expenditures for World War I. Here are the figures: World War I cost $32,000,000,000. Our military expenditures for the first year after VJ-day will cost $41,000,000,000. Thirty-two billions versus forty-one billions. And some people tell us the thing to do is to throw off all these wartime controls and give supply and demand an opportunity to function.

If you will permit me to say so, this is not a time to get back to normalcy; for the normalcy we will get back to by abolishing controls too soon will be an even more disastrous postwar inflation and collapse than that from which we suffered a generation ago.

The one highly encouraging fact in the present situation is our great productive capacity. We did the impossible during the war and doubled a production that already was the wonder of the world. Of course, a great deal of our increased capacity is in the form of shipyards and munitions plants not usable for the production of civilian goods. Other plants will require a great deal of reconstruction for civilian use. But much of our increased productivity is ready to go to work serving the public.

We have made also extraordinary technological advances during the war that are certain to have marked results on production in the future. In the 3 years following World War I output per factory worker increased a total of 32 percent. We are not unlikely to experience similar advances in the years that follow World War II.

This vast productivity, once it gets well under way, will wipe out one shortage after another. Capacity to produce machine tools and most capital goods expanded greatly during the war. Ceilings on such goods will go, one by one. So will ceilings on luxury goods, when they can be removed without hampering production of essential goods.

Food production increased more than 25 percent during the war. With Army setasides cancelled there are reasons to believe that ceilings on many foods can be suspended and later removed before many months go by. Sometime next spring, too, clothing production should begin to wipe out shortages and permit removal of many soft-goods ceilings.

Most persistent shortages will be those of building materials and of consumer durable goods, such as automobiles and electric washing machines, refrigerators, vacuum cleaners, and radios.

The best estimate is that due to low wartime and depression-year construction and to increases in population during the war, we are short close to 10,000,000 homes. Our cities already are crowded and 1,400,000 GI's, who married just before or during the war, and coming back wishing above all else to settle in homes of their own. We are going to hear a great deal from those GI's before their problem is solved.

OPA's controls over building materials prices and charges on contractors' services are going to be under terrific pressures, now that War Production Board allocation of materials is ended, for it is not possible under present laws to put ceiling prices on homes. The Government guaranteed loans of $2,000, authorized by Congress to help GI's buy homes, will not be very useful to them if the only homes available carry highly inflated prices. In fact, those loans instead of being a blessing are likely to get our GI's into financial difficulties.

We are definitely on our way out of wartime controls. Most rationing will stop by the end of the year. Month by month we shall be out from under additional ceiling prices. Inflationary pressures, however, still are terrific and if controls are removed before production can ease pressure below the hand of control, we may find ourselves in an inflationary spiral that will make that of the last war seem mild in comparison.

Alarming inflationary tendencies are evident on all sides. Uncontrolled city residential property prices have increased 50 percent or more. Uncontrolled farm land prices have risen 55 percent. Uncontrolled commercial rents have soared dangerously in many areas. And the stock market is showing signs of the kind of inflation that sent the Nation into a tailspin in the late 1920's. When taxi men begin to talk about the stocks in which they are taking flyers it is time for stockmarket leaders and Government officials to see what can be done to check inflationary advances.

Some people predicted that the laying off of many workers during the reconversion period and the ending of overtime bonuses would cause a sharp drop in retail sales that would bring supply and demand into balance and render needless continuation of price controls. There was a sharp decline on VE-day. It lasted 1 month. The second month retail sales returned to the 1944 levels. Then for four successive months they rose 12, 10, 6, and 7 percent above last year's levels, this although last year's sales were 182 percent above prewar levels. Evidently the vast public savings are going to prevent for some time at least the sharp decline in sales volume which some people predicted.

As director of OPA's congressional relations, I am glad to be able to tell you that in my belief Congress is pleased with the results of its policy of controlling prices in the face of war's inflationary pressures. I am very certain, too, that when Congress faces the issue next spring it will continue price control on products still under inflationary pressures. However, those in Congress who never have believed in price control are becoming increasingly vociferous, spurred on by the demands of small-minded businessmen from every section of the country who think they want a return to normalcy.

We are very likely, when the President's War Powers Act expires in December, to face an attempt to tack riders onto the renewal bill, which will seek to weaken OPA's authority to control prices. The move will be fought strongly by farm interests. It will be opposed by labor, a little weakly, for labor is absorbed these days in its fight to hold to its wartime earnings, with overtime work ended. It will be opposed, too, by consumer groups. And it will be opposed—too silently, I fear—by businessmen who remember the lessons of 1919 and 1920. I am quite certain the attempt will be defeated; but Congress and the country will know that we have been in a fight.

Efforts to kill OPA are taking the form of charges that we are retarding reconversion and hampering full production and employment. The fight centers around reconversion industries.

The fact is that lack of recent production costs for reconversion goods, which made it impossible to gage need for price increases by the standards applied to other goods, has forced OPA to set up formulas which base prices of reconversion goods on their 1941 prices. To these are added increases in material costs, increases in basic wage rates and average 1936-39 profits.

Reconversion industries have told the War Production Board they expect to exceed average monthly 1939 production by 53 percent in December this year, and by 138 percent by June next year. With such pricing standards and anticipated volume it is difficult to see how reconversion industries can escape having a very profitable year in 1946.

Most persistent complaints are those of wholesale and retail distributors of reconversion goods who object to OPA's requirement that they absorb increases in manufacturers' prices. What they fail to mention is that OPA does not require cost absorption if doing so will reduce a trade's over-all profits below its average 1936-39 earnings or will reduce its realized margin below those it realized in the prewar period. We do not seek to protect theoretical margins distributors were supposed to get under manufacturer's list prices, but which they actually never realized.

The fact is that there is a vast accumulation of demand for automobiles, electrical household appliances, and other consumer durable goods which have been out of pro-

duction during the war. Had 1941 output been continued through the war period, we should have produced:

| To Oct. 1, 1945: | |
|---|---|
| Passenger automobiles | 13,725,000 |
| Refrigerators | 13,125,000 |
| Sewing machines | 1,500,000 |
| Washing machines | 7,552,000 |
| Vacuum cleaners | 7,939,000 |
| Electric irons | 20,944,000 |
| Electric toasters | 9,904,000 |
| Radios | 51,375,000 |
| Clocks and watches | 102,975,000 |
| Pianos | 416,000 |
| Furnaces and heaters | 13,000,000 |
| Stoves and ranges | 17,512,000 |

These figures, of course, exaggerate the backlog of demand accumulated during the war, but they suggest how great is that backlog.

Along with this enormous accumulated need we have greatly increased productive capacity and we have the greatest consumer purchasing power in the history of the Nation.

If wholesalers and retailers of reconversion goods get the margins they actually realized in the prewar period and enjoy a greatly increased volume of sales, it is difficult to picture them in hardship in 1946 under OPA policies. There is every reason to believe they will enjoy one of their most profitable years.

From having been business manager of a metropolitan newspaper, I know that newspapermen are interested in advertising volume. It may reassure you to know that our formula for reconverting manufuacturers and for wholesale and retail distributors of reconversion goods will permit them to spend as much per unit for advertising as they spent in the prewar period. If the prediction of manufacturers that the output of such goods by next June will exceed by 138 percent average monthly production for 1939, it seems likely that advertising of such goods will be on a very satisfactory basis in 1946.

I trust that the newspapers, the public, and Congress will not be impressed by the present campaign of misrepresentation of OPA's policies, but will back an orderly lifting of price controls, as production takes the pressures off ceilings. I can assure you that if removal is left to Chester Bowles, controls will end as soon as it can be done safely. If, however, controls are removed too soon, or if other parts of the stabilization program are not skillfully managed, we may find ourselves in a disastrous experience. Never in the history of the Nation were such terrific inflationary pressures loose in the land. This time let's have a normalcy that leaded to long-time prosperity, not to boom and bust. The choice is ours to make * * * in the next 8 months.

## Contract Renegotiations

EXTENSION OF REMARKS

OF

### HON. ANDREW J. MAY

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

*Monday, November 5, 1945*

Mr. MAY. Mr. Speaker, No. 1 of the list of guiding principles advocated by Secretary of the Treasury Vinson in his able presentation to the Ways and Means Committee October 1 of the national tax structure declared:

Taxes should be levied in such a way that they have the least harmful effect on the expansion of business investment and the creation of jobs, because productive employment is the source of our standard of living, of all income, and of the revenue which the Government collects from taxes.

That is sound advice and this Congress has in the main accepted and approved it. The Secretary made bold to declare that the war had demonstrated that an annual gross national product of $200,000,000,000 at present prices is within our reach and that the only real solution of our tax problems and our debt problems is a high level of production, employment, and national income.

Speaking of deflationary factors, the Secretary said:

Such deflationary dangers as we face are the byproducts * * * of a titanic physical change-over from war production to peace production.

In other words, we should have adequate demand if we were able to mobilize our physical resources quickly enough to satisfy it. Therefore, one of the primary objectives of our fiscal policy must be to encourage the boldest, the quickest and most venturesome expansion of peacetime enterprise by business investors.

Discussing the excess-profits tax in its relation to the then pending tax amendments, Secretary Vinson said:

A serious defect of the excess-profits tax for the postwar period lies in the weakness of the average earnings credit, which uses prewar profits as a measure of normal profits. A corporation may continue to earn free of excess-profits tax 95 percent as much as it averaged during the years 1936–1939, and this amount is often enlarged by various relief provisions. A corporation with a high prewar earnings experience may thus earn 20 percent, 30 percent or more on its invested capital without paying any excess-profits tax. New and rising corporations do not have the benefit of such a credit and are thus at a competitive disadvantage in relation to established long-prosperous corporations.

Mr. Speaker, what I have quoted Secretary Vinson as saying with respect to taxes could with but slight change be appropriately applied to inequitable treatment by certain Federal Government agencies of "new and rising" and let me add, relatively small corporations, which are at a competitive disadvantage in relation to their colossally financed and rapaciously inclined rivals.

Into just how many fields of contract settlements our Government gun bearers and game beaters have ventured I am not at this moment prepared to state; but one field, that of contract renegotiation, is being pretty well shot over, to judge from reports which have been reaching our committee for some time, and, if these reports are correct, the game laws are being applied in such manner that the little fellow is shot before he is flushed.

The attention of our committee has recently been called to what is said to be a typical instance, one of many, of the favoritism of the big over the little companies. In this case the panel of the Renegotiation Board allowed big company X a profit on its fixed-price renegotiable volume far higher than on its nonrenegotiable volume; while little company Y has been offered on its renegotiable volume a ruinous percentage reduction below its nonrenegotiable business. The profit on fixed-price Government contracts of company Y at the same percentage rate as its nonrenegotiable business, whereas company X's profit on renegotiable business was materially in excess of its profit on nonrenegotiable business. Because of its small capital resources and the inequitable treatment accorded it by the Renegotiation Board, company Y will have considerable difficulty reconverting and thereby providing jobs, profits, and taxes resulting from the manufacture of its highly popular products. Company X, on the other hand, because of its size, command of unlimited resources, and comparatively liberal treatment at the hands of the Renegotiation Board, reconverts with ease and dispatch.

Company Y made enormous contribution to the victory of our armed forces. Its products in peace and war have enjoyed the highest reputation. The contributions of company X to the war effort were enormous and its products are of high type, but perhaps its ethics need examination.

It is with that thought in mind that I have taken the floor to speak for the committee of which I have the honor to be chairman, and to say that it seems to me to be only fair that notice be taken of these complaints and that a special committee of the Committee on Military Affairs make a study of, and a report to, this body thereon.

Such an investigation need not be confined to the complaining contractors themselves; all those who honestly feel that they have by Federal agencies been subjected to injustices and inequities growing out of their contractual relations with the United States Government under renegotiation procedure would be invited to notify the committee of their desire to appear before it and be heard.

Let me repeat, Mr. Speaker, small companies can be subjected to as much frustration and injury by governmental imposition of pound-of-flesh and inequitable settlements as they can by onerous and unavoidable taxes—perhaps more so, for in the latter they know what is required and can plan accordingly, while in the former their pathway is cluttered with obstacles which may become insuperable.

One wonders, as these complaints troop in, if it may not be the purpose of some clique combining wealth and influence with authority to take advantage of these contracts presently being renegotiated to help bring about a slaughter of the innocent little plants and the further strengthening of their muscle-bound adversaries.

If this be true, I do not believe this Congress will be a complaisant witness. The brains, bone, and sinew of this Republic are made up in chief part of the little businessmen and the small industries, and this Congress is going to see to it that they get a fair deal.

## War Ban Is Urgent, 515 Scientists Say

EXTENSION OF REMARKS

OF

### HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

*Monday, November 5, 1945*

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I

include the following article by William M. Blair, from the New York Times of October 31, 1945:

WAR BAN IS URGENT, 515 SCIENTISTS SAY—UNPRECEDENTED WORLD PATTERN FOR AMITY ONLY DEFENSE FOR ATOM BOMB, RADAR MEN HOLD

(By William M. Blair)

CAMBRIDGE, MASS., October 30.—Five hundred and fifteen scientists, asserting that no effective defense was possible in atomic warfare, called today for international cooperation of an unprecedented kind to assure survival of the human race.

In a statement urging that the development and production of atomic energy be brought under effective international control, the physicists, chemists, and engineers who have been engaged in war research at Harvard and the Massachusetts Institute of Technology declared:

"If the people of the world are to survive, it is necessary for the United States Government, as first producer of the atomic bomb, to initiate immediately steps to achieve effective world cooperation for the prevention of war."

They asserted that traditional methods of international policy had been unable to prevent war and contended that to perfect new methods of international cooperation "national sovereignty in its traditional form will have to be sacrificed."

The scientists made no attempt to outline a plan for the international control of atomic energy or for a world organization, although spokesmen admitted that the crisis that they believed the world faced had forced them into the field of political action.

VIEWS OF RADAR EXPERTS

The statement was modeled on previous declarations of other groups of scientists, notably those at Los Alamos, N. Mex., and others who perfected the atomic bomb. The chief difference, however, was that the statement was prepared by experts in radar, the present major defense mechanism against attack.

These experts declared flatly that the physical principles involved in the atomic bomb made it clear that "a complete defense is absolutely impossible."

Spokesmen explained that the experts' purpose was to "alert the American people and the Government to the terrible consequences of an armament race with atomic weapons."

The statement was adopted in final form by a vote of 175 to 1 at a meeting here October 23. The lone dissenter was not identified. During the last week several hundred endorsements were received from scientists who could not attend the meeting.

Attached to the statement were two memoranda on defense against atomic explosives and how an atomic bomb might be delivered.

DEFENSE QUESTION ANSWERED

Dr. I. A. Getting, a division head of the M. I. T. radiation laboratory, who worked on nuclear physics at Harvard before the war and is regarded as an outstanding radar fire-control expert, answered the question whether there was a possible defense against missiles carrying atomic explosives. He declared:

"The answer is 'the possibility of making an adequate defense against atomic missiles is so vanishingly small as to be zero from any practical viewpoint.'"

Dr. Louis N. Ridenour, professor of physics at the University of Pennsylvania, an expert on guided missiles, said in discussing the methods of atomic bomb attack:

"Of two principal classes of means for using the atomic bomb, the first, and overwhelmingly the most important, is the infernal machine, or mine, which has been located in operating position during peacetime."

"The tremendous importance given the infernal machine by the development of atomic explosives has scarcely been appreciated in public statements so far made on atomic warfare and the Military and Navy Establishments needed to take part in it," he added.

Other conclusions in the scientists' formal statement were that other nations would be able to produce atomic bombs; that safety would not be obtained by superiority in atomic armament; and that henceforth war would mean the destruction of a large part of civilization.

Among the signers of the statement were:

Dr. Lee A. Du Eridge, dean of the graduate school and head of the physics department of the University of Rochester, and director of the Massachusetts Institute of Technology radiation laboratory.

Prof. P. W. Bridgman, Harvard physics department.

Prof. W. H. Furry, Harvard.

Dr. S. A. Goudsmit, professor of physics, University of Michigan.

Prof. H. L. Chazen, head of the Massachusetts Institute of Technology electrical engineering department.

Pro. E. C. Kemble, former head of the Harvard physics department.

Prof. M. Stanley Livingston, Massachusetts Institute of Technology physics department.

Prof. F. W. Loomis, University of Illinois physics department and associate professor of the radiation laboratory.

Dr. J. C. Street, Harvard physics department

F. E. Termain, director of the radio research laboratory, Harvard, and head of the electronic engineering department, Stanford.

Prof. L. A. Turner, physics department, Princeton University.

Prof. G. E. Ulenbeck, physics department, University of Michigan.

Prof. J. H. Van Vleck, Harvard physics department.

Prof. A. T. Waterman, Yale physics department.

## Relief and Politics

EXTENSION OF REMARKS
OF
### HON. GEORGE E. OUTLAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

*Monday November 5, 1945*

Mr. OUTLAND. Mr. Speaker, the following editorial in the Washington Post for November 3, 1945, is especially appropriate in view of the action of the House in amending the bill for the UNRRA appropriation. I am wondering if the time will ever come when the opposition party will be able to stop playing politics with hunger and human misery.

RELIEF AND POLITICS

The Brown amendment which the House on Thursday tacked onto the UNRRA appropriation is at once a mischievous irrelevancy and an administrative absurdity. It pretends to assure freedom to American newspapermen in countries where UNRRA operates. Press freedom is, of course, a laudable goal. And espousal of it, like espousal of the sanctity of American motherhood, seems an easy avenue to political glorification. It has nothing to do, however, with the filling of bellies which crave not news but food. We do not believe that the House Republicans were prudent, or even politic, in making a party issue of this specious amendment. They have laid themselves open to the ugly charge of playing politics with relief.

The Brown amendment has to be read to be believed. It provides that none of the funds appropriated "shall be furnished to or used in any country of which the controlling government * * * maintains any barrier—technical, political, legal, or economic—to obtaining, dispatching, and disseminating the news." Such barriers, wherever they exist, are lamentable. But the fact is that they do exist and are certain to be continued to some extent in a number of the countries which have undergone recent political upheavals. The people who live in those countries may be no less hungry, however, than the people in countries adhering more closely to our own concepts of press freedom.

In point of fact, every country maintains some barriers to obtaining news. Newspapermen were excluded, for example, from the executive session of the House Appropriations Committee which acted on the UNRRA request for funds. A liberal interpretation of the Brown amendment would mean, therefore, that not even the United States would be eligible for UNRRA aid. General Eisenhower necessarily maintains certain barriers to dispatching news from Germany; the Brown amendment would make it impossible, therefore, for UNRRA to give assistance to the displaced persons now inside the Reich. The Russians—at whom the Brown amendment is patently aimed—are not going to be forced into an abandonment of their deplorable censorship by this sort of blackmail; all that we can get out of such tactics is a further deterioration of our relations with them.

The Republican Congressional Food Study Committee reported just a few days ago that "the $550,000,000 remaining to complete the current contribution of the United States toward UNRRA's operating expenses should be made available immediately. This is a national obligation. It is unthinkable that the United States should now default on the commitments it has made to UNRRA and which UNRRA in turn has made, in reliance upon us, to the people of the liberated countries of Europe." We cannot now impose a special condition upon our contribution to UNRRA without just such and unthinkable default on our commitments. The Brown amendment imposes a condition which is, in any case, impossible of fulfillment and which, if enforced, will condemn millions to hunger. UNRRA was established not for the purpose of opening foreign doors to American newspapermen but for the simple, humanitarian purpose of getting food to starving human beings. We hope the Senate will have a better sense of values.

## Harbors of Refuge—Knife River, Lutsen, Beaver Bay, and Other Great Lakes Harbors

EXTENSION OF REMARKS
OF
### HON. WILLIAM A. PITTENGER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

*Monday, November 5, 1945*

Mr. PITTENGER. Mr. Speaker, early this session, Congress passed Public Law No. 14, Seventy-ninth Congress, which was approved on March 2, 1945. This law authorizes the War Department engineers to carry on an extensive program for the improvement of various rivers and harbors throughout the United States. Included in the list of projects are numerous harbors on the Great Lakes, including Lake Superior. In my district we find the harbors at Knife River, Lutsen, and Beaver Bay, Minn.

These harbors are what is known as harbors of refuge, and are being established by the War Department engineers on the Great Lakes as a part of the recreational and summer resort development of the lake areas. At the present time small pleasure craft and yachts have very few, if any, available harbors along the north shore of Lake Superior—and this is true in other localities in other States—and the people who want to find a vacation spot during July and August either go elsewhere or are deprived of the advantages which come from the use of pleasure craft at vacation and summer resort centers.

Public Law No. 14 contains a section which provides that money for these projects shall not be appropriated for their construction until 6 months after the termination of World War II. No official termination of World War II has been made either by the President or by Congress. Such termination of the war ought to be made, in my opinion, but unless and until it is made there is no authority for the Appropriations Committee to appropriate money needed by the War Department engineers in the construction of these projects.

Accordingly, I have introduced House Joint Resolution 267 to amend Public Law No. 14 by striking out that section which postpones appropriations for these projects until 6 months after the termination of World War II. This has been referred to the Committee on Rivers and Harbors, and we are hopeful of early action. Numerous Members of Congress are interested in this bill to eliminate the 6 months' delay.

POSTWAR EMPLOYMENT

We ought to proceed as quickly as possible to change the law so that appropriations can be made for all of these rivers and harbors projects. Our returning soldiers and sailors, and also war workers who are out of employment, will be looking for jobs made possible by this legislation. In connection with the public roads program, it should be noted that legislation similar to House Joint Resolution 267 has already been passed. This will enable the State highway departments in the different States to proceed with highway construction work and thereby furnish jobs for the unemployed.

HARBORS PROPOSED ON NORTH SHORE OF LAKE SUPERIOR

The plans of the War Department engineers call for development of harbors of refuge at Knife River, Beaver Bay, and Lutsen, Minn. These harbors are provided for in Public Law No. 14. It should be noted that in addition to these proposed harbors, surveys are being made at other points on Lake Superior, namely, Tofte, and Grand Portage, and when those surveys are completed reports will be made to Congress by the War Department engineers. We are also requesting further improvement of the harbor at Grand Marais, Minn., and in due time report by the Army engineers will be made on that project.

The policy of the War Department engineers is to require the States that are interested in improvements of this character above described to make contributions for that purpose. In other words the customary procedure is to have the proper State authorities contribute State funds to match Federal funds appropriated by Congress.

MINNESOTA TOURISTS AND VACATIONIST ARE ALL INTERESTED

This proposed improvement of the north shore of Lake Superior is of vital concern to every citizen of Minnesota who wants first-class advantages when he gets ready to take his vacation. When these harbors are constructed, in addition to other advantages possessed by northern Minnesota, and not found elsewhere, the best boating, yachting, fishing, and water sport facilities will be available. Not only Minnesota people but people from adjoining States will want to take advantage of these new opportunities. At the present time I am advised that one of our postwar developments will be the development of small craft, yachts, and so forth for recreational purposes, wherever harbors of refuge are located. The Army engineers are to be congratulated upon recommending these various projects. They will add to the great natural advantages of the State of Minnesota, which already attracts tourists and vacationists from far and near during the summer season. Those with asthma find our northern climate a sure relief. Those who want to escape the discomforts of summer heat, and who want to get away from home for a rest in a climate where the nights are always cool, where you sleep under a blanket—these people invariably come to northern Minnesota and find every hope fulfilled and, they return year after year to this garden spot where every diversity of nature can be found. This section of the country is known as the wilderness area. It is dotted with many small lakes and most of it is untouched by the hand of civilization. Bears roam without fear of being molested, and the deer and the moose are plentiful. Not only on Lake Superior, but in our other northern Minnesota lakes as well, you will find the best crop of fish available in this sportsmen's paradise of northern Minnesota.

I could go at some length into a recital of the wonderful possibilities of northern Minnesota, but it seems to me that the sentiment I want to express is put in very beautiful and effective language by Mr. Howard Everett, who paid tribute to Minnesota in language which has never been excelled. Mr. Everett says:

MINNESOTA

God made Minnesota the Garden of Eden of America and placed it in the wonderland of the North. He gave it fertile soil that man might subsist with ease; then blessed it with 10,000 lakes and surrounded these with trees. He called it the home of laughing waters and proclaimed the Mississippi the father of sparkling streams. He sweetened its balmy air with the music of song birds and honey bees, and pronounced it the playground of wildwood and graced it with the innocence of wild life. He taught the sunshine to romp with the shadow through the forests and the fragrances of its flowers and fields of clover to mingle with the perfume of its pines. He filled its lakes with fish, its forests with game, its plains with fowl, and unto these He gave the romance of the red man. He made it grow fruits, vegetation, corn, and field of waving grain. Over it He placed a carpet of luxurious grasses and underneath He planted a store of untold mineral wealth. He took the scenic beauties of Switzerland and a Colorado and combined them with the fertile soil of an Iowa, and the fascinating climate of a California. To these He added all things else which contribute to the health, happiness, and comfort of life, and when He had finished, He called it Minnesota.

## Montana Future Farmers of America Plans Program

EXTENSION OF REMARKS
OF
### HON. MIKE MANSFIELD
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 5, 1945*

Mr. MANSFIELD of Montana. Mr. Speaker, last week end I spent a very pleasant hour with Mr. A. W. Johnson, of Bozeman, Mont., State adviser to the Montana State Association of Future Farmers of America. The young folks who comprise the membership of this organization are to be highly complimented on the fine work they have been doing on rural problems and their leadership and initiative is to be commended. These are serious young people doing serious work in serious times. We of Montana are proud of them and we know that the very necessary work they are undertaking will help to give our State and our country a sound farm foundation. Mr. Johnson represents the fine type of adviser that this organization has, and the membership represents not only the future farmers of America but the future citizens of our country as well.

Mr. Speaker, Montana was honored by having the picture of the officers of the Montana State Association and their adviser, featured on the cover of the magazine, The American Farm Youth, in its September 1945 issue. The names of the officers and their residences are as follows:

President: Oscar Donisthorpe, Lewistown.

First vice president: Bill Byrne, Kalispell.

Second vice president: John Malinak, Hot Springs.

Secretary: Joe Lee, Belgrade.

Treasurer: Malcolm Swan, Fromberg.

Reporter: Burris Blackwood, Bozeman.

Executive board: John Stewart, Miles City; Gene Combs, Laurel; Herb Fisser, Sidney.

State adviser: A. W. Johnson, Bozeman.

Under unanimous consent granted to me by the House, I am inserting with my remarks the Montana State Association of Future Farmers of America program for 1945–46. These 1,500 Montana farm boys have laid out a program that fits in with our high ideals of American citizenship, and I know that they will achieve their goals:

MONTANA FFA PLANS PROGRAM

At a recent meeting of the State officers of the Montana State Association of Future Farmers of America it was unanimously approved that the following program items be

stressed and put into operation for the year 1945–46 by Montana Future Farmers, a total of some 1,500 farm boys, so that standards of farming methods and rural leadership and citizenship development will progress to higher levels, states Oscar Donisthorpe, State FFA president, of Lewistown, Mont.

Support the Seventh War Loan drive, the Red Cross, the national clothing drive, and drives for needed scrap iron and steel.

Conduct a farming program, including a victory garden which will help meet war food needs and also aid farm boys to get established in farming.

Each Future Farmer conduct a farmstead improvement and beautification program on the home farm.

That all Future Farmers cooperate and work together for farming improvement and a satisfying way of life.

That all Future Farmers plan a program that will aid all farm boys in becoming straight thinkers and effective speakers.

To conduct a program that will teach farm boys how to earn and save so that thrift and credit will have a continuing value throughout life.

Provide leadership training in human relationships and business conduct.

Devote time and study to scholarship attainments to the end that Future Farmers will be on the alert.

Organize and conduct suitable and adequate recreational programs that will improve individuals mentally and physically.

## Los Angeles Chamber of Commerce Endorses Combined Steamship and Air-Line Operations

EXTENSION OF REMARKS
OF
### HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 5, 1945*

Mr. McDONOUGH. Mr. Speaker, in the interest of providing adequate air-line services to the American people, it appears wise and in the interest of public necessity and convenience, to permit steamship lines to operate air lines as part of their service and any administrative ruling opposing such joint operation as a first policy, would undoubtedly prove undesirable and opposed to the best interests of public necessity and convenience.

The Los Angeles Chamber of Commerce, conscious of the beneficial service such joint operation would provide, have adopted a resolution pressing their views which I request be inserted in the CONGRESSIONAL RECORD at this point in my remarks:

OPERATION OF AIRPLANES BY STEAMSHIP LINES—RESOLUTION ADOPTED BY THE BOARD OF DIRECTORS OF THE LOS ANGELES CHAMBER OF COMMERCE

At its meeting held on October 4, 1945, the board of directors of the Los Angeles Chamber of Commerce took the following action:

"*Resolved*, That since ownership and operation of airplanes in overseas commerce by steamship lines may be found desirable, and since competing foreign steamship lines will probably render such air services, steamship companies should not be precluded by law or general administrative ruling from doing the same; be it further

"*Resolved*, That the management be instructed to present copies of this resolution, together with such supporting material as might be proper, before the President of the United States, the Civil Aeronautics Board, United States Maritime Commission, members of the United States Senate Committee on Commerce and Interstate Commerce, United States House of Representatives Committee on the Merchant Marine and Fisheries and the Committee on Interstate and Foreign Commerce, and all California Members of the Senate and House of Representatives, and that the management be authorized and directed to support such legislation or other action as might be necessary to effect the chamber's position."

COMMENT

The economic future of Los Angeles and other coast cities depends in large part upon the continued growth and development of all forms of overseas transportation, to the end that passengers and goods may be transported economically and in the manner best suited to meet each situation. It is of utmost importance, therefore, that steamship lines which heretofore have constituted the principal means of overseas transportation shall not be precluded either by law or by the ruling of administrative boards from modernizing or otherwise improving through the addition of airplanes the character of services offered by them. Otherwise such carriers would continue to engage in the business of transportation and enlarge and expand their facilities at the possible risk of being forced out of business or into inferior and unsatisfactory competitive positions simply by reasons of technological advances in transportation.

## They Also Served

EXTENSION OF REMARKS
OF
### HON. LOUIS LUDLOW
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 5, 1945*

Mr. LUDLOW. Mr. Speaker, on November 2 the Indianapolis News, one of the great newspapers of the country, printed an interesting editorial on a bill I have introduced to provide a memorial for newspaper correspondents who died in World War II.

The editorial referred to reflects, I think, in appropriate and beautiful language, the opinion of newspaper people generally in respect to this proposal for a memorial to the honored dead of our profession who served America so faithfully and so creditably in covering the news of the greatest war in history.

The editorial was as follows:

THEY ALSO SERVED

The proposal of Representative LOUIS LUDLOW that Congress appropriate $50,000 for a memorial to the 38 press correspondents and photographers who lost their lives in the war is entirely fitting and should be approved.

As Representative LUDLOW points out in his resolution, which is now before the House, these men "died like soldiers on the fighting front." They died for the same ideals for which the men of the armed forces fought. By their lives and by their deaths they served those ideals well.

They were not alone in this. Between 600 and 800 correspondents were accredited to the fighting fronts during the war. Most took the same or greater risks as the fighting men; most shared the same hardships; most were gallant above and beyond the call of duty. They left the comforts of their homes to serve the people of the United States. They had a high duty in this Nation founded on free enlightenment, and they were true to their trust. They brought the war back to the firesides of America; they were the link between home and fighting front. They lived in mud and blood, in numbing cold, or suffocating heat; they dared the perils of the deep, the terror from the skies, disease and death by night that the people at home might know how this war was being fought that we might understand why it was being fought.

Alone and unarmed, they walked daily with danger. And those who did not return were among the bravest and brightest of all, for death loves a shining mark. They died remembered by millions for whom they gave their lives; they died deserving the Nation's gratitude. They should have their memorial as enduring as the cause for which they died.

## Just More Government

EXTENSION OF REMARKS
OF
### HON. BARTEL J. JONKMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 5, 1945*

Mr. JONKMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Grand Rapids (Mich.) Press:

JUST MORE GOVERNMENT

Mr. Truman in his wage-and-price address indicates that he would solve the present troubles of labor and industry by these means:

First, higher wages with a minimum of price increases.

Second, since this might be a difficult stab in the dark for many industries, a grant of price increases where cost-of-living's rise since 1941 has not been met, where there is inequity among plants in the same industry or locality or where present wage rates cannot bring out needed manpower in necessary reconversion lines.

Third, in cases where wage increases have not been granted previously by Government, industries will be given a 6-month test period to try out higher wages without price increases, then given price boosts if they can prove they couldn't make a fair profit during the 6 months.

From this summary of the President's address it is difficult not to draw the following conclusions:

"The OPA will be drawn increasingly into decisions affecting private business, rather than less.

"The way is opened for new cost-of-living determinations by the CPA to justify price increases.

"A new flood of price increase applications based on alleged inequities within an industry will descend on the OPA, on the basis of the President's second method of relief above.

"The War Manpower Commission and OPA will be called into action to determine what wage rates will bring out needed manpower—and perhaps a revival or substitute for the WPB, under some such name as the reconversion production board, will be needed to determine just which industries are 'necessary to reconversion' under the President's formula and which are not.

"And since the OPA is to give 'prompt' consideration to all wage increases on the more complex basis of the President's new rules, especially the requirement for going into companies' books to discover what's a fair profit and whether they made it, the

OPA will need a rather large increase of its force.

"Finally, there will be an increasing area of union demand for higher pay on the basis that almost any company could boost prices under one or another of the President's list of justifications, which are seemingly very liberal."

Thus the effect of Mr. Truman's address from the standpoint either of calming labor strife and averting strikes, or of holding the inflation line, is rather dubious. If his loopholes for price increase are widely used and freely granted by Government, the inflationary effect will be about as great as if the OPA had ceased business and we had returned to free markets. If the OPA is extremely strict on prices, the labor strife will not be mended. Politics being what they are, the loopholes are not apt to be plugged very tight by Government. And the OPA is on the way to a rush of applications by management, pushed in its turn by labor.

It is hard to see that the President's solution solves anything. Despite his vigorous assertion that we must "get back to the free operation of our competitive system," all his proposals definitely tend to increase the interferences of Government rather than reduce them. Despite Mr. Truman's concern for companies needing reconversion but unable to find manpower—in many cases because the manpower would rather continue living on present unemployment doles than go back to work—he takes occasion to chide Congress for failing to increase the size and extent of those doles. Despite his concern for little business, the fact is that any major wage increases for big business under one of his formulas must inevitably be reflected all the way down the line in wage demands, and little business has the hardest time both in obtaining price increases and in living competitively under them. Despite the President's warning against a repeat performance of "the dizzy upward spiral of wages and the cost of living ending in the crash of 1929," there will be great perplexity as to how he has contributed to its prevention by the offers made in his speech of Tuesday night.

Its general tone, the fatherly warnings given both labor and management, its good will and cheerfulness in the fact of a very serious national crisis, may be commended. But just now the American public needs a strong and statesmanlike leadership emphasizing the need of abandoning ridiculous demands at the muzzle of a strike shotgun, bargaining sensibly, reviving vigorous production at once as the best possible offset to inflation and also the best guaranty of wages and wealth. The speech instead was temporizing in its tone and palliative rather than sound or curative in its suggested methods. It proposes injecting Government and politics still further into the equation instead of pulling them out. To the extent that this policy hampers the restoring of full production, it is inflationary.

A Grand Rapids small businessman lost no time in wiring the Press after listening to the President. We quote his telegram:

"His speech will hinder not only the small businessman but a superman, and also the large industries. Wages have gone up at least one-third since March 1942, and raw materials have gone up accordingly, yet the very industries, large and small, which produce the necessities so scarce today are not only asked to hold the prices at 1942 levels but also to increase wages further. Small business does not need help from the Government. All it needs is the lifting of Government restrictions so it can adjust its prices according to actual cost of materials and labor. Then you will see real production and competition."

Will there be any great difference between this small business reaction and that of larger industries? We doubt it.

## Address of Hon. L. B. Pearson at the Closing Session of the Conference of the Food and Agriculture Organization

EXTENSION OF REMARKS

OF

### HON. CLIFFORD R. HOPE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

*Monday, November 5, 1945*

Mr. HOPE. Mr. Speaker, I have just returned from the Food and Agriculture Conference which closed its sessions at Quebec last Thursday. I hope at a later date to make a report to the House on the activities and achievements of this conference.

The chairman of the conference was Mr. L. B. Pearson, Ambassador from Canada to the United States. It was the universal opinion that much of the success of the meeting was due to the wisdom, tact, and leadership shown by Mr. Pearson, not only as a presiding officer but in bringing about harmony and understanding between the conflict of ideas and personalities inevitable in a meeting of this kind.

One of the outstanding features of the conference was the closing statement of Mr. Pearson. It contained so much soundness, good advice, and practical idealism applicable alike to FAO and all other contemplated United Nations organizations that it should be given the widest possible circulation. In order that it may be available to every Member of Congress and others who read the CONGRESSIONAL RECORD, I am extending Mr. Pearson's address in the RECORD at this point:

It is customary on an occasion like this—the last meeting of a conference—for the chairman to wind up the proceedings with a few remarks. Those remarks usually fall into two parts. The first includes his thanks for all the help he has received during his term of office. The second sums up the accomplishments of the conference.

The first part presents no difficulty apart from my inability to express adequately the gratitude I feel to all the members of the conference and the secretariat for their cooperation and assistance to me while I have been chairman. They have made my work easy, and I am very grateful.

The second part, however, is not so easy if one wishes to be entirely honest. I have attended many international meetings and listened to the closing speeches of many chairmen extolling the magnificent and imperishable results that have been achieved. I have seen these results embodied in impressive resolutions, and I have seen too many of these resolutions remain impressive as words only. I am too confirmed an idealist to become cynical over all this, but I am enough of a realist to be careful when I express my own opinion of the value of what we have done in Quebec.

We have made a good beginning in United Nations cooperation in a vital field—food and agriculture. We have also blazed the way for others in the launching of the first permanent United Nations specialized, functional organization. We have laid down principles of administration and operation which will, I think, be helpful guides for United Nations organization in other fields. In this respect, we have established precedents, and I think they have been good ones.

We have worked hard. The fact that in 2 weeks there have been more than 210 meetings of the conference and its committees, to say nothing of the informal groups that have assembled here and there and worked far into the night, is a tribute to our interest in the task given us and our industry in trying to do something about it.

Out of all this industry and interest has come FAO and Sir John Boyd Orr, two very good results. To help them both we have drawn up a blueprint for the work ahead. But blueprints must be converted into buildings, recommendations into realities. That is FAO's job, but FAO is in the last analysis, people and governments. So it remains for us to make this organization a success. I have no doubt of the competence and zeal of the organization itself under its great director general. I have some fear, however, that the governments, because of apathy or ignorance, may not give FAO the support it must have; may not implement its recommendations or accepts its advice. I can only hope that my fears in this respect will be entirely groundless and that, say, 5 years from now, when I take up the long list of recommendations which we have now accepted as a guide for sound action, I will be able to see written after each one, "Action already taken by FAO and its member governments." That, however, will never happen unless FAO gets its message across to the people by every possible method—press, radio, and film. Only if it is made clear to the people what this organization can do will governments give it the backing it must have if it is to succeed.

Our organization is now a going concern. In its first months of life it should, I think, avoid two things: underrashness and undue timidity. If FAO too ambitiously tries to run before it can walk, it will crash. On the other hand if it is too fearful of falling it will never learn to walk at all. In its work, thereore, it must be at the same time careful and enterprising, imaginative, and practical. It must not become a body with both its feet firmly suspended in midair or one with both its feet firmly stuck in the mud.

Important international progress in the field of food and agriculture has, I think, been made in Quebec. There are, however, implications in the work that we have done here that are more far reaching than those arising merely out of the technical subjects on our agenda. We of the United Nations have taken another cooperative step along the road that leads to peace and prosperity. We have marked another advance in the organizing of the United Nations for concrete, specialized purposes. This approach to international progress and understanding—calling together specialists and technicians who know their jobs and giving them specific jobs to do—is, of course, essentially a nonpolitical and nondiplomatic approach to the solution of international problems. But it is the best approach, because it is concerned with the welfare of the individual, not the pride or prejudice of the Nation. It may be that once or twice in our deliberations considerations of international politics and national prestige have raised their embarrassing heads. But this happened on refreshingly few occasions and when it happened we put these complicating and irrelevant issues in their place as quickly as possible.

Specialist, functional conferences are, of course, less exciting than other and more glamorous meetings. We are no Congress of Vienna. True, we have danced once or twice in this hospitable hotel, but we have also marched. There is more construction, thank God, than controversy; more drudgery than drama, about our work. No Hollywood producer of historical romances will ever be able to make much out of the meetings of the committee on statistics or agricultural production. But millions of workers may some

day live better lives because of those meetings. That is an objective more desirable to achieve, I suggest, than the altering of a boundary or the policing of an election. Scientific warfare with its shattering finality has made disputes and intrigues over boundaries and regimes as unreal as the chattering of children over the right to possess sand castles. Nevertheless, in a world where science has blown to unrecognizable dust particles all the old concepts of national rights and national security—although some of the admirals and generals may stubbornly refuse to admit this—human welfare remains, or should remain, as always, the first objective of governmental action. We can be proud, therefore, that welfare, not warfare, has been our concern at this conference and we have, I hope, made our contribution to its promotion.

It will, however, be a negligible contribution unless others are made in more difficult fields. FAO cannot stand alone.

That, among other things, means that the future of FAO is bound up with the present of UNRRA. Our organization is not, and was never meant to be, directly concerned with relief. Our task is long-range reorientation and reconstruction. Nevertheless, I speak with restraint but with a deep conviction made deeper by a visit to Europe this summer—if we do not help Europe and Asia to save themselves from ruin this year, there will be nothing to reconstruct next year.

There is an interdependence to all sound international effort. That is why I, personally, am happy that in every possible way we have emphasized at this conference that the Food and Agriculture Organization is only one of a number of technical organizations that should in some way be linked together and all coordinated for the achievement of peace and progress under the one great United Nations organization. That is why there has run through all our work the conviction that there can be no prosperity without security, freedom from want would indeed hardly be worth achieving, even if it were possible, in a world which did not have freedom from war and fear of wars.

That is the central, vital problem that has been in the mind of every one of us in our work here, no matter how technical or how remote from political considerations that work may seem to have been. There is no escape from that problem; now less than ever, when science has made war total and destruction total.

We at this conference know, and we have shown, what science could do if harnessed to the chariot of construction. Man's fears have, however, harnessed it also to another chariot—that of atomic obliteration. On that chariot race, with science driven by both contestants, all our hopes and fears and agonies and ecstacies are concentrated. If we lose in that contest anything that we have done here or may do elsewhere in London, or Washington, or San Francisco, or Moscow, will have as much consequence as a pebble thrown into the Gulf of St. Lawrence. But if we should acquire some trace of sanity and bring social progress in line with scientific development by subjecting the annihilating forces of science to some sort of social control, which in the last analysis means some sort of international control, then the work we have done at Quebec will have made a worthy and permanent contribution to man's long effort to move upward from the jungle of hatred, suspicion, and death, where so many powerful, selfish, and frightening influences even today are working to keep him mired.

Our conference is now coming to an end, but the work of FAO goes on. It is a hopeful augury for the future that this work was begun in this historic and progressive city, Quebec, where not long ago plans for victory in war were made, and where now plans for victory in peace have been laid. That those plans may be carried forward by FAO with vigor, courage, and imagination is, I know, the heart-felt wish of every member of this first conference of the Food and Agriculture Organization of the United Nations, which I hereby declare adjourned.

## Oklahoma Veterans' Homestead Project

EXTENSION OF REMARKS
OF
### HON. GEORGE B. SCHWABE
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 5, 1945*

Mr. SCHWABE of Oklahoma. Mr. Speaker, I have today introduced a bill to provide homesteads in the State of Oklahoma for certain veterans of World War II, and for other purposes.

The Oklahoma Ordnance Works, located on the Grand River between Pryor and Chouteau, in Mayes County, Okla., originally comprised a tract of approximately 18,000 acres, some small portion of which has been disposed of by the Government. My information is that approximately 16,000 acres remain in the tract. On this tract are some 63 or 65 large two-story frame dormitories, most of which were never occupied. There are perhaps 15 or more residences in a group which were occupied by the administration staff of the ordnance works. There are many other buildings on the land, such as the ordnance plant scattered over several hundred acres of the land in separate plant units, administration buildings, and so forth. In addition to these there is a large pumping plant on the river bank that was used to pump water over the entire plant for plant operations and other purposes. There are many miles of pipe of varying dimensions through which the water was conducted.

This tract of land originally was made up of many hundreds of farms operated by individual owners and tenants. It is in a good agricultural section and the land is adapted to the growing of practically all agricultural crops and fruits grown in that section of the country, and to stock raising of all sorts.

Besides the large area of land with improvements thereon, constituting the Oklahoma ordnance works, plant, and operations, some 3 or 4 miles distant and in the edge of the city of Pryor, there are approximately 350 prefabricated housing units which were constructed for the employees of the Oklahoma ordnance works.

All of this property is owned by the Government and all of it has been or soon will be declared surplus. An intensive study has been made by the United States Army engineers and other agencies of the Federal Government, by chambers of commerce in nearby cities and towns, and by almost innumerable individuals and groups of people, to determine the best use that can be made of this tract of land, the equipment and buildings thereon and the prefabricated houses at Pryor. I have discussed this problem with hundreds of peoples. Apparently industry cannot be attracted and interested. It is essentially a chemical plant and because of the lack of raw materials available, transportation, and ready marketing within close proximity to the plant, all hopes for the commercial operation of these facilities have vanished.

Mr. Speaker, there are many worthy boys in the service, the men of tomorrow, who have been reared or lived considerable portions of their lives within close range of this plant and who have expressed a desire to follow some agricultural, horticultural, or stock-raising pursuit when they are discharged from the armed services. Many of these veterans will not have sufficient funds with which to purchase a desirable tract of land and establish a home for themselves and their families. Naturally they will have only a small amount of cash, and if they are financed under the GI bill of rights for the remainder of the amount necessary to purchase a farm, they will have no funds with which to improve the land, buy livestock, and incur other necessary expenses to begin operations.

It has occurred to me that this land should be subdivided by the Bureau of Reclamation into family-size parcels, varying in acreage according to the adaptability of the soil and conditions of any particular tract, with the idea of having each tract sufficient in quantity to support the average size veteran's family. The Bureau of Reclamation should be authorized to make a study of the soil and its adaptability for the growing of various varieties of crops, fruits, and vegetables and with the use of water from Grand River and through the pumping unit on the land for irrigation purposes. This terrain for the most part lends itself readily to irrigation. It can be made a veterans' paradise.

Hence, I propose that individual tracts of this land should be given to Oklahoma veterans in the order of the filing of their applications therefor, with residences to be moved onto the respective tracts from among the prefabricated houses at Pryor and those that were used by the administrative staff, as far as they will go. Additional housing may be afforded out of lumber salvaged from the dormitory buildings and other buildings on the grounds.

Each veteran will be obligated to pay the Government the sum of $300 per tract in one lump sum or in installments over a period of 5 years, and each applicant, in order to obtain title to the tract selected by him, must actually occupy and live upon such tract for a period of at least 5 years. During this period, the Government will continue to hold title to the property and it will be tax exempt.

This is similar to the old homestead laws and will afford some 700 to 1,000 future Oklahoma farmers, horticulturists, and stock raisers the opportunities that were afforded many of their ancestors in filing upon and homesteading lands in the Middle West. It will tend to encourage these serious young fellows to become established, self-supporting, and to produce the choicest products from the soil for the benefit of mankind. It will encourage a long-felt need of putting back to the farms the best element of our population. Thus, that which made America great will be rekindled in

the lives of these young veterans. Self-reliant and self-sustaining home-owning citizens are never among the malcontents. They are happy because they are independent, and that is always an inspiration to youth. Furthermore, their Government will thus be manifesting in a material, social, and spiritual manner some degree of appreciation for the sacrifices they have already made for their country.

This is a practical plan for doing something worth while for our veterans. It will give them a new vision and a new hope. They will have as their closest neighbors those of their approximate ages who have been reared in that general area and who love their State, their country, and its ideals. They will have much in common. There will be a community of interest and the sphere of their influence will be immeasurable upon those of surrounding sections and neighborhoods, and upon generations yet unborn. It is a means by which the spirit of America may be rekindled and have a new birth. Our economic ideals expressed in the familiar phrase of free enterprise and independence will be revived in the lives and souls of these boys and their families. Social and ethical values of the American type and standard will predominate. Community interest and citizen responsibility will be assumed and made a vital factor. Ideal results can easily be envisioned.

Whatever we do for these veterans will be too little. Let us offer them this wholesome opportunity and we may be assured that they will assume their responsibilities individually and collectively. This may be much cheaper than the bill the taxpayers will have to pay for neglecting to provide such encouragement and inspiration for these boys and their families. From a dollar-and-cents standpoint, no one can complain. It will be appreciated by these young folk and their posterity. It is better to build such units of civilization on proven ground and according to tested methods, than to offer this land, these homes, and this material for sale and sell it for a mere pittance to those who will profit, or profiteer, in the resale of the same to our citizens.

I sincerely trust that the Congress will properly appraise the values inherent within and bound to flow from such a venture, and that we will not overlook this opportunity to give our sons the chance to make the type of useful citizens we want them to become when the war clouds shall all have cleared away.

## Shall We Establish Compulsory Military Training?

EXTENSION OF REMARKS
OF
### HON. RICHARD F. HARLESS
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 5, 1945*

Mr. HARLESS of Arizona. Mr. Speaker, a most important decision will face Congress within the next few months: Shall we pass legislation which will establish compulsory military training during peacetime in the United States?

In order to ascertain the views of my constituents, I plan to mail several thousand questionnaires during the next few months. The questions to be answered are as follows:

*Public-opinion poll on military training*

| | Yes | No |
|---|---|---|
| 1. Do you favor the principle of military training for boys between the ages of 18 and 21 years? | | |
| 2. Are you opposed to all forms of compulsory military training in peacetime? | | |
| If you favor military training, please answer the next 4 questions. | | |
| 3. Should military training be established on— | | |
| (a) A compulsory basis? | | |
| (b) A voluntary basis? | | |
| 4. How many months of military training should be required? | | |
| (a) 6 months? | | |
| (b) 12 months? | | |
| 5. When should Congress decide America's postwar national policy on compulsory military training? | | |
| (a) Within the next few months? | | |
| (b) 1 year after the President's declaration ending the war? | | |
| 6. If you favor a military training program would you prefer to have it in our school systems similar to ROTC....? | | |

Remarks:

Signature (optional) .....

## Dr. Frederick Taylor Wilson

EXTENSION OF REMARKS
OF
### HON. JOHN L. McMILLAN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 5, 1945*

Mr. McMILLAN of South Carolina. Mr. Speaker, many Members of the Congress, as well as countless other friends, had an affectionate interest in a simple and impressive ceremony which took place recently at a rural point in Tennessee. The occasion was the erection of a bronze marker designating the birthplace of Dr. Frederick Taylor Wilson, noted author, lecturer and friend of man.

Dr. Harry L. Upperman, president of Baxter Seminary, Baxter, Tenn., who spoke on Dr. Wilson's work today said, in part, as follows:

We are here on this Sunday afternoon, October 14, 1945, for a very pleasing purpose. Here between the towns of Rome and Carthage, Tenn., we have erected this beautiful bronze marker in honor of the nearby birthplace of our lifelong friend, Frederick Taylor Wilson, whom we have seen flower and blossom out of the farm lad of other years into the successful teacher, lawyer, author, and lecturer of today.

Other speakers have told you incidents of Fred's early life. Messrs. Walter and Virgil Sampson and Mr. Josh Denton have each pictured his early revealed talents as a writer and speaker, which have in recent years won for him fame as a writer on historical and philosophical themes and as a lecturer, who has spoken in at least three-fourths of all our States. Mr. Ed Ferrell told you of Fred's work as a store clerk and Mr. Julius Williams, who as a State legislator helped him become clerk of the Tennessee House of Representatives, has told of Fred's fight for an education at Vanderbilt University, where he won highest oratorical honors.

We all appreciate the gracious words of Mr. Gordon Moore, our master of ceremonies. There has been no secret in Fred's remarkable success. He has in recent years reaped the results of his labors of long ago. He is now perhaps the most widely read man any of us ever knew. More than 5,000 different books have been read and devoured by our friend and former neighbor. He now holds many college degrees and his name appears in numerous volumes of successful men.

An ability to make and hold the friendship of worthy men and women has served Fred well and the messages that have come to us have attest to the high regard in which he is held by great present-day leaders in education, politics, and religion.

If there has been one key to the life of our good friend, that key has been the keen desire to serve the other fellow as his good friend, Mr. Ewing Herlein, of Houston, Tex., so aptly wrote.

From the time Fred, as a mere lad, taught the Negro family in the cabin near his birthplace for 10 cents a night, until now when his work is Nation-wide, he has found his chief delight in unselfish service to humanity. Few men have so realized their boyhood dreams. As the Honorable Louis LUDLOW, Member of Congress from Indiana wrote, "Dr. Wilson is a scholar whose brilliant mind has explored many entrancing fields of thought and a writer who has made notable contributions to the literature of our time."

So we honor ourselves when we pay honor to our dear friend. How fitting it is that this marker be placed upon this great Tennessee highway. Here, in the years to come, unnumbered travelers will pause and contemplate Fred's eventful career and finding inspiration therein, travel onward, renewed in vision and strengthened in courage and faith.

## General MacArthur Becomes Convinced of Need for Unified Command—Praises Air Forces

EXTENSION OF REMARKS
OF
### HON. JENNINGS RANDOLPH
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 5, 1945*

Mr. RANDOLPH. Mr. Speaker, it is most encouraging to know of the vigorous support for a unified command by General MacArthur as contained in the following article from today's Washington, D. C., Times-Herald:

SAYS MACARTHUR ADMITS ERROR IN FIGHTING MERGER

NEW YORK, November 5.—General Kenney, commander of the United States Far Eastern Air Forces, said here that General MacArthur considers his opposition in 1931 of a unified armed forces "the biggest mistake of my military career."

General Kenney, who advocates unification of the Army, Navy, and Air Forces under a single Cabinet head, said that General MacArthur expressed himself on his earlier views when General Kenney arrived in Port Moresby, Australia, in 1943.

"I realized then," said General Kenney, "that I was working for a man whose mind was not set in concrete. He still had an open mind and thoroughly understood the unlimited possibilities of warfare 20 years from today.

"An understanding of those terrible possibilities had undoubtedly altered his opinion."

The Navy League, opposing the merger, recently quoted General MacArthur's opposition when he was Army Chief of Staff.

FOCH WRONG IN 1910

In New York for a short visit before returning to Japan, General Kenney told newsmen that General MacArthur's reversal of opinion was similar to a change of mind once made by the great French military leader, Marshal Foch.

General Kenney said that in 1910 Foch had said the airplane could never be anything more than a sportsman's plaything, but in 1921 declared the airplane's possibilities in warfare were incalculable.

To statements that separate Army and Navy departments would mean "healthy competition," General Kenney said:

"That hardly seems advisable. Businesses don't run competition with themselves. I question also the advisability of using taxpayers' money to run two organizations that do almost the same thing * * * separate funds for what amounts to exactly the same thing in many cases."

General Kenney said morale and tradition would be preserved in individual units, but added:

"I don't believe we should stress tradition at the expense of efficiency."

## Pathfinder, a National News Weekly, Discusses Proposed St. Lawrence Seaway Project

EXTENSION OF REMARKS

OF

### HON. AUGUST H. ANDRESEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

*Monday, November 5, 1945*

Mr. AUGUST H. ANDRESEN. Mr. Speaker, in the Pathfinder for the weekly issue of November 7, 1945, there is an article dealing with the proposed navigation developments on the Great Lakes and the St. Lawrence River. This article comments briefly on the purpose of this seaway development, gives a short account of its history and summarizes the arguments for and against the project.

Incidentally Members of the House know that our colleague Congressman WILLIAM A. FITTENGER, of Duluth, Minn. has been an ardent supporter of the St. Lawrence seaway ever since he first entered Congress in the year 1929. His work in favor of this measure has been consistent and aggressive.

While World War II was in progress, the St. Lawrence seaway project and many other worthwhile matters were overlooked and almost forgotten. Not so—with Congressman PITTENGER. He continued to point out on frequent occasions to the House the great value of this development. It is interesting to note that the Pathfinder recognizes his outstanding service, in this article which reads as follows:

THE ST. LAWRENCE SEAWAY—A FOURTH SEACOAST FOR THE UNITED STATES, 2,687 MILES LONG FROM DULUTH TO THE ATLANTIC, IS ONE WAY TO DESCRIBE THE GREAT LAKES PROJECT

It was virtually talked to death once. Stalling tactics have delayed it. The strategy seems unchanged.

Last month, Harry Truman joined the unbroken Presidential line extending back to Wilson and urged speedy congressional approval of the St. Lawrence seaway and hydroelectric power project. Administration stalwarts introduced bills; there was a brief flurry in the press.

This week, the seaway bills rested undisturbed in committees.

Senate Foreign Relations admitted its docket listed only one other major issue, still said it has no plans for the seaway measure.

In the House the Rivers and Harbors Committee said it was waiting for the Senate. A committee member, Representative WILLIAM A. FITTENGER, a Minnesota Republican and chief seaway advocate, who sees in the project a source of thousands of jobs, has no hope of hearings before spring, flatly predicted efforts by the opposition to delay action until midterm elections.

WHAT IT IS

Simply, the seaway is a joint effort by Canada and the United States to open the Great Lakes area to large-scale ocean shipping and to establish the world's second largest (except Grand Coulee) hydroelectric power project on the St. Lawrence River.

Normally, specially shallow-draft ocean-going ships carry some 115,000 tons direct from the Great Lakes to foreign ports. By deepening the channels linking Lakes Huron, Erie, and Ontario, and by constructing locks and canals in the rapids section of the St. Lawrence extending from Ogdensburg, N. Y., to Montreal, Duluth could become an accessible port for more than two-thirds of the world's freighters.

Power would come from a dam at Barnhart Island, between Massena, N. Y., and Cornwall, Ontario, supplemented by a small dam upstream. Half of the 2,200,000 horsepower would go to Canada, the balance (under New York State auspices) to an area within a radius of 300 miles of Massena.

Cost to the United States is estimated at $275,000,000, to Canada $145,000,000 (not counting $132,000,000 spent for the Welland Canal).

HISTORY

Canadian-American interest in opening mid-North America to ocean commerce traces back to 1895. A treaty covering the seaway was finally negotiated by President Hoover and presented to the Senate for ratification in late 1932. Extensive hearings were held that winter, extensive debate (including a Huey Long filibuster) continued until March 1934. Finally a majority—but not the necessary two-thirds—voted for the measure.

In 1941 President Roosevelt negotiated an agreement with Canada to replace the treaty. This would require only a majority vote of both Houses, but the test has never come.

PROS

Seaway supporters maintain it will provide more markets for the Midwest (which accounts for 50 percent of the Nation's production), save $4 a ton on shipping costs, provide cheap power for New York and New England.

CONS

Opponents argue that the seaway would be uneconomical, hurt the railroads, existing harbors, and waterways. Representatives of these groups, including railroad and maritime unions, fight the seaway, don't care about the power project. The latter, however, makes public-utility groups see red because the New York Power Authority Act specifies that municipalities, farm and other cooperatives get preference in the sale of power.

But whether the seaway and its accompanying power project would do more good than harm is still undecided.

Once seaway bills are pried out of committee, Senate proponents will have first to beat down resistance that a treaty is necessary, will then be able to get a favorable majority. The fight will come in the House. But if the administration puts its full weight behind the measure, there'll be enough Republican support from interested States to pass it.

## The Betrayal of Poland in Favor of Russia

EXTENSION OF REMARKS

OF

### HON. WILLIAM A. PITTENGER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

*Monday, November 5, 1945*

Mr. PITTENGER. Mr. Speaker, last Thursday I discussed the problems of the little Republic of Finland in relation to Russia. I called attention then to the fact that other small countries in the Old World were similarly situated. In yesterday's mail I received a letter confirming that statement, insofar as it relates to Poland. What we say about Poland is also true of other small countries. Attached to this letter was a copy of an appeal to President Harry S. Truman. This letter reads as follows:

POLISH-AMERICAN CONGRESS, INC.,
*Chicago, Ill., October 27, 1945.*

*To Members of the United States Government, United States Congress, the American Press and Radio Commentators:*

Attached herewith is a copy of an appeal by the Polish-American Congress, addressed to the President of the United States, Harry S. Truman, asking for a reversal of America's foreign policy in order to rectify wartime political blunders which have made Poland and other Allied Nations the victims of Russia's expansionism.

I sincerely urge your kind consideration of the contents of this letter and your support of the cause in behalf of which it was written. This is an ardent plea of six millions of Americans of Polish origin who desire to safeguard the security of the United States and the peace of the world, and who want true independence and democracy for Poland and all our allies.

Very truly yours,

CHARLES ROZMAREK,
*President.*

The copy of the letter which Mr. Charles Rozmarek, president of the Polish-American Congress wrote to President Truman is as follows:

POLISH-AMERICAN CONGRESS, INC.,
*Chicago, Ill., October 20, 1945.*

HARRY S. TRUMAN,
*President of the United States,*
*White House, Washington, D. C.*

MR. PRESIDENT: A recent Associated Press dispatch reports that Red army units, with the sanction of the Stalin-appointed Polish Government, are being sent to each of the 17 provinces of Poland. This is being done under the guise of protecting the country from an epidemic of banditry.

Catherine the Great offered exactly the same kind of protection before she took over Poland.

Russian headquarters in the capital of every province with Russian generals in command in all army units everywhere in Poland.

This grim news comes out of martyred Poland at the very moment when Mr. Wincenty Rzymowski, foreign minister of the Moscow-conceived government of Poland, is conferring with our State Department, which is still upholding—in words—the traditional

American policy of nonrecognition of governments that do not represent the free will of free people.

As Poland's independence is being strangled by a Soviet military noose, there is not a single word of protest from our Government.

This silence only intensifies the heart-tearing mental, physical, and spiritual anguish of the people of Poland.

America's staunch ally, Poland, is a victim of ingratitude, injustice and deception without parallel in history.

Not only was this friendly republic deprived at Yalta of one-half of its ancient lands, where barely 1 percent of the prewar population was Russian, but the sovereignty of what remains of Poland was destroyed by the imposition of an illegal government.

But Poland was not the only country sold into Soviet slavery at the Yalta market place. There were others. Ten nations, with a total population of 120,000,000 human beings—men, women, and children, with the same love of freedom Americans have—met the same tragic fate.

While we are not lacking in appreciation of your expression of friendship for Poland in your speech after the Potsdam Conference, we are keenly disappointed to learn that injustices against Poland and other Soviet-held countries were not corrected at that historic gathering. It was a sad commentary on American diplomacy to learn that even Poland's reparations were placed in the exclusive custody of the Kremlin.

Victim of German and Russian aggression during war, Poland is likewise a target for plunder, murder, hunger, disease, and poverty during peace.

A member of the UNRRA Commission in Poland, Clifford H. Nillson, reports Poland is undergoing the most terrible ordeal in its history.

Representatives GORDON, Democrat, of Illinois, and RYTER, Democrat, of Connecticut, members of the Foreign Affairs Committee, after a tour of Poland formally protested to you, Mr. President, that Russia is using the United Nations Relief and Rehabilitation Administration for political purposes.

We quote briefly from Representative GORDON'S observations:

"The Russian occupation army is behaving very badly (in Poland). We saw their arrogance and unfairness in taking advantage of the poor people of the city (Warsaw). We saw the nearby highways jammed with hundreds of head of cattle, horses, and farming implements being taken out of Poland by the Russians and going farther east. Pillaging of the shops on the street was going on most freely and the snatching of purses from Polish women is a daily occurrence. There also exists a wholesale raping of the Polish women. When resistance would be given, the Russian soldier would use his weapons of war and kill."

To conceal his intentions, Stalin juggles words cleverly. Repeatedly he has stated he wants a strong and independent Poland. If he really wants such a Poland he can have it. If he wanted a strong Poland he would not have annexed one-half of it. If he wanted an independent Poland he would not have imposed upon it a puppet government of Moscow-trained Communists.

Can anyone explain why Germany, an enemy, is under joint Allied occupation while Poland, an ally, is under exclusive Russian control?

If Russia would only withdraw its armies and stop interfering in Poland's internal affairs, Poland's troubles would come to a swift end.

The United States could and should have avoided recognizing the Communist-dominated Polish Government, until free elections were realized and not merely promised.

The attitude of our Government toward friendly Poland is in sharp contrast to our constructive intervention in hostile Bulgaria where we flatly refused to recognize the undemocratic government, installed by Moscow.

The American Nation is not bound by the secret agreements of Tehran and Yalta, made without the knowledge or approval of the Congress or the American people.

The Constitution of the United States invests in no one, no matter how exalted his position, the authority to consent to the mutilation of free nations, to the destruction of their legal governments, and to the condemnation of millions of decent and law-abiding people to the yoke of a despotic foreign power.

Our responsibility to right the wrong, caused by secret agreements, violating the laws of God and man, is inescapable.

Hitler is gone, Mussolini is gone and yet there is no freedom in Europe.

The dangers against which the Polish American Congress, representing 6,000,000 Americans of Polish descent, has consistently warned our Government, are now leading to a tragic climax.

As a result of blind appeasement, all gains made after the First World War have been wiped out. Nations freed by the First World War have all been enslaved by the Second World War. Stalin, who entered the war in 1939, not as Hitler's enemy but as his ally, is out to finish the task begun by Hitler—the domination of the world.

With efforts to bring freedom to all nations being nullified by Russia, granting credit to Russia indiscriminately would be foolhardy, especially until Russia withdraws to prewar frontiers and proves by actions it has no selfish aims of aggrandizement or desire to destroy democratic civilization.

In view of the ever-growing chain of slave nations, releasing the secret of the atomic bomb to Russia would spell the doom of America. This secret should be guarded carefully, for it is the only safeguard our country has against further Russian expansionism.

America's security and the peace of the world depend upon the correction of political blunders made during the war.

Unless there is a reversal in our foreign policy, it is folly to talk about liberty, democracy, and peace.

As the shadows of despair are deepening over the world, this is not the time for silence.

For freedom's sake, Mr. President, please urge independence for Poland and for all our allies. Do not assist in the crucifixion of the people of Europe. They want to live as we Americans do, not to suffer and die.

This war was fought to protect nations from aggression.

Precious American blood was spilled to purchase freedom and not tyranny for the world.

For the Polish-American Congress:

CHARLES ROZMAREK,
*President.*
HONORATA B. WOLOWSKA,
*Secretary.*
JOHN J. OLEJNICZAK,
*Treasurer.*

These documents speak for themselves. I would be remiss in my duties to American citizens of Polish ancestry in the Eighth Congressional District of Minnesota, if I did not endorse the position that the Polish-American Congress has taken in connection with the problems of the Polish people.

It just strikes me as rather odd, Mr. Speaker, that some of our orators will tell how we have fought a war for the "four freedoms," and then find that not only the "four freedoms," but every principle of decency and fairness has been violated in connection with the small countries like Poland. I join with the Polish-American Congress in urging the President to take the steps suggested by this group of American citizens.

## Altered Liberty Troop Ships Feasible

EXTENSION OF REMARKS
OF
### HON. O. C. FISHER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 5, 1945*

Mr. FISHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a newspaper article which appeared in the October 19, 1945, issue of the Army newspaper, Daily Pacifican. The article, written by editor Phil Gordon of the Pacifican staff, is entitled "Altered Liberty Troop Ships Feasible." The Army and Navy should give immediate attention to the conversion of any available Liberty ships in order to expedite the return of troops from overseas who are high in points but who are being held back because of shortage of shipping space. The article follows:

MANILA.—Liberty ships capable of carrying 750 men to the States in comparatively good living conditions can be readied within 48 hours, according to Lt. Col. C. H. Davidson, superintendent of the Water Division, Port of Manila.

Colonel Davidson, in reply to a query as to the practicability of using Liberty ships for transporting troops, said yesterday that it had been done before successfully and could be done again.

"If the ships can be allocated," he said, "I can have each one ready to carry 750 troops back to the States in comparatively good living conditions within 48 hours—if I have 50 men to work on each of them."

He stated that all equipment, with the possible exception of M-37 ranges for cooking, is available to convert the Libertys so that they will be capable of carrying troops. "These ranges may be available," he stated, "but I haven't checked on them."

"These are facts," said the colonel, who was responsible for moving the First Cavalry and the Twenty-fourth, Thirty-second, and First Infantry divisions out of Brisbane under similar conditions. "And they are indisputable."

Colonel Davidson said that the objection that Liberty ships could not be used because of cold weather encountered during the voyage was not based upon fact.

Most Libertys travel the Great Circle route, which passes near the Aleutians, between Manila and West coast ports, and cold weather is encountered during the greater part of the trip. The alternate route is by way of Honolulu, and at no time would a ship traveling this alternate route between Manila and San Francisco be more than 38 degrees north of the equator.

Although Liberty ships are without heating facilities below deck, the weather would create no problem as long as the Honolulu route were followed. Should an unseasonable cold spell be encountered, troops on board would not be uncomfortable because of the complete winter clothing issued at replacement depots before troops embark.

The Honolulu route is longer than the Great Circle route, but the added day or two would not extend the voyage to more than a total of 24 to 26 days.

Water Division, second major port, is allocated ships by AFWESPAC. So far, Colonel Davidson indicated, no ships have been allocated for conversion into troopships. The colonel has, however, converted one Liberty ship for transporting 1,500 prisoners of war back to Japan.

"This same ship," he said, "could have carried 750 GI's to the States."

The only feature of actual discomfort for troops traveling on such converted Liberty ships would be the lack of bunks of any kind, for, Colonel Davidson said, "cots would prevent a safety hazard." Since the cots are made of wood, they present a fire problem, and, in addition, there is no way of securing them.

The colonel said that he felt sure that any Liberty ship which he converted would pass the necessary inspection by officers from Troop Movement, Water Division, Port Surgeon and Inspector General departments.

## Russia

EXTENSION OF REMARKS
OF

### HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

*Monday, November 5, 1945*

Mr. LARCADE. Mr. Speaker, it is difficult for the average layman to understand the apparent lack of understanding and cooperation between our ally, Russia, and this Government.

Many of us could not understand that, notwithstanding this country was supplying Russia with lend-lease matériel and we were fighting side by side during the war, our military and other personnel was not allowed to make any observations in the conduct of the war either in Russia or in any territory under Russian control, and while I am convinced that by agreement between President Roosevelt, Prime Minister Churchill, and Premier Stalin Russia was designated to enter Berlin, there was much criticism of the fact that Americans were precluded from entering that city at the pleasure of the Russians.

There have been stories spread here that in that portion of Germany occupied by the Russians that not only have the Russians dismantled German industrial plants and other facilities and transported them to Russia, it has been charged that American-owned industrial plants located in Germany have likewise been confiscated and transported to Russia.

It is difficult for an American to understand why it is necessary for the United States through UNRRA to furnish 2,400 milk cows for relief, in one shipment, when pictures are published showing fine Holstein herds being driven from Germany by the Russians for transport to Russia.

Of course, I understand that our Government cannot disclose all of the facts which actuate certain actions in many respects in dealings with other nations; however, our people have seen so many apparent inconsistencies in our actions toward other countries that they are alarmed, and in many cases keenly disappointed.

Mr. Speaker, while we have been amazed and puzzled in reported concession after concession being made by this country to Russia, it is my opinion that at the time many of the so-called concessions were made, President Roosevelt and his advisers were forced to make most of them as a matter of expediency and due to the exigencies of the situations existing at the time. It is not necessary to now reiterate the course of the war, nor our meetings with the leaders of Russia and our other allies, as these developments were followed most closely by nearly all of us, and I will say that, in my opinion, many of the decisions made and many of the concessions granted were made against the better judgment of those in authority. I believe that ground was yielded and many concessions were made in the interest of and in the hope of terminating the terrible conflict in which the world was engaged, primarily with a view of saving thousands of the lives of our own Americans and those of our allies. Anyone who was intimately acquainted with our great President Roosevelt, and had observed his career, have only to examine the photograph of the meeting at Yalta picturing President Roosevelt, Prime Minister Churchill, and Premier Stalin at the conference table. A study of that photograph will reveal that we do not see the Roosevelt as we knew him; his head was not held in that old familiar posture of defiance, but, on the contrary, he reflected a tired man, trying to bargain and arbitrate with at that time a much-needed, made strong by us, ally.

Mr. Speaker, no matter what commitments were made by those in authority in behalf of this country, oral or written, the fact remains that President Truman had fallen heir to the same. I believe that President Truman is at a great disadvantage in falling heir to these commitments made under stress of circumstances; however, I think he is fully able to cope with the situation and, given time, will work out these problems with honor and to the best interests of the country. Mr. Speaker, apropos of my remarks, I wish to include two articles of interest on the subject under discussion, one by Constantine Brown, the other by Ernest Lindley, Washington columnists, which follow:

(By Constantine Brown)

The political chickens from Teheran, Yalta, and Potsdam are coming home to roost.

The end of the war has brought forth such a wide divergence of views between the western democracies and Russia that even the most inveterate optimists, who have specialized in hiding their heads in the sand, admit that the international situation today is precarious.

The difficulties we are encountering at the gatherings of the representatives of the United Nations and in our direct dealings with Moscow are not surprising. They are a logical sequel of a policy of expediency started in the fall of 1943 and continued until VJ-day.

A policy of utmost secrecy, adopted in the name of military security, prevented the people of this country from learning everything we surrendered to Russia's desire for expansion.

When the war ended, situations which in the past could be concealed came out in the open, and the American and British Governments were unable to hide the truth from their own people. These new conditions resulted in an inevitable stiffening on the part of Washington and London to the increasing Russian appetite for more territories and further infiltrations in the lands of her neighbors, far and near.

EXPEDIENCY POLICY BREEDS TROUBLE

The Russians had been spoiled children and had become accustomed to thinking that their wishes had to be followed without discussions by the nations which the Red armies claim to have saved.

The propaganda that the Russian armies contributed 90 percent to the defeat not only of Germany, but also of Japan, has been so strong that the Russian policy framers themselves have begun to believe it.

The trouble we are now meeting is the sequel to a policy which began at Teheran and ended at Potsdam. It is the result of a policy of expediency, which was best illustrated by the statement of Secretary Hull before the Senate Foreign Relations Committee when he said that America's main foreign policy (at the time of his statement at the end of 1943) was to defeat the enemy.

It is the result of an honest belief which, however, shows how little our leaders understand foreign mentality, that all nations which had gone through the war would be only too eager to cooperate with one another after the war. It is the result of the Yalta Conference, at which President Roosevelt and Prime Minister Churchill gave up the last shreds of a practical ideology as contained in the Atlantic Charter, in order to purchase Russia's adherence to the United Nations Organization.

The trouble is also the result of the Potsdam Conference, where President Truman, reportedly against his better judgment, allowed Russia an entering wedge in our Pacific defense by yielding the Kurile Islands, and did not insist on a cut-and-dried agreement regarding America's preponderance in the Pacific.

PERSONAL COMMUNICATION PHASE

It is true that Premier Stalin agreed that the supreme command in Japan would be entrusted to an American general, Douglas MacArthur. But the civilian representatives of the American Government did not bother to have everything in black and white in clear language, so that a repetition of the infringements of the Yalta agreements regarding Poland and the Balkan States should not recur.

We are once more in the personal communication phase which preceded the other wartime conferences among the Big Three. Mr. Truman is writing letters to Premier Stalin and few intimates know what they contain. The Russian Premier is answering in the same secretive manner. And the chances of an improvement in the general situation appear slim unless the administration is willing to continue on the road to further concessions. Such a policy is not likely to be successful because the wartime secrecy can no longer be maintained and the American public—keenly aware that something is wrong in the international machinery—will become alerted as soon as new concessions are translated into fact.

Moreover, President Truman in his Navy Day speech has shown a definite trend toward reverting America's foreign policy to the practical idealism contained in the Atlantic Charter.

How these principles can dovetail with Russia's insistent demands for a greatly increased zone of influence from the Mediterranean to the Pacific is difficult to perceive.

EXPEDIENCY ERA OVER

By enouncing his 12 points—which contained nothing new but reasserted a traditional American policy—President Truman served notice on the rest of the world that

the era of expediency was over and that the spirit and the letter of the principles contained not only in his speech but also in the United Nations Organization must be followed.

Clouds darker than those between the spring and fall of 1939 are covering the international horizon. Today we know that we will be affected by whatever happens in the res of the world.

In agreement with all our wartime allies we have created a new machinery for peace, the United Nations Organization. When its creation was being discussed and its friendly critics remarked that there was no implementation to compel any of the "big five" to submit to its golden rule, our policy framers admitted quite frankly that the UNO would be on the rocks if any of the major powers decided to put it on the rocks. The insertion of the veto power for the "big five" was intended to prevent such an occurrence.

In recent weeks the Russians have shown interest in the maintenance of world peace only on condition that their demands be accepted.

Unless America complies with these requests, it is feared that Russia's attitude toward international cooperation will remain lukewarm. Ostensibly this already has been demonstrated, since the failure of the London Conference, by the fact that the Soviet representatives at the International Food Conference left Quebec without signing any agreement and by the hesitancy of Russia to send a delegate to the meeting here of the consultative committee for the Far East. The meeting was scheduled for October 23. It was postponed at the request of Secretary of State Byrnes, until October 30, in the hope that the cooling-off period might create a change of heart in Moscow.

Our choice today lies between either accepting the Russian thesis or opposing it and taking whatever consequences might follow. Most of the intimate advisers of the overworked and somewhat disheartened Secretary Byrnes in the State Department still believe that a policy of concessions should be followed by this country.

They argue that if we appease Russia further by complying with all her present demands the UNO will become a reality. And while it may appear to the uninitiated that a Soviet wedge in Japan, for instance, might endanger our future security, the fact that the UNO will become a living reality should offset such fear. The security of the United States, such men as Ben Cohen, counselor of the State Department, and Under Secretary of State Dean Acheson believe, can be much safer if the UNO becomes a workable organization than if we have to rely exclusively on America's forces.

But if we adopt a "strong policy," as Mr. Truman's speech seems to indicate, the UNO will be doomed and a rearmament race will take place, with unpredictable consequences. Hence, Mr. Byrnes is being advised, some of his well-informed friends say, to leave nothing to chance and do his utmost to reconcile Russia.

ATTEMPTS "STRAIGHT TALKING"

Others outside the State Department and close to the White House believe that this policy of continually humoring the U. S. S. R. without our ever being humored in matters which affect our own security must come to an end. These men admit it is difficult to make a diplomatic reconversion from appeasement to "straight talking," but it can be done. Mr. Truman attempted it at Potsdam and almost got away with it. It was only when his political advisers, convinced that the people of the United States would be disappointed if he came home empty-handed, that he changed his mind and accepted some of the Russian demands which will come to light in the near future.

Mr. Truman's advisers are as firm believers in the UNO as the advisers of Mr. Byrnes in the State Department.

Those men who prevailed on the President to make his "strong" Navy Day speech say the UNO can work even if Russia sulks. Her place will always be open to her when she thinks the time has come to enter into the work of the Organization, but we must not continue to yield to all her demands.

For diplomatic reasons little is being said in this country, from official quarters, about the present state of the Red armies. Numerically, they are larger than the combined forces of the other allies. Redeployment has been much slower than in this country or in Britain, and the men who have been sent home have been quickly replaced by the new classes of youngsters between the ages of 18 and 21 who were due for compulsory military service. But the end of the war has produced new and unexpected conditions in the Red armies. The stern discipline so essential in a force which still contains a large proportion of illiterates has slackened. Mass desertions have resulted. The Soviet high command is reliably reported to have given drastic orders, including the execution of officers, in order to erase these conditions.

RUSSIAN STRENGTH LIMITED

The Red army still has a sizable quantity of American weapons, jeeps, and trucks. But because of the lack of experienced care, the motorized equipment is less effective than formerly, and no replacements are forthcoming. Russian aviation never has been really efficient. The Red army is not mechanically minded, and this has been felt in the Red air forces.

The Russians have enough strength and lease-lend material for another military effort of short duration. But their able leader, Premier Stalin, is fully aware that an attempt to force the pace by violence would jeopardize all the gains he has obtained for his country since he joined the Allied camp.

This brief sketch of Russia's war potential does not mean in the least that there are those in this country who favor using coercive methods against Russia to make her understand the path of conquest heads to disaster. But it serves as an illustration for some of our policy framers to show that while some further minor concessions might be made to the U. S. S. R., provided they do not conflict with the policies set forth by President Truman, a policy of appeasement as we have followed in the last 2 years would constitute a much greater menace to the United Nations Organization and to the United States.

This, at least, is the considered opinion of many of President Truman's realistic advisers outside the State Department. The clouds in the Near East, in the Balkans, and in the Far East all indicate another storm is brewing. This can be voiced only by an objective and at the same time determined attitude on the part of the American Government, which represents the greatest power in the world.

---

(By Ernest Lindley)

Secretary Byrnes neither set a new policy nor modified an old when he said that the United States recognizes the Soviet Union's "special security interests" in central and eastern Europe and promised that "America will never join any groups in those countries in hostile intrigue against the Soviet Union."

The same assurances have been given many times during the last 4 years. The late President Roosevelt and former Secretary Hull tried to make that clear to the Kremlin. President Truman and Secretary Byrnes have followed the same line.

At the same time American officials have sought to convince the Kremlin that: (1) Russia, like other nations, must find her ultimate security in a strong United Nations Organization and (2) Russia's special security interests in eastern and central Europe do not require that she control the internal affairs of those nations.

MINORITY IN CONTROL

The United States has consistently recognized that Russia is entitled to have friendly and cooperative neighbors, that any attempt by the western Allies to build a tier of anti-Soviet buffer States in eastern Europe would surely destroy the United Nations and the hope of a long peace. But it is a long jump from this to complete Russian control of central and eastern Europe.

It was perhaps only natural for the Russians to rely, in the first instance, on the Communist Parties in that part of the world.

But, with Russian backing, Communist minorities in some countries seem to have been trying to liquidate or intimidate leaders of parties and groups unquestionably democratic but unwilling to accept Communist domination.

It is easy to call anyone who will not accept Communist dictation or cooperate with a Communist-controlled puppet government either pro-Nazi or anti-Soviet. Many peoples of eastern and central Europe had no love for the Russians, even prior to the Bolshevik Revolution. Wise leaders in some of these countries realized, however, that they would have to learn to live and work as friendly neighbors of the Soviet Union. Unfortunately, methods adopted by the Russians have added new fears and hates to old. It has become increasingly difficult for the western Allies to support democracy in eastern Europe without appearing to be anti-Soviet.

DANGER FORESEEN

Roosevelt and many others foresaw this danger. At Yalta, Stalin, Roosevelt, and Churchill reached agreements concerning Poland, specifically, and the rest of liberated Europe, more generally. It was agreed that these countries were to have provisional governments representative of all democratic elements and that these governments were to hold free elections. It was agreed in substance, also, that the Soviet Union, Britain, and the United States should deal jointly with the problems of liberated European nations.

It was difficult to reconcile subsequent Russian performance with the pledges. Roosevelt, before his death, was disturbed by the failure, or tardiness, of the Russians. Harry Hopkins, as President Truman's personal envoy, managed to obtain from Stalin partial performance of the Yalta pledge concerning reorganization of the Polish provisional government.

Secretary Byrnes has been trying to give life to the Yalta agreements concerning liberated Europe generally—because the agreements were sound. They are no more anti-Russian now than they were when Stalin subscribed to them.

They do not challenge Russia's special security interests. On the contrary, they outline the only way in which these interests can be safeguarded within a framework of international security and close and friendly collaboration among the great powers—and probably the only way in which Russia can hope to have friendly peoples, as distinct from compliant governments maintained by force and terror, as her neighbors.

Russians have clung so long to the wrong path that it may not be easy for them to change. But the longer they delay, the worse their difficulties seem like to become. Their best hope is to invite the help of major Allies in extricating them from a predicament. They can rely on Secretary Byrnes' pledge. Any attempt to violate that would obviously be ruinous to major objectives of American policy, which center around a secure peace.

## Shall We Take Inventory of Our Possessions, Our Needs, and Our Responsibilities as of Today?

EXTENSION OF REMARKS
OF
### HON. JOHN H. FOLGER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

*Monday, November 5, 1945*

Mr. FOLGER. Mr. Speaker, I did not vote for the resolution calling for the strongest peacetime Navy in our history. I did not, and I do not now, think that we have taken a sufficient inventory of our possessions, our needs, and our responsibilities as of today that would justify the launching upon what to me is probably a needless approach to the demands of our time.

From June 1941, when I came here, to VJ-day, I voted for every bill and every resolution designed or expected to aid us in the prosecution of the war known as World War II. I did not miss one vote. But the times have changed. Science has produced or discovered, should I say, implements of war so powerful and so swift as to make it, in my opinion, demanding upon us that we do take an inventory of our needs and responsibilities as of the present date, and not before or during this war, when these things were not known. The atomic bomb is not an imagination, nor is it a fantastic dream. It is a demonstrated fact, and that fact changes drastically the whole international picture.

I am inserting in the RECORD as a part of my remarks a broadcast made by Mr. Raymond Swing on October 31, last, a partial survey of our situation which, to me, calls for the greatest concern and consideration. I regard the author as one of our greatest patriots and soundest thinkers, and I believe this broadcast, as others of his have done, deserves very special attention:

Without a dissenting vote, the House of Representatives has passed a concurrent resolution calling for the strongest peacetime Navy in our history. The resolution goes into great detail about how the Navy is to be constituted. Thus it is to have 3 superaircraft carriers, 24 standard-sized carriers, 10 light carriers, 79 escort carriers, 18 battleships, 3 large cruisers, 31 heavy cruisers, 49 light cruisers, and so on.

This Navy is to be manned by 500,000 enlisted men serving under 58,000 officers. They will be assigned to a total of 6,084 vessels, 12,000 planes and a specified list of bases in all parts of the world. It is an imposing picture, this plan for a peacetime Navy. If we had had it in 1939, we might have offered our counsel in Europe with certainty that it would be heeded. If we had had it in 1941, there would not have been the attack on Pearl Harbor.

PLAN SHAPED BY HINDSIGHT

And it is not unfair to characterize this plan for the Navy as one created from hindsight, and shaped very little by the information of foresight. It is a Navy designed and built for the world as it was toward the close of the war. And it will serve the purpose assigned to it, if the world of today remains basically unchanged. To say that is not in any way a disparagement of the record of the Navy or the judgment of the men who conduct it. The creation of the Navy during the war and its stupendous fight to victory are among the finest achievements in our history. It is only human that plans for the peacetime Navy should be based on experience first, without much heed to omens of change.

All the same, there is an air of unreality about yesterday's action in the House. Why 116 aircraft carriers? The airplane became the characteristic weapon of World War II. The aircraft carrier defeated Japan. But will the airplane be the characteristic weapon of defense in the future? Possibly, though, if so, it will be a long-range plane of tremendous speed, not a carrier plane. But quite possibly it will be replaced by the rocket, or by electronically guided missiles. In either event, we won't want 116 aircraft carriers.

We still do not know what the atomic bomb will do to naval vessels, if exploded as a depth charge. It may make the battleship obsolete. In that event, we hardly shall want 18 obsolete battleships.

FOR USE AGAINST WHOM?

A further question must suggest itself to many persons here and abroad. Against whom is such a huge Navy to be used? The textbook answer to that question is that it will be used against any aggressor, with no further specifications. But to look around, one can see that, aside from our own, there is only one other navy in the world of any power, the British Navy. And we need no assurance that we are not building the greatest peacetime Navy in history against the British. Furthermore, naval power, like all other kinds of power, is relative, not absolute. Security is not to be had from a big navy but from a bigger one, in the sense that strength is the means for security. But is not this Navy ever so much bigger than any navy against which it might be pitted? The Japanese Navy exists no more. Secretary Byrnes announced today that, save for 38 of its destroyers, all that is left of it will be scuttled. The German Navy is gone. The Russians are planning to increase their naval strength, but it cannot be anything like ours in size, not if the Russians are going to improve their standard of living, as they intend doing.

Suppose all the international machinery for maintaining peace should break down and everybody—the British included—should gang up on us navally, would we need a Navy as much bigger as this one will be to feel secure? If we should, nobody has stated a case for it in any convincing way. Apparently what has happened is that we have decided to have an overwhelmingly strong Navy, and so it is to be. Yet there is the difference between what this will cost and what one would cost that was not so overwhelming and still quite adequate. No one has analyzed that for public information.

There is, moreover, the possibility, and one hopes the probability, that international cooperation will reduce the danger of war down to a minimum, so that a Navy so overwhelmingly strong would be a shocking financial extravagance. In 1939, when we could have done with a Navy of this size, the machinery for maintaining world peace was worth little, because most of the potentially strong countries, we, and the Russians, the Germans and the Japanese, were not working together for the purpose of keeping the peace. Now the only strong nations are dedicated to that purpose. If this means nothing in terms of the size of our defense equipment, it means nothing—period. One wonders if in the minds of the 347 Members of the House who voted for the naval resolution yesterday that is the true appraisal of the prospects for maintaining peace. If so, matters are perilous indeed.

TREMENDOUS COST

Another comment is in order about this naval resolution. The upkeep of such a Navy is going to cost a solid amount of the taxpayer's money, and absorb a share of all the money to be devoted to our own defense, and to our contribution toward the maintenance of world peace. Who can say that a Navy of this size will take the proper share of the total defense budget? What would be a proper share? What, indeed, is the total budget? What is it, not only with the experience of 1939 and 1941 in mind, but in the world as it promises to be in 1950 and 1955? The naval resolution was duly discussed by the House Naval Affairs Committee and will not go before the Senate Naval Affairs Committee. But the two Naval Affairs Committees do not sit with the Military Affairs Committees of the two Houses. And there is no discussion anywhere in Congress of defense as a subject to which all the parts are related and must be weighed for their bearing on the subject as a whole.

Any child knows that there is not a naval defense, or an army defense or an air defense, all of them separate which can be planned separately, paid for separately, or function separately. It never was less true in history. In a world of slow time and long distances and only moderate explosive charges, the Army and Navy had tasks so different that they could safely be dealt with as distinct from each other. That ceased to be during World War II. It will be even less possible in the world of new weapons. Distance has been obliterated. Weapons will be swifter than the speed of sound.

## Every Bit of Shipping Space Should Be Made Available for the Return of Our Troops Now

EXTENSION OF REMARKS
OF
### HON. EDWARD H. REES
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES

*Monday, November 5, 1945*

Mr. REES of Kansas. Mr. Speaker, under leave to extend my remarks in the RECORD, I am including herewith a very interesting and important statement that appeared in the Washington Times-Herald of November 4 by its veterans' editor, Lt. Comdr. Tyrrell Krum, United States Naval Reserve, retired. This statement calls attention to the fact that our shipping facilities are not nearly completely being used for the redeployment of our troops. Incidentally, it is in line with a statement I made on the floor of the House last Tuesday.

Our Government did a wonderful job getting the boys over there. The least it can do now is to use every facility at its command to see that our service men and women are returned at the earliest possible date.

The statement follows:

VETERANS' AFFAIRS

(By Lt. Comdr. Tyrrell Krum, United States Naval Reserve (retired))

It is now almost 6 months since the guns of war were silenced in Europe. And yet, we still have more than 2,000,000 good American lads who won that war sweating it out over there awaiting their return to home and civilian life.

The War Department has just released a glowing report showing that 2,225,000 soldiers were released from the Army between May 12 and October 26. These figures, of course, include men from all theaters of war as well as many whose service was entirely in this country.

Which means that some 4,000,000 soldiers are still to doff their uniforms between now and next July, the target date when demobilization will be completed.

Just what is the reason for the snail's pace at which men are being returned home. The public would like to know. Congress would like to know. And above all else, so would the Army families and the soldiers themselves like to know the answer.

Ask the War Department, and they'll tell you blandly that everything possible is being done to bring the boys home. But, they add quickly, if there is delay it is due entirely to the lack of shipping space. A matter of transportation entirely.

All of which brings up the big question: "What's happened to our huge merchant fleet?" The Liberty and Victory ships that cost us such an astonishing amount of money and about which such great boasts were being made by high officials in the Maritime Commission before the war ended.

At war's end the United States had some 5,000 merchant ships. Of course, they were built primarily to haul cargo to all parts of the world, a task which we all admit is still important if we are to feed and supply our men overseas. But there is certainly no reason remaining why they should haul anything else. They don't need tanks, and guns, and airplanes at the fronts any more.

Supposing we had converted right after VE-day only 600 of the merchant ships we built during the war into troop carriers, or roughly 10 percent of the available total, and each ship made only one trip per month carrying troops, we could have hauled every soldier in Europe back here by this time.

The biggest ships afloat—Britain's *Queen Mary* and *Queen Elizabeth* and *Aquitania* used to arrive regularly every 2 weeks with as many as 15,000 soldiers comfortably berthed below. In fact the two Queens and the *Aquitania* did the lion's share of the job so far.

Admittedly one Queen and the *Aquitania* have been withdrawn. But there has been added the *Europa*, which we grabbed from the Germans. Which still leaves us two big liners to add to the *West Point* and *Monticello*, which we always have been using.

It just don't make sense for the Army to blame the whole thing on a lack of shipping space and still not do anything to try and remedy the situation by converting cargo ships into troop carriers.

The high command would probably say that a cargo ship is no place for a returning hero to come home from the wars. But ask the hero himself and see what he says. I've talked to a lot of them returning home. They would gladly have shipped in a rowboat if it would have gotten them home sooner.

To repeat: "What's happened to our merchant fleet?"

Some faint glimmer of an answer was seen the other day in a picture that appeared in a national magazine of five good new ships lying idle in a southern port. Are they and hundreds like them to be left rusting at their moorings while millions of good American citizens are literally going to pieces in foreign lands?

Lack of shipping space is not the only reason the Army will give you for the breakdown in the return of our victorious Army. They blame it on longshoremen's strikes, on storms at sea, and on bottlenecks that have been built up in American separation centers.

The last reason is actually laughable. There was a time when men were delayed at separation centers.

But these activities have been geared so that men are passing through on a virtual conveyor-belt system. Right over at Fort Meade more than 1,600 men are being turned out as civilians every working day.

And if more evidence is needed that the hold-up is not on this side, you have only to read the announcement by the Army Air Forces lowering its critical score to 50 points a month ahead of schedule. The AAF admits it had run out of men on this side to be released and is begging Army Transportation Corps to bring back more men to process.

And, finally, why does the Navy have to step in and try to solve the problem? One of the great heroes of this war was the carrier *Enterprise*. Instead of gaining the rest to which it is so deserving, the "Big E" is being converted, along with several other carriers, into troopships to bring soldiers home from Europe.

## The Future of Our Synthetic Rubber Industry

EXTENSION OF REMARKS
OF
### HON. CARL T. CURTIS
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES

*Monday, November 5, 1945*

Mr. CURTIS. Mr. Speaker, somewhat unbeknown to the Congress, the future of our synthetic-rubber program is being determined. I will include in my remarks an article that appeared in the Wall Street Journal for November 3, 1945.

That article will show that a group of appointed individuals in the administration is undertaking to find the answer in respect to America's future rubber supply. The answer to that question involves, first, the defense of America; second, foreign commerce; and third, the stability of agriculture. Congress has a very definite responsibility in respect to all phases of the problem.

Congress should serve notice now upon the administration that our synthetic rubber industry must be preserved and maintained. In the CONGRESSIONAL RECORD for May 26, 1945, on page 5158, there can be found a letter from Mr. W M. Jeffers, the former Rubber Administrator. I wish to again quote two paragraphs from that letter. They are as follows:

As soon as practicable, all phases of the synthetic rubber industry, now in Government hands, should be returned to private enterprise. This return to private initiative must be safeguarded, however, to assure that research and development is carried forward to the point where synthetics will meet all requirements at a fair cost. Proper dissemination of information must be assured so that, regardless of the views of the larger companies, the smaller have an equal opportunity. This industry has been built with the money of all of the people, and all should have an equal chance at the future.

Certainly we ought never permit ourselves to be placed in the position again of being dependent upon a supply of rubber from the Far East, neither should we permit ourselves to be placed in the position again of allowing the Dutch and British or any other foreign power to fix prices on crude rubbers.

Mr. Speaker, this inter-departmental committee that is studying our rubber program could well heed Mr. Jeffers' advice. If this administration, in any measurable degree, destroys our synthetic rubber industry the American people will hold them responsible.

The article from the Wall Street Journal is as follows:

OUR RUBBER POLICY—BIG PROBLEM IS DECIDING FUTURE ROLES OF NATURAL, SYNTHETIC IN INDUSTRY—EIGHT-MAN FEDERAL TEAM CONSIDERS PLAN, STUDIES DISPOSAL OF GOVERNMENT PLANTS—WORLD PACT AWAITS DECISION

(By A. K. Estill)

WASHINGTON.—Rubber is bouncing up as one of the administration's major peacetime problems.

This commodity hasn't yet swung round the full cycle of scarcity-to-surplus. But while the Nation's $750,000,000 synthetic rubber industry continues to operate at capacity, a trickle of natural rubber is beginning to flow from the Far East. Before foreign plantations start shipping in quantity, the United States must have a long-range rubber policy.

A compact group of officials, representing eight Federal agencies, is working quietly to develop such a program. It hopes to prepare a comprehensive report by the end of the year. This study will go to Reconversion Director Snyder, and presumably will form the basis for White House recommendations to Congress.

William L. Batt, the War Production Board's vice chairman for international supply, is chairman of the eight-man task force representing Mr. Snyder's office. Other delegates are Assistant Secretary of State Clayton; Assistant Attorney General Berge; Surplus Property Administrator Symington; Reconstruction Finance Corporation Chairman Henderson; Maj. Gen. Sidney Spalding, of the War Department; Arthur M. Hill, Navy; and Alan Grant, of the RFC's Office of Rubber Development.

COORDINATED NATIONAL POLICY DEMANDED

This Inter-Agency Policy Committee on Rubber is charged with "recommending a coordinated national policy on rubber." It must find the answer to such questions as these: Should all the Government's wartime synthetic plants be kept operating permanently? Should the United States have a peacetime rubber stock pile? How much crude rubber will this country want to import, from where, and at what price? What are our minimum military needs for rubber over the next few years?

Official estimates, hitherto unpublicized, suggest that some natural rubber may be shipped from Pacific areas far sooner than had been anticipated. Rubber stock piles in liberated regions of the Far East are believed to total at least 250,000 tons, split up this way:

Indochina, about 140,000 tons; upper Malaya, 32,000 to 34,000 tons; Netherland Indies, about 52,000 tons; Sumatra, about 30,000 tons; Singapore, about 7,000 tons of first quality rubber and 8,000 tons of inferior grades. Burma, 500 tons, although the original estimate of discovery was 2,000 tons. There is little rubber available in the Philippines and practically none in Japan.

The Netherland Indies Government has set up an emergency agency known as Rubberfonds to speed the shipment of rubber supplies during the reconstruction period.

SYNTHETIC TIRES NEED NATURAL RUBBER

Because some natural rubber must be mixed with present types of synthetic for many industrial uses, and for heavy-duty tires, the United States is actively seeking rubber imports. The country's stock pile of natural rubber will have dwindled to less than 66,000 tons by the end of this year.

The Office of Rubber Development has five scouts looking for crude rubber in the Pacific. Three of these men are attached to the British rubber buying unit in Singapore and two others are in the Dutch East Indies. The Office is continuing its wartime function of buying all natural rubber coming into the United States.

The expiring WPB foresees an over-all shortage of rubber for domestic purposes for some time to come. It is on record that there

must be "some Federal control of rubber for at least a year." This control will be exercised by its successor agency, the Civilian Production Administration.

Rehabilitation of plantations in Malaya, Sumatra, Java, and Burma may take as long as 2 to 3 years. Once this is accomplished the world will have available well over 1,600,000 tons of natural rubber from these sources annually. United States synthetic plants will be capable of producing a million tons or more. This total anticipated supply of 2,600,000 tons stacks up against prewar world production of 1,500,000 tons in 1941, 1,300,000 tons in 1940, and 969,000 tons in 1939.

While fighting was going on in Europe and the Pacific, the State Department was carrying on informal talks with the British and Dutch on current and future rubber problems. A study group representing the three nations will meet again the first of next year. It is expected to lay plans for a full-dress international conference which may result in a definite rubber agreement. Up to now discussions have been informal and no long-range commitments have been made.

PROPOSALS FOR SURPLUS PLANTS DELAYED

No world rubber pact will be possible until the United States has reached a decision about the future of Government-owned synthetic factories. The Surplus Property Administration has not yet come forward with specific proposals to Congress on the disposition of these plants. Officials of the SPA call the question a "hot potato," even though it hasn't yet become as urgent as some other plant-disposal dilemmas.

Unofficial suggestions for disposing of the war-built synthetic rubber installations range all the way from outright scrapping of excess capacity to the maintenance of some plants as stand-by facilities in case of emergency and the sale of the rest to private operators. One question still to be answered is whether a peacetime stock pile of natural rubber is to be built up.

The Army is understood to have set its minimum security requirements for rubber at the amount that it used in 1944. Those figures are secret. Total United States peacetime needs for synthetic rubber for all purposes have been estimated at anywhere from 300,000 to 700,000 tons, depending on how much natural rubber is imported to supplement domestic production.

The WPB's Rubber Division estimated recently that consumption of synthetic and natural rubber in 1945 would total 870,000 tons, compared with 1944 usage of 711,000 tons, and a peacetime peak of 650,000 tons in 1940, considered the last prewar year. Consumption in 1941 was 781,000 tons.

BALANCE USE OF TWO TYPES SEEN

Present thinking in administration circles is that a balance will be struck in the peacetime use of general-purpose synthetic rubber and natural rubber.

The Rubber Development Corporation estimates it will probably take 2 years to get the rubber industry back on a normal footing and about 6 months before any substantial quantity of natural rubber will come out of the Far East. An answer to how much natural rubber the United States will want when imports can be resumed on a prewar scale will depend largely on relative quality and price, officials believe.

The experts say synthetic can be produced at 14 or 15 cents a pound in the near future as output is concentrated in low-cost plants.

Prewar natural rubber cost about 18 cents a pound. The pegged price during the war was 22.5 cents, and the Dutch and British want 25 or 26 cents for their first shipments now.

For the 10 years up to 1944 the International Rubber Regulation Committee, set up by the British and Dutch to fix prices and assign production quotas, kept natural-rubber prices between 10 and 20 cents—as close to the top figure as possible, of course.

## Two Hundredth Anniversary of the Founding of Frederick, Md.

EXTENSION OF REMARKS

OF

## HON. GEORGE L. RADCLIFFE

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

*Tuesday, November 6 (legislative day of Monday, October 29), 1945*

Mr. RADCLIFFE. Mr. President, on September 3, 1945, the city of Frederick, Md., celebrated the two hundredth anniversary of its founding. The exercises were admirably planned and carried out in a highly successful manner. On that occasion I made an address and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The celebration today of the two hundredth anniversary of the founding of Frederick city suggests this interesting query: If in 1861, the so-called rebel legislature had been called by Governor Hicks, of Maryland, to meet in Annapolis, as customary, rather than in Frederick, would Maryland have seceded from the Union, and would the course of history have been radically changed? The question is an interesting one.

Had Maryland seceded, Baltimore would have been the largest city in the Confederacy. The State of Maryland possessed large and valuable resources which might have been a big factor in turning the scales of war. The city of Washington would have been completely surrounded by the Confederate States. The high strategic importance of such a position is obvious. These are among the reasons why the position of Maryland at the beginning of the Civil War has been regarded by historians as one of paramount importance.

The facts in the case are interesting and quite unique. One Southern State after another was passing ordinance of secession. The Federal Union was apparently going to pieces. Delegation after delegation came from different seceding States to Maryland, urging that our State join them, individually or collectively. Persistent efforts were being made in Maryland to persuade Governor Hicks to call the legislature to vote for secession. However, Governor Hicks, a Union sympathizer, had been refusing to do so.

After President Lincoln, upon the fall of Fort Sumter, called for volunteers for the Army, Massachusetts troops passed April 19, 1861, through Baltimore on their way to Washington. Baltimore was in an uproar. These Massachusetts troops were attacked and a few were killed. Tremendous mass meetings were held that day in Baltimore city, expressing violent opposition to any plans by which Maryland would be used as a means for coercing the Southern States.

A historic meeting was held that night in Governor Hicks' bedroom. Then and there Governor Hicks reversed his position and called a special session of the legislature to meet on April 26. But in doing so he took the very extraordinary step of shifting the meeting place of the legislature from Annapolis to Frederick. Later Governor Hicks stated his reason for doing so was that he thought that the meeting of the legislature in Frederick, where Union sentiment was known to be very strong, might prevent a secession bill from being passed and put into operation.

The so-called Rebel legislature passed no secession measure although there was tremendous continuing pressure upon it to do so. At least one secession bill was drafted. After adjourning from time to time for short recesses, many members of the legislature were arrested by the Federal Government on the charge of treason, and thrown into prison, where they remained for quite a long while.

Years ago I wrote a book on that period which was accepted by the Johns Hopkins University as a thesis for the degree of doctor of philosophy which I received from that university. In that book I attempted to speculate as to what might have happened if Governor Hicks had not made his momentous decision to shift the meeting place of the legislature. His decision may have changed the course of history. It illustrates again the continuity of history, and also the fact that the current of history is sometimes changed fundamentally by the doing of the unusual.

Today we meet in this historic city of Frederick. Two hundred eventful and consecutive years have transpired since Daniel Dulaney secured his estate of 7,000 acres and his brother, Patrick, laid out the town of Frederick in 1745, and since John Thomas Schley built the first house in this city. We are here to pay tribute to the vision, wisdom, and energy of those who founded Frederick and to call attention to some of the many very important happenings here since that day. According to an old-fashioned concept of history a mere listing of important events would constitute the history of Frederick. We know better. We know that such milestones have a special significance, but that they are not isolated events. We know that history is not a series of records merely but it is a constantly flowing stream whose course is shaped largely by forces it meets and also by those which it has left behind. History is an evolutionary process. Reading a page in a book gives information usually inadequate only, unless we read what is on the preceding page and on those that follow. And so an understanding of the course of history requires intimate consideration of the past, the present, and the future.

When we look over the long record of progress and achievement which has characterized Frederick the story is a fascinating and an instructive one. We find here a very prosperous city located in a county said to be the richest agricultural county in the United States. Here is success obtained in truth by merit, not by chance.

We find Frederick has been characterized by a spirit of thrifty, progressive conservatism throughout the years. In no place has the average man or woman filled a more helpful role than here. But that is only a part of the story. No county in Maryland has been more closely associated with men who played a predominating part in the history of the States, especially in the earlier days. Daniel Dulaney, Charles Carroll of Carrollton, Roger Brooke Taney, Francis Scott Key, Gov. Tom Johnson, the first Governor of Maryland, Admiral Schley, John Hanson—these are among the very prominent people who have been born in Frederick or once had a home here.

A few years ago I had the pleasure and honor of speaking at the unveiling of a tablet to John Hanson in your Frederick Courthouse. John Hanson may for many reasons be regarded as the first President of the United States. When he signed his name as President of the United States in Congress Assembled the term was certainly no idle one. As first President of the United States under the Articles of Confederation, he carried us a long way toward a federal government.

Today the American flag is the most significant and most effective material object in the world. The hopes of mankind center largely in it. Frederick will always have enduring fame as the birthplace of the author of our national anthem. There has been considerable controversy as to whether John Marshall or his successor Roger Brooke Taney was the most effective Chief Justice of the Supreme Court. A northern poet found the

theme of one of his most delightful poems in the story of Barbara Fritchie.

In our own generation men and women of Frederick ancestry have held prominent positions in the State. Judge Albert Ritchie and his distinguished son, Gov. Albert C. Ritchie, were members of a Frederick family. Each one of you will agree that the course of history of Frederick County has been happily influenced by the distinguished services of the late Joseph T. Baker and by the example which he gave of fine citizenship.

These men and women did big things for their county and for their State, but no history of Frederick is in any sense adequate which fails to bear witness to the fact that men and women generally who, during 200 years lived in Frederick city, have reached and maintained a very high standard of usefulness and accomplishment. Attempt to pay justly earned tribute to them is pleasant. Their example is stimulating and a call to new service.

Someone has said:

"Politics without history has no root;
History without politics has no fruit."

The term "politics," of course, here is used in a very broad sense, implying the drafting and operations of general policies. If we in Frederick, or out of it, attempt to decide the grave questions pressing upon us for action without due consideration of the lessons history teaches us, we will be making decisions without deriving the benefit which experience can give. It would be like a lawyer, physician, businessman farmer, or housewife deciding what to do today without paying any attention to what the experience can teach.

Let me give another illustration. Now, we know that much of the reason for the ever-increasing efforts of our Government to press forward our war operations at home and abroad at a tremendous speed was needed to win against the Nazis in the race for the development of the atomic bomb and certain other instrumentalities of warfare. For a long time that race was a close one. Again and again we were on the verge of defeat and disaster. Had we failed, we would not be meeting here today on this anniversary to pay tribute to Frederick's patriotic and distinguished sons and daughters. On the contrary, we would be completely at the mercy of the cruel and capricious whim of ruthless conquerors. All the years of free enterprise and liberty which our ancestors had utilized so successfully would have come to naught.

The story goes that once upon a time efforts to capture Babylon by siege and assault long remained unsuccessful until the course of the river which ran through Babylon was changed by the stupendous work of digging a new river channel and diverting the course of the river. Thereupon the enemy marched into Babylon on the former river bed. Thereby the channel of history was turned. Most assuredly the course of history would have been changed suddenly, violently, and most disastrously if the Nazi had won out in the race for new, terrible powers of destruction.

Never let us lose sight of the fact that for the first time in history the power of the atomic energy has been brought under the control of man. We face indescribable disasters unless this power, for the first time unleashed, is utilized for peace and welfare and not for carnage and destruction. We have opened a new Pandora's box. What will come out of it? That fateful decision is in our hands.

If the world acts in accordance with the wise, sound spirit which has made Frederick an outstanding type of an industrious patriotic and well-balanced community, it will see to it that the course of history as shaped by the atomic bomb will be turned into happy channels and not into turbulent and destructive waters.

Those decisions we must reach just as Governor Hicks, after opposing secession and after being placed in the position where he had to unleash certain powers, made a momentous decision. What he did quite likely prevented here in Frederick the secession of Maryland and thereby may have altered materially the course of history.

In countless ways, history illustrates and emphasizes that the poet told a part of the truth only when he said:

"Of all the sad words of tongue and pen,
The saddest are these, it might have been."

These words at times are among the happiest of expressions whenever they call attention of dangers avoided and harrowing threats of misfortunes which did not materialize. Fortunately what we often escape is stark and hideous tragedy. The history of the atomic bomb bears witness to that fact.

Never have I accepted an invitation to participate in the dedication of a building when there were more reasons why I wanted to accept. I will mention a few only of them.

First of all anyone in Maryland or out of Maryland would naturally consider it a privilege to participate in these exercises. Here I have many friends whose confidence and kindness I appreciate greatly. Another reason is that I have a special feeling of attachment for the Steiner family, former owners of this property. Dr. Louis Steiner was in charge for years of the Enoch Pratt Library and rendered invaluable service in providing Baltimore with a first-class public library.

His son and successor, Dr. Bernard C. Steiner, continued the good work of the Enoch Pratt Library. Bernard C. Steiner was one of my teachers in history at Johns Hopkins University. It was upon his suggestion that I wrote the book just mentioned on the Civil War period, stressing the vast significance of Frederick as the meeting place of the so-called Rebel legislature. Long ago Dr. Bernard S. Steiner and I became very closely associated with each other, and until his untimely death our friendship continued constantly to grow stronger.

Another reason why I am happy to be here is that I have been keenly interested in the subject of history as a student, a teacher, and to a very limited extent, as a writer. For 30 years I have been an officer of the Maryland Historical Society and am now its president. As a citizen and as president of that society I rejoice in the fact that Frederick County is today acquiring such an attractive and useful home for the study and presentation of the history of Frederick County.

Relations between the Maryland Historical Society and the Frederick County Historical Society have always been close and I am confident that each year will find many new opportunities for closer cooperation to our mutual advantage.

The Maryland Historical Society rejoices in your opportunity, prosperity, and success.

The Maryland Historical Society has accumulated during its 100 years of existence a vast collection of books, paintings, manuscripts, relics, and other objects of historic importance. Some of these are concerned with Frederick County. I am hoping that within the near future we can have a Frederick County night at the Maryland Historical Society having its program in the charge of Frederick County Historical Society.

The astonishing thing about a historical society is how quickly historical material begins to flow in. Books, manuscripts, paintings, and relics are finding depository in the Maryland Historical Society. Almost every day the Maryland Historical Society receives a gift or an offer of worthwhile material. Many of these come from outside of Maryland, just as Mrs. William Bradley Tyler Belt, the generous donor of this splendid home to you, is not living in Maryland. In your new home you will find your historical collection growing rapidly.

I rejoice also in the fact that in providing this historic and attractive home for the Frederick County Historical Society the far-sighted donor is doing something which in no end of ways will aid greatly the cause of good citizenship.

History pleases, but it also instructs and constructs. In the trying days which are ahead of us we will need the benefit of every useful agency which can be made available to assist us in adopting wise policies and doing essential things. This building enshrining the tradition and history of Frederick County will ever be a stimulating reminder of what has been done so well by your forefathers in this county. It will bring to your service the vast field of experience. As you go forward step by step, it will aid and succor you. The information which it will bring to you, and the helpful advice which it can prompt are elements of tremendous value. Although I do not mean in any way to ignore the significance and value of the cultural and pleasure-giving province of history, I am glad to bear witness to the fact that history is one of the useful factors in human progress. The history of Frederick County will contribute much as we attempt to solve, in this day of vast economic readjustment, problems of business, labor, agriculture, return of veterans to civilian life, elimination of governmental restrictions and so many other matters pressing upon us for consideration and action.

Everyone knows that the present rate of Federal taxation does not give opportunity for venture or risk capital so essential to development of business. We must begin to reduce these taxes and yet be ready to meet the heavy cost of interest charges on debt, reconversion from a war to peace basis, reasonable needs of our veterans, of unemployment, and other necessary expenditures.

There is not time to attempt to dwell upon the many wise lessons that history can teach us. Let me emphasize one. Some people cavil at our frequent references to what we call the American way of life. They are wrong. We cannot overstress its importance. The American way of life typifies consistency, but it is elastic enough to permit change whenever clearly advisable.

The American way of life began in Colonial days. It grew greatly during the Revolutionary period. It went forward by leaps and bounds at the time our Constitution was framed and our Nation was created.

Throughout the years some of the apparent changes in our way of life are recognized almost universally as being in the nature of improvement. But our American way of life has certain principles which are fundamental. Life, liberty, and the pursuit of happiness, the "four freedoms" are among the basic elements of our concept. That way of life does now and must always continue to contemplate and require that our Government of men and women should be freed as far as feasible from governmental restrictions. It holds that thrift, free enterprise, and wide opportunity for private initiative and discretion are among the factors which have made this Nation great. These principles are going to be preserved in our systems of government and society. We are not going to be swept from our moorings by socialistic or communistic theories of government. We are not going to embrace a regimentation or paternalism which would enfeeble. What we need is more and more invigorating self-reliance and less debilitating paternalism.

In the furtherance of this great objective the people of Frederick will continue to serve valiantly, blessed by guidance from the light which ever shines so brightly in the history of Frederick. In this new home ideally situated and adapted for the purposes desired, the Frederick County Historical Society can and will continue to play a very useful role.

## The Challenge of Citizenship

EXTENSION OF REMARKS
OF
**HON. ALEXANDER WILEY**
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

*Tuesday, November 6 (legislative day of Monday, October 29), 1945*

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a talk which I delivered this morning at the Federal court here in Washington to a class of new citizens approximating about 175.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

THE CHALLENGES OF CITIZENSHIP

It is a great pleasure and privilege to me as a United States Senator and as an American citizen to contribute in a small way to this inspiring naturalization ceremony.

In a very brief period, you will be privileged to become citizens of this great country. You will join 140,000,000 compatriots in the privileges, rights, and obligations of American citizenship, so newly rewon for us on the battlefields of the world.

Unlike myself, you will become a citizen because of your own free choice. I had nothing to do with my own citizenship. I was born here in this blessed land, but I am the son of immigrants. My father and mother both were born in Europe.

I feel that the experience that you are undergoing in becoming a citizen is somewhat analagous to that in the Book of Books, wherein it is said that "man must be born again to inherit the kingdom."

THE OLD WORLD AND THE NEW

To fully appreciate the privilege that is to be yours, you must be born again. I know that is the way my father looked upon it. In the old country at that time, he wasn't good enough to own land. He worked for some 40 cents a day in the mines (I emphasize a day) and he left the old land to come over here. He raised a brood of seven children. He had little or no education. Those seven (because our parents wanted it so) went through the public high schools and each of them had the benefit of higher education.

In the old country there was a state church. In America, church and State are separate. Here, you go to the church of your own free choice.

In the old country (and this is so now in many places) there was no such thing as freedom of speech or press, and men dared not to express their own thoughts aloud. In this country, these freedoms are part of what you attain today. I know, however, that you will not confuse freedom with license.

You may be assured that the eyes of all the peoples of the world are upon this glorious land today, as never before. Recently it has been decided that the headquarters of the new United Nations Organization will be established on the free and friendly soil of America. This is in itself a tribute to America, which has been precipitated to leadership among the nations of the earth.

Here in this land, there is abundant opportunity for the innate and dormant qualities of man to be reborn. In the Senate of the United States, we have several men who were born abroad. Here the poor boy of today becomes the factory owner of tomorrow. Here the son of the European peasant becomes a famous judge, lawyer, doctor, educator.

To every foreigner who comes to these shores and becomes a citizen, we say "Welcome." Our arms are extended, our hearts are warmed by the thought that another brother has come into our midst. You know the Statue of Liberty in New York Harbor has engraved on it:

"Give me your tired, your poor,
Your huddled masses, yearning to breathe free,
The wretched refuse of your teeming shore:
Send these, the homeless, tempest tossed, to me:
I lift my lamp beside the golden door."

And the salutation from each American to you is:

"As you breathe the free air of our shores,
Homeless wanderer, reaching home,
Become one with us in freedom's cause:
Take the riches of our liberties,
And repay the gift by becoming one of us,
An American."

But, we ask every individual upon whom we confer citizenship that he leave behind those hates, those prejudices, which are unfortunately still so prevalent in Europe. Here, there is only one ism, and that is Americanism, for him to become inoculated with. We ask him to bring and throw into the blood of the Nation the high concepts of his people, the fine music, art, drama, religious concepts—those things which make for better living. All these constructive qualities we accept with gratitude. But, we ask that, in his rebirth, the new citizen leave behind those negative qualities, those destructive forces, which have made the Old World a vale of tears and terror for so long.

LOYALTY TO YOUR LAND

How, specifically, may you demonstrate the love of the land which you are now to call your own? How may you be adequate to the challenges of citizenship?

May I suggest a few ways:

1. Know and love the American Charter.

What is the American Charter? It consists in part of the United States Constitution, including, of course, the great Bill of Rights, the first 10 amendments to the Constitution.

The American Charter consists in part of the Declaration of Independence, sealed by the blood of the martyrs of the American Revolution. It consists in part of the Gettysburg Address, delivered by that epic figure, Abraham Lincoln. The American Charter consists of these and more. It consists of American history, the deeds and words and thoughts of every generation of America since 1776, in times of war and peace. All these you must learn and relearn and love sincerely from the very depth of your being.

2. Know and love the American cultural heritage.

America, the Beautiful is more than a song. Ours is more than a great and beautiful geographic expanse. We have American poetry, literature, music, art, which can hold their heads high amidst the other great cultures of the world. We have thrilling customs, traditions, flowering in every one of our regions, in every one of our local communities, all constituting a part of our cultural heritage—yours and mine and the possession of those who are yet to come.

3. Know and respect the symbols of America.

Every good citizen knows and respects the great symbols of our land. He has a deep and abiding respect for the Stars and Stripes. He knows our great songs. He observes our national holidays—Lincoln's Birthday, Washington's Birthday, Independence Day, Memorial Day, Thanksgiving, Christmas. He loves these symbols of our country, not blindly, but with his eyes clear and filled with the beauty of them. He respects all these symbols in the very depths of his heart and soul and relives each holiday in the very fiber of his being.

4. Know and contribute to American leadership.

You should become acquainted with the workings of your government—local, State, and national. You should make certain that the men whom you elect and support in public office respect public office as a public trust. They must be men devoted to the American way of life. You must exercise your ballot choice wisely and carefully. Do not allow yourself to be mentally stampeded by false slogans and synthetic thinking.

5. Know and contribute to your community.

You have obligations not only to the land in which you live, but to the local community in which you reside and work. Do your part in helping to make it a clean, happy, thriving community. Fulfill your neighborly obligations to those who dwell in your vicinity. The strength of the Nation is founded on the strength of its smallest unit—in the family and in those who are close to the family.

6. Contribute to the economic well-being of our country.

You must become an ever more important sustainer to the economic life of our country. Contribute to the economic bloodstream of our land. Do your part, however humble, in helping to make jobs, wages, and goods. America needs job makers and job builders.

7. Develop the personal qualities of an American.

We have great traditions for the ideal American. He is a man of thrift and diligence, industry and energy, humor and love. His mind is unclouded by distrust or fear. He has perspective. He has faith in himself, in his loved ones, in his Government, in his fellow man. He has no time for the pessimist, the defeatist, the divisionist. He owes allegiance to his God, to his country, and to his fellow man. He holds his head high because his conscience is clear. He is a growing man. He is not guilty of arrested development. He knows that life is an unfolding process in which more and more of his potentialities can be developed with each passing day.

These are great times in which to be an American—times full of challenges. America and the world have just entered a new revolutionary atomic age. Greater possibilities for an abundant life in our land and in all other lands have now become possible.

The aged cry is true now more than ever before:

"God, give us men!
The time demands strong minds, great hearts, true faith, and willing hands."

The field of citizenship is ever expanding. The opportunities for you to become a proud contributor to our way of life are increasing all about you. I have faith that you will fulfill the faith that your country is placing in you, in giving you the great honor of citizenship. I have faith that you will help your fellow Americans to pass on, unimpaired, the great values of which we of this generation are but trustees.

I extend to you my hand and my heart in welcoming you to our brotherly fold.

## The Veteran Looks to Congress

EXTENSION OF REMARKS
OF
**HON. EDWIN C. JOHNSON**
OF COLORADO
IN THE SENATE OF THE UNITED STATES

*Tuesday, November 6 (legislative day of Monday, October 29), 1945*

Mr. JOHNSON of Colorado. Mr. President, I ask unanimous consent to have printed in the Appendix of the

RECORD a radio address entitled "The Veteran Looks to Congress," which I delivered before the Disabled American Veterans' convention in Chicago, on October 20, 1945.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The veteran very properly looks to Congress to facilitate his readjustment into civilian living. Exactly what measures should be enacted into law by the Congress to accomplish this worthy purpose is not so easy to determine. However, the Nation owes its first obligation to provide for its disabled and handicapped warriors and for their dependents and for the dependents of those who have made the supreme sacrifice.

I agree with the viewpoint expressed by the National Service Director of the DAV, the Honorable Millard Rice, who, during his recent appearance before a Senate committee, stated that Americans, who have sacrificed their bodies or their health to preserve the American way of living, deserve richly an opportunity for themselves to live a normal American life. They above all men certainly are entitled to have a home and a wife and children if that be their desire.

Most of us are inclined to take too many things for granted. Americans have been assuming that our Government already has made adequate provisions for all of its war disabled veterans and their dependents, and the dependents of our war dead. I have found, however, that that is not true and therefore, as one Member of Congress, I shall do what I can to enable this grateful Nation to make adequate provisions for the human aftermath of its wars.

It is common knowledge that the Veterans' Administration is authorized to provide compensation or pensions for service-connected disabilities of war veterans, in amounts ranging from $11.50 per month for a 10-percent disability, to $300 per month for a so-called double total permanent disability. Very few of us, however, realize that the sum of only $115 per month is the highest amount payable to veterans who are totally disabled and unemployable, and that higher awards are payable only to those who have lost one or more limbs or both eyes. We provide family allotments for the men in the armed forces but very few of us realize that no dependency allowance is provided for discharged veterans who are totally disabled.

The Disabled American Veterans and its authorized representative, Millard Rice, have vigorously advocated that the United States should provide the same dependency allowances to its totally disabled veterans as Canada provides, namely $25 for a wife, $15 for the first child, $12 for the second child, and $10 for each additional child. Such allowances would be about half those provided for the dependents of men now serving in the armed forces. Such payments are necessary if disabled veterans are to live a normal family life and rear their families according to American standards. My bill, S. 1031, now receiving the attention of our committee, provides for such payments.

The Veterans' Administration has been authorized to provide hospitalization for treatment of service-connected disabilities, but very few citizens realize that single veterans who are hospitalized for the treatment of service-incurred disabilities are not permitted under existing law to receive more than $20 per month compensation, regardless of the payments due them. Thus, veterans in effect are required to pay at least in part for their hospitalization. To correct this situation, I have another bill, S. 1203, now before our committee, which provides that there should be no reduction of compensation during at least the first 3 or 4 months of hospitalization. This would enable the veteran to take care of his many financial commitments while undergoing hospitalization.

Certainly our hospital bed capacity must be increased just as rapidly as possible so that veterans requiring medical treatment may not wait for weeks or months before they can be hospitalized. I am pleased to state that the new Administrator of Veterans' Affairs, Gen. Omar N. Bradley, has taken a firm hold of the many perplexing problems with which he is confronted. Very definitely he is on the way to their solution.

It is not generally realized that only about 10 percent of our war disabled veterans are rated by the Veterans' Administration as totally disabled and unemployable. The other 90 percent must be regarded as employable, since their compensation provides only a small portion of their support. These partially disabled and handicapped veterans must have gainful, useful, and suitable employment, since they cannot rely upon compensation or pension payments for their full support.

Surveys definitely have indicated that handicapped employees are more sensitive to injury and therefore are naturally more careful and cautious and less likely to lose time from the job by reason of injury or illness. Furthermore, handicapped employees are generally more productive, more cooperative, more resourceful, and more loyal to their employers than are able-bodied persons.

Every employer in the country owes it to our returning disabled dischargees to do his utmost to employ in suitable jobs just as many disabled veterans as possible.

Out of a selection of several hundred courses the Veterans' Administration is authorized to provide for handicapped Veterans of World War II vocational training to prepare them for suitable employment in some profession, business, or occupation. Every war-disabled veteran should look carefully into the advantages of taking a specialized course of vocational training.

The monthly allowance now provided is admittedly not adequate: $92 per month for a single veteran plus $11.50 for a wife and $5.75 additional for each minor child. The Senate Sub-Committee on Veterans Affairs is now considering legislation to increase the basic monthly allowance for vocational trainees, disabled and able-bodied veterans alike. Proposals to facilitate the economic adjustments of our returning veterans, who are not handicapped by any service-incurred disabilities, present many perplexing problems. We must consider not only the immediate effects but the after effects as well. As a matter of fact, our committee has many bills before it, proposing amendments to the GI bill of rights including the proposal to guarantee loans by the Veterans' Administration to GI Joe for purchase, repair, improvement, and operation of a home or a farm or a business. We hope to report out a bill in a very few days.

All of us are anxious to help returning veterans become adjusted to civilian life, but in our enthusiasm we should not enact into law provisions which may prove to be unfair or inequitable as between various groups of returned veterans, nor should we enact into law provisions which do not afford the very solutions which we seek.

In the final analysis, the desire of our returning able-bodied veterans is essentially the same as the desire of returning disabled veterans; that is, to resume normal civilian living status, to have a home and a wife and children, and the means to rear those children in the accepted American way. The Nation should compensate to the best of its ability the sacrifice of their time, and the loss of opportunities which they might have enjoyed had they not served so many years in the armed forces during a time of war. Most of our returning young men and women have lost their youth in the crucible of war. Time cannot be turned back. So the loss in that respect is permanent. But they should be assured that in fighting to preserve the American way of living they will not be compelled by their fellow Americans to forfeit it for themselves and their dependents.

Veterans will represent between 20 and 25 percent of the total number of employables. They will represent a very substantial portion of the total number of taxpayers. In every conceivable undertaking in our economy they will occupy a place as professional men, businessmen, agriculturalists, white-collar employees, skilled workmen, and as laborers. They will be looking to Congress for adjustments on a Federal level of the interrelated problems that will affect their welfare as American citizens, just as do other citizens and other groups.

Yes, the veteran looks to Congress and I hope not in vain. Many Congressmen are veterans of one or more of the wars in which our country has been engaged. Several of the Member of every congressional committee are ex-servicemen. All of them are deeply interested in the disabled warrior.

Veterans represent a cross section of our society, culturally, occupationally, socially, politically, and religiously. They and their relatives will constitute a majority of the population of this Nation. They will not all have one viewpoint on legislative or economic or social-justice questions.

But in looking to Congress they must bear in mind that Congress is an institution of the people. Its voice is their voice. Its will is their will and its power is their power. It determines what should be done in our relations with other nations and what should be done in our relations with each other, only to the degree desired by the people themselves. Through Congress the American people determine what they shall undertake collectively on behalf of able-bodied veterans, disabled veterans, their dependents, the dependents of our war dead, our handicapped citizens, the aged, the infirm, and every other group. Congress can and must, however, work out the proper adjustment between all of its citizens.

Yes; "the veterans look to Congress" and for advice and guidance Congress in turn must look to the veteran. Congress has no funds that do not belong to the people and Congress possesses no wisdom that is not inherent in the people.

## Address by Hon. William O. Douglas, at Portland, Oreg.

EXTENSION OF REMARKS
OF
### HON. WAYNE L. MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES

*Tuesday, November 6 (legislative day of Monday, October 29), 1945*

Mr. MORSE. Mr. President, on June 30, 1945, Mr. Justice Douglas, of the United States Supreme Court, delivered a very interesting and statesmanlike address in Portland, Oreg. I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

We here in the Pacific Northwest think that the West is a particularly vital part of the Nation. I admit feeling that way myself. But it seems to me that the vitality of the West is simply the newest expression of the vitality of our social system.

The vitality of our social system is something we all feel, but do not often stop to analyze. First of all, our vitality consists in our common pride in our country, our pride

in being Americans. Life in this country is full and satisfying—not as much as we want it to be, but more so than it has ever been anywhere else at any other time. We do not have to feed the minds of our children on myths of past greatness. We are greater now than we have ever been before. We have met the challenges facing our generation, and we have conquered or are conquering them.

Nor do we have to dream of future imperial splendor in order to offset a narrow present. We here in America enjoy mature and responsible life. Opportunities that are dead or that never existed in other countries are within the grasp of our people. Certainly, we dream of a better and happier life for all. But we dream of it in the practical, inventive way that is typically American. We know we can make our dream come true. We do not tie our dream to conquest, or to the subjugation of other nations, or to inflexible, unrealistic ideologies.

Jefferson, as we westerners know, was one of the world's great prophets. He sent Lewis and Clark out to find the Columbia River. With the Columbia, America found more than the inland empire of Jefferson's heritage. It found a way to create the society of Jefferson's dreams and of our dreams. Nothing is more intangible than the current of our imperial river, and yet nothing is more powerful. Nothing except the democracy it symbolizes and enriches.

The promise of a nobler power than the world has ever seen flows through the current of our river. It is the promise of happiness for people. It is the promise to which Jefferson dedicated America in his great concept of "life, liberty, and the pursuit of happiness."

That is a simple aim which the Declaration of Independence expresses so nobly. Here in our rich and beautiful land, we count upon the blessings of liberty as we count upon the air we breathe. Our real problem is that last great objective—the pursuit of happiness. But who can be so sure of life, so certain of liberty, that they can dare to concentrate on this last aim? Only freemen. Only members of a society which is strong, which is vital, whose traditions of liberty grow out of a great past.

There are people who say that this idea—the pursuit of happiness—is idealistic nonsense. But a long time before Jefferson, Jesus Christ said, "Man does not live by bread alone." And our great achievements in this war against brutality and indecency bear witness to it. The Americans who died—and who will die—for their country in this war went down fighting for the highest aims of our society.

There have always been sunshine patriots who have wanted America to cater to very puffed-up tyrant from George III to Hirohito. They don't change from one generation to another. They call themselves "realists." Actually, they are the most unrealistic minority among us.

They are unrealistic because they are irresponsible. They are afraid of new ideas because they are afraid of responsibility. They don't trust the people of America.

True social realism never belittles people and their ideals. Idealism and hope for the future are the driving forces of true social realism. Abraham Lincoln, Woodrow Wilson, Franklin Roosevelt—they were idealists. And yet each won a great war. Each of them saw further into the future than the small-minded men of little faith who bedeviled them. They knew that idealism is not impractical, that it is part and parcel of true realism, along with hope and responsibility and trust in people.

These men are examples to us of the good that true social realism can do. Their idealism, their statecraft stand out in bold contrast to the so-called realism of Hitler, who corrupted men's souls.

Germany collapsed as our victorious Army rolled toward Berlin to join hands with the Russians. The shame of Dachau and Buchenwald was made clear before the world—and the sullen people stood in the streets like cattle and watched our troops march past. But not one voice rose to say "This ruin is what we made. It is enough. Let us try to become human beings again, responsible for our fate." The proud cities of Germany are rubble. That was the Allies' work in this grim war. But the souls of the people are rubble, too. And that was Hitler's work.

Hitler and his gang are dead men, Hirohito and his are marked men. "Those who take the sword shall perish by the sword." But those who corrupt the human mind shall have their minds corrupted. So out of the rubble of empire there is no one left to build anything new, simple, humble, anything with vitality. These people have lost their moral sense and because of that, they have lost their social responsibility.

Here in America the time has come to talk of peace. Half of the war has been won. In the West we know better than any that the toughest part is still ahead of our fighting men. But to define our attitude toward the peace will not slacken our effort against the Japanese. It will strengthen it. Let us take thought for the future. In so doing we shall reinforce the power and determination of our present actions.

The part we play in world affairs is inevitably influenced by our domestic situation. We cannot be strong abroad if our economy is weakened by depression and unemployment. Equally, we cannot be strong abroad if our ideals of justice and understanding are absent from our national life.

One of our fundamental concepts is the value of competition. That holds good in sports, in business, in politics. Neither race, nor creed, nor color disqualifies anyone for that competition.

We believe in competition because we trust people. Here is our basic difference from Hitler. He believed that human beings, if left to themselves, act according to their basest desires and in the most short-sighted way. But we believe that human beings know their true interest and that these interests do not differ in the long run from the interest of the community.

We believe that if men sometimes act basely, they also act nobly. We believe that if a man or an idea is sound, progressive and productive, that man or idea will be recognized and put to work.

At one time, when our economic system was in transition, we passed a statute declaring economic competition to be the law of the land. That statute—the Sherman law—still stands. It was sustained not only by the courts but by the hardy belief of the people as well. But we have never needed to pass a law sustaining political competition. It is our fundamental assumption, because we do trust each other, because we do believe in the good will of common humanity.

So deeply rooted is our belief in political competition that we know when political partisanship must leave off. Americans are mature enough, they are responsible enough, to know that patriotism must always come before partisanship.
